Despite our opposition, the idea of such a continuing forum was incorporated in the final communique issued when the talks adjourned. It was considerably diluted and couched in diplomatically vague terms. The participating delegations "agreed to recommend to their governments that favorable consideration be given to informal arrangements which would facilitate discussion and consideration" of the issues before the conference. Our interpretation of this language, based on explanations given by the State Department itself, is that the arrangements in question were to consist, at most, of an agreement under which further discussions might be held at the shipping attaché level in Washington.

There is ample evidence that the European version of what the arrangement was to be is entirely different. On the day the talks ended, the London Daily Express said that Mr. Harold Watkinson, leader of the British delegation, would "report an American agreement to set up a committee sitting in Washington and Paris to consider grumbles about the West's maritime policies, government cargoes, and flags of convenience." Later, the London Financial Times quoted Mr. Watkinson as saying the committee would be on a "reasonably high level" and that if this committee made no material progress within "perhaps a year" another intergovernmental conference with the United States should be proposed. And, the London Daily Mail in spelling out the plan in some detail stated, "The first meeting of the group will probably be held in Washington some time soon to settle organization arrangements and afterwards it is hoped the headquarters will be established in Paris."

This seems rather fantastic, doesn't it? Imagine, an organization set up for the prime purpose of reviewing U.S. shipping policy would be located in Paris. How ridiculous can you get?

And yet very recently the president of the British Chamber of Shipping, Sir Nicholas Cayzer, issued a report calling upon the United States to fulfill the promise, allegedly made during the June talks, to set up machinery for continuing the examination of the matters previously discussed. You will understand now, I am sure, why I consider this threat to our maritime policy to be far from extinct. It could become very real again on short notice.

We vehemently deny the need or, in fact, the propriety of establishing an intergovernmental organization to study America's maritime policy. Our own Government has never hesitated to make such studies whenever they seemed timely or appropriate and indeed more often in the past 15 years than has seemed justified. However, that is our business and we need no help from foreign competitors.

Protests from abroad with respect to merchant marine matters should be submitted through regular Government channels and given no more fanfare and no more special treatment than protests with respect to any other aspect of national policy. We hope the American Legion will stand with us on this as it has in the past on questions of vital concern to the American merchant marine.

The Deceptive Mouse

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. KEFAUVER. Mr. President, between June 5 and 10 of this year 650 delegates from the NATO nations including

130 from the United States, met in London in the first Atlantic Congress. The congress was sponsored by the NATO Parliamentarians Conference.

I have just read an article in the summer European-Atlantic Review by Earl Jellicoe, member of the House of Lords, who served on the United Kingdom delegation and acted as rapporteur for the United Kingdom at the Atlantic Congress.

Lord Jellicoe's description of the work of the congress, as it points to developments for the future, is the most perceptive as well as complete that has come to my attention.

Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DECEPTIVE MOUSE

(By Earl Jellicoe, United Kingdom rapporteur at the Atlantic Congress)

An objective reader, confronted with the final declaration of the Atlantic Congress, 1959, may be forced to the conclusion that the congress mountain, having labored mightily, managed in the end, to produce only a rather small mouse.

Such a conclusion would not be entirely false. The declaration is a poor, weak, thing. It has little punch and absolutely no sex appeal. Reading it, one would not suppose that it was the product of a congress attended by 650 representative and distinguished—on the whole I was one of them—delegates from 14 of the 15 NATO countries, addressed by some of the most eminent of the citizens of those countries. Reading it, one can find little echo of the meticulous preparation and careful planning on which the congress was based. In it there is not the clear lead for which Her Majesty the Queen, in an admirable speech at the impressive opening ceremony, called. In it there is little reflection of the urgency of the challenge of our times.

That challenge is indeed urgent and grave. Something—a great deal—has been achieved in the 10 years since the Atlantic Treaty was signed. Global war has been prevented. The NATO defense structure has been brought into being. Political consultation between the members of the alliance has been developed. The economy of Europe has been restored. In a material sense both North Americans and West Europeans have never had it so good.

But those successes mask grave shortcomings and insistent dangers. On the military side the NATO nations have still to find in a joint atomic strategy an adequate response to the Soviet achievement of atomic parity. In many other vital respects the NATO defense structure is fragile and inadequate. Politically, the increasingly astute, flexible, and resourceful conduct of Soviet foreign policy since Stalin's death has not been matched by an effective, integrated, and positive Western foreign policy. Rather, the NATO nations have tended to dance, belatedly and often out of step, to Moscow's tune. Moreover, with the growing upsurge of nationalism on both sides of the Atlantic, the NATO nations have shown a regretable and possibly increasing tendency to fall out among themselves. Economically, although the achievements have been real, the West has not proved its ability to match the rate of growth of the Communists' economies; nor has it solved the problem of continuing steady and rapid economic progress with stable prices.

These are some of the challenges of our times. The Declaration of the Atlantic Congress contained little affirmative response to them. Does this mean that the Congress was a failure? I do not think so.

I feel this for at least two reasons. The first is that a valuable part of the work of the Congress was done before the Congress even assembled. This work included the preparation of the papers to be submitted by the various national committees to the Congress. Many of these papers—and I am glad to say that not a few among them were British—are of a very high standard. It is a pity that most delegates had little time to read them, let alone digest them, since they embody, in concise form, recommendations which merit the attention of the NATO governments and peoples.

The second reason is that very little of the real work of the Congress really emerges in the final declaration. The donkeywork was, of course, done in the 5 main committees and the 16 subcommittees where discussion was often prolonged and sometimes passionate. It is, accordingly, to the reports of the committees, and subcommittees, that one must turn if one wishes to form any real idea of the ground covered.

Of these committees, three—the Atlantic Spiritual and Cultural Committee, the Atlantic Political Committee, and the Atlantic Economic Committee—were concerned with the problems facing the NATO countries in their relations with each other. These were the inward-regarding committees, and each of them had three or four subcommittees. There were also two outward-regarding committees—the Free World Committee, and the Communist-Bloc Committee. These, too, had three subcommittees each.

These committees and subcommittees achieved, in the way of solid resolutions and specific proposals, quite a lot—as will be seen from their reports which were later debated and adopted by the Congress as a whole.

In the first place the Spiritual and Cultural Committee produced an admirably short and pithy restatement which owed much to the mind and pen of Father Daniélou, of France, of the fundamental credo of the member countries. In words which the Secretary General of NATO subsequently quoted, this statement emphasized that: "Respect for human dignity is the inalienable basis of civilization. The purpose of a political and economic society is to create conditions enabling every human being freely to fulfill his destiny. The guarantee of this dignity is, first the recognition of objective spiritual values which cannot be altered by any human agency but are the expression of a natural or transcendent law governing communities and individuals alike."

Significantly, this statement made it clear that not only must the Atlantic community be outward regarding but also that civilization was by no means the prerogative of the hitherto materially favored West: "Civilization is the common product of all peoples. In particular, Asia, Africa, and Oceania have a part to play side by side with the Western peoples. It is important to realize that the common values of civilization are differently expressed by different peoples according to their various traditions."

This committee also proposed a number of practical means by which the information and educational activities of NATO and the member countries should be reinforced in order that the purposes of the community should be projected more effectively to its own and other peoples. As a nonexpert in this field, these proposals have struck me as eminently sensible and, given the will, quite practical. What is more important, they have for the most part, commended themselves to the NATO experts in these matters. They are varied in scope. For example, they included definite suggestions as to how the role and responsibility of the NATO Information Division should be strengthened and broadened—a request to member governments to devote more funds toward facilitating student and teacher exchanges, and proposals designed to increase the number of Asian and African students studying in western universities and to bring about in 1960 a conference of university teachers from NATO countries concerned with international questions.

In addition the Spiritual and Cultural Committee recommended that a Studies Center for the Atlantic community should be set up in the near future. This proposal, which had strong and well-organized support, was criticized, I gather, by a number of the delegates, especially those from the United Kingdom, who felt that it might involve unnecessary duplication with existing research work and that the project in general was overambitious. They would have preferred a foundation on the American model with more restricted terms of reference. However, the larger project carried the day. It remains to be seen if the scheme has sufficient steam behind it to attract the necessary private and public support. If it has, this Studies Center may well have a valuable role to play as an intellectual focus for the Atlantic community.

The Political Committee dealt with both the political and military aspects of the alliance. In the main the debate on the political side centered around the proposals sponsored by certain of the signatories of the Declaration of Atlantic Unity who acted throughout the Congress and in every committee, as a well-organized lobby. In the end the Committee adopted two of their proposals. The first was that meetings of the NATO heads of government should be held annually. The second was that member governments should be requested to convene not later than the spring of 1960 a conference of 100 leading representative citizens charged with examining and recommending ways and means of developing greater cooperation and unity within the alliance.

It was, moreover, suggested by the Committee that this special conference of 100 wise men should, inter alia, specifically consider three more of the signatories' proposals, namely, the development of the NATO Parliamentarians' Conference into a fully fledged advisory assembly, the adoption by the North Atlantic Council of the principle of the weighted vote, and, finally, the possible establishment of a small advisory panel of qualified men of wide experience attached to the bureau of the general secretariat. In addition, the Committee, after noting with satisfaction the growth of political consultation between the member countries, emphasized the need for still greater coordination of NATO governments with the North Atlantic Council on "all questions of common concern." They also drew attention to the desirability of further enhancing the authority of the Secretary General and proposed that a special study group should be set up to examine new methods of conciliation between member states, including the possible creation of a NATO court of justice—an idea which had been strongly canvassed by Mr. Charles S. Rhyne, the former president of the United States Bar Association.

On the military side the military subcommittee, on which representation was exceptionally strong, produced, after considerable discussion, a carefully drafted and delicately balanced resolution. This compromise resolution was designed to pay some regard to the French desire to participate, together with the other NATO powers with worldwide responsibilities (e.g., the United States and the United Kingdom) in the

formulation of an agreed global strategy. It was also meant to take account of current French susceptibilities about the control of nuclear weapons and the exchange of atomic secrets. However, on French initiative, the Committee finally presented to the Congress a much emasculated resolution which the Congress, after a spirited debate, rejected in favor of the original. The resolution, because of its careful balance, should be read as a whole. But among its salient points are the following: the urgent need to bring the European "Shield" forces up to the levels laid down in MC–70; the need for reexamination of the structure and control of NATO's atomic forces; the need for a common NATO armaments funds and the widest possible interchange between the member governments of atomic information and the implied need for a drastic overhaul of NATO's air and naval command structures. All this—and more.

I am no economist and I shall therefore deal briefly with the work of the Economic Committee—more briefly than it deserves. The philosophy behind its resolution was expansionist, derestrictive and cooperative. It called for governments to adhere to policies designed to promote higher levels of employment and living standards. It stressed the need for governments to avoid restrictive economic practices and called upon governments wherever possible, to reduce tariffs and other trade barriers. Above all it stressed the need for closer economic integration within the Atlantic Community and drew attention to the gaps that exist in the existing arrangements for economic, scientific and technological collaboration. With this in mind the committee suggested that governments should consider the possibility of transforming the Organization for European Economic Cooperation into an Organization for Atlantic Economic Cooperation in which not only the West European but also the North American countries would be full members. The proposed new organization would have wide functions. It would be designed to form an economic bridge between the European Economic Community, the economies of the rest of Europe and those of the remainder of the free world. It would promote coordinated polices for the expansion of the North Atlantic economies without inflation or recession. It would also coordinate national policies and develop cooperative policies for accelerating the economic development of the underdeveloped areas of the world.

Before the Congress it had generally been anticipated that much attention would be focused on the relations between the countries of the Atlantic Community and those of the remainder of the free world, many of which are underdeveloped and most of which are uncommitted in the world struggle. This expectation was not disappointed and most committees of the Congress, in fact, dealt in one way or another with this problem. But the report of the Free World Committee itself is rather a disappointing document. This does not mean, however, that the committee, and the Congress as a whole, did not recognize that possibly the most crucial problem confronting the Atlantic Community over the next decade was that of establishing a mutually satisfactory relationship with the new and emerging countries. Speaker after speaker—from the Archbishop of York at the first plenary session to Mr. Gaitskell and Mr. Macmillan at the special plenary session—emphasized this. It was also clear to the Congress that not only was it necessary for the Atlantic countries to adopt the right political stance toward the newer countries, based on a frank and full recognition of their right to political independence, but also that this political independence would be an empty concept unless it was based on solid economic foundations. Because of this massive and sustained aid from the West would be needed over a long period.

There was a general feeling that such aid should be given on its own merits, since we in the Atlantic Community have "a duty to help less-developed countries to help themselves." But there were many who also felt that a massive effort was required to offset the Soviet challenge in this field, given the fact that the new countries are a primary target for Communist penetration.

There was also widespread agreement as to the forms which aid should take. First, the need for a steady, and probably increased, flow of long term capital to stimulate capital investment and growth. (It was recognized that, of necessity, the bulk of this investment would be public investment but there was a strong feeling that steps to stimulate private investment in developing countries should be taken.) Second, expanded technical assistance programs. Third, as Mr. Cahan, the Deputy Secretary General of OEEC put it in a notable speech: "It is very necessary, if we are honestly to develop these underdeveloped countries, to give them an opportunity to sell what they can best produce in our markets. There is no other long-term solution. It is no use pouring money in, it is no use giving them technical help if the resultant product simply has to be burnt or thrown away. I think in this—as perhaps in other things—it is worth looking at what our Russian friends are doing. Our Russian friends, when they give technical assistance and financial aid, do not stop there. This is a very important difference between what the Russians have done and what we have done. The Russians are prepared to take the exportable product of the countries which they wish to help and to take them at almost any price, any quantity and any quality. I do not suggest that we go as far as that, but I think we ought to do a little better than we do now."

There was also widespread agreement that in a program of this nature there was a clear need for greater coordination between the NATO members. Such coordination, it was felt, could well be advanced through quiet consultation within NATO, although there was little support for the idea of converting NATO itself into an agency for channeling aid to the underdeveloped countries. There was less unanimity over the need for new agencies for aid, and if so, what form such agencies should take. Some felt that the proposed new organization for Atlantic Economic Cooperation should play a role in this field. Others that private participation in aid programs should be stimulated by the creation of a World Development Corporation. Others again (i.e. the Free World Committee, in a resolution adopted by the Congress) that an International Development Association should be established, broader than and independent of NATO, open to all nations and working "either directly or through existing international and regional associations, including the World Bank and other organs of the United Nations." (It was not clear whether this agency should be designed to encourage the provision of long-term, low-interest loans, as a counterpart to the World Bank's "bankable" loans, or whether it would be wider in scope.) And a strong minority felt that, although increased aid was needed, it should be channeled through existing institutions, especially those linked with the United Nations.

The Communist Bloc Committee reached, with little difficulty, unanimity in their diagnosis of the scope of the Communist challenge. And they were unanimous, too, in their proposals. On the political front, they called for perseverance in negotiations with the governments of the Communist countries, for an increase in East-West contacts and exchanges, and for a proclamation by the Atlantic Powers of their continued determination to do all within their power by peaceful means to enable the satellite countries to achieve self-determination. They pointed out the inadequacy of the West's response to Communist ideological warfare and called for more effective measures, within the NATO framework, for matching it, and also for the creation of an international, unofficial, organization designed to serve the same end throughout the world. Finally, on the economic side, the committee proposed that, to counter the growing Communist economic offensive, a NATO Economic Council should be created as a policymaking, planning, and coordinating body.

What emerges from this plethora of paper—of reports and resolutions and recommendations? It is sometimes a little difficult to see the wood for the trees, and others who have fought their way through the paper jungle of this Congress may have somewhat different ideas as to what constituted the real hard core of the Congress. But, as I see it, these were the four main underlying themes:

(a) The first was the universal recognition of the continuing need for the alliance, coupled with the conviction that if the alliance were to endure, let alone prosper, the concept of the interdependence of the countries of the Atlantic Community must somehow be given real flesh and bones. But beyond that there was divergence. On the one side there are the adventurous spirits who feel that the time is now ripe to give the embryo Atlantic Community an institutional framework, moving toward some form of Federal structure. And they have influential support—M. Spaak, for example, came down personally in favor of the principle of Atlantic institutions taking decisions by a weighted majority vote. On the other side are the more cautious spirits—with whom, I am sure, the majority of our governments are at present in sympathy—who feel that progress toward the greater integration of the Atlantic Community must be cautious and pragmatic and functional. For the present, a meeting ground was found in the recommendations of the Political Committee (which may, of course, lead to a meeting of 100 wise men next spring) and in their expressed belief that the demands of the alliance and our times make some further erosion of our national sovereignties inevitable.

(b) The second theme, to my mind, was the very evident dissatisfaction of the Congress with many aspects of NATO defense—in particular the failure to achieve the force targets laid down in MC–70, to weakness of political control over the "philosophy and practice of war," the failure to achieve any rational interdependence in arms research and production, the holes in the European air defense system, the ramshackle air and maritime command structures, and the weakness of our antisubmarine defenses. The support which the Congress gave to Mr. George Brown's strong words on the subject was significant. It is perhaps more doubtful if significant action by governments will necessarily result.

(c) The third theme (and perhaps the most important) was the universal recognition that the Atlantic Community must be outward looking, that it cannot, and should not, constitute itself a self-regarding club of the rich, white, free nations. With this went a recognition that our countries must speedily create a clear, consistent, and long-term policy toward those countries which lie outside both our community and the Communist bloc, and that such a policy will call for a long-sustained effort on all our parts. But there was some considerable wooliness as to how such a policy should be

applied and how best the efforts of the member countries should be concerted.

(d) Finally, there was an equally clear recognition that all our efforts would be stultified unless our community was able, in concert, to achieve something which has so far eluded it—the combination of sustained economic growth without inflation. With this went a recognition that, possibly, new economic institutions, and, most certainly, a more effective coordination of our economic policies and a greater awareness by our peoples of the issues at stake were essential.

But, all said and done, it can still be asserted that the results of the Congress were rather pedestrian and unimaginative, that the delegates took refuge behind their proposals for a mass of new institutions, and that the Congress, unlike its predecessor at The Hague, sounded no brave, new note. All this is true in part. But the Congress was concerned with the affairs of a going concern—the Atlantic Community—and the affairs of going concerns are usually rather terre-à-terre. True, the delegates did suggest rather a bellyful of new institutions. But, if they had not, they would have been accused of lack of imagination and there are admitted gaps, which need filling, in the economic structure of the free world. It is also true that the Congress sounded no clarion call for action. Partly this is the fault of an unnecessarily mute declaration. But it is also an echo of the times in which we in the West live. If we are honest we must admit that leadership in the West is lacking—and lacking most where it is most needed—in and from the United States. It would have been to ask too much of a Congress of this nature to bridge these gaps in leadership. But it may have pointed a way.

Ultimately, of course, this Congress will not be judged by the paper it produced. A stirring declaration may be a good thing. So are imaginative and practical proposals. But the followthrough is the thing. What is really significant is the seriousness of purpose of the delegates and their determination, on their return home, really to push with their own peoples and with the appropriate national and international organizations and with their governments the proposals which they have backed on paper. This is the yardstick by which this Congress will in the end be judged.

The Captive Peoples Pray for Help

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. LANE. Mr. Speaker, on July 17, the White House issued a proclamation designating the third week in July as Captive Nations Week, and urging the people of the United States of America to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations of the peoples of these captive nations.

This was an inspiring declaration that raised the hopes of the oppressed peoples within the Communist empire.

Yet, within 2½ weeks, there occurred the most amazing reversal of policy in American history.

On August 3, the White House announced that it had invited Soviet Dictator Khrushchev to visit the United States, and to enjoy the hospitality of the American people.

And the captive nations were plunged into despair.

Would the United States and Soviet Russia agree to noninterference in one another's domestic affairs?

If so, that would mean the end of hope for millions in the captive countries.

What had hapepned to the United States which, from the days when it had won its own independence, had been loyal to the principle of liberty with justice for all?

Who can trust the United States after "Desecration Day," when the officials of the U.S. Government welcome the Red dictator who is responsible for so much of the world's misery?

The victims of Russian communism pray, not in the churches that have been closed to them by atheistic despots, but from behind the locked doors of their homes.

Praying that the unpredictable behavior of the U.S. Government does not represent the freedom-loving American people who would never compromise with evil.

Praying that the voice of the American people will be heard above the vague and vacillating pronouncements of its Government.

"Dear God, we know that the American people are not afraid of the truth. We know that they do not worship materialism, closing their hearts to the cry of humanity. We have seen their courage and their generous spirit. From our own relatives who left our homeland to seek a better life in America and found it there, we have heard how they live up to the responsibilities of freedom.

"Washington, Lincoln, Wilson, Roosevelt, these were the leaders who spoke up for human rights.

"But where is the conscience of America, now, when the Government opens its arms not only to our oppressor, but to the Red tyrant who is also determined to destroy free America?

"The policy of the American Government cannot represent the true beliefs of the American people because they would not change so overnight.

"Father in Heaven, intercede for us.

"Help our pleas to break through the rigid barriers which enslave us, so that they may reach and touch the conscience of the American people.

"We do not ask them for the charity of material things, because we know they would be quick to give it.

"We do not ask them to risk their security and their lives to effect our liberation.

"But we do ask for their moral support, which is the soul of America and its greatest strength.

"When Khrushchev, the master of deceit is visited upon the American people, we ask them to protest in an orderly manner.

"So that firmness in the right as God gives us to see the right will prevail over the counsels of those who seek an accommodation with tyranny.

"When all seems lost, we have faith in the power of prayer.

"Help us to reach the hearts of a great, free people so that they may speak up for liberty with justice, and repudiate the shameful spectacle of 'Desecration Day' that is being thrust upon them.

"We pray for universal freedom under God."

There's a Lack of Interest in the Interest Problem

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. ROBISON. Mr. Speaker, the lack of action by this Congress on the extremely important problem of Treasury bond interest rates is a disgrace. Without a realistic increase in interest rates the Treasury will be put in a nearly impossible debt-management position and the blame will lie squarely with the Congress.

I include three opinions highlighting the great need for action. One is a column by the objective and nonpartisan financial writer, Sylvia Porter, published in the Washington Evening Star of August 26, 1959, an editorial from the New York Times of August 27, and an editorial from the Wall Street Journal of August 27.

[From the Washington Evening Star, Aug. 26, 1959]

WARNING TO CONGRESS ON BONDS

(By Sylvia Porter)

Warning to the 86th Congress: Before you adjourn, pass a law permitting the Treasury to raise the interest rate paid U.S. savings bonds holders or you will:

Invite an avalanche of cash-ins of savings bonds by little investors who have bought these bonds with the idea of keeping them to maturity, but who are now aware that the top rate they can earn on the bonds is far below what they can get on a deposit in most savings banks;

Drastically curtail the sale of new bonds to wage and salary earners who know that the pay scale on the bonds has become glaringly out of line with the general level of interest rates;

Risk forcing the Treasury to borrow cash via expensive short-term loans in order to get the money needed to pay off bonds presented for redemption by disillusioned holders;

Give corporations which never liked the job of maintaining employee payroll savings programs a perfect excuse to cut off the program;

Undermine the reputation of the Treasury among financiers the world over who are fully informed about our debt management problems.

FORTY MILLION HOLDERS

Over 40 million Americans now own more than $42 billion of these riskless, nonmarketable bonds which pay 3 percent interest if held for 3 years, 3¼ percent interest if held to maturity in 8 years, 11 months. Over

8 million are buying them under payroll savings plans.

The program has been the most successful of all the Treasury's debt management operations since World War II. But it has become increasingly endangered in recent years as interest rates have climbed across the board and the pay scale on savings bonds has become progressively less attractive. Last month redemptions of the bonds totaled $507 million against new sales of only $350 million. For 12 months redemptions have been topping sales—meaning the program has been going in reverse.

In recognition of the interest rate realities, the Treasury in early June asked Congress to permit it to boost the pay scale so the bonds would pay 3¾ percent if held to maturity. The request was included in a package also asking that the Treasury be allowed to sell new marketable bonds with coupons above the legal ceiling of 4¼ percent.

OPPOSITION INTENSE

The opposition to the removal of the 4¼ percent ceiling has been intense—reflecting a combination of honest doubt about the economic effect of rising interest rates and pure politics—and Congress has turned down this request. As a result, the Treasury will have to do all its multibillion dollar borrowing in coming months through new short-term loans. That will be expensive, fundamentally unsound debt management—but apparently that's the way it will have to be.

Despite its "No" on removal of the marketable bond ceiling, though, Congress still can pass a separate bill permitting the savings bond rate increase. The Treasury doesn't want to settle for this, but it will to avert a flood of cash-ins and keep the program alive.

If Congress does this? Then a recommendation of the bonds for basic savings nest-eggs again will be justified.

If Congress does not? Then no one can forecast what might happen. A calling of a special session might be necessary to rescue the program from slaughter.

[From the New York Times, Aug. 27, 1959]

THE INTEREST CEILING ISSUE

President Eisenhower at his news conference Tuesday renewed, and in the most emphatic manner, his request first made to Congress on June 8 that the existing ceilings applying to interest rates on Government bonds be removed or liberalized.

The ceiling on marketable securities is 4¼ percent, and applies to issues with maturities of 5 years or longer. This legislation is in the nature of an anachronistic accident. It has no logical relationship to present conditions in the bond market. It was enacted in 1918 in connection with the Second Liberty Loan financing of World War I, and was based on conditions then contemporary but today purely history.

What makes this legislation imperative is that the Treasury must raise vast sums in the months ahead in order (1) to fund a constant procession of maturing obligations, and (2) to raise new money to pay for the appropriations voted by Congress and not covered by taxes. As much as possible of such financing should take the form of securities designed to appeal to savers since, when money is raised through savings, it has no inflationary effects. In practice this means that, broadly speaking, it should be raised through the sale of long-term securities. But with business in a boom phase at present, the demands of borrowers of all categories in the money market are extremely heavy. These demands, competing for a comparatively limited supply of funds, have driven interest rates sharply upward. With the market rate on comparatively long issues above 4¼ percent the Treasury finds itself in a position in which it has no alternative but to raise its funds through the sale of short-term paper, a procedure inflationary in its implications because it involves the creation of bank credit or expansion of the money supply.

The present ceiling on savings bonds, from which the President has also asked relief, is roughly 3¼ percent, a rate that makes it impossible for the Government to compete actively with other available outlets for savings. This is not only a grave injustice to the 40 million patriotic holders of savings bonds in the Nation, but it is a potential threat of the most serious kind to the whole Government savings bond program, itself a major bulwark against monetary inflation.

Savings bonds outstanding total $50.5 billion. That figure exceeds by $2 billion the total of all publicly held marketable issues of the U.S. Treasury with maturities of 5 years or longer. Every dollar that is withdrawn by a savings bond holder is a dollar that the Treasury will have to replace, and that, so long as present interest limitations remain in effect, it will have to replace by raising the money through methods highly inflationary.

[From the Wall Street Journal, Aug. 27, 1959]

THE WAYS OF FOLLY

Figures may be dull things, but as every family man knows they sometimes tell grim stories.

The other day the Treasury borrowed some money to tide it over for the next 13 weeks. For this short-term loan the Treasury had to pay 3.8 percent interest, the highest it has paid since that dark March of 1933 when all the banks were closed.

At the same time, the Treasury issued some I O U's for 26 weeks, and for this loan it had to pay 4.2 percent interest, the highest ever for this series of Government bills.

It is against the background of these hard figures that the country must view the renewed appeal by President Eisenhower for congressional action which will permit the Treasury to borrow more on long-term bonds. This it cannot now do because of the unrealistic restrictions on the interest rate the Treasury is permitted to pay on such bonds.

The story that is told in these figures is one of the Government of the United States, seemingly the richest in the world, getting itself into a financial fix as senseless and as full of folly as the most prodigal of its citizens who cannot manage to live from paycheck to paycheck and finds himself slipping week by week into a deeper financial pit.

Consider:

Within the next 12 months the Government must borrow at least $85 billion. It cannot borrow this with long-term bonds because the law says it mustn't pay more than 4¼ percent whereas the going market rate is much higher than this. So it must try to borrow $85 million by juggling 13-week bills or 26-week bills or 12-month notes, coming back over and over again like the improvident householder, hat in hand, to the finance company.

Now, it is true—and this is the only thing some Congressmen can see—that the interest paid on long-term loans is usually higher than that on short-term loans; a good borrower can normally get money from the bank cheaper on a 90-day note than on a 20-year mortgage. Hence the reluctance of Congress to permit the Government to pay more than 4¼ percent in order to borrow on long-term bonds.

But the Government of the United States is dealing in mammoth figures. The Government's demand for money to support a debt now approaching $290 billion is the major factor in pushing all interest rates upward. They rise not because the President or the Secretary of the Treasury or anyone else wishes it but from inexorable pressure.

What is happening now is that all this demand—the whole $85 billion that must be borrowed this year alone—is concentrated on the available supply of money for short-term loans. Thus, from the same inexorable pressure the interest rates on short-term money as well as long-term money are climbing sharply.

Thus, it is not inconceivable—indeed, it is likely—that if the Treasury is forced to do all its financing in this fashion then the short-term interest rate will itself rise well above 4¼ percent, thus defeating the purpose of interest ceilings anyway. This prospect is sped when Congress serves notice it will not change the law and in effect announces that all future borrowing will perforce be for short-term money.

One consequence of all this, as the President noted, is that the heavy short-term borrowing increases the inflationary pressure that helped force interest rates up in the first place. It does this because holders can treat a 13-week Treasury bill as almost the equivalent of cash and because when commercial banks acquire these short-term securities the effect is an increase in the total money supply.

Another consequence of the reliance on short-term borrowing is that it makes the problem feed upon itself. People are cashing in their savings bonds at a rising rate, and the need for money to repay them increases the size of the demand by the Treasuary for short-term loans. So, too, does the fact that old maturing bonds cannot be refinanced with new bonds. The $85 billion the Treasury must juggle now will grow bigger by the passing months.

And a third consequence is that it keeps the Government of the United States, just like that improvident householder, at the mercy of fortune. Like any man borrowing from debt to debt, the Treasury faces the fact that someday—and that someday may be soon—it will not find enough real money in the marketplace to meet its needs. When that happens the Government will have no recourse but to manufacture money, to run the printing presses, in a desperate and surely futile effort to disguise from the world what is happening.

Frankness must acknowledge that this prospect is not wholly banished by the President's proposal to let the Government put a larger part of its debt into long-term bonds instead of constantly recurring I O U's. For the root of the problem is still the size of the spending.

But every man knows there are sensible and foolish ways of managing the burden of debt. And only an irresponsible Congress will force the Nation of which it is caretaker further along the ways of folly.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. ANFUSO. Mr. Speaker, before leaving on an official trip to London where I am scheduled to address the Congress of the International Astronautical Federation early in September in my capacity as chairman of the Subcom-

mittee on International Cooperation and Security of the House Committee on Science and Astronautics, I want to reiterate my views on labor legislation as considered by the House.

During the discussions on the floor of the House, I stated that it was most unfair to strike at legitimate unionism and to foreclose the rights of working people which required many years of hard work and determination to achieve. It was my feeling that enactment of the Landrum-Griffin bill would be a decided step in the direction of outlawing or controlling labor because many of labor's rights are denied in that bill. For that reason I voted against the Landrum-Griffin bill.

It was also my view that political motives were behind the effort to adopt the Landrum-Griffin bill, and I could not see the logic or reasoning in making a political football out of the bread-and-butter problem of millions of Americans.

I also opposed the bill because it was a piece of legislation which struck blindly at labor, the guilty and the innocent alike, the racketeers and those seeking to eliminate racketeering. This is a wrong approach. We must not throw all of labor into the discard or cast shadows of doubt upon all of organized labor. The racketeers are a small percent of organized labor and they must be weeded out.

The Landrum-Griffin bill, for example, outlaws all types of picketing, except where a plant or factory is on strike. Organized picketing has been established and recognized over the years as a peaceful and democratic method. By eliminating or outlawing such picketing we actually empower employers to exploit those working for them, paying them low wages, and forcing them to work longer hours. The only type of picketing I would oppose would be in instances where it is used as blackmail or abused for racketeering purposes.

Thus, the Landrum-Griffin bill affords no protection for the working people, but actually opens up possibilities for their exploitation and the denial of their rights which they have gained over the past half century or more. It will only help to depress the working conditions and the standard of living of the laboring masses of this country. In so doing, we shall not bring about a higher standard of living, but we will lower it for huge segments of our population and this will have a tremendous effect on our whole economy. When labor will not be able to buy the things we produce, when its purchasing power will drop, the whole Nation will feel it.

The Landrum-Griffin bill also bans the so-called "hot cargo" provisions, which is nothing more than a device to maintain nonunion conditions. This is an unfair labor practice for it denies unions the right and the opportunity to protect themselves against ruthless employers.

Finally, the Landrum-Griffin bill is hurting legitimate union organization which is seeking to establish the same pay for the same work for all working people in the country.

I hope and trust that when the conference report on the labor bill is brought back for final consideration by both Houses of Congress, all or most of these objectionable features will have been deleted or so amended as not to hurt legitimate labor unions. We must not turn the clock back. The people of America want to see reform in the ranks of labor, not revenge or the destruction of labor's achievements.

Merit Appointment

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DULSKI. Mr. Speaker, the President has acted wisely in selecting John O. Henderson, of Buffalo, a U.S. attorney since 1953, for the vacancy as Federal judge in the western New York district. This is a merit appointment which has the gratifying support of our entire community.

John Henderson is a dedicated public servant who has acted in the highest tradition of his profession and fully warrants the promotion to the Federal bench.

This is the third time that President Eisenhower has nominated him for Federal office. The Senate twice has confirmed him for U.S. attorney and I am hopeful that the Senate again will act promptly on his nomination.

The Buffalo area recognizes this as an excellent appointment as is well stated in an editorial appearing in the Buffalo Evening News, Buffalo, N.Y., on August 24, 1959, as follows:

MERIT APPOINTMENT

Although it was preceded by altogether too much high-powered political maneuvering among New York State Republicans, President Eisenhower's nomination of U.S. Attorney John O. Henderson to a lifetime seat as a U.S. district judge is a clear-cut recognition of merit and experience. It is, in the best sense, a promotion, and we hope that the Senate will so regard it in confirming the appointment before it adjourns next month.

Mr. Henderson has given outstanding service as Federal district attorney throughout the Eisenhower years. His prosecutions of income tax violations have been handled without fear or favor, in the highest traditions of the Justice Department. He has had other exceedingly complex matters before him, not the least being the still-pending Buffalo paving scandal with its tax-evasion angles complicated by a prolonged grand jury inquiry into the possible antitrust law violations.

In fact, this heavy run of pending business in the U.S. attorney's office, which Mr. Henderson will now have to turn over to others as he steps up to the Federal bench, makes a careful and prompt selection of his successor almost as important as was the filling of the judgeship vacancy. We hope that the President will lose no time in getting this office as capably filled as it has been—and that the Senate Judiciary Committee, which has been stalling all too many judicial appointments, will recognize the nomination of Mr. Henderson to succeed the late Judge Justin C. Morgan as so clearly meritorious and nonpolitical that it will recommend swift and unanimous Senate confirmation.

New York Philharmonic Symphony Orchestra in Russia

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. LINDSAY. Mr. Speaker, among the many things of which the 17th District of New York is justly proud, the New York Philharmonic Symphony Orchestra has always been one of the first. We in New York are especially proud of this orchestra and its talented conductor for the splendid performances they have given on their current international tour. The excellence of this orchestra is another demonstration to peoples of the world, and in this instance to those behind the Iron Curtain, that America is continuing to provide cultural leadership.

I should like to include at this point an editorial appearing in this morning's New York Herald Tribune:

MR. BERNSTEIN CONQUERS MOSCOW

The acclaim which has greeted Leonard Bernstein and the New York Philharmonic in Moscow is gratifying, but not particularly surprising. Without exception, every American musician visiting the Soviet Union has been received enthusiastically—and, for that matter, Russia's musical ambassadors have done right well here, too.

But there are extraordinary aspects to the Bernstein-Philharmonic success story. Mr. Bernstein, whose parents were born in Russia, is himself American-born, bred, educated and trained. He is the most eloquent and exciting spokesman American music has had in many years. And his current excursion to Russia is more than just a tour, it's an education—for the Russians, that is.

For in Moscow on Tuesday night Mr. Bernstein gave his Russian listeners an opportunity they have not had for a generation. He and the Philharmonic played Igor Stravinsky's "Le Sacre du Printemps"—music of worldwide fame since 1913, but proscribed by Soviet cultural censors as "bourgeois" and "decadent." Stravinsky, who was born in Russia, hasn't been back there since before World War I, and has often expressed his dislike for all things Soviet, including music. But the Moscow audience greeted Mr. Bernstein's performance of the Stravinsky work with shouts of acclaim, and it's just possible that one of these days a Soviet orchestra may suddenly be playing it.

In any case, Mr. Bernstein has certainly given Moscow something to remember. Some people—Russians no less than any others—judge a civilization by the way it makes autos; others by the way it makes music. In regard to the latter, the Philharmonic concerts have been an eye-opening experience for the Russians. And it's ironical that part of the revelation should

stem from a composer of their own blood, whose art they have been deprived of by their cultural commissars.

Resolution by Junior Chamber of Commerce on Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DULSKI. Mr. Speaker, our great city of Buffalo was host to the U.S. Junior Chamber of Commerce when it held its national convention there in June of this year.

As a Representative from Buffalo, and a member of the Committee on Veterans' Affairs, I would like to include, under leave to extend my remarks in the RECORD, a resolution adopted by the junior chamber of commerce at this convention concerning veterans' benefits:

Whereas the U.S. Junior Chamber of Commerce has, in convention assembled, passed a resolution endorsing benefits to veterans, their families and dependents for service-incurred disability or death; and

Whereas the U.S. Junior Chamber of Commerce has, in convention assembled, opposed by resolution payment to veterans of pension benefits based solely on previous military service and pensions or other benefits based on non-service-connected disability; and

Whereas the nature and extent of the Government's obligations to war veterans should be clearly defined: Now, therefore, be it

Resolved, That the U.S. Junior Chamber of Commerce, a vast majority of whose members are veterans, through its delegates in convention assembled in Buffalo, N.Y., on June 17, 1959, commends to the leadership of this country the following principles as a guide for establishing current and future programs:

1. Military service is an obligation of citizenship. It should not in itself be considered a basis for special privilege and benefits.

2. Veterans' benefits are a means of equalizing significant sacrifices that may result directly from military service.

3. The Government should maintain a positive policy of meeting fully and promptly the needs of veterans resulting from service.

4. Service-connected death or disability benefits should be accorded the highest priority. Readjustment needs are almost equal in importance. Veterans' non-service-connected needs should be met when possible through programs for the general population; the non-service-connected veterans' programs retained only to meet minimum needs not covered by general programs.

5. Veterans with equal handicaps should have equal treatment.

6. Benefits for veterans with similar needs should, in most programs, be uniform throughout the country.

7. We must bear our own responsibilities. We should not burden a future generation with obligations we ourselves are not willing to shoulder.

8. We should keep the whole range of our national needs in perspective so our veterans' programs will be in balance with each other and with other general programs.

9. Our national veterans' policy should be developed in the open forum of public discussion. The people should be given complete factual information on the economic and social status of veterans and their needs; be it further

Resolved, That the U.S. Junior Chamber of Commerce opposes any legislation and programs which violate the principles previously stated herein; be it further

Resolved, That a copy of this resolution be forwarded to each member of the Congress of the United States.

Yardstick of Progress

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. INOUYE. Mr. Speaker, Hawaii has been justly famed as a land where all men, regardless of their ethnic origin, freely intermingle in a cosmopolitan society. The vigorous Americanism of Hawaii's people is best attested by your endorsement. "The people of Hawaii deserve statehood. They will be an asset to the Nation."

To the native Polynesian, whose ancestors inhabited Hawaii, must go the credit for this harmony between the races, for the native Polynesian welcomed all, regardless of their race, color, or creed. All of Hawaii's people have inherited this spirit of "Aloha."

It should be understood that we are not perfect. Since our society is composed of humans, we, of Hawaii, err as do other humans. Conscious of the fact that our social failures in this regard can only be corrected if identified, Hawaii encourages and welcomes objective appraisals on frequent intervals.

In this connection, I include an editorial from the Honolulu Advertiser, of August 22, 1959, which comments rather well upon a recent appraisal and reports the findings, which, in my opinion, will be of interest to the Members of this Congress.

YARDSTICK OF PROGRESS

During the past several days, and concluding today the Advertiser has reprinted the full text of a report on island race relations prepared by the social research laboratory at the University of Hawaii.

The report is a serious inquiry into the claim that in Hawaii racial equality is an accomplished fact.

While this is not yet entirely true, the report says, great progress has been and is being made.

Briefly, these are the major conclusions:

1. There is a strong sentiment for racial equality. The postwar decade saw a further closing of the gap between actual practice and the unwritten code.

2. Before the war a disproportionate number of Caucasians occupied preferred jobs in business and the professions. While they still enjoy an advantage in some areas, the Caucasians are being overtaken rapidly by non-Caucasians. Many of the latter now sit on the boards of major corporations, are preferred for key positions by mainland firms opening island branches.

3. The postwar rise of organized labor has assisted greatly in spreading more widely the fruits of Hawaii's stepped-up economic activity. The labor movement itself is surprisingly interracial.

4. Where Caucasians and Hawaiians formerly dominated the government, now the ethnic composition of the territorial and county offices tends to approximate that of the territorial population. Representation on appointed boards is decidedly more equitable (more) on the basis of personal merit and party affiliation.

5. There is strikingly little interest in fair employment practices legislation. The general public is either unaware of any serious problem of racial discrimination in employment, or there is general distrust of legal methods for correcting such discrimination.

6. Undoubtedly there are violations of the unwritten code, but they become more difficult to verify, the evidence is far less convincing than formerly.

Meantime, intermarriage and fraternization on the social and civic levels are increasing.

The report concludes:

"Thus in one area after another • • • Hawaii's professed ideals of racial equality are being translated into reality."

The report has two great values. It shows us where work is yet to be done in tearing down racial barriers so that we may in truth one day square practice with our ideals. And it encourages us for this work by highlighting the remarkable progress we already have made.

Restrictions on Federal Interest

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. PELLY. Mr. Speaker, President Eisenhower has sent up a message requesting legislation to remove the limitation which the law now imposes on the rate of interest at which the Federal Government is allowed to borrow money for more than 5 years.

If such legislation is not enacted, the Democratic leadership of Congress must take full responsibility for their failure to heed the President.

The Treasury can pay whatever rates are required by security market conditions for short-term loans, but the 4¼ percent ceiling on 5 year or more maturities handcuffs the Treasury in its debt management responsibility.

Seventy-six billion dollars' worth of Federal securities will come due within the next year. Unless the Government is able to sell long-term bonds, the under 1 year Federal debt will climb to $100 billion. No responsible official would allow such a huge short-term liability to be created which in a crisis the nation might be asked to meet. It is a dangerous situation and fiscally irresponsible for such a condition to be forced on the Treasury. Congress should face up immediately to the debt problem.

mittee on International Cooperation and Security of the House Committee on Science and Astronautics, I want to reiterate my views on labor legislation as considered by the House.

During the discussions on the floor of the House, I stated that it was most unfair to strike at legitimate unionism and to foreclose the rights of working people which required many years of hard work and determination to achieve. It was my feeling that enactment of the Landrum-Griffin bill would be a decided step in the direction of outlawing or controlling labor because many of labor's rights are denied in that bill. For that reason I voted against the Landrum-Griffin bill.

It was also my view that political motives were behind the effort to adopt the Landrum-Griffin bill, and I could not see the logic or reasoning in making a political football out of the bread-and-butter problem of millions of Americans.

I also opposed the bill because it was a piece of legislation which struck blindly at labor, the guilty and the innocent alike, the racketeers and those seeking to eliminate racketeering. This is a wrong approach. We must not throw all of labor into the discard or cast shadows of doubt upon all of organized labor. The racketeers are a small percent of organized labor and they must be weeded out.

The Landrum-Griffin bill, for example, outlaws all types of picketing, except where a plant or factory is on strike. Organized picketing has been established and recognized over the years as a peaceful and democratic method. By eliminating or outlawing such picketing we actually empower employers to exploit those working for them, paying them low wages, and forcing them to work longer hours. The only type of picketing I would oppose would be in instances where it is used as blackmail or abused for racketeering purposes.

Thus, the Landrum-Griffin bill affords no protection for the working people, but actually opens up possibilities for their exploitation and the denial of their rights which they have gained over the past half century or more. It will only help to depress the working conditions and the standard of living of the laboring masses of this country. In so doing, we shall not bring about a higher standard of living, but we will lower it for huge segments of our population and this will have a tremendous effect on our whole economy. When labor will not be able to buy the things we produce, when its purchasing power will drop, the whole Nation will feel it.

The Landrum-Griffin bill also bans the so-called "hot cargo" provisions, which is nothing more than a device to maintain nonunion conditions. This is an unfair labor practice for it denies unions the right and the opportunity to protect themselves against ruthless employers.

Finally, the Landrum-Griffin bill is hurting legitimate union organization which is seeking to establish the same pay for the same work for all working people in the country.

I hope and trust that when the conference report on the labor bill is brought back for final consideration by both Houses of Congress, all or most of these objectionable features will have been deleted or so amended as not to hurt legitimate labor unions. We must not turn the clock back. The people of America want to see reform in the ranks of labor, not revenge or the destruction of labor's achievements.

Merit Appointment

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DULSKI. Mr. Speaker, the President has acted wisely in selecting John O. Henderson, of Buffalo, a U.S. attorney since 1953, for the vacancy as Federal judge in the western New York district. This is a merit appointment which has the gratifying support of our entire community.

John Henderson is a dedicated public servant who has acted in the highest tradition of his profession and fully warrants the promotion to the Federal bench.

This is the third time that President Eisenhower has nominated him for Federal office. The Senate twice has confirmed him for U.S. attorney and I am hopeful that the Senate again will act promptly on his nomination.

The Buffalo area recognizes this as an excellent appointment as is well stated in an editorial appearing in the Buffalo Evening News, Buffalo, N.Y., on August 24, 1959, as follows:

MERIT APPOINTMENT

Although it was preceded by altogether too much high-powered political maneuvering among New York State Republicans, President Eisenhower's nomination of U.S. Attorney John O. Henderson to a lifetime seat as a U.S. district judge is a clear-cut recognition of merit and experience. It is, in the best sense, a promotion, and we hope that the Senate will so regard it in confirming the appointment before it adjourns next month.

Mr. Henderson has given outstanding service as Federal district attorney throughout the Eisenhower years. His prosecutions of income tax violations have been handled without fear or favor, in the highest traditions of the Justice Department. Resolved, That the U.S. Junior Chamber of Commerce opposes any legislation and programs which violate the principles previously stated herein; be it further

Resolved, That a copy of this resolution be forwarded to each member of the Congress of the United States.

Yardstick of Progress

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. INOUYE. Mr. Speaker, Hawaii has been justly famed as a land where all men, regardless of their ethnic origin, freely intermingle in a cosmopolitan society. The vigorous Americanism of Hawaii's people is best attested by your endorsement. "The people of Hawaii deserve statehood. They will be an asset to the Nation."

To the native Polynesian, whose ancestors inhabited Hawaii, must go the credit for this harmony between the races, for the native Polynesian welcomed all, regardless of their race, color, or creed. All of Hawaii's people have inherited this spirit of "Aloha."

It should be understood that we are not perfect. Since our society is composed of humans, we, of Hawaii, err as do other humans. Conscious of the fact that our social failures in this regard can only be corrected if identified, Hawaii encourages and welcomes objective appraisals on frequent intervals.

In this connection, I include an editorial from the Honolulu Advertiser, of August 22, 1959, which comments rather well upon a recent appraisal and reports the findings, which, in my opinion, will be of interest to the Members of this Congress.

YARDSTICK OF PROGRESS

During the past several days, and concluding today the Advertiser has reprinted the full text of a report on island race relations prepared by the social research laboratory at the University of Hawaii.

The report is a serious inquiry into the claim that in Hawaii racial equality is an accomplished fact.

While this is not yet entirely true, the report says, great progress has been and is being made.

Briefly, these are the major conclusions:

1. There is a strong sentiment for racial equality. The postwar decade saw a further closing of the gap between actual practice and the unwritten code.

2. Before the war a disproportionate number of Caucasians occupied preferred jobs in business and the professions. While they still enjoy an advantage in some areas, the Caucasians are being overtaken rapidly by non-Caucasians. Many of the latter now sit on the boards of major corporations, are preferred for key positions by mainland firms opening island branches.

3. The postwar rise of organized labor has assisted greatly in spreading more widely the fruits of Hawaii's stepped-up economic activity. The labor movement itself is surprisingly interracial.

4. Where Caucasians and Hawaiians formerly dominated the government, now the ethnic composition of the territorial and county offices tends to approximate that of the territorial population. Representation on appointed boards is decidedly more equitable (more) on the basis of personal merit and party affiliation.

5. There is strikingly little interest in fair employment practices legislation. The general public is either unaware of any serious problem of racial discrimination in employment, or there is general distrust of legal methods for correcting such discrimination.

6. Undoubtedly there are violations of the unwritten code, but they become more difficult to verify, the evidence is far less convincing than formerly.

Meantime, intermarriage and fraternization on the social and civic levels are increasing.

The report concludes:

"Thus in one area after another * * * Hawaii's professed ideals of racial equality are being translated into reality."

The report has two great values. It shows us where work is yet to be done in tearing down racial barriers so that we may in truth one day square practice with our ideals. And it encourages us for this work by highlighting the remarkable progress we already have made.

Restrictions on Federal Interest

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. PELLY. Mr. Speaker, President Eisenhower has sent up a message requesting legislation to remove the limitation which the law now imposes on the rate of interest at which the Federal Government is allowed to borrow money for more than 5 years.

If such legislation is not enacted, the Democratic leadership of Congress must take full responsibility for their failure to heed the President.

The Treasury can pay whatever rates are required by security market conditions for short-term loans, but the 4¼ percent ceiling on 5 year or more maturities handcuffs the Treasury in its debt management responsibility.

Seventy-six billion dollars' worth of Federal securities will come due within the next year. Unless the Government is able to sell long-term bonds, the under 1 year Federal debt will climb to $100 billion. No responsible official would allow such a huge short-term liability to be created which in a crisis the nation might be asked to meet. It is a dangerous situation and fiscally irresponsible for such a condition to be forced on the Treasury. Congress should face up immediately to the debt problem.

It is particularly desirable to adjust the rate on savings bonds. This form of government loan is anti-inflationary and the patriotic citizens who invest their savings in this security in all fairness should be paid a rate of interest equal to that paid by private savings banks.

Mr. Speaker, I realize the political implications, but here is a case where President Eisenhower says the administration is willing to assume full responsibility for managing the Government debt if allowed to do so free from artificial restrictions.

Operation Bootstrap—Reservation Style

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial from the McLaughlin Messenger, McLaughlin, S. Dak., on my program, "Operation Bootstrap—Reservation Style." The editorial, written by Merle E. Lofgren, reads as follows:

Uncle Sam is currently engaged in projects all over the world helping underdeveloped areas. We are spending millions of dollars to start factories, build irrigation projects and subsidize other industries to help people develop these areas so that they can become self-sufficient.

Maybe we are right. In the long run it is probably better to help people to help themselves than to condemn them to either permanent proverty or perpetual dole. People who have a chance to make something of themselves are hardly likely to fall for the Communist line.

While we are helping to get these people on the path to better things it might be well if we would take a little better look at some of our own underdeveloped areas. One of these is the Indian reservations of South Dakota.

Here you find some 35,000 people, largely unemployed and with hardly a goal in life except to live.

No matter how you look at it there is not enough work to make jobs for these people. Agriculture is the only industry and the large scale farming and ranching operations that exist do not take a large labor force.

For that reason we see merit in a bill E. Y. BERRY has introduced in Congress. It is a self-help measure, a "lift yourself by the bootstraps" operation. It would provide that the Federal Government spend money for establishing industry on the reservation and to explore the possibilities of creating jobs for the large labor supply of Indian people.

We are not fond of starting new Government projects or of asking for Federal aid. In this case we think BERRY is justified because tax money is now being spent on the reservations in large amounts for relief, welfare, ADC and for law enforcement. Our Government has spent millions on the reservations.

Yet we are little further ahead, perhaps worse off, than we were when the Great White Father took over the Indian destinies.

We think BERRY's line of thinking should be pursued by the Indian Bureau and the Congress. With a little resourcefulness an "operation bootstrap" might be put in effect in this area at but little greater cost than that of our present multitude of welfare programs. Certainly the cost would not be as great or as hard to justify as is the amount we are now spending in areas with similar problems overseas.

Declaration of Santiago

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. FLOOD. Mr. Speaker, much has been published about the mounting tensions in the Caribbean area and the efforts of the governments of the Western Hemisphere to allay these threats to peace and political stability. Culminating in the 10th Inter-American Conference at Santiago, Chile, which was finished on August 18, 1959, this major attempt to restore normal conditions merits wide study.

A summary of the results of the Santiago Conference by Bertram B. Johansson, staff writer on Latin American affairs for the Christian Science Monitor, also the text of the Declaration of Santiago were published in the August 19, 1959, issue of that well-known international newspaper.

The indicated summary and declaration follow:

SANTIAGO WATERS FREEDOM'S ROOTS

(By Bertram B. Johansson)

Veteran delegates to the American Foreign Ministers Conference in Santiago, Chile, are under no illusions that the Santiago Declaration immediately will end Caribbean tensions.

They are hopeful, however, that the Santiago conference, which finished August 18, has at least defined objectives more clearly and strengthened hemispheric resolve that the Caribbean shall not continue as an area of ferment.

Ten thousand words were written into the Declaration of Santiago, issued August 18 by the foreign ministers. The declaration:

Condemns dictators;

Reasserts the principle of nonintervention;

Approves of democratic systems;

States that democracy cannot be forced on a country, especially from the outside, but must come as a natural growth from within a nation;

Revives an Organization of American States peace committee to bring the glare of publicity on tension areas which, in the current Latin American context, means the Caribbean.

U.S. Secretary of State Christian A. Herter said at the end of the meetings he believed the conference will have a long-range effect that will have great significance.

The deliberations, he said, brought into clearer light the problems that face us and have offered a means for their solution.

REBELS HUNTED IN HAITI

In the course of his stay in Santiago, Mr. Herter talked privately with all of the foreign ministers of the 20 Latin American republics. This was of enormous help, he said, in giving him a greater understanding of the hemisphere.

As if to illustrate the problems confronting members of the peace committee which will begin immediately to investigate Caribbean tensions, two "invasions" occurred in the area while the Foreign Ministers Conference was in progress in Chile.

Premier Fidel Castro charged that the Dominican Republic and/or former dictator Fulgencio Batista had launched an invasion effort from the Dominican island against Cuba.

In Haiti, troops still are attempting to ferret out some 30 rebels, allegedly from Cuba, who made a landing early this week.

The Dominican Republic announced it would come to the aid of Haiti, if necessary. Cuba countered and said that though the invaders may have come from Cuba they had been sent by Dominican President Trujillo to embarrass Cuba's position at the OAS Santiago discussions.

Days before the Santiago conference opened, the foreign ministers said they did not plan to umpire the crosscurrents of invasions in the Caribbean. Rather, they hoped to create a climate of opinion that would keep would-be invaders inactive.

COMMITTEE'S ROLE

With the military success of the Castro revolution still fresh in peoples' minds and producing effervescent invasion attempts around the Caribbean, this will take some doing.

It was for this reason that the Inter-American Peace Committee of the OAS was revived to keep watch on the trouble spots, study ways to prevent attempts from abroad to overthrow legal governments, and report to the Quito, Ecuador, conference in February.

The committee may make investigations either at the request of a victim country or on its own initiative. But the committee will have to obtain consent of the country it wants to investigate if it desires to make an on-the-spot check.

The conference resolution did not say what would happen if a country refuses consent to an inquiry, but the foreign ministers could call a hemispheric conference to throw the floodlight of publicity on the refusal.

The peace committee also could make its investigation from the outside and then publicize its report. This, it is hoped, would bring the matter before the people of the Americas and bring public opinion to bear on the troublemaker.

The conference produced one change. Maj. Raul Castro of Cuba, arriving in Santiago after the conference had ended had some kind words for the OAS discussions.

Earlier, in Lima and Caracas, while en route to Chile, Major Castro had said the Santiago conference was farcical and useless, repeating terms his brother, Fidel, had used last week.

Major Castro said in Santiago, however, that after reading reports on the meeting he felt it accomplished something positive by giving serious consideration to dictatorship and poverty in the Americas.

OAS NATIONS RELEASE DECLARATION OF SANTIAGO

SANTIAGO, CHILE.—The text of the Declaration of Santiago adopted by the American foreign ministers in their special conference on Caribbean tensions:

The fifth meeting of consultation of ministers of foreign affairs, expressing the general aspiration of the American peoples to live in peace under the protection of democratic institutions, free from all intervention and all totalitarian influence, and considering:

That the faith of the peoples of America in the effective exercise of representative democracy is the best vehicle for the promotion of their social and political progress

(Resolution XCV of the 10th Inter-American Conference), while well planned and intensive development of the economies of the American countries and improvement in the standard of living of their peoples represent the best and firmest foundation on which the practical exercise of democracy and the stabilization of their institutions can be reestablished (resolution of the Special Committee to Study Formulaton of New Measures for Economic Cooperation):

That in Resolution XXXII, the Ninth International Conference of the American States, for the purpose of safeguarding peace and maintaining mutual respect among states, among other things, resolved to reaffirm their decision to maintain and further effective social and economic policy for the purpose of raising the standard of living of their peoples, and their conviction that only under a system founded upon a guarantee of the essential freedoms and rights of the individual is it possible to attain this goal; and to condemn the methods of every system tending to suppress political and civil rights and liberties, and in particular the action of international communism or any other totalitarian doctrine;

In Resolution XCV, 10th Inter-American Conference, resolved to unite the efforts of all American states to apply, develop, and perfect principles of the inter-American system so that they would form a basis of firm and solidary action designed to obtain in a short time the effective realization of representative democratic system, rule of social justice and security and economic and cultural cooperation essential to the mutual well-being and prosperity of all peoples of the hemisphere;

That harmony among American Republics can be effective only insofar as human rights and fundamental freedoms and exercise of representative democracy are a reality within every one of them, since experience has demonstrated that failure to adhere to such principles is a source of widespread disturbance and gives rise to emigration that causes frequent and grave political tensions between the state any émigrés leave and the states that receive them;

That the existence of antidemocratic regimes constitutes a violation of the principles on which the Organization of American States is founded and endangers peace and harmony of the hemisphere; and

It is advisable to enounce in a general way a few principles and attributes of the democratic system in this hemisphere so as to permit national and international public opinion to gage the degree to which political regimes and governments conform to that system, thus helping to eradicate forms of dictatorship, depotism, or tyranny without weakening respect for the right of peoples freely to choose their own form of government, declares:

1. The principle of the rule of law should be assured by separation of powers and by control of the legality of governmental acts by competent organs of the state.

2. The government of American Republics should be derived from free election.

3. Perpetuation in power and exercise of power without a fixed term and with the manifest intent of perpetuation is incompatible with the effective exercise of democracy.

4. Governments of American states should ensure a system of freedom for individual and social justice based on respect for fundamental rights.

5. Human rights incorporated into the legislation of various American states should be protected by effective judicial procedures.

6. Systematic use of political proscription is contrary to American democratic order.

7. Freedom of the press, of radio, and television, and in general freedom of information and expression are essential conditions for the existence of a democratic regime.

8. American states, in order to strengthen democratic institutions, should cooperate among themselves within the limits of their resources and the framework of their laws so as to strengthen and develop their economic structure and achieve just and humane living conditions for their peoples;

Resolved, This declaration shall be known as the Declaration of Santiago de Chile.

Sale of Commemorative Soil Conservation Stamp. Promoted by Radio Station KWHI, Brenham, Tex.

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. THORNBERRY. Mr. Speaker, on August 26, 1959, over radio station KWHI, Brenham, Tex., a very splendid radio program was presented promoting the sale of the new U.S. commemorative postage stamp featuring soil conservation in our Nation.

Participating in the program were Mr. T. A. Low, the very fine postmaster at Brenham, and Mr. W. H. Prenzler, vice chairman of the Austin-Washington Soil Conservation District of Burton, Tex. Working with these two gentlemen to make the program so successful was Mr. E. P. Krueger, work unit conservationist of the Soil Conservation Service. This program was made possible through the courtesy of Mr. Tom Whitehead, Sr., publisher of the Brenham Banner Press and owner of the KWHI radio station.

It is significant that two of the important departments of the executive branch of the Federal Government cooperated in this special stamp program to recognize and honor the soil conservation farmers and ranchers of America.

Because of the interest the Members of Congress have in the importance of the soil conservation program, I include the transcript of that program in the RECORD:

ANNOUNCER. A new U.S. commemorative postage stamp featuring soil conservation has been placed on first-day sale at Rapid City, S. Dak. today, August 26. Tomorrow, August 27, the stamp will go on sale at all post offices in the country and in this area. We've asked Postmaster T. A. Low of Brenham and Soil Conservation District Supervisor W. H. Prenzler of Burton to tell us about the new stamp. Let's hear from our postmaster first. Mr. Low, just what is a commemorative stamp?

POSTMASTER. A commemorative postage stamp is a very special kind of stamp. These stamps are used to commemorate national events, such as statehood anniversaries, pay tribute to our national ideals, and mark important national achievements. The stamps remain on sale for a limited time, usually 6 months to a year, or until the supply is exhausted. Normally, we print 120 million stamps of a commemorative issue. In the case of the soil conservation stamp this is $4,800,000 worth. When these are gone, there will be no reprints, and the stamps will become stamp collectors' items.

ANNOUNCER. You told me an interesting fact about stamp collecting—that it has become the Nation's No. 1 hobby. I wonder if you could tell us something about this, and why it is such a popular hobby.

POSTMASTER. It has been estimated that there are upwards of 20 million stamp collectors in the United States. This easily makes stamp collecting the most universal hobby in the country. There are more stamp collectors than there are dog owners. Stamp collecting actually began in 1840 when the first adhesive postage stamps were issued in England. The United States issued adhesive stamps for the first time on July 1, 1847. Incidentally, Washington County had five post offices and Austin County had six post offices in that year. They were surpassed in all of Texas only by Brazoria County.

ANNOUNCER. I sure would like to have a set of these first cancellations from our oldest post offices, some of which are now only names in the history of the county and Texas. How many of these commemorative stamps does the Post Office Department issue nowdays?

POSTMASTER. In recent years the Department has been issuing 12 to 15 a year. You might be interested to know that commemorative stamps are fairly new. They were introduced at the Columbian Exposition in Chicago in 1893. If Grandpa has any of these old Columbian Exposition commemorative stamps around that he bought back in 1893, they have increased a good bit in philatelic value since the time they were first issued.

ANNOUNCER. Does the Post Office Department get many requests for new stamps each year?

POSTMASTER. Yes, we receive hundreds of requests each year, and we now have a backlog of approximately 2,600 suggested subjects. Obviously, since we only issue a dozen or so commemoratives each year, we cannot begin to comply with all the suggestions that come in. But, I want to say right here, that in my opinion, the selection of soil conservation as the motive for a special edition postage stamp is a very befitting and worthy move, and this stamp is very pretty.

ANNOUNCER. Thanks, Mr. Postmaster. Now let's turn to our other guest Mr. Prenzler, as a leader in soil conservation I'm sure you feel honored about the new soil conservation postage stamp.

SUPERVISOR. I certainly do. You know, issuance of this commemorative stamp is actually a salute to farmers and ranchers, their local soil conservation districts, and to the professional conservationists and other agricultural workers who have helped make the United States a world leader in soil conservation. As one of five supervisors of the Austin-Washington Soil Conservation District and as one of the first farmers to cooperate with the district, I feel very proud over this nationwide recognition of the effort which we and others are making in the soil conservation cause. I also would like to say here that as an auxiliary rural mail carrier for many years, I feel very proud over the soil conservation stamp issued jointly by the Post Office Department and the U.S. Department of Agriculture.

ANNOUNCER. Have you seen the new stamp, Mr. Prenzler?

SUPERVISOR. I've seen them and I will buy some as well as selling, I hope, many of them. And it certainly is an attractive stamp. It's in three colors, yellow, green, and blue. It portrays a modern farm showing that conservation farming brings beauty as well as bounty to rural living. The stamp shows contour stripcropping, terracing, pasture improvement, tree planting, and a farm pond. In addition, the silhouette of a city in the background symbolizes that urban as well as rural people are highly dependent upon the care and wise use of land as a principal source of food, water, shelter, and clothing.

ANNOUNCER. I suppose you have some local observance planned when the stamp goes on sale?

SUPERVISOR. That's why the postmaster and I are here, to kick off the sales of the conservation stamp in Washington County. The soil conservation district has also published an article and a reproduction of the stamp in its weekly news column in the Brenham Banner Press.

ANNOUNCER. Well, I hope the new soil conservation stamp is a big success, Mr. Low and Mr. Prenzler, and that lots of them are sold. By the way, which post offices in this area are offering the special soil conservation stamp? How about it, Mr. Postmaster?

POSTMASTER. We at the Brenham Post Office have ordered $2,000 worth of the soil conservation postage stamp, as a starter. I am informed that all other post offices in Washington County are also handling a limited supply of this commemorative stamp.

ANNOUNCER. I understand that at one time we had quite a number of post offices in the area, but several have closed down in recent years. Would you tell us briefly something about this and which post offices are now in operation here?

POSTMASTER. The present-day post offices in Washington County and postmasters are: Washington is the oldest post office, Edwin Dickschat is postmaster; next is Brenham, with more than 113 years of postal service, and I am the postmaster here; Old Gay Hill and Chappell Hill are other old post offices with nearly 110 years of service to the public. Mrs. Smith is postmistress at Chappell Hill; and Walter Werchem is postmaster at Gay Hill. The Burton Post Office is a mere youngster, but it too has serviced its area about 88 years now. Mr. E. O. Oslmeyer is acting postmaster there.

There used to be numerous post offices in the past. In 1904 we had 22 post offices in the county, but with the coming of the R.F.D. routes in that the need for some of the offices was eliminated. With the coming of the automobile, better roads, and relatively fewer people left on the land, there followed a steady reduction in the number of post offices.

By the way, this makes me think that the farmers and ranchers still on the land, not only have a greater job of feeding 176 million people in this country alone, and others, but also that their care and conservation of the land is of the greatest importance to all of us and is even more important in 1959 than in former years.

ANNOUNCER. Well, thanks very much gentlemen, for all the good information about the new soil conservation stamp that goes on sale here tomorrow, August 27, and the great cause it sponsors. Our guests today were Will Prenzler, a supervisor of the Austin-Washington Soil Conservation District and T. A. Low, postmaster at Brenham.

Foreign Firms Plague U.S. Firms

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, competition from foreign industrial firms, employing cheap labor, low prices, and American know-how, is plaguing more and more U.S. companies. Finally, the problem is on the very doorstep of Congress itself.

Just recently, I discovered that the CONGRESSIONAL RECORD, our own medium for recording debates, expressing views, and printing much of the data from which American history will be written, is being stitched with British wire.

Mr. Speaker, I grant that this is a relatively small matter in terms of money, but it illustrates how far foreign competition with American products has gone. In the first 6 months of 1959, all seven awards for CONGRESSIONAL RECORD binding wire appear to have gone to Holdwire, Ltd. During the second half, the Holdwire firm continues to obtain contracts. Some recent awards to the British company were as follows: July 23, 2,200 pounds; July 29, 3,000 pounds; July 29, 2,200 pounds.

Of course, our friends in London purport to favor the reciprocal lowering of trade barriers. It is interesting to speculate, however, on how soon we shall find that the proceedings of the British Parliament are stitched with foreign-produced wire or printed on American newsprint.

Mr. Speaker, the rate at which our manufacturers are losing markets, both at home and abroad, is truly alarming. I might point out that this result was foreseen by many Members who have sought to change our present foreign trade policies. Perhaps this small example in "our own living room," so to speak, will illustrate why the import problem calls for constant vigilance on the part of Congress.

Poison in Your Water—No. 160

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Omaha (Nebr.) Morning World-Herald of March 24, 1959, entitled "Purer River Is Safety Aid."

[From the Omaha (Nebr.) Morning World-Herald, Mar. 24, 1959]

PURER RIVER IS SAFETY AID—TRESTER TESTIFIES ON SIOUX CITY SEWERAGE

(By Gabe Parks)

SIOUX CITY, IOWA.—The treatment of Sioux City sewerage before it is dumped into the Missouri River would be "an added safety factor" for Omaha's water supply.

Ralph Trester, general manager of the Metropolitan Utilities District, testified Monday before a special eight-man board of water pollution officials.

PURITY IS IN EXCESS

The hearing is part of a Federal procedure being invoked by the Public Health Service to get Sioux City to quit polluting the river.

Mr. Trester stressed that the purity of Omaha's drinking water, after treatment, is "far in excess" of State and Federal requirements.

But the risk connected with a possible human or mechanical failure in the purifying process "is in direct proportion of the increased pollution of the raw water supply," he said.

OMAHA COSTS CITED

Omaha Public Works Director George Fisher reported Omaha is spending $5,100,000 for sewerage treatment projects now either in the construction or planning stages.

"The wonderful big Missouri should not be polluted by anybody, including ourselves," Mr. Fisher said.

George Davis, attorney for Sioux City, cross-examined Messrs. Trester and Fisher closely on Omaha's water and sewer programs.

DENISON PLANT BLAMED

Mr. Davis also said the packing plant at Denison, Iowa, is dumping untreated refuse into the Boyer River which empties into the Missouri.

"This is at least twice as close to Omaha as Sioux City," he said.

Mr. Davis said Sioux City is 117 miles above Omaha and "there should be a certain amount of natural purification" in that distance.

Industrial Peace or Conflict

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 4, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the controversy over labor-management reform legislation has degenerated into a conflict that threatens future labor-management relations and cooperation.

These serious and troubled times call for understanding, good will, and cooperation between these two great forces in our economy. When the spirit of cooperation gives way to bitter strife and hatred, the public and the Nation suffer as well as management and labor.

My opposition to the Griffin-Landrum bill was to its punitive provisions which were deliberately designed to weaken or destroy labor unions and to make impossible the formation of new unions, particularly in backward southern areas. This is the road to a corporate state with the destruction of basic and fundamental rights of American citizens.

It is more than a threat to free unions. It is a challenge to all good citizens who abhor totalitarian tyranny. It is a danger to American democracy.

To reverse this ugly trend calls for the best in both labor and management. It calls for recognition of their own common interest and concern for the public welfare and national unity and strength.

The powerful propaganda drive for a strong labor reform bill, if successful, can be of no real value if such legislation contains unjust, unworkable, and punitive provisions which will lead to widespread strife, disunity, and discontent.

In the past decade labor unionists have worked with leaders of industry and other civic leaders in community projects which have contributed much to the progress and welfare of citizens in towns,

cities, and rural areas throughout the Nation.

It would be a tragedy if this good will and teamwork would be destroyed by ill-considered, unwise, and unworkable legislation designed to fight unions rather than corruption.

The reaction to punitive legislation as contained in the Landrum-Griffin bill is already evident in bitter comment from publications representing the views of decent union men and women. They know and understand the objective of Landrum bill sponsors who see unions as a greater evil than corruption and racketeering.

The following editorials and statements reflect the thinking of union members dedicated to justice and decency in both unions and Government:

[From current issue of the Machinist]

INFAMY

The history of the 86th Congress will be sad reading, for it will contain one of the most shameful chapters of lobbying activity in modern history. This issue of the Machinist gives some indication of how the screws were turned on Congressmen, of why a number of normally liberal legislators lost their nerve, of why they turned on their friends to vote for the Landrum-Griffin bill.

The big corporations, the chambers of commerce, the National Association of Manufacturers were well organized and well informed. They were better informed than those Congressmen who voted without having ever read or understood the bill.

That organized employers would pull every trick in the book to get Congressmen to vote for a killer bill could have been expected. They have the same right as labor or any other group to attempt to influence Congress by persuasion and by pressure.

The shocker was the extent to which the big corporations were able to get the highest officials of our National Government to do their work for them. Seldom in American history has the executive branch of our Government interfered so openly with the legislative branch.

Other Presidents have attempted to give leadership on legislation, true. Yet, never in the memory of oldtimers has the logrolling, the patronage promising, the threats of reprisals been applied so brazenly that they could be advertised on the floor of the House during debate.

Normally our press—the great free press of the United States—has been quick to defend Congress against encroachment by the White House and against undue pressures from any lobby. This time, however, many of our newspapers had become part of the lobby. Our largest TV networks were used by the lobby.

With the notable exception of the Atlanta Journal-Constitution, we know of no daily newspaper that attempted to expose the sordid spectacle of the Landrum-Griffin lobby. In our opinion, the Atlanta Journal deserves a Pulitzer prize, for exposing the pressures brought against one courageous Congressman who stood up against them all. The Atlanta Journal's reporting is the more remarkable because the newspaper itself editorially supported the Landrum-Griffin bill.

Unlike the big business lobby, labor's lobby is constantly exposed to the withering scorn and exaggerations of the editorial writers, antiunion columnists, and correspondents.

The report in this issue of the Machinist of pressures that pushed the Landrum-Griffin bill through the House of Representatives is only a partial report. It is not one to make Americans proud.

[From the New Era, Reading, Pa.]

FIGHT NEVER ENDS

Anyone harboring the quaint notion that management wants to get along with labor is suffering from delusions.

That myth disappeared into thin air last week when the true temper of big business emerged during debate on the Landrum-Griffin antilabor bill.

Washington was crowded with lobbyists from the National Association of Manufacturers and the U.S. Chamber of Commerce, who put heavy pressure on lawmakers with the argument that this is the time to "put labor in its place."

There used to be a time when labor was lulled into a false sense of security with the management argument that industry accepts labor as a partner on the national scene and that the days of strife are over.

Labor let its guard down—and wham, we got clobbered, but good.

What this latest episode proves once more is that down deep in its cold, calculating heart, corporate America has no use for organized labor. Unions are something that must be "tolerated," only as long as unions are strong.

And meanwhile big business is providing the money, the brains, the propaganda—and, yes, the votes in Congress—to weaken the trade union movement.

At every turn you find a stiffening of big business against labor—in the steel dispute where "inflation" is the propaganda word. In the railroad industry where "featherbedding" is the scare word; in Congress where "reform" touches off a tirade of antiunionism; in the Presidency where Ike Eisenhower goes on TV during the most costly time period to whack the devil out of workers and their unions.

What have we learned from the Landrum-Griffin vote?

In our humble opinion it signals an agonizing reappraisal of labor's attitudes and labor's goals. It calls for a return to militant unionism in which a fighting labor movement is willing to dramatize the issues through sacrifice and sweat.

This militancy on the economic front must be accompanied by organizing effort, more education, and then greater political action.

Anyone harboring visions of labor-management peace for licking the boots of big industry will go down in history as a Chamberlain-type appeaser who merely postponed the day of showdown.

As we said, "nobody gives labor nothing." History shows it's a struggle right down to the wire.

REFORM MANAGEMENT

(Letter to Washington Post editor)

With all the antilabor sentiment erupting from Capitol Hill and that place on Pennsylvania Avenue, it seems appropriate to remember that there is one and only one reason for the existence of labor unions in the first place—the shocking lack of conscience on the part of those who control production.

If industrial management were just, we would need no labor unions and all of us duespaying members would tear up our cards happily. Unfortunately, this is not the case, a fact fully realized by anybody who ever has tried to negotiate a fair contract with greedy, millionaire owners.

As far the gangsterism in unions, a history of labor-management relations shows positively that the door to this evil was opened by management, which hired goons to beat down workers looking for something better than a peasant's existence.

All honorable union men everywhere are in favor of getting rid of the gangsters, but no union man will buy legislation aimed at curbing honorable union activities.

A mere glance at the economic situation prevailing in this country today should convince even a schoolboy that something besides gangsterism needs correcting. While owners are stacking it away by the millions (look at last year's profits earned by the steelmakers), the average workingman still has to have two jobs or send his wife to work to enjoy a minimum of luxury such as a new home and a decent car.

All the idiots are buying that congressional and Presidential baloney about labor reform. Why doesn't somebody try to reform management?

WILLIAM FUCHS.

WASHINGTON.

[From the New Era]

PLACING THE BLAME

There's an axiom in politics that a defeated candidate blames his closest friends for his downfall—they didn't do enough for him. The same kind of thinking apparently has beset some of our top labor leaders since the Republican-Dixiecrat coalition clobbered us last week by passing the antilabor Landrum-Griffin bill in the House of Representatives.

Instead of putting the blame where it belongs—on the Republicans and southern Democrats, who are subservient to big business, big money interests—the disillusioned unionists are talking about taking a new look at the Democratic Party.

Now this is kid talk. When you look over the Landrum-Griffin vote, you find that 90 percent of the votes against the harsh killer legislation were cast by Democrats. On the other hand, 88 percent of the Republicans voted against labor and for the National Association of Manufacturers and the U.S. Chamber of Commerce. So, does it make sense to drop the Democrats when they were the only ones to give any support at all to labor's position?

Unfortunately, as long as there is a South and a civil rights issue, there will be Dixiecrats. And the Republicans will continue to sell the Negroes down the river by swapping, dealing, and trading with the Dixiecrats in Congress to control the Government. In this instance the Republicans agreed to duck the civil rights issue, and the Dixiecrats in turn voted for antilabor legislation.

I didn't realize, until Congressman GEORGE M. RHODES called it to my attention, that some southern Democrats really want to keep labor weak so that Southern States with their cheap, unorganized labor can continue to entice industry away from the industrial North. Many of the big corporations are building new plants in backward, right-to work States, mostly in the South. They will reap tremendous profits until such time as unions do win a foothold and overcome the fear which employers are implanting in Southern workers' minds.

So the Dixiecrats sold their party once more for a few pieces of silver. But this is no reason for labor to desert the liberal Democrats just because Dixiecrats betrayed the party that has given them national prominence, prestige, and power unparalled in American history.

Isn't it a tragic thing, when you stop to think about it, that right here in Reading some of the most outspoken advocates of the Landrum-Griffin bill were the most hostile union-haters in the community. What the devil do the managements of giant nonunion industries here in Berks County care about the welfare of union members employed in another plant? You'd think these moneybags employers were bleeding for the "little people," judging from the things they wrote and said while the labor fight was on in the House. The truth is that millions of unsuspecting union members were "used" and

"taken in" by corporate executives who demanded "labor reform" but really want no unions at all.

[From Public Affairs Institute weekly column]

LABOR PEACE?

All the time that Congress is feverishly debating what kind of legislation we ought to have to bring an end to labor-management malpractices and to curb the power of alleged union bosses what may be an infinitely more important story is going unnoticed.

That is the story of the steady increase in labor-management tensions as reflected in the number of complaints of unfair labor-management practices before the National Labor Relations Board.

Month after month the Board's business mounts. Month after month the bitterness of strife between union workers and their employers mounts.

Instead of labor peace as the authors of our labor-management legislation tells us is their goal, we are getting industrial warfare.

With 500,000 steelworkers out on strike and another 100,000 workers laid off in related industries in what is obviously one of the sharpest labor-management disputes that we have had in many years, it might be a good time to look at the more general picture and see what is happening on the labor front.

The NLRB has just issued its statistical summary of its activities covering the second quarter of 1959.

Here are some of the recordbreaking highlights:

The five-member Board issued formal decisions in 699 cases, an increase of 21 percent over the previous 3 months.

The General Counsel issued 297 unfair labor practices complaints—the greatest number ever issued in any one quarter.

Unfair labor practice cases filed by employers numbered 563; an increase of 126 percent over those filed during the same quarter a year ago.

Unions filed 1,021 unfair labor practice cases for an increase of 41 percent over those filed by unions during the corresponding period of 1958.

These increases are not something new. They are part of a pattern of increasing tensions and disputes that has shown itself clearly for at least the past year and a half.

Why?

Any objective study of the attitude of many segments of industry during the past few years will show an obvious determination to crack down on organized labor.

Both the National Association of Manufacturers and the U.S. Chamber of Commerce have been conducting a never-ceasing campaign against labor, constantly using the timeworn cliches of labor bossism, labor monoply, and labor corruption.

In this the McClellan committee hearings have been a never-failing and convenient source of citable evidence to be used against all unions whether they are among those which have been investigated or not.

Right-to-work supporters, despite the setbacks suffered at the polls last November, have never ceased to press for harsher States rights legislation to weaken and perhaps even destroy unionism in the name of protecting it.

In Congress itself there is a group of Senators and Representatives who spend much of their time in the fight to enact legislation that would further restrict union activities and discredit labor.

The drive of business to enter the political field more actively and more openly is a reflection of business hatred of labor strength.

The NLRB itself had been accused repeatedly by labor spokesmen of showing bias toward business as against unions and certainly it had reversed numerous decisions made by previous Boards which, in turn, had been accused by business of being prolabor.

The result in tension and tendency to rush to the Board shows itself in the statistics.

Employers, emboldened by proemployer decisions, have more than doubled their complaints to the Board as compared with the figures for 1958.

Unions in turn have upped their complaints by more than 40 percent for the same period.

The General Counsel issues a recordbreaking number of complaints.

It's all very well to keep pounding away on corruption within the labor movement.

But how about a little investigation into the reasons for the recordbreaking charges and countercharges that are overburdening an already overburdened NLRB?

HE'S THEIR BOY

[From the New Era]

The President's ability to doubletalk constantly amazes us.

When labor suggested he enter the steel strike situation Eisenhower said: "I couldn't think of anything more objectionable than to put the Federal Government constantly in the business of settling these major strikes."

Yet when it came to sticking his nose into the basic rules under which labor-management relations are supposed to function, the President didn't hesitate one moment to go on the air, read an antilabor speech prepared for him by someone else, and arbitrarily put the Federal Government into the business of labor-management relations.

In other words, he was willing to use his high office for the benefit of big business, but refused to give up even 2 holes of golf to help 500,000 idle steelworkers.

Report on the U.S.S.R.—I

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. LIPSCOMB. Mr. Speaker, the very able chief of the Los Angeles Times Washington bureau, Mr. Robert T. Hartmann, who was one of the newsmen accompanying Vice President NIXON on his tour of the U.S.S.R. and Poland, has written an outstanding series of eight articles on his experiences during the tour and his impressions of the U.S.S.R. and its people. The series appeared recently in the Los Angeles Times.

Mr. Hartmann has presented some very interesting comments and sidelights about his trip and a penetrating "what-makes-it-tick" analysis of the Soviet system which I believe will be of much interest to the Congress.

Under leave to extend my remarks, I am submitting for inclusion at this time the first two articles of the series:

NIXON IN RUSSIA: FUSION OF POLITICIAN AND STATESMAN

(By Robert T. Hartmann)

WASHINGTON, August 15.—RICHARD M. NIXON, not the *Lenin* which is being outfitted in Leningrad for October trial runs, may turn out to be the world's first atomic icebreaker. Or he may be merely the latest Western recipient of Mr. Khrushchev's uninhibited hospitality when the devil a saint would be.

It's a gamble, and nobody is more aware of it than the California-born Vice President. His final place in history may be a footnote relating the fact he told the Soviet Premier he didn't know everything and talked too much.

But NIXON is not under any illusions about this powerful, peasant-born dynamo of energy and Communist dialectic who bosses half the world. His report to President Eisenhower will make fascinating reading when the secret archives of this administration are someday published, like the Yalta papers.

Meanwhile, though the Vice President has kept scrupulous silence about his private conversations with Khrushchev, the American people and the rest of the free world already have a better picture of the U.S.S.R. than ever before through the words and pictures of nearly 100 newsmen who followed NIXON to Novosidrsk and back. They also have an enlarged picture of NIXON, who will be argued about during the next 12 months in the United States.

These last 6,000 miles of NIXON's amazing total of 150,000 miles of goodwill globetrotting proved nothing entirely new. What they demonstrated most significantly was that he can combine his rough-and-ready whistlestop technique, heretofore seen only on the domestic campaign trail, with his undoubted but previously perfunctory talent for meeting the leaders of 53 nations he has visited. The old and new NIXONS have fused; the politician and statesman were a single self-confident man in Moscow.

It's an ironic fact that the very traits which NIXON's critics have treated most scornfully, a certain icy ruthlessness in verbal battle, aggressive and agile counterpunching rather than direct defense, a lawyer's facility (or trickiness) with words, and the knack of swiftly seizing upon any advantage, served him and his country best in the public (and presumably the private) slugfests he had with the Communist heavyweight champ.

This reporter and others who watched the Vice President in action on this as well as earlier missions abroad are now thoroughly convinced that NIXON's great genius lies in an uncanny ability to size up strangers and situations almost instantly and to exploit them to his maximum advantage, often by shifting to an unexpected tack or darting through a surprise opening.

Whether his football coach or debate coach at Whittier College gets the credit for this, or whether they must share it with Duke Law School, the U.S. Navy, and the hard political road to reelection as Vice President, NIXON showed superb skill in taking the measure of the man who since Stalin's death has been the most worrisome puzzle to Western statesmen.

Only secondary, and rather surprising to everybody, including Soviet leaders (who moved swiftly to keep it within bounds), was the warmth of NIXON's reception by crowds of ordinary Russians. Everywhere except Venezuela his reputation as a crowd pleaser has been confirmed, but inside the U.S.S.R. there was no reason to expect cheers for an avowed anti-Communist American who had just told off their Prime Minister on Moscow radio and television.

Yet NIXON's primary task was not to win the affection of Russian masses in a fortnight, an obviously impossible task, though he lost no chance to plant a few question marks in Soviet minds which are not so much

closed as insulated from the world. He did this by stressing America's desire for peace and hope for higher living standards for the Russian people—standards which their leaders have promised but are slow in coming—and constantly urging more freedom of ideas and information for which they all seem to hunger.

KHRUSHCHEV REAL JOB

But the Vice President's real job was to treat with the man who matters, a point on which most statesmen of East and West now agree. Mr. Khrushchev is a self-made man extremely proud of his maker, much better informed statistically than might be expected but woefully wrong in his conclusions about the West—not so much about its power as about its will to use it.

Like all Russians since centuries before communism, he suffers from a well-founded inferiority complex, but this is not all. He really believes his dogma, and he is 64 years old and in a dreadful hurry to see it come true. Khrushchev knows that the West—even the United States alone—is currently stronger and more productive than the Soviet Union.

But he believes the discipline and the determination to surpass the United States which has spurred his society to such remarkable industrialization over the past 40 years will even the balance.

WANTS SUPERIORITY

Khrushchev wants equality—then superiority. This is the real reason he so desperately sought a summit meeting and an invitation to the United States.

Why, then, give him his way? History may call it a mistake, but this is the administration thinking which NIXON's trial run corroborated:

Khrushchev and his ruling elite (as lordly a class as ever existed though the premier and Kozlov show some signs of enjoying the cheers of the crowd, are somewhat like the chiefs and sachems of a warlike American Indian tribe in the old West. They have somehow gotten themselves guns and occasionally they get some firewater. They don't have any trousers or comfortable houses, they can't read or write, they are savages by the standards of cultivated paleface society.

SERVICEABLE GUNS

But they do have guns—not as many, perhaps, but their's are serviceable; they have firewater in the form of self-intoxicating speeches about their own superiority and virtue, and if they start shooting a lot of people are going to be killed.

It seems necessary, therefore, to send our scouts out ahead to powwow with the big chief, to treat him with respect shown an equal and to decide whether the peacepipe shall be passed around before the war drums sound. Any pact may not last long and treachery is to be expected. Still, the only alternative is massacre.

NIXON accomplished his difficult mission of pioneer scout but the powwow is out of his hands. Khrushchev started out by giving him the business exactly as he has every western caller since he disposed of his principal rivals and found out his missiles would fly. He sailed into NIXON after their first handshake but the Vice President, has, as he told his host, "been insulted by experts."

His rudeness Prime Minister Macmillan suffered with dignity. It silenced Senator HUBERT HUMPHREY for most of 8 hours and terrified ex-Governor Harriman. It merely caused NIXON to conclude, correctly, that Khrushchev's behavior was neither irrational nor inhospitable by Soviet ground rules. Thereafter, NIXON played by those rules.

BULLY CHALLENGED

Details of how the bully was challenged and then conned into showing it on his own television and publishing it to all his people have been fully reported, but this conceals a somber warning. It could never have happened had Khrushchev any serious doubts about his own position, based on both popularity and police power. The relative (though strictly limited) freedom the Soviet Government gave NIXON and his huge American entourage was a demonstration of strength possibly more significant than the first Soviet sputnik, certainly more than any antiquated factory or unfinished project on the Vice President's super Intourist itinerary.

To appreciate this, Americans need to know more about the way the new society of the U.S.S.R. really works, perhaps as badly as Khrushchev needs to learn about the real America.

SOVIET OPEN CITIES NOT TYPICAL OF U.S.S.R.—DECEIVE TOURISTS, RUSS, TOO

(By Robert Hartmann)

WASHINGTON, August 16.—To understand the Soviet Union it is first necessary to understand Russia, and to understand Russia one must constantly remember that it is mostly in Asia.

These historic and geographic facts, far more than the theorizings of Marx and Engels about communism, make the U.S.S.R. what it is today. In the same category, the Pavlovian theory of behavior popularly associated with drooling dogs is a major key to what makes Soviet society work with ever-increasing efficiency.

CHURCHILL'S COMMENT

It would be presumptuous indeed to pretend to explain what Sir Winston Churchill called a riddle wrapped in a mystery inside of an enigma on the basis of the two short visits, 4 years apart, which this reporter has made to the biggest country on earth. But the second time, viewing things from the somewhat different angle of a semiofficial guest and seeing the forbidden areas of Siberia as well as revisiting the tourist centers, much became clear that was puzzling in 1955. (This is deliberate Soviet policy; the curtain is lifted a little for tourists not to enlighten but to deceive.)

MOSCOW NOT TYPICAL

Moscow, Leningrad, and the other open areas which a steadily mounting stream of American and other free world citizens are seeing each year are not even as typical of the U.S.S.R. as New York and Boston are of the United States. They are, in fact, vast museums—diabolic Disneylands—to impress not only foreigners but the much less sophisticated Soviet tourists from other parts of the U.S.S.R. and Communists or delegates from backward Asian and African lands.

One impression you get from Moscow is that of huge, if tasteless, new construction projects on every horizon; of massive monuments to Soviet "culture" such as the skyscraper university, the Ukraina Hotel and the spotless subway; of broad boulevards, beautiful parks, lavish exhibitions, and superbly staged theater and ballet. Another—equally essential to the deception—is the conviction that most Russians are incredibly slow, dense and maddeningly inefficient.

The European corner of the U.S.S.R., except for the Kremlin and its bombproof basements, was really written off by Soviet planners in World War II when the Germans nearly took it. Moscow is either the best of Asia or the worst of Europe. And so it impresses tourists from both worlds, exactly as planned.

Asians marvel that communism has produced such a capital in a mere 40 years and hurry home to try the same forced progress. Americans go away certain that any people who can't add up a hotel bill or serve tea in less than two hours are never going to "bury" us or convert our grandchildren to socialism.

POLICE DON'T "TAIL"

Western visitors also find, or think they find, a measure of freedom in Moscow and Leningrad which they had not expected. They are not "tailed" by the secret police; they freely criticize Khrushchev and company in their hotel rooms—sometimes in conversations with Russians—and nothing dire happens to them; customs is cursory and people are so honest it is virtually impossible to lose anything, let alone have it stolen. Very few Russians will accept a tip.

Yet, as for everything in the Soviet Union, there is a reason for this. The Communist hierarchy is now secure enough in its almost absolute control that it's a sheer waste of manpower to watch every foreigner, unnecessary, too, when every Soviet citizen is watched already. They have the most monumental indifference in what most foreigners do, say, think or bring, but they are fantastically sensitive to what their own subjects see, hear, think or covet.

STILL MENTAL STRAITJACKETS

Times publisher Norman Chandler concluded perceptively on his visit to the U.S.S.R. shortly after the first summit conference in Geneva that the Iron Curtain was not around the country but around the minds of its people. As the physical barriers have been lifted to travel since 1955, the mental straightjacket has been strapped tighter still. There are occasional signs of encouraging exceptions, such as Moscow students questioning the bloody reprisals in Hungary or the current scramble to see the American fair despite a vicious official campaign to discredit it, but they are very few.

NOT IN SIBERIA

The fact is that the biggest concentration camp in the Soviet Union is not hidden in Siberia today. It is Moscow itself, on display to the world. Most of its claimed 7 million people are the drones and dumbbells of Soviet society, the below-average in ability and ambition who have been rejected by the state, the incorrigibles and misfits who have resisted conversion to the new norm of behavior.

They are good enough as street cleaners, chambermaids, and ice cream vendors, and it makes no difference if some clever rascal from Redondo Beach slips them a forbidden paperback novel or French fashion magazine. Let them be impressed by Cinerama or other aspects of American living at the fair. It doesn't matter, they will never go there or anywhere.

POWER CENTERS SHIFTED

Having switched the penal camps from Siberia to old Russia, the Soviet planners completed the reverse play by switching the real producers and power centers of industrial society from Europe to Asia. The Kremlin and the official bureaucracy remains in Moscow to complete the illusion. But the things that really matter are out east, beyond prying foreign eyes and out of non-Communist earshot.

"Why, this is where all the efficient Russians are," was the frequent comment by members of NIXON's party within minutes after we landed at Novosibirsk, the Siberian boom town that's pushing toward a million people and won't stop there any more than Los Angeles did.

BETTER THAN MOSCOW'S

The airport is far better than Moscow's and its paved runway seems to go on for miles. The hotel, though small, was a model of brisk efficiency laid on for the rare visitors. The food, including the best beef Stroganoff we had in Russia, was infinitely better than anything in Moscow or Leningrad where bureaucrats, ruble millionaires and tourists pay as much as $20 for a bad meal, sloppily served.

Most impressive of all were the people of Siberia. They were usually handsome—mostly Russian in race, for that's who is run-

ning things despite the fiction of 16 autonomous Soviet Republics. They were healthy looking, well fed, clean and as well clothed as any crowds seen in Russia. The ordinary folk on the streets of Novosibirsk and Sverslovsk showed more consciousness of style—though still not in the class with Paris or Pasadena or Podunk—than a visitor to Moscow can imagine.

This is a new metropolis, one cell of a new society terrifying in its implications. For these Siberian people actually appear perfectly happy with their lives. They are working hard and creating something they can see. Their children will have a better life than they; and they know absolutely nothing of the world beyond what is piped in to them by their Government.

UNCONTAMINATED CULTURES

You fly over the barren wastes of Siberia at 500 miles per hour in a Tupelov jet, and all you can see are empty subarctic lands dotted with innumerable lakes. A doubt-tracked ribbon of steel connects these new cities, and now the airplane, but there is no other communication. A dozen cities of 500,000 or more are spotted across this vast continent, like islands in a land ocean. They are the sterilized and uncontaminated cultures where the new society really works.

For the Soviet society to work effectively, the same fundamental rules apply that prevail in any industrial nation. There must be resources, managerial ability, skilled labor and the saving or plowing back of some production into capital for expanding production. The U.S.S.R. is conceded to have the most and probably the most nearly self-sufficient resources in the world. Much managerial and organizing ability perished or was exiled in the 1917 revolution and succeeding Stalin purges, but a new generation of peasants' sons turned engineers is coming up. There still is not enough talent to go around, so it is rationed by the state like everything else, from rare space alloys down to a glass of water.

The Wrong People in the Wrong War

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. PORTER. Mr. Speaker, it was clear at the Santiago Conference, as it had been clear many times before, that the Latin American nations do not like Trujillo. Their distaste is based on good reasons and it is not casual.

However, these nations also made it clear they did not want intervention—or filibustering in the earlier sense of that word. I personally advised Fidel Castro last February against any such expeditions against Trujillo. He has ample to do in Cuba. The OAS would be obliged to help Trujillo. Trujillo is on his way out anyway, so why bring death and heartbreak to many families?

The August 17, 1959, Life magazine published an article entitled "How Americans Were Duped Into Bloody Castro Fiasco." From the evidence it looks as though Castro or persons close around him cooperated in the enlisting and training of American citizens. I believe it is correct to say they were "duped" and, I will go further, exploited.

Why involve American citizens? Why but to involve the United States? We are involved because we are part of this hemisphere and because we believe in freedom, justice, and economic security. But we do not hold with the recruiting practices and the revolutionary operations described in the article which I am including here under a previous consent.

Trujillo is an apple ripe to fall any day. No need to shake the tree—the breezes are blowing and becoming stronger each hour:

HOW AMERICANS WERE DUPED INTO BLOODY CASTRO FIASCO

(By Keith Wheeler)

A flamboyant plot, inspired by Cuba's ever-ready Fidel Castro, to conquer the Dominican Republic with the aid of U.S. citizen soldiers of fortune was tracked down last week by a team of Life reporters.

The first clue to this weird and startling story was contained in a vainglorious report by the Dominican Republic's durable dictator, Gen. Rafael Leonidas Trujillo, that his army had repulsed and wiped out an invasion force in June. Giving weight to his words, Trujillo had named the "dead" attackers—among them seven New Yorkers.

Thereafter the Life team worked with fragments of fact scattered from New York to Havana. Last week they found four of the purported corpses alive in New York. Two had apparently died in the Dominican Republic. One was still unaccounted for.

From the living they uncovered a bizarre and brazen recruiting scheme in which, for months, freewheeling Latin Americans had been proselytizing some highly gullible U.S. citizens to fight in the Caribbean.

The story began, apparently, after Castro and his Cuban rebels had seemed to prove, to the satisfaction of the militarily unsophisticated, that the pure in heart could defeat a dictatorship with nothing but hope and a handful of heroes. A wave of euphoria for libertad swept the Caribbean. Its special target, understandably, was Trujillo's iron-fisted 30-year rule of the Dominican Republic.

Castro himself started the real recruiting on a visit to Venezuela after his Cuban triumph. When a crowd cheered him with shouts of "Trujillo next," he plunked his fatigue cap on the speaker's rostrum and started a war chest by dropping a 5-bolivar coin in it. That show alone yielded 500,000 bolivares ($150,000). Soon, inspired with Castro fervor, the recruiters were shuttling back and forth across the Caribbean and up to Miami and New York.

In New York, it developed last week, they operated blandly under the noses of the authorities in the upper West Side of Manhattan, an area densely populated by Puerto Rican Americans. It is now possible to trace their activities, beginning last winter, to several known hangouts.

There were rallies in private apartments on 106th Street and Amsterdam Avenue and at 103d and Amsterdam. Another hangout was a safe run by a man named Hector Américo at 922 Amsterdam Avenue. They even made use of otherwise innocent gathering places, including the Club of the Good Star at 906 Columbus Avenue and the Hamilton Place Hotel at 138th Street and Broadway.

The chief activist and later leader of the ill-fated invasion, now reported dead in the Dominican Republic, was a former Castro guerrilla chief still spoiling for a fight, one Enrique Jiménes Moya. It is known that he moved freely in and out of New York, operating through two Dominican exile organizations.

Now merged under the title "Movimiento de Liberación Dominicana," they were controlled by one Alfonso Canto and a man named Juan Diaz. Canto, too, was a peripatetic plotter, who shuttled back and forth between New York and Cuba on his devious business.

For bait, the recruiters used, first and foremost, the Castro mystic of the out-at-elbows conqueror and the appeal of "the chance to be a hero, too." They made it sound easy. A fortnight of guerrilla practice, a short hop across the Caribbean, then, wham, Trujillo would collapse.

The recruiters also used money—not actual money, but the talk of it. To many a hard-pressed Puerto Rican, condemned to dreary menial jobs in New York, the promise of support for wife, child, or parent proved a powerful incentive.

There is evidence that perhaps scores in the New York area "fell for this guff." It is certain that at least these seven did:

Daniel Chervony, 23, clerk.
David Chervony, 17, delivery boy.
Moises Agosto, 23, odd-job man.
Santiago Carbonell, 27, pants presser.
Pablo Vélez, 23, packer.
Manuel Costa, 29, laborer.
Eugénio Román, 24, handyman.

It was astoundingly easy for the susceptible to fall into the recruiters' hands. On March 1 Moises Agosto, whose natural tendency to somber brooding had been accentuated by his inability to keep a job since leaving Puerto Rico 5 months earlier, was out for a Sunday stroll with his girl.

Moises and Irma Villanueva, who called him "Ruben" because she liked that name better, idly drifted into a basement meeting at the Hamilton Place Hotel. Almost before Irma had noticed, someone had pinned a three-pointed card (blazoned for peace, liberty, and democracy) on Moises' lapel. Before they left, Irma saw him sign something. Two days later, after a series of telephone talks, she was present when he signed what she thought was a contract. On the fifth day he was gone. He said he might be away a year or two.

Irma later recalled sadly that Moises desperately needed money for his mother and two small daughters back in Puerto Rico, and she believed he had been promised $90 a month for their support. Significantly, a relative recalled that Moises, the broody one, had "always wanted to do something big someday. He always wanted to be a hero."

It was the beginning of a fantastic trail. But, although she received 10 letters from him, Irma never learned much of Moises' progress along it. Moises' letters were deliberately vague. Only occasionally did he hint that he was engaged on desperate business. Once he wrote: "I hope, if God wills it, to return soon and bring in my conscience and heart the happiness of a free people. And if I die, I will die content."

Others set off on the same strange journey with equal offhandedness. For Pablo Vélez, who is called "a crazy character" even by his family, it began in a neighborhood bar. Santiago Carbonell fortuitously met the recruiters just when he had been laid off from his pants-pressing job and no longer had means to support his wife and three children. Both of them were fired by a lot of loose talk about the iniquities of Trujillo and boasts that Castros' bravos could bring him down with fewer than 100 men.

Vélez, a former soldier, and Carbonell, an ex-marine, soon found themselves in the 106th and Amsterdam apartment at rallies of Dominican exile patriots who called themselves the "February 27th movement." They were signed up by Juan Díaz, one of the recruiters, and off they went.

The Chervony brothers, Daniel and David, found their way to disillusionment for the one, death for the other through Hector Américo's cafe—since burned down—and grocery store. Américo recruited them on a promise that their family would be supported, according to Daniel Chervony.

He roped another gullible innocent, Eugénio Román. "I will get $10,000. Wow!" Eugénio told his patroness, Dona Amanda Douchkess Lindberg, who had been supporting him as a helper around the Club of the Good Star.

The long and idiotic trail to nowhere has now been blazed by Daniel Chervony and Vélez and Carbonell. In March each of the suckers was given an airline ticket to Havana. Daniel Chervony traveled among a group of 7 recruits, Vélez with a batch of 11.

"We very happy," Vélez recalls. "We going to stay only 15 days in Cuba, make a lot of money and shoot down Trujillo. We laughing all the way. I don't feel bad; I like go fight."

From Havana they were taken to the mountains, installed in training camp in the hills at Mil Cumbres in Pinar del Río. They were given logs and thatch and told to build their own huts. And they were issued weapons, a motley collection of M–1 Garands, Dominican-made carbines and machineguns.

At first it was fun. They went on conditioning hikes and played soldier learning to fire the weapons. Their training officers were Dominicans and Cubans and occasionally they were visited by Jiménes Moya. Although Moya was a glamorous figure, they eventually resented the fact that he apparently spent most of his time living it up with the girls in Havana.

But the promised limit of 15 days passed and there was no action. The weeks began to stretch into months.

"They gave us almost no food—only a little coffee," Vélez laments. "We killed a cow and we eat it but it's no good. We just boil it and we have no salt. But snakes were all right. You cook snake right and it taste like chicken."

"We were treated worse than dogs; we were like slaves," Daniel Chervony says. "I didn't have a bath for 6 weeks."

Eventually, out of disgust and sheer boredom, some of the camp's 200 inmates tried to run away. These efforts came to nothing for they would always run into Cuban army patrols who good-humoredly but firmly herded them back to Mil Cumbres. Gradually, as the time passed, it began to dawn on them that they were prisoners.

The worst of it was when word seeped in from home that the promised payments to families had failed to materialize. It was then that the Americans at the camp staged a rather ridiculous gesture of defiance. Many of the recruits had grown beards in idolatrous emulation of Castro's legendary barbudos. The Americans shaved their beards as an open protest.

Oddly enough this charade seemed to have some effect on the camp bosses. Alfonso Canto, the MLD's suave New York operative, appeared in the camp and promised to go back to New York and pay up. Indeed, some of the families there did receive small sums.

Finally Benigno Chervony, a New York building superintendent, blew the whistle on all this revolutionary hocus-pocus. He wrote the U.S. Embassy in Havana to say that his two sons were in Cuba on some kind of nefarious enterprise and he wanted help getting them out. Shortly thereafter six of the by-now disconsolate buccaneers—Daniel Chervony, Carbonell, Vélez, Román, Agosto, and Costa—sent a letter to the U.S. Embassy in Havana saying they were being held prisoners and wanted to be sprung.

A dogged but frequently obstructed investigation in Cuba got nowhere; besides, it was too late to save those who were doomed.

On June 14, the expedition finally got underway in as slapdash a manner as any invasion that was never planned. First to go was an ancient C–46 cargo plane camouflaged—inaccurately as it turned out—with Dominican Air Force insignia. Jiménes Moya led this first wave—after a long argument with the pilot who eventually turned out to be a spy for Trujillo—to an airstrip in the Dominican mountains called Constanza. Jiménes Moya had 63 men aboard the plane. In a 3-week series of ragged running fights with the Dominican Army he and most of his men were killed—apparently including Agosto and young David Chervony.

The second wave consisted of a couple of antique landing craft which sailed from Cuba with about 200 men. One boat made it all the way to the Dominican Republic at a north coast beach. Its luckless crew also apparently died to the man under the guns and bombs of Trujillo's defenders.

The second boat had the incredible good fortune to be even less efficient than all the rest of this haphazard adventure; it ran out of gas 30 miles off the Cuban coast. After wallowing around without food or water for 4 days, its company of seasick bravos were rescued. Many of them, including Vélez and Carbonell, had a belated attack of good sense and refused to go out again. Finally they were given tickets home.

A few others among the would-be Castros did even better. They simply said they wanted no further part of revolution and, after a few days in a Cuban prison, were disgustedly turned loose and sent home with a warning to keep their mouths shut.

Last week, mourning his brother lost in a reckless adventure, Daniel Chervony was still harassed by fear. His wife had been getting mysterious threatening telephone calls and a group of seven sinister strangers were, from time to time, haunting his home. He was afraid to go outside.

The last act of this never-never-land melodrama may be written this week. Seeking to set its own house in order, the Organization of American States convenes in extraordinary session to consider what to do about unrest in the Caribbean—most of which, quite obviously, originates in Castro's Cuba.

Report on the U.S.S.R.—II

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD the third and fourth of a series of eight articles which appeared recently in the Los Angeles Times written by Mr. Robert T. Hartmann, chief of the Los Angeles Times Washington Bureau. Mr. Hartmann accompanied Vice President NIXON on his recent tour of the U.S.S.R. and Poland.

The articles follow:

RUSS RULED BY CONTROL OVER MIND

(By Robert Hartmann)

WASHINGTON, August 17.—The Founding Fathers of the American Revolution, a rather radical affair in its day, boldly proclaimed that government rests on the consent of the governed. And this is true even in a police state like the Soviet Union, though the means of obtaining consent are quite different.

That's where Dr. Pavlov comes in.

In his experiments with dogs, rats, and other animals, Pavlov sought to prove his thesis of the conditioned reflex as the key to human behavior. This is a psychological concept premised on the atheistic Communist belief that man is merely a mentally superior animal but an animal for all that.

PAVLOV THEORY

According to Pavlov, people do things in response to external stimuli and will automatically do the same things under the same stimuli.

Further, by deliberate switching and confusion of the natural pattern of stimulus and response, it is possible to make men do exactly what the manipulator of the stimuli wants them to do.

Not only will they do it—and this is practically important—but they will want to do it. They will truly believe they are doing it of their own accord. Thus, by the influence of Pavlovian thinking on virtually every process of Soviet life from the toddler's day nursery to the brainwashing chambers of the MVD, the Russian masses are slowly coming—as George Orwell predicted in his book "1984"—to the point where they really do love Big Brother.

For the young, the Communists call this free education, for adults, rehabilitation.

There's many a slip in the Pavlovian conditioning. The past ways are not quite dead, and the Kremlin has had to backtrack on some points, notably the perpetuation of the family unit which passes many troublesome folkways along. Religion persists, though in a strictly limited and suspect way. Also, later researchers have shown that conditioned reflexes tend to fade with time and must be constantly recharged.

But in isolated central Asia the experiment is working under optimum conditions. Romantic writers may liken Siberia to the ripsnorting spirit of the old American frontier, but nothing could be more wrong. That was, if anything, a bit too much freedom for the individual with the fastest draw. The Soviet east is a prison so vast and secluded those within it mistake it for the world. They not only have no real freedom but no conception of it and probably do not long for it.

OTHER EXTREME

Poland and the other European satellites, of course, represent the other extreme of Communist conditioning. Even so dyed-in-the-wool a Communist as Gomulka, as dogmatic as Khrushchev, probably cleverer and certainly more worldly wise, doesn't expect to win his battle with the Catholic Church and the 1,000-year-old nationalism of the Polish people in anything short of generations.

The success of 40 years of Pavlovian conditioning on the peasant masses of Central Asia—which were always used to obedience and never much aware of anything beyond the horizon—has been such that Khrushchev is now bold enough to take a few western visitors among the subjects of the experiment. From a boat on the Moscow River he taunted Vice President NIXON (twisting, as usual, the "captive nations week" controversy which applied to enslaved nations and not Russians) by asking "Do these look like slaves?"

CALLS TO SWIMMERS

Then the premier called out to the swimmers "Are you slaves?" and they called back in unison: "Nyet, nyet." Conditioned reflex, not fear, accomplished this, though there's still a large reserve of fear left over from the Stalin terror to reinforce any shaky reflexes.

Once this psychological system is understood, the absolute necessity of Soviet censorship, radio jamming and control of all incoming information is apparent. To keep conditioned reflexes in working order there must be no interference from extraneous stimuli; the word "America" must always evoke a spontaneous link with the word "warmonger" in the Russian mind, not an

image of a land of peace and plenty with no designs at all.

JUST CHIPPING

The word "capitalist" must be coupled with "exploiter"—"Negro" with "lynching"—"foreign bases" with "aggressive designs on the U.S.S.R.," and so on. And this must happen automatically so that the Soviet citizen actually feels he is thinking it out for himself.

Against this massive iceberg (not the thinning ice President Eisenhower spoke of in announcing his invitation to Khrushchev) NIXON'S appeals to open up and don't be afraid of the truth and trust the people and read both sides and reach your own conclusion, were just chipping with an icepick. He knew it and hoped only it might strike one or two unconditioned ears. He also knew everyone in the Kremlin would hear it, where some high-ranking Soviet intellectuals are a bit annoyed with the uncouth manners and crowd-pleasing proclivities of Mr. K.

Members of NIXON'S party, including the newsmen who took their cue from the Vice President and resolutely argued every inch of the journey with Soviet critics and questioners, ran into the same hemispheric mentality.

The Russians are not dumb, nobody could make sputniks, run the world's most efficient secret police and produce a supercolossal stage spectacle like Khachaturian's "Spartacus" and be called stupid. But they live in only half the world, and like our medieval ancestors they have no idea what lies beyond the dropping-off place.

Their kings and priests aren't about to tell them, either.

GET FACSIMILES

However, as the Russians are no less intelligent than any other race, the state must maintain the colossal fraud that the Communist hemisphere in which the Soviet people live is actually the whole world. Thus there exists in the U.S.S.R. a facsimile for everything which free peoples take for granted, such as free communications and a free press.

The curious university-trained Soviet scientist who will live and work in the new "community of scientists" near Novosibirsk, for example, will be able to buy at any street kiosk and freely read newspapers and periodicals from all parts of the world, if he knows the languages.

"What do you mean when you say we cannot get the truth?" a Sverdlovsk journalist demanded at a party given by the local press for the newsmen accompanying NIXON. These vodka-toasting affairs were always scheduled at the same time or immediately after NIXON'S most important activity of the day; as far as I know, Soviet journalists never write or else they do it very leisurely.)

PAPERS AVAILABLE

He went on to insist that even in the Ural Mountains papers are readily available from New York, London, and Paris flown in daily by Soviet jet from Moscow along with Pravda and Izvestia. This is true, but they are the London and New York Daily Workers, L'Humanite and Communist Party papers from other free-world capitals. (This explains why obviously costly Communist organs are kept alive in places where there is virtually no chance of converting anyone or subverting the free government.)

The Russians readily admit all these are Communist papers but, since they believe the Communist Parties in foreign countries actually reflect the aspirations of the common people, what's wrong with that? Only false and misleading papers published by the ruling capitalist circles are, quite properly, kept from poisoning the peace-loving Russian people.

Of course, the Communist papers published in Western Europe and America are vastly more objective than Pravda and Izvestia, though one has to rely on them for news in Russia to appreciate this.

FOLLOW PARTY LINE

They follow the party line, but they must compete with a free press and be plausible enough for free readers. They slant and sneer but cannot utterly ignore or invent the way Soviet papers can and do. For example, in the famous fiction of NIXON trying to tip, bribe or otherwise corrupt a poor Soviet workman on his first day in Moscow, the Belgian Communist paper Le Drapeau Rouge added the explanation of the vice-president's press secretary, Herbert Klein, that what the market workers really wanted was tickets to the American Fair. This was utterly ignored in the Soviet press, as was all advance mention of Nixon's plan to visit Poland.

The average Soviet citizen, even the Soviet educated, thinks he is getting word of what's going on in the world, or at least most of it. He reads news telegraphed by Tass from Washington, New Delhi, Peiping and all parts of the U.S.S.R., and he has his choice of a score of different newspapers in which varying vehemence, brightness of typography, make-up and literary style are substituted for any very profound difference of opinion.

BOSS OF BOTH

He knows, of course, that Pravda is the official organ of the Communist Party while Izvestia speaks for the Government of the U.S.S.R. These are mostly the same people and Khrushchev is boss of both, but the distinction is useful. Izvestia, for example, which recently acquired as its new editor Khrushchev's son-in-law, generally took a more friendly tone toward father's official guest than Pravda.

Pravda sniped constantly at NIXON, whose anti-Communist sentiments are well known at world headquarters. It may have gone too far, for after the 100-ruble fiction appeared on the back page (where sophisticated Russian readers habitually look for items which might have escaped the editor, though they seldom do) the principal NIXON stories carried the byline of Pravda's former editor, Yuri Zhukov, now director of cultural exchanges and the Vice President's ranking escort on his Siberian journey.

Thus the heckling by planted loyal Soviet workers at the doorways of each plant or project on the NIXON schedule and the letters to the editor which showed up contradicting the Vice President and his claim of American prosperity for all probably were not all rehearsed or written by professional party editors.

NATURAL RESULT

In many cases they were Soviet citizens reacting as they have been conditioned to respond to American claims by years of reading Pravda and listening to Moscow radio.

The heckling had a dual purpose: It refuted what NIXON said and the uttering and publishing of it contributed to the grand illusion that free expression exists in the U.S.S.R. as anywhere else.

But for Khrushchev to permit really free intercommunication of ideas and information, as NIXON urged in the shadow of the Soviet Union's most powerful radio jamming transmitters near Novosibirsk, would really wreck the system which has been so carefully erected to permit the Kremlin to control even the subconscious thoughts of its 208 million subjects.

This much, however, may be hoped. If a divine spark does exist within the human soul—as communism denies and we affirm—it will someday burst into flame. As Khrushchev & Co. gain confidence they may relax the reins a bit more, as they have in the economic and agricultural areas already. But there is no sign of any such trend in the intellectual area today.

RUSS OPEN UP VAST NEW LAND

(By Robert Hartmann)

WASHINGTON, August 18.—The unprecedented invasion of Siberia by some 130 Americans with Vice President NIXON undoubtedly made quite an impression on the isolated Soviet residents of this long-closed area. It also made quite an impression on the Americans.

As a second-time traveler in the U.S.S.R., this reporter was not especially surprised by returning to Moscow and Leningrad on the regular intourist circuit. He noted many changes in 4 years: Hundreds of massive apartments teeming with people stood where only skeletons of stone and cement were before; quality of consumer goods appeared better and more were seen in use as well as in store windows, but prices were still very high and waiting lists long for many items.

WEATHER GOOD

Because it was summer (the weather throughout NIXON'S 11-day stay in the U.S.S.R. was uniformly perfect, cool and sunny) instead of the drab winter of his previous visit, this reporter had difficulty comparing the dress and demeanor of the crowds of Soviet citizens. They seemed more carefree and colorfully clothed, there were more smiles and friendly helpfulness toward foreigners, but in 1955 any foreigner was a rarity. Now even Americans are fairly commonplace.

But seeing Siberia and the Urals redoubt was quite a different and memorable experience. Here is a land where fertile black soil stretches for thousands of miles, of virgin pine forests and vast north-flowing rivers, where the new Communist society has placed its bet for future world supremacy.

Not that the Uralmach, the machine tool "mother of factories" or the steel pipe works near Sverdlovsk or the copper mine exactly halfway around the world from Los Angeles were particularly impressive.

PLANTS FAIR

They are evidently fairly good plants, according to the industrial experts in the Nixon group, but to western newsmen they looked old-fashioned and grimy. (The new steel mill shown NIXON in Poland was far more modern.) Despite Soviet pride, a length of red-hot pipe roling down to a conveyor belt by gravity is not quite what we mean by automation. John L. Lewis' miners generally live better than the management of a Siberian mine.

What impresses you, and must have impressed NIXON, is the potential of this vast land and the bustling energy of its people. They are the producers and pioneers of this new order, encouraged to move eastward by such Marxist heresies as the right to own their own homes and state loans to build them, by opportunity for rapid advancement which a society starving for technical and managerial talent must offer.

MANY SHORTCOMINGS

It would be easy to catalog the shortcomings of these Siberian boomtowns, to belittle the plumbing of the ancient hotel or spotlight the clusters of crumbling wooden shacks which are slums in any language.

This is what a Soviet journalist would see visiting a fast-growing American industrial city; in fact, it is exactly what most condescending British and European writers saw when they ventured west of tidewater in the United States during the 19th century. Most of them found the Yankees to be lawless, ill bred, and unwashed boors whose experiment would never amount to much.

The difficulties faced by the 100 American newsmen covering NIXON were incredible

and unending; no problem ever stayed solved; each battle with the bureaucracy had to be refought daily. It seemed part of the Soviet system to take up every minute of everyone's time so that none remained for mischief or meditation.

BREAKFAST IMPORTANT

This was applied to the NIXON party from start to finish. We soon took to rising extra early to eat all we could stuff down for breakfast; very often it was the only meal of the day. Not that the four daily menus for which we paid cash in advance were not available; but at best it took 1 hour to be served and another to settle one's bill.

Communications were also a problem complicated by constant moves. The Soviet authorities promised that NIXON's dress party could file "freely and without delay." With some mysterious exceptions impossible to explain, it is this reporter's opinion that they tried to keep their advance bargain.

STORIES DELAYED

There were long delays, partly because every word had to be read (and probably photocopied) by Soviet censors even if not tampered with, but also due to the heavy load of outgoing traffic requiring operators familiar with the Latin alphabet, who probably are not numerous in such spots as Sverdlovsk and Novosibirsk.

Often I found myself the only person moving on the empty city streets as I directed a sleepy taxi driver to the central telegraph office, which stays open around the clock. Always, after my name was located on "the list" of NIXON newsmen, which was the password for every privilege, my copy was accepted courteously and only three times failed to reach Los Angeles on time.

RUMORS RIFE

There was one nerve-racking day when the rumor spread around Moscow that the Soviets decreed only 12 of the 80-odd American reporters accredited to the Vice President's party could accompany him through Siberia—the key portion of the journey U.S. editors had paid thousands of dollars to have covered. The reason given was the usual Soviet quid pro quo; only a dozen Soviet journalists had accompanied Deputy Premier Kozlov around the United States. This was argued all day, when suddenly the Soviets gave in and said: "We'll take 100." Though only about 80 were signed up, enough resident Moscow newsmen and wives were rounded up to force the Soviets to make good for the full quota.

This was Herbert G. Klein's finest hour, among many. A San Diego editor, Klein became NIXON's press spokesman in July. Always a calm, quiet-spoken man, his baptism of fire in the U.S.S.R. absolutely inoculated him against any minor difficulties which may arise in the future.

While Klein waged a continuous battle with second-string Soviet officials on behalf of the Western press (including several British, French, and West German correspondents on an equal basis) his two assistants helped newsmen over many a minor hurdle. They were Richard Bean of North Hollywood, Lockheed public relations manager, and Richard Davies, a State Department officer formerly stationed in the U.S.S.R. and Poland who spoke both languages. Davies knew very little at the outset about newspapermen, and Bean very little about Russians, but between the two Dicks most crises were eventually surmounted.

Ordinarily, veteran American reporters and photographers have little need of chaperons. But they are indispensable in the Communist world because there are only two kinds of people recognized in the "classless society": somebodies and nobodies. Any official, especially of a guest delegation, must be listened to and obliged if possible. An official is a somebody. But any nonofficial, like a newsman, is less than dirt and his protest might as well be shouted into the wind. Therefore, every major problem had to be taken up through Klein, and a few required NIXON's personal intervention with his hosts.

The astonishing thing was not the many niggling difficulties and roadblocks placed in our way by lower echelon Soviet officials, but the fact that we operated with as much freedom as we did. The regular Moscow correspondents remained under strict censorship rules all the time. The Soviet authorities arbitrarily held up all unprocessed film for several days and decreed that thereafter only Soviet or East German brands could be used—though tourists freely take U.S. film in and out of the country. But for the most part the NIXON story got told to the world and the invaders retreated from Moscow without a serious incident or any lost luggage.

HOSPITALITY ON TRIAL

Here again, however, there was a reason. Khrushchev knew very well his hospitality was on trial, that if things went reasonably well with NIXON he would get his invitation from President Eisenhower. We were the guinea pigs for the pampered White House press corps; we learned a lot about news coverage in the U.S.S.R. and the Soviets learned a lot about our demanding ways.

There is a sinister postscript to this. At this moment in some Moscow bureau there is a dossier on every American reporter or photographer among the NIXON group. It contains a minute record, possibly augmented by infrared photographs of everything each visitor did during his stay in the U.S.S.R. It may also contain a transcript of everything he said.

The elevator never stops at the 12th floor of the new Ukraina Hotel which was built primarily for foreign visitors to Moscow. This is the tape-recording master control room where any suite in the huge edifice can be monitored through built-in microphones.

The secret police by no means bug every visitor around the clock. But they do know whom to watch, and they can tune in on you any time.

The NIXON newsmen were all given single rooms—a mark of luxury but also keeping them apart. Nobody gives out room numbers in Soviet hotels and ours were scattered all over.

On all group movements we were never out of earshot of an English-speaking Intourist guide or a so-called Soviet journalist, who seated themselves in an obviously prearranged pattern in every bus and plane.

Chances are nothing will ever come of these dossiers, but if anyone made a misstep in Novosibirsk under the illusion they were free and undetected, embarrassing evidence could turn up. It might be used for espionage blackmail, to deny future entry or in reprisal for a hostile account after leaving the country. All Western newsmen permanently in Moscow live under this sword, part of the psychological pressure which never lets up and is inexorably directed toward one goal proclaimed on every hand: "Victory for communism."

REALITY MASKED

"If you tell the truth about this place," one American warned me, "nobody back home is going to believe you. It's too utterly incredible, like life on another planet. But the Russians look like us and it's all wrapped up to look like a somewhat backward form of our society.

"It won't do you any good to try and explain this isn't so, because these guys are so smart they are sending home 5,000 Americans this year who'll tell their friends the Russians are really nice, sweet, somewhat inefficient people who like Americans and want peace. These Americans will even authenticate their accounts by saying some things are bad in the U.S.S.R., that while freedom for the Russians isn't anything like ours, they're getting more all the time. So don't waste your time trying to tell how it really is, they'll tag you for another McCarthy."

Panama Canal Zone: "Peaceful Occupation" Proposed for November 3, 1959

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. FLOOD. Mr. Speaker, a revealing news story about projected political plans now being agitated in Panama for November 3, 1959, the 56th anniversary of the independence of the Republic of Panama, was published in the July 14, 1959, issue of the Star & Herald, Panama, Republic of Panama.

The news story follows:

[From the Star & Herald, Panama, Republic of Panama, July 14, 1959]

"PEACEFUL OCCUPATION" OF CANAL ZONE PROPOSED FOR NOVEMBER 3

Two opposition politicians sounded a call this weekend for the "peaceful occupation" of the Canal Zone by Panamanians on November 3, 1959, Panama's independence anniversary.

The proposal came from Aquilino Boyd and Ernesto Castillero Pimentel, who also were the first to call for a 50-50 split of the gross income of the Panama Canal between the United States and Panama. Boyd is a former Foreign Minister; Castillero, a former Vice Foreign Minister.

Boyd, featured in a Sunday night radio program "Meet the Press," first broached the occupation idea, saying Panamanians should move into the Canal Zone on November 3 to plant flags. This would be a repetition, on a larger scale, of the "Operation Sovereignty" carried out on May 2, 1958, by university students.

In a prepared statement, Castillero furnished additional details yesterday. He said:

"We can imagine the spectacle. Once the (Nov. 3) parade is over, students and citizens, rather than devoting themselves to the usual festivities and diversions, will walk toward the Panamanian territory known as the Canal Zone, entering through the various streets and avenues, in good order, perhaps carrying national flags, and will occupy the zone symbolically (and effectively). They will sit down on the curbs of all the sidewalks, on the benches of all parks, on the steps of the Administration Building, under the palm trees of the Prado, under the shadow of the banyan trees, at portals, at churches, and in the stadium. Those with automobiles also will go, silently, scrupulously obeying all traffic regulations, without interfering with traffic. This cannot be an act of physical force nor of material violence. It will be a transcendental manifestation of national reaffirmation, a massive demonstration of the unbreakable unity among all Panamanians, without partisan distinctions, in support of the longed-for adjustments."

Castillero compared such a move to the passive resistance movement in India before World War II.

"The independence of India in those days was as utopic and remote as, for example, the ideal of the recovery of the canal by the Republic of Panama is at present. And I call it recovery because the canal once was ours, materially and juridically, from November

3, 1903, to February 26, 1904, the date of the exchange of ratification of the fateful Hay-Buneau Varilla Treaty."

Castillero added that after 56 years of negotiations, Panama has gained nothing. "It is necessary to open a new front—the front on the street, on the public park, on the zone * * *."

In his radio appearance Sunday, Boyd castigated Governor Potter for the latter's pronouncements on U.S. policy in the zone, saying the interpretation of treaties was not within the Governor's function. He added that he resigned as Foreign Minister in President Ernesto de la Guardia's Cabinet because his idea for the 50–50 split of the Canal's gross income was termed "not too realistic" by the administration's newspaper.

Pollution Problem Acute

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PRICE. Mr. Speaker, my compliments are extended to the Evening Journal, East St. Louis, Ill., for the timely and provocative editorial which it carried in its edition of Tuesday, August 25, 1959, on the subject of our water resources.

The editorial searches wisely for a more appropriate description of what is happening to the Nation's and world's supply than the inadequate word "pollution."

It predicts, and I feel compelled to agree with its prediction, that it is entirely possible that our civilization will drown in a sea of poisonous slime long before it perishes from the effects of radiation.

I have long been interested in the problem of meeting this very serious threat. I have, in the past, been among the original sponsors of legislation dealing with the subject. I have a strong feeling that we are not dealing with it seriously enough, and a far more extensive program should be encouraged by the Federal Government in this area.

The editorial follows:

POLLUTION PROBLEM ACUTE

While public health, government and civilian defense authorities ponder the dangers of radioactive fallout, and old problem poses an ever-increasing threat to our burgeoning population.

Water pollution is not a dramatic or agreeable subject. It is hard to get excited about sewers when there are more exotic dangers to worry about. But "pollution" is getting to be an inadequate word to describe the enormous quantities of detergents, pesticides, and industrial wastes being added to the sewage and garbage flow of cities, small and large.

For lack of adequate facilities, cities dump raw or only partially treated sewage into the nearest convenient river or lake, regardless of the fact that other communities also draw their drinking water from the same body of water.

Even the broad oceans are not free of the menace, and the problem is approaching crisis proportions on many of our major waterways. The Federal Government is pressing for control of pollution on several rivers, particularly the Missouri. Sioux City, Iowa, was enjoined last April from dumping raw sewage into the Big Muddy above Omaha, Nebr.

A Federal sewage control program, in effect since 1956, has stimulated construction, starts or authorization of more than 1,400 sewage treatment plants. A modest authorization of $50 million a year is allocated for Federal aid to community sewage treatment projects. Even this amount is not usually appropriated each year, partly because of the Eisenhower administration's hostility to Federal activity in this field.

Eastern rivers already are largely sewage and industrial waste conduits, devoid of marine life and too dangerous for swimming, boating, and other water sport. The Great Lakes, especially Erie and Ontario, are becoming more polluted each year as cities and rivers pour wastes into them.

Fishing has been wiped out in the Mississippi River for miles below St. Louis, because of sewage, garbage and industrial wastes from the metropolitan area. The pattern is repeated on most of the major rivers.

Usually any city located on a river treats polluted water it receives at a point below the water intake. The communities yet further downstream pay for this—with interest—in the form of still more elaborate water treatment projects.

The problem is becoming acute all over the world. Civilization's effluence destroys the aquatic food cycle on which sea animals depend—and seafood is still the staple diet of much of the world's population.

Radioactive fallout is a potential menace to mankind. Wastes from atomic reactors already contribute in no small measure to water pollution. But it is entirely possible that our civilization will drown in a sea of poisonous slime long before it perishes from the effects of radiation.

Report on the U.S.S.R.—III

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD the fifth and sixth articles of a series of eight articles which appeared recently in the Los Angeles Times written by Mr. Robert T. Hartmann, chief of the Los Angeles Times Washington bureau. Mr. Hartmann accompanied Vice President NIXON on his recent tour of the U.S.S.R. and Poland.

The articles follow:

BIG BROTHER NEVER SLEEPS

(By Robert Hartmann)

WASHINGTON, August 19.—Will it do any good for Premier Khrushchev to see the United States as it really is, in all its awesome industrial and farm productivity and widely distributed prosperity and political power? Neither Vice President NIXON nor anybody who accompanied him in the Soviet Union really knows.

But it would do every American good to see what NIXON saw in the U.S.S.R. though it was only a carefully controlled peep show into the forbidden cities of Siberia. At the very least, every American who has a responsibility for foreign policymaking or informing the U.S. public should go to the Soviet Union not once but several times.

STATE MANIPULATION

Difficult as it is to convey the incredible police authority and all-pervading manipulation of people by the Soviet state to anyone raised in a relatively free climate, it is worth trying. The key to the system is the same Pavlovian concept mentioned earlier in this series, a deliberate and systematic confusion of illusion and reality.

Thus in the Soviet Union one must always operate on suppositions, deductions, and educated guesses. It is never possible to check it out, or establish anything absolutely as truth. Even events within one's own sensual observations, and even they are deliberately distored by chronic fatigue. When, like a rat in a maze, one gets weary of this unrewarding search, Big Brother takes over and shows the way. It is, even for a foreign visitor, almost a relief.

Let me relate two versions of an incident which happened to me firsthand in Siberia, first the way I believe it happened; then the way I think the Soviet manipulators hoped I would conclude it happened.

HOW IT HAPPENED AS I SAW IT

Throughout the time the NIXON party was in the U.S.S.R., because of high-level orders to all cognizant officials, American newsmen were permitted to photograph freely anything they saw without interference.

In Sverdlovsk, where Soviet heavy industry was moved behind the Ural Mountains during World War II, the MVD is extremely sensitive, not about the rather antiquated machinery but because of a complete quarantine of the population from foreign contamination, not possible in Moscow.

After emerging from the tiresome trek through the pipe foundry, waiting by the press bus for NIXON to get in his Zis limousine I spotted a knot of Soviet workers standing a block from the crowded doorway where the Vice President was saying farewell to the plant officials. They were not trying to get any closer, so I walked over to try and talk with them and show some friendship.

CARDS CHECKED

As I got closer, I noticed that one man of obvious authority in civilian clothes was shaking down this group of workers, making each of them produce his red covered identification card which every Soviet citizen must carry at all times.

I was so curious about what was going on I forgot about the camera slung open around my neck until the plainclothesman swung around and saw me. The red cards instantly vanished and the group rapidly broke up.

As the MVD sauntered past me with studied casualness, I remarked: "We may not use our cameras, but we have eyes."

At the next stop, I used the last shot in my camera and reached in my coat pocket for one of the three rolls of film I had put there before leaving the hotel that morning. My pocket was empty.

"Somebody's swiped my film," I muttered, then remembered I had left two more rolls in a Pan American flight bag on the bus. Rushing to the bus, I unzipped the bag only to find the two rolls (which had never left that bag since New York) were also missing though lenses worth several hundred dollars were undisturbed. This all happened within 10 minutes after the MVD man checking unreliable workers thought I had snapped him in action. This is an area in which the Soviets are especially sensitive, and they can move fast when one of their own secret agents is concerned.

Knowing I was in danger of losing the remainder of my film supply or having it all fogged, if not in worse trouble, I at once loudly and publicly protested to NIXON'S

assistant and the AP and UPI reporters, saying the story that nobody steals in the U.S.S.R. is all propaganda, though I had previously believed it. Then I sat down to lunch.

PROTESTS USELESS

Georgi Bolshakov, former Tass bureau chief in Washington, came over and asked me what was the matter. I told him. I also told him that I knew very well nothing is stolen in Russia except on purpose, certainly not simultaneously from pocket and flight bag. I said I thought I knew why it was gathered up but truthfully denied that I took the MVD agent's picture.

"Perhaps you left it in your room," Georgi suggested helpfully. He had no immediate ideas about the two rolls that disappeared from the bus, however.

On the long ride back to the city our press bus was under strict orders not to stop. But there's a common humanity that defies rules, and at the urgent request of some passengers we did halt momentarily by a thicket of trees in the Siberian forest, almost exactly on the watershed that divides Europe and Asia.

FILM PASSED

Screened by foliage and 1,000 feet from the nearest Russian "guide," I swiftly passed the finished film from my camera to another American we shall call Jones. I didn't want to lose it, too, and sooner or later they'd discover it was the one they wanted, not my unused cartons.

Rushing to my room, I unlocked the door, and there on the bed were three rolls of film, apparently unopened. Perhaps I had forgotten to tuck them in my coat pocket when I left hurriedly. Maybe some of my American friends did help themselves to the two rolls on the bus.

I saw my Tass friend and thanked him for his quick work, saying I was willing to forget about the other two, as I might have been mistaken.

Two days later we returned to Moscow. There, some time during the night, two somewhat battered boxes of film turned up in the Pan American fight bag under my hotel bed.

My friend Jones was somewhat cold. He informed me that while in Sverdlovsk someone had stolen all the color film in his hotel room, but missed my exposed roll in his pocket.

HOW RUSSIANS HOPED I WOULD SEE IT

There is just as much freedom for visiting foreigners in the U.S.S.R. as anywhere else; amateur and news photography is permitted anywhere except in specific closed defense areas, for the Soviet people have nothing to hide.

In Sverdlovsk, as in some U.S. defense areas, guests are asked not to make photographs, but nobody seizes visitors' cameras as they do in America. They simply trust the guests not to take pictures inside the pipe foundry (the dumb Russians being unaware that it is at least 50 years behind the times and one couldn't care less about copying it).

While many Soviet workers crowded around to see the American visitor, they were not ordered to do so. Some were so little interested they simply stood apart talking among themselves and didn't particularly care about getting pushed around in the crowd just to say they had seen Vice President NIXON. After all, they were free to do as they liked on their guaranteed lunch hour, with pay.

SLANDEROUS LIE

Eager to find some evidence that would prove the slanderous lie written by American journalists that the loyal Soviet workers introduced to NIXON were selected "plants" primed with party-line questions, one of the visitors quit watching NIXON to snoop around behind the scenes.

The American journalist (who is not even a photographer, but has taken far too many pictures in the hope of discrediting Soviet progress) attempted to secretly photograph a plant security guard.

Ignorantly assuming that the security guard could not understand him the American cursed obscenely in English.

He used up his film and had forgotten to bring any more, having left it on his hotel bed while dressing. The Americans think they are very efficient, but they are not.

Instead of blaming himself, he at once sought to impugn the honesty of hardworking Soviet workers, who never steal anything because they have everything they need.

COLLEAGUES BLAMED

If anything was lost from the bag on the bus it was, after all, full of Americans (including many with 35-millimeter cameras who were running out of color film and begging it from their colleagues). They could have borrowed it even while the bus was under guard and nobody else allowed aboard. When the bus returns to the Bolshoi Ural Hotel, there will be the other three rolls, right where the journalist left them.

Not content to spread his fantasies and lies in the reactionary Los Angeles Times, he tried to spread them to the U.S. wire services and poison the good impression Vice President NIXON had received of Soviet hospitality and desire for peace and friendship with the United States.

WANTED TO BE HELPFUL

As a former Washington colleague and despite the allegation of many Americans that all Tass correspondents are spies and informers, Mr. Bolshakov merely wanted to be helpful when he saw the journalist in distress. He seemed tired, and Mr. Bolshakov diplomatically suggested that perhaps he planned to put the film in his pocket but never actually did so. At any rate, he said he would do what he could to help locate the missing film.

By now suffering hallucinations of persecution brought on by a guilt complex, the American journalist attempted to pass his film to another of his countrymen. This ruse did not accomplish anything since the Soviet authorities were not interested in the slightest in his fumbling amateur photographic efforts. The bus had been ordered to hurry back to the hotel so as to permit the correspondents time to file freely and without delay, as the Soviet authorities promised, and at the request of the Americans themselves, who were in a hurry to return.

Rushing to his room, he unlocked the door, and there, on the bed, were three rolls of film, quite untouched. They were just as he left them when he left hurriedly, and, as for the other two, either they were taken by other Americans or never existed.

JOURNALIST'S SNEERS

The American journalist apologized to his Soviet colleague but was unable to restrain himself from sneering about the two films stolen by his countrymen.

Upon returning to Moscow, where the American group had ample stocks of all kinds of U.S. film, the person who borrowed the two rolls on the bus returned them secretly to avoid embarrassment.

Clearly, this was nothing more than a coincidence, certainly not proof that thievery exists in the U.S.S.R., since none of the other Americans lost any film.

I may never know for certain which of the above versions is true. For one thing, the film has not been processed to see if anything is on it or if it has been fogged by X-rays, a favorite Soviet device. Even if it isn't, what does it prove? That one's imagination runs wild in the U.S.S.R.? Or that big brother is always watching you?

ASIAN-WESTERN CLASH AGE-OLD

(By Robert Hartmann)

WASHINGTON, August 20.—Ivan Ivanovitch is supposed to be the Russian counterpart of John Smith, just the plain ordinary guy who typifies his country regardless of passing regimes.

But there is a vast gulf between Ivan and his American and European brothers which romanticists—some in high places—seem to ignore when they say what we must do is reach the real Russian people in spite of their wicked government.

Ivan Ivanovitch, though he may be Tovarish (Comrade) Ivan today, is no less a product of Russia and Asia than John Smith, perhaps unknowingly, is the heir of Athenian philosophers, Semitic prophets, Viking pirates, Roman legionaries, Davy Crockett, and the Barons of Runnymede. Unfortunately, Asia (except for its peninsulas) is not as well known as Latin America to most American students.

The big conflict in the world today goes far deeper than communism versus capitalism or freedom verses regimentation. It is not a new conflict at all but a very old one magnified to global dimensions.

AGE-OLD BATTLE

It is the age-old battle of the land people against the sea people.

The land people have to scratch harder for existence than those who can, at least part of the year, farm the sea. They become tougher, hungrier, more indifferent to human life. To survive, to plunder and to protect what they have, the land people tend to think and act collectively, to follow a strong leader like a herd of sheep.

Historically, the human masses of Central Asia are known as hordes, but until one is swept up in the crush of a few hundred garlic-soaked Russian laborers—all headed for a single doorway—he doesn't really get the picture of what Genghis Khan's golden horde must have been.

It is no accident that the present borders of the Communist world from the China Sea to the "gates of Vienna" are substantially those of the Mongol hordes' greatest expansion from their central Asian homelands. That was the best the land people have done in history, but Khrushchev is out to do better with mechanized, industrialized, nuclear-armed horde of his own.

INDIVIDUAL EFFORT

The sea people, on the other hand, have developed along continental coasts and offshore islands and from the beginning their ways have called for individual and small group effort. Seafaring in tiny vessels and hunting with crude weapons cannot be done by a horde. The sea people have also lived by commerce and/or sea raiding, both of which contribute to cross-breeding of ideas, tools, cultures, and techniques. NATO is the current name for the community of the sea people just as communism designates the new horde.

Since the sea civilizes and invigorates human communities, the technically superior sea-people (except while fighting among themselves) have not been seriously threatened by the land-people since the Middle Ages produced spectacular advances in weaponry. The horde, however, has an effective defensive capability which has resisted and exhausted successive attacks on the land-people of Russia and China, though at fearful cost. As late as World War II and Korea the tactics of Communist armies were essentially those of the horde, augmented by tanks and artillery.

LATEST ATTEMPT

Communism as it works today in the U.S.S.R. shares little except its name with the economic analysis of history written by a German-Jewish atheist living in London 100 years ago. It is nothing more than the

latest and most systematic of many attempts by a ruthless and intelligent elite to hold the lid down on the surging masses of Asia, to organize and control the horde and direct its irresistible force toward global conquest.

Soviet communism differs from the rules of the Tartar Khans and the Russian Czars only in thoroughness; instead of depending primarily on terror and fear it seeks to penetrate and change the very minds of members of the horde so they will become manageable without losing their mass power.

Soviet communism disdains the dilettante efforts of Peter the Great and his successors, who wanted to be Europeans in architecture, court manners, and power politics. It aims to organize Asia with the industrial and military know-how of America. From this synthesis will come a unique new order, the Soviet society, to dominate the world.

This is what Khrushchev means, and what the Russian workers in Siberia mean when they cry, "Mir y mira" (peace to the world), and boast of Soviet cultural achievements. Their peace is like the peace of Islam—nonresistance to the will of the all-powerful (not Allah, but the Kremlin). Theirs is not the culture of the Acropolis, the Louvre, or Hollywood Bowl, but something akin to Herr Goebbel's "Kultur," in which the basic ingredient is not genius but conformity.

GRAVE ERROR

It would be a grave error to underestimate this latest surge of the silent, long-isolated land people, for Communist planners know the history of Asia far better than we and have studied the weaknesses of the sea people which they believe will lead to our undoing.

The individuality and free will instilled in the small boats, family cottages, and forest hideaways of the sea people from prehistoric times are to their mass-conditioned minds, evidence of undisciplined weakness. What we call liberty they regard as anarchy, and because of their isolation from the realities of the Western World, they see this as fatal disunity both within and among the free nations.

Khrushchev and his top associates cannot ignore the evidence of the recent past that free peoples and free alliances are capable of determined and united action in time of war. But they believe we are incapable of acting beyond individual self-interest in the absence of immediate and obvious peril. This is the key to the current peaceful coexistence campaign which will, like the cynical Ribbentrop-Molotov nonaggression pact which Khrushchev recently defended, give the Soviet Union more time to become both invulnerable and invincible.

TWO-STAGE PROGRAM

The Communist method of managing the horde is a two-stage program. The first step is "crowd control," which has been perfected to an amazing degree in the U.S.S.R. The second is "thought control," and the apparent relaxation since Stalin's death indicates that this much subtler and more sinister method of disciplining the mind rather than the body is being gradually substituted for sheer terror and police power. At the present stage both methods are used, but in such insulated and uncontaminated areas as Siberia, thought control is much more relied upon than in European Russia and the minority areas to the south.

Crowd control involves the effective management of the unmanageable horde by compartmenting it and by reinforcing official surveillance by indoctrinating everyone to watch everyone else. Thus Soviet planners are pushing their mass housing program with high prority everywhere; not only to satisfy the people with more modern and sanitary accommodations, but also to collect them in easily controlled increments. Collective farms, collective apartment houses with common bathrooms, kitchens, and restaurants, collective recreational facilities, collective educational and scientific institutions discourage individual thought and attempts to differ from acceptable group behavior.

When this reporter was in Russia 4 years ago he never saw as many as a dozen people idly assembled in public. They were always working, going somewhere, sitting in pairs in well-lighted parks, or attending scheduled events such as athletic meets or theater performances. The main idea seemed to keep moving.

MORE FREEDOM

This time there was more seemingly spontaneous and informal gathering, partly because of the balmy summer weather, but also because the ordinary Russian does feel more freedom and is less fearful of chance conversations or overhead complaints.

But with large assemblies the science of crowd control is still very much in evidence. For each of Vice President NIXON'S appearances, the numbers of cheering Russians were carefully regulated in advance—as they are for all visiting dignitaries and for Khrushchev's own public appearances. This is done in part to achieve the precise degree of welcome desired, and also because of the ever-present fear that too large a crowd will become unmanageable. (In Warsaw, the same technique was attempted, but didn't work.) This, rather than a sly effort to sabotage, probably accounts for the Soviet authorities limiting attendance at the American exhibition to 50,000 per day. Even at this rate, there is danger of the displays being slowly carried away by the human anthill hungering for knowledge and novelty.

READ DISPATCHES

The nearly 100 Western newsmen accompanying the Nixons provided the Soviet authorities with a day-by-day consensus of the success or failure of their efforts to create the desired crowd reaction. If they did not censor our dispatches, they certainly read them carefully and reacted swiftly.

On July 27 in Leningrad, our 5th day in the U.S.S.R., most Amercian correspondents reached that breaking point of exasperation which comes to all first-time visitors. Their cables home were full of angry accounts of frustration and Soviet inefficiency. In 24 hours, from the time the party landed at Novosibirsk, everything suddenly took a turn for the better. Press buses were waiting, hotel assignments were prearranged, telegraphic facilities were on all-night standby a block away, food was good, refreshments were lavishly provided, there was even a pressing and shoe-shining service "while you wait" at a tiny Siberian hotel where such a crew of Americans had never been seen before.

Similarly, when news stories sent to the United States the following day complained that Soviet journalists and "loyal workers" were crowding so close around NIXON, assisted by his MVD security guards, that American newsmen couldn't get within earshot, we were astonished the next day to find manhandling MVD agents smilingly stepping back to let us walk alongside the Vice President while they held the Russians back.

There was even a "spontaneous public demonstration" in the central square of Novosibirsk in which the press bus was mobbed by several thousand Russians to show how welcome was the free American press.

Can We Set "Safe" Tolerances for Cancer-Inducing Agents?—Comments by Dr. Harold F. Blum of National Cancer Institute

---

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mrs. SULLIVAN. Mr. Speaker, a few days ago the Senate, on a routine call of the calendar, and without a record vote, passed a far-reaching bill on the use of coal-tar colors and other coloring substances in and on food. It is S. 2197, the proposed Color Additives Amendments of 1959, to authorize the establishment by the Food and Drug Administration of safe tolerances for coal-tar or other coloring substances which are not harmless under the terms of the Food, Drug, and Cosmetic Act of 1938.

Demands for such legislation have been increasing among food manufacturers as a result of a combination of court decisions on the one hand and of new testing techniques which now disclose that a number of coal-tar colors used for years under the impression they were harmless no longer can meet that requirement.

The Department of Health, Education, and Welfare has urged enactment of legislation such as contained in S. 2197, and experts from the Food and Drug Administration, the Senate Committee on Labor and Public Welfare, and representatives of the food and chemical industries sat down to draft mutually acceptable amendments to the bill as originally introduced. I am informed no hearings were held on this legislation, however. Now that it has passed the Senate, I understand efforts are being made in behalf of the food and chemical industries to have it scheduled for early action by the House Committee on Interstate and Foreign Commerce.

CONGRESS NEEDS TO BE INFORMED ON TECHNICAL MATTERS INVOLVED

Under the circumstances, Mr. Speaker, I think it is important that all of us who are interested in the issues this legislation presents should inform ourselves on the details of this legislation. I am reminded that only last March we had a prolonged debate and rollcall vote on special legislation on the use of an other-than-"harmless" coal-tar color, Citrus Red No. 2, on the skin of oranges. Many of us had strong misgivings about the authorized use on a food product of a coloring substance which is not harmless, even though we were assured it is safe in the manner and in the volume used on oranges.

Mr. Speaker, although I took an active role in the legislative drive which led to the Food Additives Act in the last Congress, and although I spoke on and voted against the Citrus Red No. 2 bill we

passed in March, I am the first to acknowledge that I am not a scientist, not a chemist, not a physiologist—and that on these complex technical issues we who are not scientists must weigh and balance the conflicting views and statements of people who do have technical competence.

I am always trying to find reliable scientific information in this field of food chemistry but the difficulty is to be able to understand it when it is available. In this connection, a good friend of mine from St. Louis recently suggested that I look into the studies of a physiologist of the National Cancer Institute who had, she said, published an outstanding paper on the cumulative effects of certain carcinogens.

For the information of the Members, Mr. Speaker, I now include as part of my remarks in the Appendix of the CONGRESSIONAL RECORD the letter which I wrote to Dr. Harold F. Blum of the U.S. Public Health Service's National Cancer Institute and his reply, both of which are self-explanatory and, in the case of Dr. Blum's letter, well worth reading, I believe:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 17, 1959.

Dr. HAROLD F. BLUM,
National Cancer Institute, National Institutes of Health, Bethesda, Md.

DEAR DR. BLUM: A friend of mine in St. Louis, who is a very active member of the St. Louis Consumer Federation, has written me that she thinks your article in the June issue of American Scientist is the best answer to the question of whether tolerances should be set for coal tar colors in foodstuffs. She warned me, however, that the article is very technical.

Could I have a brief statement in as nontechnical language as possible on the dangers of allowing continued use in or on food—even in very low amounts—of coal tar colors found not in fact to be "harmless." I am interested in this from the standpoint of overall color legislation and such special bills as the one to permit continued use of Yellow 3 and 4 in butter, etc.

With best wishes, I am,
Sincerely yours,
LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District of Missouri.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
PUBLIC HEALTH SERVICE,
Bethesda, Md., August 25, 1959.

Hon. LEONOR K. SULLIVAN,
House of Representatives,
Washington, D.C.

DEAR MRS. SULLIVAN: This is in answer to your letter of August 17, in which you refer to my article in the June issue of American Scientist, and its bearing on the question of tolerance for coal tar colors in foodstuffs with regard to cancer.

The article (Quantitative aspects of cancer induction and growth; as illustrated in carcinogenesis by ultraviolet light) is based on experimental studies of cancer caused in mice by repeated doses of ultraviolet light. It permits certain conclusions to be drawn regarding the origin and growth of cancers induced in this way. Since comparable studies have not been made using coal tar derivatives or other substances as cancer inducing agents, I cannot say with complete certainty that the same conclusions apply. But what evidence exists, suggests that continued dosage with such agents produce similar results, and I think that until further evidence is forthcoming we are justified in assuming the cases to be parallel.

If this point of view is adopted, cancer induction is to be regarded as a cumulative process which begins with the first dose of the cancer-inducing agent. Whether the cancer will reach detectable size within the lifetime of the animal in which it is induced, must depend upon how fast the cancer grows. Thus, a cancer induced by a single or a few doses of the agent may grow so slowly that it will never be detected, and of course will not seriously affect the animal. If the dosage is continued, however, cancer growth will speed up, and the cancer will reach detectable size before the animal dies. In the case of cancer induced by the more effective chemical agents, a single dose, if large enough, will result in a detectable cancer; but we do not have adequate knowledge of the effect of repeated small doses.

It is probable that there is a "threshold dose" for every cancer inducing agent, that is, a minimum dose below which no cancer is produced; but you can see that it would be very difficult to determine such a threshold if it exists. All one could hope to say would be that a given small dose did not produce cancers in a given kind of animal—say the mouse—within the lifetime of that animal. But one would be without any basis for assuming that this minimum dose applied to any other kind of animal—say man. Thus I cannot see how we have any sound basis for assigning tolerance doses or tolerance levels for cancer-inducing agents. I think this must be the case, whether or not the agent in question produces results exactly comparable to those produced by ultraviolet light.

Viewed in this way it would seem that the only practical answer would be to keep any substances known to induce, or suspected of inducing cancer at as low levels as feasible. The assigning of tolerance limits—which must necessarily be arbitrary—can only give a false sense of security.

I must point out again that these conclusions are, for the most part, based on studies of an agent other than those to which you refer specifically in your letter, and hence may not be completely justified. But until experimental studies have shown that similar relationships do not hold for chemical substances of the kind in which you are interested, I think one is justified in assuming that they do.

I hope that this brief statement will have made my point of view clear. The details of the argument, summed up only briefly in the article you mention, are too technical to present in short space. What I have said here, follows, I think, the experimental data, without bringing in theoretical points that might be more open to question.

I hope that this brief discussion will have answered your questions satisfactorily, but if there are points which I can help to clarify further, I shall be pleased to in so far as I am able.

Sincerely yours,
HAROLD F. BLUM,
Physiologist, National Cancer Institute.

Report on the U.S.S.R.—IV

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD the concluding two articles of a series of eight articles which appeared recently in the Lose Angeles Times written by Mr. Robert T. Hartmann, chief of the Los Angeles Times Washington Bureau. Mr. Hartmann accompanied Vice President NIXON on his recent tour of the U.S.S.R. and Poland.

The articles follow:

KHRUSHCHEV HAS LIMITED HORIZON

(By Robert T. Hartmann)

WASHINGTON, August 22.—Nikita Khrushchev, Chairman of the Presidium of the U.S.S.R. and first secretary of the Communist Party, has good reason to feel he is riding the wave of the future.

He got his invitation to the United States, for which he has been angling since his London visit with Marshal Bulganin (whatever became of him?) in 1955, and he is going to get his second summit meeting after outliving the late John Foster Dulles, who thought the first one a bad mistake.

At 64, his tanned, robust appearance belies rumors of ill health. I watched him drink toasts in vodka, whisky, and California champagne, but he showed no signs of the babbling alcoholic part he once played. Vice President NIXON found him sufficiently blunt and outspoken while cold sober, and less impetuous than many observers suppose.

HAS SEEN BOOM

Khrushchev has seen his country boom, as all backward societies boom at the point in their industrialization when making machines to make machines begins to give way to making machines to make useful products. He takes the credit for it, being a superb politician, and in return appears to have won a measure of real popularity with the Russian people which Stalin never sought or got.

Now he is going to see the United States—including Los Angeles—since he discussed his itinerary with a prominent southern Californian—and he is going to be President Eisenhower's host in the Kremlin. What will this momentous exchange accomplish, and why was it agreed to so suddenly?

TO KEEP RUSS TALKING

In part, it is simply an effort to keep the Soviet Union talking instead of taking one-sided action over West Berlin. The Geneva foreign ministers' talks dribbled off to an inconclusive end, as everyone expected—especially Mr. K., who never intended to let Gromyko settle anything except the time of tomorrow's meeting. Moreover, the invitation is an attempt to impress Khrushchev—the real decision maker in all important matters affecting the Communist hemisphere—with the realities of American power as well as its peaceful intent.

President Eisenhower and his advisers evidently feel that the Mikoyan and Kozlov visits—especially the latter—did break down some Soviet misconceptions about the only nation in the world they regard as really a rival.

But in the consensus of many Americans who have watched Khrushchev closely in his swift consolidation of Stalin's power there is only a very, very long chance of making a very, very small dent in his diametrically different mind.

TRUE BELIEVER

Khrushchev is not using communism as a means to power, as did Lenin, or for the cynical perpetuation of personal despotism, as Stalin did. He is a true believer in the system which brought him success but he is not a Marxist intellectual devoted to sterile dogma that cannot be altered. He has already made sweeping reforms in decentralization of bureaucracy and in agricultural planning. He has a practical peasant's

shrewdness and limited horizon. He is quick-witted and extroverted, but utterly without a sense of sportsmanship or compassion.

Most Western visitors have been struck by Khrushchev's unbelievably inaccurate picture of the United States, though he is thoroughly aware of its industrial and military potential in a statistical way. He has, after all, one of history's most extensive intelligence networks; he is not above learning or asking advice from such close subordinates as Kozlov and Mikoyan, though probably his inner circle is quite limited.

UNAFFECTED BY TALK

Khrushchev is totally unaffected by "sweetness and light"—the kind of international small talk which has been President Eisenhower's long suit since World War II. There is not much evidence after NIXON's 11 hours of hot-and-heavy debate in public and private that he is any more affected by argument.

What he wants is a trade, in which he gets the best of it if he can. Nobody is likely to get anything from Khrushchev—which is to say from the Soviet Government—unless they give him something he wants. Pure self-interest, not in the vain personal sense that drove Nero and Hitler mad but the interest of his own and the world Communist goal (which must be identical in the fully conditioned Soviet man), is all that counts with Mr. K.

Quid pro quo, the direct trade by which all transactions between hostile camps must be made, is the only way to do business with Khrushchev.

BASES BIG ISSUE

What does he want the United States to give? The most frequently heard topic on the Nixon journey was American bases in foreign countries. "Why do you keep such bases if not to attack us?" the Vice President and every American with him was asked by everyone from Khrushchev down. The Premier, in fact, put it this simply: Anyone who favors bases wants war, anyone who is against bases (American bases, that is) is on the side of peace.

While the Captive Nations Week resolution also upset the Soviets, who seized upon it as a convenient needle for NIXON, Khrushchev is well aware that the United States is not going to liberate the Eastern European satellites by force. Hungary proved this fact and pretty well fixed the line between the two worlds, though the Communists are still pushing for something like the Rapacki plan (advanced by Poland's foreign minister) to pull back military forces on both sides of the borderline—which gets right back to the "U.S. bases must go" business.

AT BIG DISADVANTAGE

NIXON was at a severe disadvantage in his encounters with Khrushchev because it had been publicly announced in advance that he had no authority to negotiate and the President had privately opened negotiations on an exchange of top-level visits before NIXON arrived. The Vice President did give Khrushchev a preview of the kind of arguments to expect in America and took home a fair sample of the line the Soviet leader is likely to be peddling over here.

It can be reasonably assumed that neither man changed his mind much on any major East-West difference; both, however, probably modified their impressions of each other. An extra bonus was NIXON's opportunity to get some of his views across to the Soviet people via Khrushchev's own network and newspapers, but this was essentially a long-range and longshot endeavor.

FIRSTHAND LOOK

Khrushchev's firsthand look at the United States, in the judgment of those who helped counsel such a step, will be most effective if it convincingly demonstrates America's will to stand firm for its principles and power positions. Khrushchev frankly doubts that such will exists and unfortunately there is much corroborating evidence in each day's Western newspapers. He is quite respectfully aware of U.S. power—of the NATO sword—but he doesn't think the flabby arm will ever be strong enough to wield it.

NIXON countered that view with straight talk which Khrushchev repeatedly objected to as "threats". But the Vice President deliberately made it clear the United States will not be pushed around and said both publicly and privately that no nation should ever be put in a position where it has no choice but to fight. He didn't use the word "Berlin," but it was understood.

On the other hand, the Vice President tried to assure Khrushchev that the United States has no designs on the U.S.S.R. itself; no plan to liberate adjacent Communist-dominated areas by force. He tried to appeal over his head for more consumer goods for the Soviet people and a sort of Russia-for-the-Russians development under communism if that's how they want it. Such an appeal runs directly counter to the dynamic nature of doctrinaire communism, but there is a bare chance that Mr. Khrushchev might settle for a century of internal development if actually convinced the alternative is nuclear devastation without a moment's moral hesitation and regardless of reprisal.

COEXISTENCE ISN'T ANSWER

(By Robert T. Hartmann)

WASHINGTON, August 22.—Despite the apparent thawing of the cold war beginning in 1955 and climaxed by Vice President NIXON's ice-breaking mission to Moscow and the forthcoming Eisenhower-Khrushchev visits, the United States and the Soviet Union are still the polar centers of two completely different worlds.

In seven preceding articles this reporter has not attempted to detail the superficial contrasts between Communist life and what we call western civilization. Instead he has tried to show the deep and fundamental gulf between the mentality of the human horde—the land people of Central Asia—and the individualistic sea people who up to this time has dominated the world.

This prehistoric difference, amounting almost to a division of species, is obscured by such surface affinities as similarity of clothing and skin color, by words which in translation appear to express the same concepts and by the deliberate efforts of the Russian Communists to pattern their productive plant and material achievement after those of America.

HASN'T PROVED SUCCESS

The Soviet system of managing the mass manpower of Asia has not yet proved a total success; in four decades, however, it has achieved such impressive and visible results as to intrigue kindred land people seeking a shortcut to economic equality with the sea people, some of whom have been their masters. This is why Moscow impresses the unending stream of delegates and students from Asia and Africa far more than it does a sophisticated European or American tourist. It makes Lenin's prophecy that "the road to Paris runs through Peiping" take on new and fearful meaning.

When this all-pervading difference of thought, tradition, aim, and action is understood—even half-appreciated—many questions as to why the Soviet Union behaves as it does answer themselves. It explains the almost insurmountable barrier to even the most elementary communication which exists between the inhabitants of the two worlds from the humblest level all the way to the summit. The summit itself embraces quite opposite ideas of political power vested in a constitutional president or prime minister and a Soviet boss.

Yet, we do live on one and the same planet and must therefore answer the ultimate question: Is it large enough for both of us?

It would be a neat and comforting conclusion to be able to answer this question with certainty. The Communists, who have an absolute answer for everything, have already composed theirs. Our planet—and perhaps other planets eventually—will one day be organized into a single Soviet society. In the meantime, until the inevitability of Socialist truth is everywhere recognized, a period of peaceful coexistence may be required.

In short and simple English this means "it's us or you and it's going to be us." The only possible response to it is the same resolution.

ONE OR OTHER

Either the free way of life will encompass the earth or there will be no life left on earth to worry about. When jets fly nonstop from New York to Moscow as we did in less than 9 hours this is just as true as Lincoln's declaration about a "house divided" was on the eve of the American Civil War.

In this reporter's opinion, there is only one line to take toward the Soviet Union, as the guiding center of an historic upsurge of hordes of land people which has communism as its current name. We must either lick them or join them. Coexistence is at best an interim truce and never a solution. Khrushchev & Co. know this, but do we?

We must lick them, without war if possible, exactly as they are determined to lick us without war if possible, but lick us in any case.

MUST UNDERSTAND PROBLEM

How do we go about this? First of all, we need to understand what we are up against. Let me be the first to confess that when it was announced Vice President NIXON was going to Novosibirsk and Sverdlovsk I—and I am sure many of my colleagues who write important foreign policy news daily from Washington—had to look on a map to locate these places. Yet both are cities of more than 750,000 people, laboring mightily to build a new society on the ruins of ours.

There has been much talk recently about foreign languages—Russian is being introduced in a few more U.S. high schools and colleges. But the U.S.S.R. is turning out thousands of students annually trained to speak English—and Urdu and Indonesian and Spanish and Arabic and Zwahili and Japanese.

NOT PREPARED

Americans are not only colossally ignorant of Russia. They are not properly prepared to uphold their own way of life and to preach it to others. Every Communist gets this militant indoctrination from childhood. The newsmen in NIXON's party found themselves unofficial defenders of the faith of free men in almost every conversation with Soviet citizens. But the right words at first were hard to find, since these concepts are taken so much for granted by all of us and, fundamentally, throughout most of the world we know.

We must make a massive effort to leaven Soviet society with at least a touch of the spirit of free inquiry in the hope that someday it will leaven the whole lump. It may not, but we must believe in the triumph of human intelligence as thoroughly as the Communist mass managers believe in the triumph of Pavlovian psychology.

PREPARE INTELLECTUALLY

There isn't any other choice but to prepare ourselves intellectually as well as militarily for years and decades and perhaps even centuries of tough confict and compe-

tition with these vigorous people who are resolved to bury us. Our aim must not be to bury them but to raise them from their living graves.

Americans who travel to Russia or anywhere else where the battle may be joined must know what they are talking about, must know what to say, must never yield a foot of ground to the superbly prepared Communist or Communist-influenced adversary. We have been sending too many patsies with U.S. passports to see the Kremlin.

In the U.S.S.R., it's plain that the war on men's minds has as high a priority as intercontinental missiles; indeed, the missiles' primary purpose may be their effect on our minds rather than upon our cities. The Communists never send a soldier into the idea war without thorough training and full equipment, while we are still mustering minutemen to return their fire with muskets.

As NIXON demonstrated effectively, it is not enough merely to answer the kind of questions which are fired as bullets—not to elicit information but to destroy. Americans must return fire without falling back, must counterattack with even more devastating questions about the new order of Communist conformity. There are channels of "scuttlebutt" and word-of-mouth transmission throughout the Soviet empire by which some of these questions will be relayed.

All of this is more easily said than done, to be sure. But having seen a little of it done by our Vice President, Dr. Milton Eisenhower, Admiral Rickover, and most of the other Americans who invaded Siberia for a few days, I know it can be done and must be done.

Mr. Khrushchev dosn't think we care that much. He could be right.

Congress Sideswipes the Treasury

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an article which appeared in Business Week of August 22, 1959, entitled "Congress Sideswipes the Treasury."

This is as clear a statement of the political aspects of the fiscal fiasco into which the leaders of the 86th Congress have permitted the relatively simple question of interest ceilings for Federal bonds to fall as I have read. The leaders of this Democratic controlled Congress should take heed and take corrective action before more damage is done to the fiscal integrity of the Federal Government.

The article follows:

CONGRESS SIDESWIPES THE TREASURY

The House Ways and Means Committee has turned down, for this session at least, the administration's request to lift the interest rate ceiling on sales of new Treasury bonds.

This move came after the committee had passed a compromise bill that would have given the Treasury what it wanted. The trouble was that Congress would not accept the compromise. A large group of congressmen—in both the Senate and the House—are critical of the Federal Reserve Board and its Chairman, William McC. Martin. They balked at passing a bill that did not contain some sort of stricture on the Fed; unable to get their way, they worked to have the bill shelved.

This hurts the Treasury more than it does the Fed. For with the Fed pursuing a tight credit policy, outstanding Government issues are selling to yield well above the 4¼-percent ceiling on interest on bonds. If it must confine itself to selling short-term securities, the Treasury will not only force up interest rates but create a potentially inflationary situation.

Congress refusal to act emphasizes the Treasury's subordination to the Fed—rather than giving it greater flexibility and independence. As long as their hands are tied by the ceiling, the debt managers lack the freedom possessed by the money managers.

Thus, the Treasury has become the unwitting and unhappy victim of Congress pique with the Fed. This is the worst kind of politics, because the end result is tighter money and higher interest rates than ever. The Fed can feel justified in going to an even more restrictive policy on the grounds that demand for short-term funds will now be stronger than ever; and the Treasury has no other choice than to float short-term issues. At the same time, investors in U.S. savings bonds are likely to cash them in if short-term rates rise above long-term rates.

There is no doubt that Martin's stubborn attitude has a great deal to do with creating the impasse. But he feels, understandably, that the independence of the Fed is threatened. And he has made one telling point. He has challenged his critics in Congress to make clear the kind of directives that they want the Fed to abide by and proposed that these should be offered as an amendment to the Federal Reserve Act, thus giving Congress as a whole a chance to vote directly on the issue. This would not involve the Treasury but would be a separate fight.

Martin's critics, however, have not taken this challenge. Instead, they have vented their displeasure by turning down the Treasury.

Congress should reconsider the whole problem. Most Congressmen favor giving the Treasury greater flexibility, and should do so. If the attitude of the Fed, which is an agent of Congress, is not all it should be, then Congress can address itself to this problem separately. But for Congress to penalize the Treasury because it is displeased with the Fed is neither politically wise nor economically sound.

Now more than ever, the Nation needs a searching review and reappraisal of our fiscal and monetary system. In the meantime, Congress should consider a minimum program, one that would help the Treasury rather than hurt it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Nationwide Demand To Limit Postal Subsidies

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 4, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, a few weeks ago I introduced H.R. 8433, a bill to place an annual limitation on publishers' second-class mail subsidies. The bill has since been introduced by the gentleman from Wisconsin [Mr. REUSS] as H.R. 8603 and is cosponsored in the Senate by the senior Senator from Pennsylvania [Mr. CLARK] and the junior Senator from Wisconsin [Mr. PROXMIRE] as S. 2536.

The purpose of this measure is to require that the annual postage paid by second-class publications be equal to the Post Office Department's annual cost of handling, processing, transporting, and delivering of the publication to its mail subscribers, subject to a 5-year sliding-scale subsidy limitation formula. A maximum $5 million subsidy per publication would be permitted during the first year of operation, a $3 million subsidy the second year, a $1 million subsidy the third year, a $500,000 subsidy the fourth year, and during the fifth year and thereafter a maximum $100,000 a year subsidy per publication.

As I explained in my introductory remarks—CONGRESSIONAL RECORD, July 28, 1959, pages 13275–13279—profitmaking newspapers and magazines are now incurring an annual postal deficit of more than $200 million. The administration proposes to reduce the size of the tremendous postal deficit, estimated at close to $500 million for fiscal 1960, by raising first-class mail from 4 to 5 cents an ounce, despite the fact that this type of mail is more than paying its own way. If the Post Office Department is genuinely concerned with reducing the postal deficit, it will support our bill and submit a favorable report to the House Post Office and Civil Service Committee so that hearings may be held early in the next session.

Mr. Speaker, since the introduction of H.R. 8433, I have been overwhelmed by mail from all parts of the country in support of postal subsidy limitation legislation.

Under leave to extend my remarks, I include a representative group of news stories, editorials, and mail support for this measure:

[From the Reading, Pa., Eagle, July 28, 1959]

RHODES BILL WOULD CUT MAIL SUBSIDIES FOR PUBLICATIONS

WASHINGTON, July 28.—Representative GEORGE M. RHODES, Democrat of Pennsylvania, proposed legislation today to cut postal subsidies to large newspapers and magazines. He said they now cost the taxpayers more than $200 million a year.

Rhodes' bill, being introduced today, calls for a gradual reduction in subsidies over a 5-year period.

It would put a $5 million limit the first year on the subsidy to any newspaper and magazine over and above the Post Office Department's cost of handling the publications.

The limit would drop to $3 million the second year, $1 million in the third, $500,000 in the fourth, and $100,000 in the fifth and all succeeding years.

Rhodes compared his proposal to limitations placed on soil bank payments and farm price support loans.

"These publications which benefit most from postal subsidy handouts have been extremely critical of the cotton, wheat, and other farm programs," he said in a statement. "Therefore, they cannot honestly and consistently oppose this legislation."

Rhodes cited Life Magazine as an example of the extent of subsidies to large publications using second class mail. He said post office figures showed that it cost the Department $9,400,000 more to deliver the magazine than Life paid in second-class mail rates in 1956.

The House last year approved an amendment by Rhodes to limit second class mail subsidies to $100,000 a year, but the Senate rejected it by a 57 to 33 vote.

The Pennsylvania Congressman said publishers objected then that the amendment would have too much of an immediate economic impact upon their businesses.

He contended that his new bill would overcome that objection through a gradual reduction in subsidies.

The Berks Democrat vigorously opposed the administration's request for another 1 cent increase in first-class mail, which he termed "an obvious attempt to hide the huge deficits resulting from subsidizing profitmaking newspapers and magazines.

If the post office department is genuinely concerned with reducing the tremendous postal deficit, estimated at close to $500 million for fiscal 1960, it will support this bill," Congressman RHODES concluded.

[From the Philadelphia Inquirer, July 29, 1959]

BILL WOULD CUT POSTAL SUBSIDY TO PUBLICATIONS

WASHINGTON, July 28.—Representative GEORGE M. RHODES, Democrat, of Reading, Tuesday introduced legislation in the House to place a 5-year sliding-scale limitation on mail subsidies to large magazines and newspapers, which now cost taxpayers more than $200 million a year.

Citing a Philadelphia Inquirer editorial of June 25, 1959, which urged an end to magazine subsidies by the Post Office Department, RHODES called for a limit of Government handouts to publishers.

Under the Rhodes bill each magazine and newspaper using second-class mail would be limited to a maximum subsidy of $5 million in the first year over and above the Post Office Department's cost of handling and delivering the publication.

The maximum second-class mail subsidy would be $3 million for each publication during the second year, $1 million during the third year, $500,000 during the fourth year, and $100,000 during the fifth year and each year thereafter.

When the subsidy limit is reached by any publication during any year, the full rate necessary to cover the Post Office Department's costs for that publication would go into effect.

Ten magazines listed by RHODES have received subsidies exceeding $32 million in 1956. The largest was $9,494,000 and the smallest $1,130,000.

The Inquirer editorial labeled as unfortunate the Eisenhower administration's proposal to again raise first-class mail and air rates. The Inquirer also opposes subsidies to newspapers.

[From the Yuma (Ariz.) Daily Sun July 29, 1959]

THE EDITOR'S NOTEBOOK

(By Jones Osborn)

This business of subsidies is a touchy one in many quarters.

The last time I mentioned farm subsidies, I was told to give my attention to airline subsidies instead.

But there is one form of subsidy that can be discussed without treading on local toes:

The postal subsidy to large newspapers and magazines.

Congressman RHODES, a Democrat, from Pennsylvania, says postal subsidies are costing the taxpayers more than $200 million a year.

RHODES cited Life magazine.

He said postal accountants have figured that it costs Uncle Sam $9 million more to deliver the magazine than Life paid in mail rates in 1956.

So RHODES yesterday introduced a bill calling for a gradual reduction in subsidies over a 5-year period.

The first year, his bill would limit the subsidy to any newspaper or magazine to $5 million.

The second year, $3 million.

One million in the third year.

A half-million the fourth year.

And from the fifth year on, no publication would be allowed more than a $100,000 annual subsidy.

There's another side to this, of course. That is the wish of early Americans to disseminate information about this country's Government and affairs to all citizens, that they might govern themselves more intelligently. And so second-class postal rates for publications were kept low.

But I doubt if our early lawmakers ever expected to put $5 million a year into anyone's pocket.

[From Editor and Publisher magazine, Aug. 1, 1959]

SUBSIDY ON SECOND-CLASS HIT

WASHINGTON.—A proposal to eliminate the subsidy on second-class mail through a 5-year sliding scale for increased rates has been made to Congress by Representative GEORGE M. RHODES, a former printer and labor union executive.

Mr. RHODES contends the larger magazines and newspapers enjoy a $200 million gift from the taxpayers each year. He proposes that limitations be made on each publication to bring rates ultimately to the level of cost-of-service as determined by the Post Office Department. No publication would be carried in the first year for more than

$5 million under the determined cost figure; the figure would drop to $3 million, $1 million, $500,000, and $100,000 in subsequent years. The full rate would apply to overage at each of these stages.

The House voted for the Rhodes "subsidy" reduction last year: $100,000-a-year limit on any company's charges below cost-of-service. The Senate refused to concur.

Mr. RHODES contends increase in mass media and in travel and educational opportunity has obviated the basis on which subsidies were originally granted to printed matter. In any event, he told colleagues, publishers would pass the added costs on to subscribers instead of to the taxpaying public generally. The Pennsylvania Democrat has inserted in the CONGRESSIONAL RECORD a tabulation showing costs of carrying certain second-class material, amounts paid to the Post Office Department, and losses allegedly sustained. All of the illustrations concern nationally circulated magazines.

[From the Lewiston (Mont.) Daily News, Aug. 2, 1959]

SAUCE FOR THE GANDER

Congressman GEORGE M. RHODES, of Pennsylvania, has proposed legislation to cut postal subsidies to large newspapers and magazines which he says now cost the taxpayers more than $200 million a year.

The Rhodes bill would put a $5 million limit the first year on mail subsidy to any publication over and beyond the Post Office Department's cost of handling. The limit would drop in succeeding years to $100,000.

We couldn't agree with Congressman RHODES more.

Some of the larger magazines in this country such as Life have been subsidized long enough. It is one thing for the post office to grant special rates to small weekly newspapers which are struggling to meet their costs and provide news and grassroots editorials to rural folk. It is something else to subsidize Life to the tune of millions annually when that publication is well able to pay its way.

Mr. RHODES in fact cites Life as a prime example. He points out that it cost the taxpayers $9,400,000 in 1956 to help circulate this magazine giant.

Life has been extremely critical of the parity farm program and has consistently denounced Government payments to wheat farmers as handouts. But the so-called "handout" this powerful national magazine begrudges the farmers, it is more than willing to take for itself.

Here is but another dismal example of Government economy being a good thing for the other fellow.

The Rhodes bill deserves to be enacted into law, Life and Mr. Luce to the contrary notwithstanding.

[From Labor, Aug. 8, 1959]

TWO HUNDRED MILLION DOLLARS IN HANDOUTS—RENEWS FIGHT TO CUT BIG SUBSIDIES TO MAGAZINES

A new drive to curb the huge mail subsidies enjoyed by big magazines and newspapers has been launched by Congressman GEORGE M. RHODES, Democrat, Pennsylvania. These subsidies exceeded $200 million a year, RHODES told the House last week.

Life magazine alone gets a $9.4 million yearly subsidy, RHODES said. That's based on the Post Office Department's latest estimate of how much the cost of delivering Life exceeds the second-class postage paid by the magazine.

RHODES cited the yearly cost of postal subsidies to some other big magazines as follows: Saturday Evening Post, $6.1 million; Reader's Digest, $4.8 million; Look, $3.5 million; Ladies' Home Journal, $1.9 million; McCall's, $1.5 million; National Geographic, $1.3 million; Good Housekeeping, $1.3 million.

These figures date back several years, RHODES noted. Since then, he said, the magazines' circulations have increased, "thereby adding to the subsidy they receive."

RHODES introduced a bill providing that the mail subsidy received by any magazine or newspaper shall be gradually reduced to a $100,000 yearly maximum. He noted that this would sharply cut the annual postal deficit.

In contrast, President Eisenhower has asked Congress to raise the postage from 4 cents to 5 cents on letter mail—which already more than pays its way. Ike's proposal, said RHODES, "is nothing more than an obvious attempt to hide the huge deficit resulting from subsidizing profit-making newspapers and magazines."

RHODES' bill was referred to the House Post Office Committee, where little action is expected. However, other ways may be found to bring the subject to the floor of Congress.

INCONSISTENCY CITED

Two years ago, a largely similar measure by RHODES passed the House. But it was then killed in the Senate, RHODES recalled, after "the magazine publishers' lobby conducted an intensive behind-the-scenes campaign against it."

RHODES noted also that the big magazines and newspapers have "carefully kept from their readers" information about their postal subsidies. Yet, he said, "these publications which benefit most from postal subsidy handouts have been extremely critical of the cotton, wheat and other farm programs."

"It is not easy," RHODES said, "to advocate the elimination of any subsidy, particularly one which affects the powerful newspaper and magazine industry. But the time has come, in fact it is long overdue, for Congress to show some courage."

[From the Publishers' Auxiliary, Chicago, Ill., Aug. 8, 1959]

RHODES ASKS END TO POST OFFICE SUBSIDIES

WASHINGTON.—That old song about you take the high road will be sung by the mass circulation magazines with some new lyrics if Representative GEORGE M. RHODES (Democrat, of Pennsylvania) has his way.

RHODES wants to take the subsidies for the large magazines and newspapers out of postal rates.

According to the new Rhodes bill, postal subsidies would be limited to large publications to $100,000 a year after 4 years. Publications would be forced to pay their full cost of handling, as ascertained by the Post Office.

RHODES was unsuccessful in 1957 when he sought to pare publication subsidies. He did get his 1957 version adopted on the House floor, but it was killed by the Senate.

The present bill would be costly to the magazine industry. Life alone would be required to pay more than $9 million a year in additional postage.

Representative RHODES told the House that "latest figures show that it cost the Department some $9,400,000 a year to deliver Life magazine than the publication paid in second-class mail rates."

Life magazine, which several years ago made a study of the out-of-pocket cost to the Post Office of delivering each copy of the magazine, disputes RHODES' claim.

In the new Rhodes bill, amount of subsidy would be determined by data developed under the Postal Policy Act of 1958, which requires the Post Office to report to Congress every 2 years on the costs of handling various classes of mail.

RHODES said that it costs taxpayers $200 million each year to make up the difference between the cost of handling such publications and the second-class postage they now pay.

NEW YORK CITY, *July 29, 1959.*

DEAR MR. RHODES: At last. I wish you all success in your effort to make magazines and newspapers pay their own way. In the end we may even get decent mail deliveries in our cities.

MARION HART.

BROOKLYN, N.Y., *July 29, 1959.*

DEAR SIR: I want to thank you for your proposal on the mail rates for large magazines. I'd hate to think that I'm working for the publishers when I'm actually a letter carrier working for the Government.

Thank you.

EDMUND A. SAWKOWSKI.

OAKLAND, CALIF., *July 29, 1959.*

DEAR SIR: Hurrah for you and here's to the success of your bill cutting subsidies to newspapers and magazines. The age of needed support to assure a free press has passed in the U.S.A. Good luck.

Just a little voter.

A. I. MCCARTHY.

MIAMI, FLA., *July 28, 1959.*

SIR: Have just read in today's paper about your proposal to gradually increase mail rates for large magazines and newspapers over a 5-year span.

As a mail carrier of 5 years and as one who believes the Post Office should be on a paying basis, I can only say thanks. Your proposal is the best single idea I have concerning the operation of the Post Office in the last 5 years.

Increased postal rates for magazines seem far overdue. I can assure you, sir, from experience that working with magazines and newspapers takes for more time, and thus money cost, than working with letters. There is no comparison. Of course, working with the larger size third-class flat mail is also much harder to work with than letters. The ordinary first-class letter is the easiest piece of mail to case (work) and deliver.

JAMES O. SHIVER.

HOUSTON, TEX., *July 29, 1959.*

DEAR SIR: I wish to congratulate you on proposing legislation to cut postal subsidies. I am always thankful when a Congressman thinks of a taxpayer. For the people who can't read or will not read, the "picture" magazines could be made smaller.

Mrs. ROBERT NORDIN.

NEW ORLEANS, LA., *August 10, 1959.*

DEAR MR. RHODES: I want to very sincerely compliment you on your worthwhile speech of July 28 on "Postal Subsidy Limitation."

Subsidies are right and proper for those who need help but the rich and powerful magazines need no Government help to stay in business.

JOHN T. MENDES.

JERSEY CITY, N.J., *August 18, 1959.*

SIR: I am informed through Labor, the railroad brotherhoods' newspaper, of your action to curb the huge mail subsidies enjoyed by big magazines and newspapers. * * *

I understand the President wants to make [regular mail] 5 cents. With a mere post card at 3 cents, the trash, including that in magazines and newspapers, [is] a means of making money at reduced rates. I think it only fair that advertising be made to pay to clear the deficit and to bring down the rates on personal letters and post cards.

I appreciate your action and respectfully urge steps be taken to set things right, as in a democracy.

HENRY PETERSEN.

LINCOLN, NEBR., *August 8, 1959.*

DEAR SIR: In the Washington Labor weekly is an article telling of your effort to renew a bill reducing newspaper and magazine subsidies. Why not take them away altogether? What is the argument for granting them any?

In an article in a recent Reader's Digest was a scornful attack on the farmer—the total amount of subsidies granted to them—it is a staggering amount. Yet, there are millions of farmers to share the subsidies—not nearly as many magazines and papers. A farmer is asked to stop producing; what would the papers do if they were told to quit advertising? If they were asked to do so, it is my opinion they would be eligible for subsidy.

* * *

Here's power to you and your worthy bill. Surely you have enough Democrats beside you to see this through.

Mrs. E. W. KOENIG.

SUNSHINE PRESS,
St. Louis, Mo., August 14, 1955.

DEAR MR. RHODES: Permit me to congratulate you on the introduction of your post office bill to limit subsidies to $100,000.

As editor and publisher of community newspapers here and as an active member of the Pine Lawn Chamber of Commerce, we have been fighting for more just postal rates for several years.

We have repeatedly pointed out to our friends, readers, fellow members, Senators and Congressmen that second-class mail getting a free ride of about a million dollars a day is grossly unfair to other users of the post office.

We have written numerous editorials to the effect that Life magazine has been getting a $9 million handout yearly.

We have urged our Congressman CURTIS and others to enact legislation as simple as this:

Those who use the post office for profit should pay at least break-even rates for service rendered.

When second class pays its just rate and we quit giving away $300 million a year to gigantic magazine publishers, then perhaps we can put a fairer rate on third class, parcel post, and above all, first-class mail.

You are certainly to be warmly commended on your brave stand and I will be looking forward to news of what happens.

Thanks again,
Sincerely,

AL SONNENSCHEIN,
Editor and Publisher.

SUNSHINE PRESS,
St. Louis, Mo., August 22, 1959.

DEAR CONGRESSMAN RHODES: I have read carefully the tearsheets from CONGRESSIONAL RECORD about your views on H.R. 8433 and I am happy that you expressed yourself as you did. You are 100 percent right and deserve all the support the people of the United States can give you.

* * * * *

How true the comment: "the time has come for Congress to show some courage by standing up to the publishers who reap the big profits from postal subsidies at taxpayers' expense.

How true, too, Mr. Wolf's comment:

"These magazines have grown fat and saucy because of their help—subsidy—from Uncle Sam."

I have been fighting this injustice, this subsidy to second-class mail, for several years. The Pine Lawn Chamber of Commerce of which I am a director sent a protest along lines of objecting to the huge handout to second-class mail (magazines chiefly) to every Congressman and Senator a few years ago. To no avail. Ed Murrow had a program on TV nationwide and that helped some.

If the Postmaster General and the postal officials do not back you up in your excellent bill, then they should be fired.

May I compliment you, too, on your analysis of postal receipts and average payments. Can anyone justify magazines paying 2½ cents a pound while first-class pays $1.19? Carry this one point further. Weigh a pound of post cards. Multiply by 3 cents. You will note post cards are paying $5.61 a pound—and they are the "poor man's letter."

* * * * *

Sincerely,

AL SONNENSCHEIN.

Meeting the Challenges of Soviet Progress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. WILEY. Mr. President, today the Soviet economy is moving forward at a faster rate of progress than it has in recent times.

Regularly, Khrushchev, with an air of braggadocio, states that, before long, the Soviet economy will pass us by.

Frankly, I do not think this will happen.

We recognize, however, that Soviet progress is a real challenge.

These include, first, the military threat to our security; second, efforts at economic penetration of more areas of the world; third, the need for illustrating to the world's uncommitted peoples that a free enterprise system cannot only provide the highest standard of living, but also maintain at the same time the maximum degree of freedom for its citizens; and fourth, the demands of normal growth and the need for economic progress, themselves—discounting the Soviet threat—require constructive measures to stimulate economic progress. In the light of our own needs—as well as the threat to our security—we need to be economically aggressive and creative to meet the challenge ahead.

We have witnessed in Russia, as in other dictatorships, that state control, directing manpower and resources toward specific ends, can make impressive gains in any particular field.

In the long run, however, I am confident that it will be balanced economy—the one that will provide the most for its people with the least restriction on their activities, that will ultimately elicit the confidence of men and nations.

In view of the challenges, both externally and internally, we cannot afford to assume a lackadaisical attitude. It has been said that, for those who would preserve liberty, it must be won anew in each generation. This is true today, as it has been historically. We have been enriched by a heritage of a magnitude beyond understanding. Now, we must strive, with diligence and dedication to make our own contribution to that great heritage—both in terms of progress and security.

Recently, the Janesville Daily Gazette carried an article by James Marlow entitled, "How to Spur Americans to Keep Up With Soviet Progress," representing a major challenge with which we, as a nation, are confronted. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROBLEM: HOW TO SPUR AMERICANS TO KEEP UP WITH PROGRESS OF SOVIETS

(By James Marlow)

WASHINGTON.—American leadership is showing a growing concern about the ability of this country—at the rate and in the way we are going—to keep up with Soviet progress.

Time was when Soviet claims to achievement were taken with a grain of salt in the United States.

That attitude began to change when the Soviets showed how far advanced they were, industrially and scientifically, first by making the atom bomb, then the hydrogen bomb, and then beating us into outer space with their sputniks in 1957.

Earlier in the week this writer reported President Eisenhower:

1. Is concerned about the driving urge to get ahead which the Soviets 7-year plan is giving them.

2. Thinks this country needs an incentive toward harder work—something similar to the 7-year plan—which he believes is providing the Soviet people with the moral equivalent of war.

3. Feels Americans must be induced to work harder, think more of achievement, less of leisure and money.

ECHO BY COMMITTEE

Now comes the Draper Committee—a 10-man group headed by the investment banker, William H. Draper, Jr.—which sounds like a direct echo of the President.

Eisenhower created this Committee to study the U.S. program of military assistance to other countries. Its report, made public Thursday, urged even bigger aid and went much beyond talking in terms of weapons alone.

The 10-man group sought to look at the Soviet challenge from many angles—its progress, its productive expansion, its goals, and its tactics—plus the need it creates for American efforts to match Soviet efforts.

The Committee, noting the Soviets are maintaining a higher rate of growth than the United States in industrial production and in their technology and technical education, said:

"Their objective of equaling and exceeding the United States in selected areas of their own choosing has provided an unusual psychological stimulation to their people which we must more than match by dedication to our own cause.

"GREATER DEDICATION

"These trends in the Communist world cannot be ignored. They suggest the need for real concern about our present and prospective rates of progress which will determine our future ability to compete with Communist states.

"All this requires a positive individual and national dedication, greater emphasis on hard constructive work and thought, less rather than more emphasis on leisure, more rather than less application to our tasks."

The similarity between Eisenhower's thinking and the Committee's statement may have been the result of the President having seen the Draper report before it was made public.

But he was concerned about this problem of competition and incentives many months ago. He announced in his State of the Union message last January he would create a committee to study and then propose national goals.

NATIONAL GOAL

The Soviets' 7-year plan is in their case a national goal. Eisenhower is ready to name his Committee as soon as he can find enough private organizations to finance its work. He doesn't want the Government to foot the bill.

But neither Eisenhower nor the Draper Committee has come up with an answer to the question they raise:

How can Americans—people in a free society—be induced to work harder and think less of leisure and money in order to compete with the Soviet people living under a dictatorship which can direct, control and compel them?

The dictatorship controls everything: People's lives; the work they do; where they work and on what and for how long; the luxuries they can have or must do without; their hours; prices; wages; and the means of production and distribution.

We may be entering a period of public breast-beating for our failures to do more and do without more. But self-flagellation is neither an answer nor a substitute for action.

Perhaps Eisenhower's Committee on Goals may produce suggestions for the old philosophical, but now very real, problem of how a free people, with all that means, can compete with a people controlled and centrally directed.

Landrum-Griffin Bill Held No Credit to Legislators

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. BOWLES. Mr. Speaker, under leave to revise and extend my remarks, I include an excellent article by the Reverend William J. Smith, S.J., which appeared in the Catholic Transcript for yesterday, August 27, 1959. The article is entitled "Landrum-Griffin Bill Held No Credit to Legislators." The text of the article follows:

LANDRUM-GRIFFIN BILL HELD NO CREDIT TO LEGISLATORS

(By Rev. William J. Smith, S.J.)

Politicians are supposed to know the mood of the people. It is an important part of their business. They not only keep a wet finger in the air to see which way the wind is blowing; they must also keep their ear to the ground. That is why they seem to assume such awkward positions at times.

The heated, high-tensioned debate which preceded the passage of the Landrum-Griffin labor reform bill reflected the current mood of the voting public. It is a long time since the country witnessed so tense and hectic a session of the House of Representatives.

The public was in an angry frame of mind about labor reform and the majority vote for the Landrum bill mirrored it. The resentment was not merely a reaction against the Becks and the Hoffas. An untold number of local incidents each added its mite to create an antiunion mood in the mind of the public.

An ironic feature of the debate as it was conducted and controlled by the supports of the bill seemed to pass unnoticed. One section of this bill deals with the democratic conducting of labor union meetings. Heavy criminal penalties are attached to the violation of that section of the law. The irony lies in this: If a union official were to conduct a union meeting and employ some of the tactics alleged against the congressional supporters of the bill at the session, the union official might find himself in violation of the law and be jailed because of it.

Even so inveterate an antiunion protagonist as Representative CLARE HOFFMAN, of Michigan, protested vigorously from the floor the dictatorial tactics of what he called the bloc in control.

I find it a little difficult, however, to express any strong sympathy for the northern Democrat-Liberal Republican bloc in regard to the point. If they had had as tight a grip on the majority as their opponents had, they would have done the same thing. This is "democracy in action" as it has been exemplified on many occasions in both Houses of Congress. Pressure politics reached a new high in this titanic tussle. The lobby laws of the Nation were shamelessly violated on all sides.

Arthur Krock, with a distinctly antiunion article in the New York Times, summed up the struggle as a battle between the labor monopoly and the industry monopoly. With the coming of F.D.R. and the New Deal, Krock contended, a labor monopoly evolved from the expansion of the trade union movement. The new labor monopoly eventually came to dominate the industrial monopoly which had prevailed over the country all the years before. The fight over the Landrum-Griffin bill was simply the industry monopoly again giving challenge and overriding the labor monopoly.

I do not concede Mr. Krock's parallel of what he terms the two monopolies. But I do recognize a conclusion which the noted columnist failed to state explicitly. The conclusion is that with the passage of the Landrum-Griffin bill, if it becomes law in its present form, the monopoly of industry is again in the saddle.

The Landrum-Griffin bill was promoted and passed in an atmosphere of ignorance and/or hypocrisy. Corruption in union-management relations was the basic point at issue. When the chips were down, however, the issue of corruption was bypassed. A determined effort to curtail some of the economic power of the labor unions crept into its place.

About 80 percent of the provisions of the Elliott bill and the Landrum-Griffin bill were almost identical. They contained hard and tough restrictions on the criminal and the racketeering elements that have infiltrated the labor movement. The administration forces simply ignored these similarities in the two bills. The Republican-southern Democrat coalition was in the saddle and it rode right through.

It cannot be denied that the practice of secondary boycotting and of organizational picketing have been abused by some union officials and some so-called labor leaders. This writer has pointed out these abuses on more than one occasion. But there have been thousands of union officials who have used both these economic weapons licitly and honestly, with the sanction of the Taft-Hartley Law and the interpretation of the Supreme Court. They are weapons of economic warfare used in an economic system which is based on a clash of opposing economic parties, if not on a principle of conflict.

It can be conceded that some reasonable restrictions should have been placed upon secondary boycotting and organizational picketing. To outlaw the practices totally and completely, however, without corresponding restrictions upon the employer, was a direct attack upon the traditional and court-sanctioned use of these weapons of economic war. To make all secondary boycotts and organizational picketing synonymous with corruption and racketeering was to profess ignorance of the character of industrial relations in this country or a blatant surrender to hypocritical pretense. Certainly these two trade union practices were never made a major target of the McClellan Committee. How did they suddenly become the pivotal point for a labor reform bill?

In approving the Landrum-Griffin bill, the House based its vote on a "mood"—not on the objective realities of industrial relations.

The Houston Chronicle and Marquis Childs Favor Padre Island National Seashore

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. YARBOROUGH. Mr. President, the ultimate authority in our democratic system of government comes from the people. And our Government and we, the Members of Congress, are here to serve the people.

I sincerely believe that one of the finest services which could be rendered to the American people in the field of recreation and conservation would be to preserve the 118-mile-long Padre Island, Tex., one of the few remaining examples of our Nation's rapidly vanishing virgin shoreline, in a National Seashore Area. And I believe the majority of the people favor this move.

People are living longer and have more years for leisure than was true a generation ago.

The natural beauty, abundance of fish and other wildlife, recreational potentials and rich and colorful historic beaches and dunes of Padre Island must be preserved for the enjoyment of future generations. If we do not act now to save this area, which could easily become a winter playground for our Nation, we may find it much harder and it will certainly prove more expensive to acquire it in the future, when private ownership has carved it into plots. There is some private ownerships of the island's tips now, but quick action can preserve the greatest part of the island for the enjoyment of all as a National Seashore Area.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Houston (Tex.) Chronicle for Tuesday, August 25, 1959, entitled "Let Senate Group Know People Want Park at Padre Island." The Chronicle is one of the largest and most influential newspapers in Texas, and I believe the editorial expresses the opinion of the majority of the people of Texas. The Senate Interior and Insular Affairs Committee has been invited to conduct hearings in Texas later this year to see the great potentials of this area for themselves and learn firsthand the sentiments of the people.

In addition, I ask unanimous consent to have printed in the Appendix of the RECORD a very perceptive article by Marquis Childs, one of the most independent of America's newspaper columnists, which points to the need for action now to preserve the Padre Island shoreline as a recreation area. Delay will be costly and may forever take away the opportunity to save this area. Mr. Childs' article was published in the Corpus Christi Caller for Tuesday, August 25, 1959, and entitled "Powerful Lobbies Oppose Park Conservation Moves."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Houston (Tex.) Chronicle, Aug. 25, 1959]

LET SENATE GROUP KNOW PEOPLE WANT PARK AT PADRE ISLAND

Popular sentiment in Texas undoubtedly is favorable to Senator RALPH YARBOROUGH'S bill to create a national park on 110 miles of the 118-mile-long Padre Island. The island should be preserved for public use, rather than letting it be developed privately to the exclusion of the average citizen. The Federal Government has operated a national park system for more than 70 years, so it would be logical to add Padre Island to the system.

But will this popular sentiment express itself if and when the Senate Interior and Insular Affairs Committee, which is handling the bill, holds a hearing in Texas on it? Senator RICHARD NEUBERGER, Democrat, of Oregon, a member of the committee, said his group wants to hold a hearing in the local area so the people there can have a say in the matter.

In cases like this, opponents usually are the ones who organize and speak most vociferously. Those in favor of it don't take the trouble to go before the committee and urge approval. Thus, to committee members, it appears that popular sentiment is against the project.

There is some small, but strong opposition to the Padre Island project generated mostly by persons who want the beautiful island left for private development.

Organized groups of citizens, like outdoor nature and sportsmen's clubs, should keep in touch with the congressional committee and make plans to produce a showing in strength when the hearing is held.

Citizens who favor making Padre Island a park can help the cause by writing Senator NEUBERGER at the Senate Office Building, Washington, D.C.

It would be unfortunate if private interests were allowed to take over such a splendid recreation spot and exclude the general public. Such places already are getting scarce for citizens who can't afford to spend a lot of money on recreation—and, as Abraham Lincoln said, there are many citizens in this category.

[From the Corpus Christi (Tex.) Caller, Aug. 25, 1959]

POWERFUL LOBBIES OPPOSE PARK CONSERVATION MOVES

(By Marquis Childs)

WASHINGTON.—This is the time of year when vacationers begin to take a last, long, loving look at the line of the surf and the generous expanse of sun and sand. They know that all too soon jobs, the city, the old routine will catch them up again.

The vanishing American seashore, source of pleasure, strength, relaxation for millions of Americans is currently the subject of a drive in Congress. Conservationist Senators are pushing measures to save the last remnants of natural shoreline. They are opposed by a powerful lobby of industrial and speculative interests.

The argument of the conservationists is that with America's exploding population there will soon be no shoreline left that preserves the natural beauty and the sense of solitude and lonely grandeur that were part of America's heritage. Unless national parks are created of what remains it will all go into overcrowded beach developments intensively exploited for industrial uses.

The argument of the opposite is simple—the right of private developers to go where they like and do what they please. That, too, is part of the American heritage, a privilege going back as far as the privilege to seek solitude and commune with nature; the right of a Thoreau to be alone on Walden pond.

But with an ever-more crowded America the conservationists are pressing to save a small part of the past so that later generations will have a glimpse of what the earlier America was like. Because it is threatened by imminent industrial development the most urgent pressure is on to save the Indiana Dunes.

The 25-mile expanse of duneland on Lake Michigan between the industrial center of Gary and Michigan City has steadily disappeared as industry, with smoking chimneys and mill towns, has spread. Today approximately 3½ miles remain, which Senator PAUL DOUGLAS, of Illinois, is trying to save as a national park.

He has, however, a powerful opponent in the Bethlehem Steel Corp., which has acquired much of the land for a projected $350 million plant development. With it goes an industrial harbor and related housing developments. Bethlehem acquired the property from a company set up by Clint W. Murchison, one of the Texas billionaires whose speculation in land reaches into every corner of America.

Important political interests are also involved. While he fought the St. Lawrence Seaway, which has opened the Michigan lake shore to steel development, former Senator William Jenner, of Indiana, is now cashing in on it with a company to promote the harbor development. The entire Indiana delegation favors the project.

A Senate Interior Subcommittee failed to approve the Douglas bill. But it is believed that nevertheless the full committee may report it out favorably.

With the bipartisan support of Senator RICHARD NEUBERGER, Democrat, of Oregon, and Senator GORDON ALLOTT, Republican, of Colorado, a second bill would give the Secretary of the Interior authority to select three shoreline sites to become national parks. If this should pass, the sites selected are likely to be the Indiana Dunes, a stretch of untouched shoreline on Cape Cod in Massachusetts, and the dunes area and Sea Lion Caves in Oregon. These, with a fourth site, Padre Island off the south Texas coast, have been approved by the National Park Service Advisory Board.

Reported to have administration backing, this measure would cost an estimated $15 million. Still a third bill with 18 sponsoring Senators, including such veteran conservationists as CLINTON ANDERSON, of New Mexico, and JAMES E. MURRAY, of Montana, takes in additional sites and the cost would be $85 million.

Should all of these measures get caught in the jam now promising to develop, with major legislation held up until the end of the session, they would carry over to next session. This is the hope of their sponsors who insist that even if work is started on the steel plant for the Indiana Dunes site it will not be too late to take the land by right of eminent domain and preserve it for the use of the public.

Powerful as are the interests seeking to block any of these measures there are impressive forces on the other side. Out of the great impetus that Theodore Roosevelt gave to the conservation movement, scores of organizations have continued to carry on the fight to stop the spreading blight of urbanism and industrialism that has left only a small remnant of the unspoiled beauty of what was once an almost empty continent.

Address by Hon. Thomas H. Kuchel, of California, at Ceremony Commemorating the Death of Padre Junipero Serra

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by the distinguished senior Senator from California [Mr. KUCHEL] at the ceremony in Statuary Hall, on August 28, commemorating the death of Padre Junipero Serra.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF U.S. SENATOR THOMAS H. KUCHEL AT THE CEREMONY IN STATUARY HALL COMMEMORATING THE DEATH OF PADRE JUNIPERO SERRA, FRIDAY, AUGUST 28, 1959

These services commemorate the life and labors of a Franciscan friar whose intrepid Christian ministrations were spread throughout a great primitive area before the United States came into being. Junipero Serra, Franciscan missionary from Malorca journeyed to the North American continent in 1750, and in the last 1760's went northward to California.

In that northward trek, both he and his courageous, faithful companions sowed in the hearts and minds of men, the seeds of a new civilization under divine spirit. Father Serra brought with him the mission, which meant the spread of religion in these unknown lands; the presidio, which meant the expansion of the political and military control of Spain; and the pueblo, the town, which meant the establishment of orderly civil government. Here was a tripartite development, both secular and spiritual. The hard trails that his weary feet traversed from mission to mission along the El Camino Real continue today to be the royal road along which are strung great cities, great universities, great industries, and great agriculture—human progress in its every latest attainment.

One hundred and seventy-five years ago Father Serra departed this life. From a primitive unsettled land on the Pacific shore to which he came has developed a majestic center of cultural and economic life, rich in all the bounty of nature, our magnificent State of California.

While we honor Junipero Serra for the blessings of civilization he left in California, we shall not forget that his was a spiritual labor. The missions he built, the agriculture he founded—supported, incidentally, by irrigation systems which excite the admiration of the modern hydraulic engineer—were all means to an end. The sword was there to support the cross and so was the civil authority. But it was the cross which came first. Imbued with divine spirit, charged with an exalted mission, and sustained by an unfaltering faith, Father Serra brought to the Indians the civilizing message of Christian teachings. Here was the solid foundation

upon which all other building rested. It is well to recall this simple fact in our own day. For we, too, have an exalted mission: To hold high the banner of man's freedom, to protect it from all assaults from the ungodly, and to advance it, by an unfaltering faith in the righteousness of our purpose.

U.S. Labor Leaders Can Handle Selves With Khrushchev

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. WILEY. Mr. President, the advent of Premier Khrushchev's visit to this country is stirring a wide variety of reactions among the American people.

Fortunately, our climate of freedom allows for such differences. Constructively, however, I am confident that the American people will demonstrate a unified spirit and conduct during the visit in order to show the real side of what we believe is America.

Views on the visit, of course, differ not only among individuals but among different groups in the economy.

We recall that, recently, the AFL–CIO, representing approximately 13½ million workers in America, decided against inviting Khrushchev to address this great and powerful labor organization.

We recognize that, in many lands around the world, communism has made its greatest inroads in labor.

Fortunately, I believe that America can be proud of the stanch anti-Communist spirit which has prevailed in the U.S. labor movement.

Regrettably, the occurrence of abuses and irresponsible actions among minorities in the labor movement has resulted in the need for reevaluation of our laws relating to the labor movement; as well as legislation to curb abuses.

However, this should not be allowed to reflect unfairly on the vast majority of honest, competent leaders—or the millions of rank-and-file members—who are doing a fine job—in my home State of Wisconsin, as across the Nation—in serving the interests of the working people of America.

Nor should this situation be allowed to, in any way, "hide" the stanch patriotism and loyalty which has so largely prevailed in the ranks of unionism throughout the country.

Recently, the Milwaukee Journal published a constructive editorial entitled "U.S. Labor Leaders Can Handle Selves With Khrushchev."

The editorial, I believe, presents a thoughtful analysis, outlining in a well-justified way, the competence of our labor movement and its leaders to deal with communism.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. LABOR LEADERS CAN HANDLE SELVES WITH KHRUSHCHEV

President George Meany of the AFL–CIO and his No. 1 lieutenant, Walter Reuther, see eye to eye on communism. They both think it is an immoral and brutal force that suppresses human freedom and democratic rights. Where they differ—and differ vigorously—relative to the forthcoming visit of Soviet Premier Nikita Khrushchev is over the tactics the labor federation should adopt.

Meany, who opposed President Eisenhower's invitation in the first place, wants labor to snub Khrushchev, to boycott him completely. Reuther thinks that American trade union leaders should talk to Khrushchev "straight from the shoulder."

The other day the executive council of the labor federation lined up with Meany. A resolution was adopted, 22 to 3, declaring that it was "out of the question for the AFL–CIO to give recognition to the head of a government which does not permit its own workers to have free trade unions." But Meany emphasized that the resolution was not intended to stop union officers who wanted to from holding personal meetings with Khrushchev, and arrangements are going forward for such a meeting.

With considerable reason, Meany and other labor leaders were annoyed by hints from Washington that the State Department and White House would be "quite happy" if Khrushchev were invited to address the AFL–CIO convention opening in San Francisco September 17. Khrushchev is going to have ample opportunity to spout off during his 12 days in this country. There is no reason why the AFL–CIO should let him use their convention as a special sounding board.

On the other hand, there are very good reasons why trade union leaders should meet with the Soviet premier and let him know just where American workingmen and women stand. After all, the purpose of bringing Khrushchev to America is to educate him about this country and its people. Labor leaders like Reuther are well qualified to help act as teachers.

Last January, it will be recalled, Reuther and several other labor leaders played host at a luncheon to Anastas Mikoyan, Russia's deputy premier. They came away confident tht Mikoyan was impressed with their arguments that there is no class struggle in America and that American labor has a major stake in capitalism and democracy.

Indeed the success of the luncheon and the demonstrated skill of the labor leaders to handle the slick talking Mikoyan—in contrast to the relative lack of success by businessmen—prompted Vice President NIXON to declare: "I would respectfully suggest that some of the business leaders in this instance could learn a lesson from our labor leaders, who had to fight to expel Communists from their unions and in the process learned how to deal with them."

Operation Bootstrap: Reservation Style

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BERRY. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial from the Tucson (Ariz.) Daily Citizen, under date of August 19, 1959, in which they endorse the Indian self-help, dubbed "Operation Bootstrap: Indian Style."

The editorial follows:

BOOTSTRAP FOR INDIANS

The Commonwealth of Puerto Rico, oldest territory under the American flag, is offering a helping hand to the Indians, oldest American inhabitants.

Representative E. Y. BERRY, Republican, South Dakota, is proposing a program to industrialize American Indian reservations patterned after Puerto Rico's "Operation Bootstrap," about which so much is currently being said and written.

Prior to the industrializing program launched in 1946, Puerto Rico's jibaro lived in "the poorhouse of the Caribbean." Now he has the second highest standard of living in Latin America. The island has had 600 new industries locate there since 1946. It has risen from a burden on the U.S. Treasury to an economic asset. Puerto Rico now buys more from the United States, on a per capita basis, than Canada.

The American Indian occupies the same place in this country that the jibaro did in Puerto Rico in pre-Bootstrap days. The 535,000 Indians are the poor country cousins living on remote agriculturally based reservations virtually untouched by America's industrial economy. A large number of these are on Arizona reservations; most Tucsonians are familiar with nearby reservations and the social and economic limitations under which Indians live there.

Representative BERRY, who lives with a similar Indian problem in South Dakota, estimates that 80 percent of the reservation Indians in this country have little or no job opportunities. Many are permanently on relief. The U.S. Government spent about $180 million on Indian welfare programs in the last fiscal year, and the amount will increase as Indian population increases rapidly.

There is no logical reason why "Operation Bootstrap, Indian style," providing incentives for industrialization on the reservations, would not be successful and popular. It is a prospect which should command the interest of Arizonians and Arizona Congressmen.

Needed: More Doctors

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. NEUBERGER. Mr. President, in the August 7, 1959, issue of the Morning Call of Paterson, N.J., there appeared an editorial entitled "Needed: More Doctors," which points out that the United States faces a potential shortage of trained physicians in the next decade unless medical education facilities are expanded. The editorial discusses several suggestions which I have made to aid in solving this problem. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEEDED: MORE DOCTORS

It is commonly supposed that medical care in the United States is both the best and the most readily available in any large nation. In general, this optimistic picture is close to the truth. A shadow has fallen across the picture, however—the fact that we are not

producing enough doctors to keep pace with our population rise.

Dr. Howard A. Rusk, famous both as an authority on human rehabilitation, estimates that in order to have enough doctors to provide adequate treatment for our population by 1975 we will need an annual net increase of some 5,250 doctors. That figure compares with the present net increase of about 3,000 doctors per year.

One big reason why not enough doctors are being trained is that the cost of medical education has grown steadily and is still growing. Senator RICHARD L. NEUBERGER, who has made himself an expert in this field, wrote recently that "medical education * * * is running an annual operating deficit of between $10 million and $20 million at the present time." This is despite the fact that tuition and other costs have risen until most families cannot see a medical student through school.

Senator NEUBERGER proposes a three-pronged attack on the problem. He wants Congress to appropriate $500 million to build medical teaching and research institutions. He also wants Federal scholarships for qualified men and women, and he proposes an incentive plan to induce gifted medical students and other scientists to enter medical research. The Neuberger proposals may not be the answer, but they are worth thinking about. The longer we delay, the harder it is going to be to catch up with the growing need for more doctors.

The Rambler Looks Back

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. CASE of South Dakota. Mr. President, Tuesday's Washington Evening Star contained George Kennedy at his best as he looked back 20 years in the typical analytical and perceptive style of the Rambler.

I ask unanimous consent that this thought-provoking work be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE RAMBLER LOOKS BACK 20 YEARS

(By George Kennedy)

A quiz question in a Sunday newspaper threw the Rambler.

It was, "What important treaty was signed 20 years ago today?"

He flunked it.

He had no excuse, especially with the covers of news magazines on the stands reminding everyone that World War II started 20 years ago.

It was the Ribbentrop-Molotov nonaggression treaty—the big surprise of the prelude to war. In it the U.S.S.R. and Germany agreed not to make war on each other, which made it "safe" for Hitler to invade Poland.

Flunking the question caused the Rambler to refresh his memory by putting the spool of microfilm containing the August and September, 1939, issues of the Star on the Recordak. As he turned the crank, the front pages of one momentous day after another came on the screen.

The issue of the 23d gave the startling news that Ribbentrop, Hitler's Foreign Minister, had arrived by air in Moscow to negotiate a nonaggression pact. His arrival broke up a British-French military mission's conversations with Red Army leaders on cooperation.

The Star's lead editorial the next day was entitled, "The Zero Hour." It was hard to believe. War had lost is glamour. Millions remembered the trenches and the mud and the senseless slaughter on the western front only 21 years before. British Ambassador Nevile Henderson was telling Hitler that war would mean an "end to civilization as we have known it."

As in many a death watch, there were hopeful bulletins near the end. The headline of the 25th—20 years ago today—was "Hitler Parley Stirs Talk of Peace."

The Clifford K. Berryman cartoon showed Hitler rolling the world over the brink and Roosevelt trying to stop it was entitled "Doing His Bit."

Major wars always cause major changes in the economy. The supermarkets were advertising hams for 23 cents a pound; legs of lamb for 21 and porterhouse steaks, 39.

You could buy a new Ford, Chevrolet, or Plymouth for well under $1,000, and the Pennsylvania Railroad was advertising a round trip to New York and the World's Fair there over the Labor Day weekend for $4.

Washington was wild about the Redskins who had won the world's championship of pro football 2 years before.

The Yankees, sparked by the frequent hitting of centerfielder Joe Di Maggio, were leading the American League. Washington was in fifth place. Cincinnati was leading the National League. Ann Sheridan was starring in the film at the Capitol.

The headlines were giving hope and then snatching it away. On Saturday the 26th it was: "World War Averted, Berlin Reports"; on Sunday, "France Cold to Hitler's 'Peace' Offer." On Tuesday it was "Britain Stands Firm in Reply to Hitler."

Twenty-five years before, in August, Lord Grey of Fallodon, the British Foreign Minister, had seen the same thing happen, and said, "The lamps are going out all over Europe; we shall not see them lit again in our lifetime." At that time Americans found it hard to accept what was happening. This time they knew from experience that it was all too true: War was coming.

On Wednesday the headline was: "Peace or War Up to Hitler—Chamberlain."

The bad news came on Friday. The headline read: "German Planes Bomb Heart of Warsaw."

And on Sunday, September 3, the Labor Day weekend was made memorable by the headline: "Britain Goes to War as Ultimatum Expires."

Premier Pedro G. Beltran

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story, from today's issue of the New York Times, in regard to the Premier of the Republic of Peru, Mr. Pedro G. Beltran.

This article, written by one of the country's outstanding Latin American news experts, Mr. Tad Szulc, has to do with "a quick-tempered, plain-speaking newspaper publisher with a large background of public service," who has taken over the job of directing the destinies of Peru, under the direction of President Manuel Prado y Ugarteche.

Mr. Beltran is an outstanding friend of this country. He understands our people and our needs. After talking to him on several occasions, I know that he hopes that we, in turn, will understand better the needs, not only of his own country, but of all Latin America.

I believe the article written by Mr. Szulc is worthy of the attention of all Members of the Senate.

I certainly hope for the Premier of Peru all the best in the difficult times which confront him in the weeks, months, and years ahead. He is a good man; and if anyone can bring order out of chaos, I think Mr. Beltran will be that man.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW AND INDEPENDENT PREMIER BUILDS PUBLIC CONFIDENCE IN PERU—BELTRAN, A CRITIC OF REGIME UNTIL APPOINTMENT, ATTACKS INFLATION VIGOROUSLY

(By Tad Szulc)

LIMA, PERU, August 27.—A quick-tempered, plain-speaking newspaper publisher with a large background of public service appears to be restoring confidence in Peru.

When President Manuel Prado y Ugarteche resolved in mid-July to appoint Pedro G. Beltran, his foremost critic, as Premier, the nation appeared to stand on the threshold of chaos.

Inflation was spreading, the economy was in disarray and there was talk of revolutionary attempts or military coups. Peru's 3-year-old democratic rule faced collapse.

A month earlier, Premier Luis Gallo Porras, unable to cope with mounting deficits, rising prices, constant strikes and increasing pressures from all sides, offered the resignation of his cabinet. President Prado finally turned to Senor Beltran to save the constitutional government.

APPOINTMENT STIRS HOPE

Senor Beltran was not identified with any national party. He was known for his independent views and his almost fanatic belief in sound money and orderly fiscal policies. His appointment was greeted with a surge of hope by most of the public.

But he found unrelenting opponents in the extreme Rightwing groups represented by the newspaper El Comercio and in the Communists.

The new premier, a wealthy landowner and London-trained economist, is an advocate of free enterprise as the basis for solving Peru's economic and social ills with state aid. The Comercio group and the Communists are propounding state control of economic activities, possibly leading to nationalization of the foreign-owned mining and oil industries.

Senor Beltran is also opposed by the small but influential Christian Democratic party and by the left-of-center Popular Action Party. His support in Congress rests on President Prado's Democratic Peruvian Movement and a powerful bloc identified with the left-of-center out anti-Communist APRA Party.

GASOLINE PRICE AT ISSUE

Tonight, the 62-year-old Senor Beltran may join this young Minister of Development and Public Works, Alfonso Rizo Patron, in explaining to Congress last month's decision to almost double the price of gasoline.

He did so because under the old prices, which were among the world's lowest, foreign oil companies had halted drilling in Peru and the threat arose that production would eventually come to a standstill.

The former administration had refused to raise prices in fear of strikes and other disturbances. But Senor Beltran wasted no

time in acting when he took office. He suspended constitutional guarantees for a few days and broke a strike of taxi drivers here.

Now the opposition is hoping to use the gasoline price issue to force a new vote of confidence tonight, in an effort to defeat the Government. Communist deputies have charged that Senor Beltran "sold out" to U.S. oil trusts.

The 1960 Republican Presidential Nomination

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. SCOTT. Mr. President, I should like to call to the attention of the Senate two articles which have appeared recently about Vice President NIXON. One is a long and very thoughtful analysis by Alan L. Otten about the situation with respect to the 1960 Republican Presidential nomination. The other article is an interview in the Christian Science Monitor.

I ask unanimous consent to have these two articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follow:

[From the Wall Street Journal, Aug. 27, 1959]

NOT 1952—THE TAFT-NIXON, IKE-ROCKEFELLER PARALLELS ARE MUCH LESS VALID THAN OFTEN CLAIMED

(By Alan L. Otten)

WASHINGTON.—After looking long, but not too hard, at the jockeying for the 1960 GOP Presidential nomination, some soothsayers are falling back on what is becoming a common political aphorism: "It will be 1952 all over again."

But this theory, while neat in its way, will not stand up under close examination.

Behind the assumption lies the belief that, regardless of the outcome, political events are casting Vice President NIXON in the role of the late Senator Taft, and New York's Governor Rockefeller in the role of General Eisenhower. Those who expect 1960 to be a repetition of 1952 state their case thusly: Mr. Taft, while commanding the loyalty of much of the GOP, also had the enmity of many party leaders, led by then Governor Thomas E. Dewey, of New York, who apparently now is masterminding the Rockefeller candidacy. The anti-Taft Republicans hitched their hopes to a bright new star with a nonpolitical aura, and put Mr. Eisenhower across by beating hard on the theme "Taft can't win."

Certainly there are strong similarities between the Taft-Eisenhower struggle and the Nixon-Rockefeller battle that's shaping up. Certainly the Rockefeller backers are getting set to try to torpedo the Vice President's White House ambitions with the same sort of "can't win" theme song they effectively used against the Ohio Senator. The differences, however, are equally striking, even if less well understood.

To begin with, Mr. Taft's opposition within the Republican Party was far more extensive than is the party opposition to Mr. NIXON. Or perhaps more accurately, the Vice President's following among GOP regulars is probably greater than that enjoyed by any other Republican, including Mr. Taft, in recent history. It is true, to be sure, that much of the Vice President's support lacks the fervor that characterized the Taft backers of the early 1950's.

In 1951 and 1952, some Republicans looked upon Senator Taft as an old warhorse, respected and even revered, but suspected as a candidate as being too conservative on domestic economic policies, somewhat arbitrary and a little condescending in dealing with people he did not consider his intellectual equals. Moreover, there were those who sincerely questioned Mr. Taft's views on foreign policy as being "too isolationist" and his qualifications to deal with the overriding issues between the United States and Russia.

MATTER OF BACKGROUND

By contrast, Mr. Rockefeller patently lacks the background and experience on which was built another 1952 Eisenhower slogan, "He knows how to deal with the Russians." Mr. NIXON, to be sure, also lacks the Eisenhower reputation as a war hero and standing as a military-diplomatic statesman in world councils. But the NIXON supporters can and do claim his years as understudy to Mr. Eisenhower and the late Secretary of State Dulles have given him a background that no other Republican today can enjoy. Certainly no one has ever seriously questioned the Vice President's internationalist tendencies, which have been evident at least since his years as a freshman Congressman.

To many people in 1952 Senator Taft was identified with what's commonly called the Old Guard wing of his party, even though politically he was more liberal on some issues—housing and health legislation, for example—than Mr. Eisenhower. Here again by contrast, Mr. NIXON is part of and identified with a very popular President and Republican administration that has widespread support not only among Republican voters but, as well, among Democrats and independents.

Nowhere can the contrasts be more drawn, however, than in the political alinements of 1952 and 1959–60. For one thing, nearly all the former Taft backers are now firmly in the Nixon camp. But so, too, are many groups and individuals who once supported Eisenhower.

Lined up with Mr. NIXON also is much of the former citizens for Eisenhower group including its cochairman, former Under Secretary of Commerce Walter Williams. These once-Eisenhower, now Nixon rooters also include such liberal Senators as HUGH SCOTT of Pennsylvania and JOHN SHERMAN COOPER of Kentucky, as well as large numbers of GOP House Members. It is also an interesting fact that the Vice President's three principal staff political aides were either actively for or sympathetic with the Eisenhower candidacy of 7 years ago. These are Mr. NIXON'S top assistant, Robert H. Finch; his press secretary, Herbert H. Klein; and Charles K. McWhorter, a special assistant, who was secretary of the National Youths for Eisenhower in 1952.

Moreover, the bulk of Mr. Eisenhower's professional GOP support came from the Nation's 25 Republican Governors. Though there are now only 15 GOP Governors, most of them are lined up solidly with Mr. NIXON. The Vice President's widespread backing among lawmakers in Congress and the Republican Governors illustrates a fact that still is not fully appreciated.

Contrary to widespread impressions, the political "ins" supported Mr. Eisenhower in 1952, while much of the Taft support came from the "outs" who were trying to get "in." There were many exceptions, to be sure, to that generality. But with fewer exceptions now, the "ins" are backing the Vice President, while the "outs" are lining up with the New York governor in hopes of getting "in." Most any professional politician would tell you that this, indeed, is not the strongest political position.

Moreover, it would be difficult to estimate the number of Republicans throughout the country who are deep in Mr. NIXON'S debt. He has spoken and campaigned for Republican candidates in nearly every State over the last 7 years. He has done favors in Washington for hundreds of GOP officials. While Senator Taft was primarily the philosophical leader of his party, functioning mainly through the Senate and only occasionally with grassroots contacts outside Ohio, Mr. NIXON has contacts and debtors everywhere.

And while Mr. NIXON seems to have a kind of party support that Mr. Taft never knew, Mr. Rockefeller would appear to have considerably less backing than did General Eisenhower. Whereas Mr. Rockefeller is largely unknown beyond the borders of his State, every American was familiar with the beaming smile of the World War II commander.

QUESTION OF THE POLLS

The public opinion polls, which were used with such devastating effect against Senator Taft before the 1952 convention, do not thus far seem likely to provide Mr. Rockefeller with similar ammunition. Mr. NIXON has been doing much better in the polls than did the late Senator, both with regular Republicans and independents. And while Mr. Eisenhower started pulling away in the polls once he entered the race, the New York Governor actually slumped after his big post-election showing. Mr. NIXON would have to slump very hard indeed for the opinion polls to give the Rockefeller camp much support for a "NIXON can't win" campaign.

The Vice President, too, is in many ways a more astute political performer than was the Ohio Senator. Mr. Taft had a brilliant mind, but comparatively little finesse with people—and it was a rare moment that he stirred an audience. His speaking style was dry and pedantic.

Mr. NIXON, on the other hand, is almost flawless mechanically: There is much of the actor in him, not that he is insincere, but rather that he has cultivated a dynamic stage presence. He is at ease, he is sure, he is dramatic, and his most recent doings in the international spotlight would seem to attest to these qualities.

The Vice President's press relations are good. He works assiduously at keeping newsmen informed and is deliberately patient under pertinent questioning. Mr. Taft's relations with the press, however, were spotty and unsatisfactory.

Mr. NIXON rarely runs away from hot issues but usually handles touchy subjects with a diplomacy the late Senator could not match. It is difficult, for instance, to imagine the Vice President doing what Mr. Taft did during the 1952 South Dakota primary when he was asked his views on the price of gold. This was a vital subject in the gold-mining area of the State, but Mr. Taft stoutly proclaimed the current price too high. Later, an aid remonstrated with him, thought he had persuaded the Senator he had spoken too harshly, and arranged for the question to be put to the Senator again the following day.

"I answered that last night," Mr. Taft snapped. "The price is too high."

In 1952, it must also be remembered, other candidates were in the wings—Governor Warren of California, perennial hopeful Harold Stassen, favorite sons—who helped deadlock the convention and permit the Eisenhower maneuvering. By all present indications, if Mr. Rockefeller challenges in 1960—and there seems little doubt that he will—it will be a two-man race, with no room to use favorite sons and stalking horses to halt the big first-ballot Nixon strength.

ART OF COMMAND

On the other side, there are several areas in which Mr. Rockefeller does not come up to the 1952 Eisenhower as a candidate. The

New York Governor's newness on the political scene is not counterweighted, as it was in the general's case, with a long period as a popular leader. His brief tenure in Albany has not provided Mr. Rockefeller with the time to demonstrate his ability fully. His move to raise State taxes immediately after taking office did him little good, politically, as he himself admitted. And while it indicated his willingness to command, the uproar the tax boost caused gave evidence the measure did not have wide understanding or support. The art of command is not quite the same as the art of leadership.

It should not be overlooked, also, that the Rockefeller name in many sections of the country does not arouses friendly feelings. The 1952 Eisenhower was a self-made man up from the Kansas cornfields. Governor Rockefeller has a less bucolic background.

After all the evidence is in, a man would have to be downright imprudent to guess who will carry the GOP standard next year. But that same evidence makes very clear how inaccurate is the aphorism: "It will be 1952 all over again."

It won't be. It will be 1960, for the reason that NIXON is not Taft and Rockefeller is not Eisenhower.

[From the Christian Science Monitor, Aug. 26, 1959]

ELEVATING THE VICE PRESIDENT—A CAPITAL INTERVIEW WITH SENATOR HUGH SCOTT

(By Courtney Sheldon)

WASHINGTON.—Republican Senator HUGH SCOTT, of Pennsylvania, a veteran of eight terms in the House, national chairman of the Republican Party 1948–49, an early (1949) supporter of an Eisenhower candidacy in 1952, and today a supporter of Vice President NIXON for the GOP presidential nomination:

See no substantial difference between Vice President NIXON and Governor Rockefeller on foreign policy, but regards Mr. NIXON as the best qualified candidate in either party in the foreign-affairs field.

Anticipates Mr. Rockefeller would become the GOP presidential candidate and leader of his party after he has served another term as Governor and after a Nixon administration nationally.

Question: "Senator SCOTT, why do you feel Vice President NIXON is the best qualified man for the Republican nomination for the Presidency?"

Answer: "Well, I would say on the basis of experience and temperament, personality. Undoubtedly he is the best qualified candidate in either party in the foreign affairs field, one who has been singularly blessed with the opportunity to meet chiefs of state and of government. His experience and wisdom in handling difficult problems have been demonstrated by the Moscow trip, the Latin-American trip, by the way he conducted himself at the time of the two serious illnesses of the President, and by the degree to which his advice is valued by people experienced themselves in government; for example, in the National Security Council."

Question: "How do you feel Mr. NIXON compares as a votegetter with Mr. Rockefeller?"

Answer: "I think both have demonstrated they are excellent votegetters. They are both attractive personalities who grow in attraction as you have the chance to know more about them. A half hour before this interview I was talking with Governor Rockefeller. He is a most attractive man. I think if he is reelected Governor of New York—and I expect he would be—he would become the next candidate of the Republican Party for the Presidency, and I expect, too, that he would probably become the party's leader for a decade or more.

"There is a great place in the sun for Governor Rockefeller and I admire him without reserve. But the situation presently indicates that Republicans would be well advised to close ranks, as there is every indication they are doing, and really go to work along with independents and Democrats to elect a competent, experienced and wise and moderate man in DICK NIXON as their next President."

Question: "Then you don't feel Governor Rockefeller will formally become a candidate for the nomination?"

Answer: "It is my judgment that he probably will not in any real all-out down-the-line campaign. I think surveys among Republican leaders indicate that Vice President NIXON will be nominated on the first ballot, perhaps by acclamation. I hope that when they come around to talking about vice presidential candidates they will give very serious thought to Governor Rockefeller. I think it would be a dream ticket."

Question: "Since you were one of the original Eisenhower supporters, do you have indications from other early Eisenhower men as to their preference now?"

Answer: "Well, I have talked to many early supporters of President Eisenhower and to many Democrats-for-Eisenhower and the greater part of them favor Vice President NIXON as the Republican candidate. There are some who favor Governor Rockefeller and I think rather notably in one or two of the Southern States."

Question: "Would you say there is any substantial difference between Mr. NIXON and Mr. Rockefeller on international policy?"

Answer: "I can't see where such an area of difference would arise. Governor Rockefeller has some edge in South America by virtue of his experience in those countries, but the policy down there would be the same in either event, a good-neighbor policy of nonintervention and of friendly and benevolent cooperation. In the rest of the world, NIXON's experience counts more heavily. The policy of both of these gentlemen is the policy of Dwight Eisenhower."

Question: "What about domestic policy?"

Answer: "In domestic policy I would be inclined to say that the Nixon policy would be, in the future as in the past, adherence to the general Eisenhower program, a moderate, middle-of-the-road policy. Vice President NIXON has shown his convictions on the tough issues, such as civil rights, and in my judgment he has been right and proper in his attitude there. He has, if anything, shown an inclination to go a little beyond the Eisenhower program in some areas, such as housing.

"I think that Governor Rockefeller's record indicates he is perhaps somewhat more on the liberal side in meeting the necessities which the Governor of New York has to meet in the political world, but he is no wild-eyed radical by any means."

Question: "If there is a fight between the two for the nomination do you feel there will be any outstanding issues, or will it be over who is the best leader, over personality questions?"

Answer: "There are some differences on issues, but none that occur to me as the kind which appear in presidential campaigns. If it came to a choice between the two, it would be based on personality, experience, and ability to handle the job."

Question: "Any particular reason why you have made known your preference so early?"

Answer: "The main reason is that I don't want anything. I am sure that when I campaigned so vigorously for General Eisenhower there were many people in the entourage who may have harbored doubts on that score and wondered why I worked so hard and my wife worked so hard. I just wanted to keep on being a member of the House of Representatives. The same thing is true now.

"I am extremely happy; in fact, I am in something of a glow about being a Senator of the United States. It is something I have wanted since I was 13 years old. Why should I want anything else? Not having anything in my mind except the desire to get the strongest candidate for the Republican Party and the best qualified man for the Presidency of the United States, I can afford to come out early."

Contested-Election Expert

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the August 26, 1959, issue of Roll Call, the newspaper of Capitol Hill. It was written by Mr. Marvin D. Resnick and is entitled "Contested-Election Expert." The article is about Mr. Samuel H. Still, Jr., a native of Blackville, S.C., who attended the Citadel at Charleston, S.C., and was graduated from the George Washington University School of Law. Mr. Still has been in Washington for a number of years and has distinguished himself as a research expert of the American Law Division of the Library of Congress. This article points out that while serving on loan from the Library as legal counsel to the House Elections Subcommittee of the House Administration Committee and as special counsel to the House Special Campaign Committee and the Senate Subcommittee on Elections, Mr. Still has probably learned more about election law than anyone else in this country. We, in South Carolina, are very proud of Mr. Still's record of accomplishment and his service to the Congress through the years.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTESTED-ELECTION EXPERT

(By Marvin D. Resnick)

At the time of the hectic controversy which surrounded Franklin D. Roosevelt's bid for a third-term election, someone posed an interesting legal question: If F.D.R. won the popular vote, were the presidential electors pledge-bound to elect him?

After much laborious research the answer to that question was clearly revealed—in some States the electors were bound to vote for F.D.R., but in some States they weren't.

At any rate, the question had been sent to the right man. The lawyer who "dug up" the information for that interesting and politically significant question was a man who has worked closely with election laws for many years, a man who probably knows more about election law than anyone else in the country. His name: Samuel H. Still, Jr.

Although Still is actually employed by the American Law Division of the Library of Congress, he has been loaned as legal counsel to the House Elections Subcommittee of the House Administration Committee almost continuously since 1946.

He has also served as special counsel to the House Special Campaign Committee and the Senate Subcommittee on Elections.

A 51-year-old, scholarly, gentleman-lawyer from Blackville, S.C., he has been concerned with important election law questions since the early 1930's.

In an area so complex that even a lawyer and most certainly the layman get lost in the maze, Still works with the patience of a saint and the perseverence of an impatient prospector.

As legal counsel to the House Elections Subcommittee, people seek him out with many questions. A Congressman wants to know just how much money he can use in a forthcoming campaign. A potential presidential candidate wants the dates on all the presidential primaries. And members want to know what procedures must be used to recount questioned ballots.

But that portion of Still's work which is most fascinating concerns contested elections. Often, Still travels to different parts of the Nation to make "spot-checks" of election records. A good deal of the time he pores over contested ballots with committee members in room G–53 of the Capitol building.

A contested election involves a very definite and serious procedure, Still points out.

"In an ordinarily contested election," he explains, "the contestant, the defeated candidate, files a notice of contest. This is served on the contestee, the elected representative, who answers.

"Then there are 90 days in which testimony may be taken by the two parties. This testimony is printed and goes to the Committee on House Administration. The elections subcommittee doesn't come into the picture until this testimony comes in."

When the elections subcommittee calls the parties in, a public hearing for both parties is held. Each party is entitled to $2,000 expenses in conducting the contest and has an attorney.

The committee hears the arguments, studies the testimony and then renders a decision. Sometimes it is necessary for the committee to actually examine the ballots.

"As a general rule," Still says, "the committee asks the attorneys for the contestant and contested to stipulate on questionable ballots. The remaining ballots are then examined personally by the committee members and various markings or erasures are ruled on with respect to each ballot.

"Finally, the decision of the subcommittee is made to the full Committee on House Administration which in turn reports to the House.

"The report and resolution are privileged and may be called up at anytime but notice is usually given so that one side or the other may object."

How does the committee actually go about investigating the contested ballots?

"Where the investigation is authorized by House resolution," Still says, "or where an aggrieved candidate complains directly to the elections subcommittee, a hearing is held to determine whether an investigation should be conducted.

"If the Elections Committee decides, after a hearing, to investigate, it usually sends two or more members on the scene for a 'look-see' to determine whether a full investigation should be made.

"The subcommittee members, accompanied by the staff, make a spot-check of ballots, including absentee ballots, and registration books. If an appreciable error occurs, additional ballots and paraphenalia are examined."

Ballots are examined to determine whether they are marked according to State law and voters' qualifications are checked against State laws.

When checking the validity of a ballot the committee leaves no stone unturned. It looks into:

Registration lists or lists where persons are shown as having paid poll taxes in a State where poll taxes are required.

Registers of persons who actually voted, or a list of a register of voters.

The actual ballots cast.

And the ballot stubs or related material.

Also, it checks information relating to registration, including:

Change of address.

Payment of poll taxes.

Persons exempt from payment of poll taxes.

Maiden voters—those persons who have attained the age of 21 subsequent to the last registration date.

Military personnel voting.

Voting in precincts other than where the voter is listed as a qualified voter.

And if there is a write-in candidate who is a serious contender, the manner in which the name is written in is closely scrutinized; also use of stickers may be evaluated.

What are the most common types of election fraud?

"Absentee ballots are used most often to fraudulently defeat a candidate," Still explains.

"But a good many mistakes made in election returns are due to the time element. The voting and the counting take place the same day, with the same set of clerks and judges.

"Naturally, these officials are dead tired by the end of the day, and it is easy to make a mistake. In the old days—maybe as far back as 1875—the people who worked on the ballots had 2 or 3 days to count the ballots.

"The older method was better," Still feels.

But since he's been with the committee, Still points out, the majority of election frauds have not been attributed to the congressional candidates themselves.

"Since I've worked on the committee," he says, "most of the fraud has been attributable to the local candidates."

"For instance, a hot local issue may exist between the 'drys' and the 'wets,' or between candidates for a local judgeship. One of the local candidates may attempt to monkey up the ballots. Some of the ballots, which include the congressional candidates' names, are altered."

"But such fraud," Still concludes, "is disassociated from the candidate for or incumbent Member of Congress."

Because of his study and long experience with elections, Still has strong opinions about corrections which he feels have to be made to rectify the intentional and unintentional errors in election returns.

Still hopes there will someday be a uniform system of registration in every State. He feels that registration should be taken much more seriously than it is now. He feels that there should be a definite identification for a registrar, something like the definite identification necessary for a marriage license or a motor vehicle license.

"It should be a system of registration in which the registrant is clearly identifiable along with his legal residence. Many States don't have this.

"It might be possible to have a picture on the registration card, and the method of identification should be even more perfect in the case of absentee voting."

Still also feels that in the county or State there should be a department of elections which has certified public accountants available to count and audit election returns.

When Still visits an area for an investigation, he almost always receives the highest cooperation from officials, he claims.

"The State officials are most cooperative and I know most of the secretaries of state," he explains.

Of course, he has been in situations where officials weren't willing to cooperate. A city clerk in Battle Creek, Mich., once refused to let him see the materials of a senatorial election. The clerk said a telegram wasn't a correct subpena.

Technically, the clerk was correct. But Still could have easily gotten a correct subpena. Still decided not to press the issue for the moment, though.

But the fact that he was defying a congressional committee must have worked on the man. Shortly, the official visited Still and handed over the material.

While searching for a group of ballots after one election Still was told to visit a certain farm. There he found the ballots placed on top of a high silo.

It took a good deal of climbing but Still was finally able to place a Senate seal on the ballots.

On another occasion, Still opened the ballot box and discovered a most unusual specimen—a jug of corn whiskey. Before Still could decide what to do with it, the owner rushed into the room to assert his right of possession.

In 1958, at the suggestion of Still, the elections subcommittee broke the ice with a new procedure. It voted to go to Minnesota's First Congressional District to inspect a close special election.

Rather than get bogged down in formal procedures, the subcomimttee took quick action by virtue of a House resolution which granted the House Administration Committee powers of subpena. This enabled the committee to report directly to the House concerning an investigation's results.

Previously, redtape procedures blocked such action, and in the last case in which a House Member was unseated (the Jenks-Roy contest), the redtape prevented the legitimately elected candidate from being seated until the last day of the 75th Congress.

To fill the demand for information concerning election laws, Still has authored a number of studies printed by the Government Printing Office.

These include "Federal Corrupt Practices and Political Activities," "Information of Importance to Candidates for Office of U.S. Representative in the 84th Congress," and "Manner of Selecting Delegates to National Political Conventions and the Nomination and Election of Presidential Electors."

The latter work was compiled in collaboration with Richard D. Hupman, head of the Senate library. It grew out of the question concerning presidential electors when F.D.R. ran for a third term.

Working with contested elections always means controversy, but Still learned long ago how to deal with controversy.

Married now and the father of a 21-year-old daughter, Still attended the Citadel military college before he was graduated from George Washington Law School in 1933.

As a junior at the Citadel he wrote an editorial in the school paper which touched upon extremely volatile issues of the time—Al Smith and prohibition.

Still supported Al Smith as a candidate for president and also suggested that prohibition be repealed. He said this is a section of the country where both Al Smith and the "wets" were unpopular.

Talk about controversy. Still, a Baptist, recalls: "I received letters from some 30 Baptist ministers for my stand on prohibition.

Proposed Confirmation of Judge Forman

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD

an editorial entitled "Confirm Judge Forman" from the Asbury Park Evening Press. It is one of many which have come to my attention urging action by the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONFIRM JUDGE FORMAN

The Democratic leadership of the Senate of the United States is not enhancing its prestige by the treatment it is according the nomination of Judge Phillip Forman to the third circuit court of appeals. As long ago as last February President Eisenhower offered the name of Judge Forman. The Senate promptly pigeonholed it.

It is significant that in all this delay there has been no suggestion that Judge Forman lacked either the character or the capacity to serve in the high post to which the President has named him. As long ago as June of this year the Senate Judiciary Subcommittee finally got around to interviewing Judge Forman but still, without explanation, it continues to withhold his name. This is not the way to interest capable men in service in the Federal judiciary.

Three days after Judge Forman's name was submitted, President Eisenhower offered the name of a Texas lawyer for a district judgeship. A few days ago the Texan wrote the President asking that he withdraw his name as the delay in confirmation was proving embarrassing. His view is understandable, for when a man is named for high office and the Senate ignores him it is inevitable that some persons will assume that the Senate has some good reason for its failure to confirm. The fact of the matter is that approval is being denied Judge Forman and some 1,800 other presidential appointments, of which 50 are to the Federal bench, simply because the Democratic leadership of the Senate is playing politics and hopes to extract some concessions from President Eisenhower in return for confirming his apopintments.

Judge Forman is a competent jurist. He should not be subjected to the treatment he is receiving.

Proposed California-Pacific Northwest Transmission Intertie

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. NEUBERGER. Mr. President, the Senate Interior and Insular Affairs Committee has asked the Department of the Interior to conduct a study of the feasibility of interconnecting Federal power generating facilities of the Pacific Northwest with those in the Central Valley region of California. The committee took this action after holding hearings earlier this year, and the Department is expected to have a report completed before start of the next session of Congress.

Naturally, this proposal has created considerable editorial comment in newspapers of the Columbia Basin region. The able and knowledgeable editor of Northwest Ruralite, Mr. Henry Alderman, reviewed some of the problems connected with the proposal in an editorial which appeared in the August 1959 issue of his publication. I ask unanimous consent that the editorial, entitled "Power Intertie," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER INTERTIE

The proposed California-Pacific Northwest electric power intertie reminds us of the proposal to unify Germany. It is obviously the right thing to do; but gosh, how everybody dreads it.

This intertie proposal has a long history. A number of years ago the Federal Power Commission, which has some statutory authority for power planning, recommended that the Columbia River power system (Bonneville, Grand Coulee, and other dams) be connected electrically with the California utilities including the big Federal Shasta Dam project on the Sacramento River.

At that time, the Interior Department undertook to implement the Federal Power Commission's suggestion by requesting funds from Congress for the construction of a 230,000 volt interconnecting line. Just at that time, also, the Interior Department was making a study of proposals to send surplus Columbia River water to water-shy California. The combination of these two proposals frightened Northwest people out of their wits. It looked as though the booming State of California was going to hob on to our water and power supplies for its own enhancement, leaving the Pacific Northwest short of two of its basic resources required for future population and market development.

Although it is doubtful that either scheme actually would have operated in this fashion, fears carried the day in the Northwest. The intertie was stopped cold.

Some time later Interior Department through its Bonneville agency managed to convince Northwest leadership and the Congress that a heavy circuit should be built from the Federal system as far south as Klamath Falls, primarily to serve the power market around Klamath Falls, but secondarily to be used sometime in the future to bring in excess California generated power to supplement Columbia hydro as well as to send surplus Columbia River power south to conserve oil fuel in steam electric generators there.

This proposal carried the Congress. Right-of-way was bought. Materials for construction of the line were laid out for use. Then Douglas McKay became Secretary of the Interior. Mr. McKay and the then Oregon Senator, Guy Cordon, promptly put their heads together with the California-Oregon Power Co. and sold out the Government line to that company. Copco didn't want any Federal system in its market territory as a possible threat to its high rate, profit position.

Following this sellout, nothing more was heard of the major line south toward California for several years. Then, last summer, the public utility commissioner for Oregon commissioned a private consulting engineering firm to look into some of the advantages which might accrue to the State of Oregon in the matter of power supply if there were an electric transmission tie between the Columbia River and California.

The consultant's report was published last November. Although cautiously worded it was, in the main, strongly favorable to the tieline.

With publication of this report, everybody in the power business jumped into the act. The California power companies, the big public agencies in the State of Washington, the small public agencies in the State of Oregon and State officials of Oregon, Washington and California, all saw the possibility of considerable profit in the construction of the intertie. Even rough preliminary calculations on the value of such a tie demonstrate great possibilities.

Public power people in the State of Washington are still nervous about the possibility of a Federal intertie being used to export the Northwest power resource when it might be needed here. This is a legitimate fear. It needs to be answered.

The California private power companies obviously have taken a look at the figures and would like to control for their own profit any such facility. Their recent proposal to do so was very narrowly stopped by the U.S. Senate.

Some public agencies and the private power companies in the Pacific Northwest see virtue in controlling a tieline.

There has been some argument made in behalf of the State of Oregon owning and operating it as an insurance against control falling into the hands of California, and as a method for giving the State an equity stake in the Columbia River power resource.

With passing weeks, this ferment has steadily grown.

All these interests in the values of the intertie must be resolved by someone. Fears must be allayed, potential markets measured, and costs and benefits to all parties determined.

The U.S. Senate Committee on Interior and Insular Affairs now has attempted to point to an answer to these questions by instructing the Interior Department to conduct a detailed study of the tie's values and of how they might be adjudicated.

But the Interior Department appears reluctant to do this. Interior has little choice in the matter, however, since the Senate committee has told it to do this; but it must be remembered that it is this Department which sold out the beginnings of the tie to a power company about 5 years ago.

To be truly effective, such a study should include a great many factors, not only of a technical and economic nature but of a political nature. A good study will require a great deal of initiative and imagination and an enthusiasm on the part of those making it for finding acceptable compromises among the groups which have interest in it. It is a job which, if handled in a routine and unimaginative manner, will be useless.

Now It's Up to the Russians and Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 28, 1959

Mr. WILEY. Mr. President, just after President Eisenhower left for his highly successful European trip, the State Department announced that the United States will continue its unilateral suspension of nuclear weapons tests for the rest of this year. This, we all believe, is a testimonial to America's own desire for peace and nuclear disarmament.

It is now up to the Russians, in their turn, to prove their own sincerity by agreeing to an international inspections system which will protect the world against further dangerous nuclear weapons tests in all countries.

"It is for this purpose, that our negotiators have sat patiently through many wearying weeks of nuclear negotiations at Geneva," says the New York Times this morning. "And," it continues, "the hitch has always been to what extent Russia will consent to the presence of non-Russians on international inspection teams operating in Russia. If Russia really wants to put an end to the tests, the technical problem is not too difficult. Even today, such tests, in most cases, can be detected."

Let me go one step further: Since it is now up to the Russians to prove their sincerity, what better opportunity can they have than the occasion of Mr. Khrushchev's forthcoming visit to announce their willingness to join us in an effective international inspection system over nuclear tests? I am certain that there is no other subject that means as much to the people in this country, and in all other countries, as the subject of peace and freedom from the fear of nuclear extinction. If Mr. Khrushchev wants to demonstrate his actual good faith in peaceful coexistence, he will have the opportunity, before coming here or during his American visit, to announce Russia's willingness not only to talk about peace but also to do something about it.

I ask unanimous consent to have the editorial from the New York Times printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW IT'S UP TO THE RUSSIANS

The State Department's announcement that the United States will continue its unilateral suspension of nuclear weapons tests for the rest of this year is a testimonial to our country's honest desire for nuclear disarmament.

It is now up to the Russians, in their turn, to prove their own sincerity, if they can summon such a quality, by agreeing to an international inspection system which will protect the world forever against any more nuclear weapons tests at all in any country.

It is for this purpose that our negotiators have sat patiently through many wearying weeks of nuclear negotiations at Geneva. The hitch has always been to what extent Russia will consent to the presence of non-Russians on international inspection teams operating in Russia. If Russia really wants to put an end to the tests the technical problem is not too difficult. Even today such tests in most cases can be detected.

There are those in this country who argue that nothing can be gained by any government by further experiments with nuclear weapons. From this point of view the weapons already possessed by the United States, by Russia and in lesser quantity by Britain are adequate to perform their terrible task. It is contended, on the other hand, that defense benefits can come from further testing, especially in the field of antimissile weapons. This view is certainly present in the Atomic Energy Commission and in the Pentagon. It is difficult to discuss the merits of these arguments because the technical factors are not and cannot be accessible to the general public. No American, of course, would argue that if further tests contribute to our defense we should remain inactive while Russia moves. It is possible, too, that weapons tests may yield knowledge useful for peaceable purposes.

We must remember, however, that there is a growing worldwide danger of fallout from atomic tests. Russia will suffer from her own tests if she carries them too far, and we will suffer from ours as well as hers if we are forced to continue.

We may profitably turn to a report issued last weekend by the Joint Congressional Committee on Atomic Energy. The report is based in part on the testimony of some 30 scientific expert witnesses as well as upon statements presented by many other scientists.

The report, on the one hand, presents a generally reassuring picture of the fallout hazard from past atomic tests. On the other hand, it warns of potential dangers, particularly to generations–yet unborn, if testing were to be resumed on the intensive patterns of the last 5 years. In 1958 the equivalent in explosive energy of TNT of more than 40 million tons of fission products alone was released in the world's atmosphere as the result of tests by the United States, the United Kingdom and the Soviet Union.

Significantly, the report contains no sweeping general conclusions about the damage that can be expected from the tests thus far. While it repeatedly emphasizes that the radiation received from fallout so far is still only a small fraction of that received from natural background radiation in the earth and in the atmosphere, it focuses new attention on the potential long-term genetic damage that could be caused by carbon 14, the radioactive isotope created from the nitrogen in the air by neutrons liberated in both atomic and hydrogen bomb explosions.

In short, the well-being of the human race for generations to come may be affected by the increase of radioactive material in the air and on the ground, and the very existence of humanity might be endangered by an all-out atomic war.

We do not argue that the way to avoid this catastrophe is to give way to tyranny and injustice, and to weaken in our defense. But this is the danger that all the peoples of the earth, the rulers of Russia especially included, must be made to understand.

Historic Harpers Ferry, W. Va., Faces the Nation—To Celebrate Centennial October 15–18

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1959

Mr. RANDOLPH. Mr. President, less than a month ago in this Chamber I issued an invitation with these words of injunction: Come to West Virginia and you will find a wonderland.

Then, as an example of but a fraction of the beauties and the attractiveness of our Mountain State, I referred to a historic and scenic area within 1 hour and 15 minutes driving time from Washington, D.C., to Harpers Ferry, W. Va.

It was my privilege, when a Member of the House of Representives, to have been author of the 1944 act by which Harpers Ferry National Monument was established. This facility of the Federal Government, under the administration of the U.S. Park Service, has become a most inviting mecca for tourists. In 1956, the first year during which it was fully developed, 115,000 persons signed the guest book there, and the following year the number grew to 170,000. During the past year the figure rose to 271,000, and I am informed officially that in the first 7 months of the present year the 12-month figure for 1958 had been exceeded, with 287,978 guests having placed their names on the U.S. Park Service roll of visitors. It seems to be a logical prediction that the total for 1959 will exceed 400,000.

But, Mr. President, historic Harpers Ferry, where the centennial observance of the John Brown raid will take place October 15, 16, 17, and 18 with pageantry and beauty on parade, was very appropriately displayed to the Nation Wednesday morning. The interesting and much appreciated showing was by means of the National Broadcasting Co's wonderful morning network show, "Today." Popular Dave Garroway presides over the program. Charles Van Doren has added much recently with his trips, scenes, and narration to overlooked vacation areas.

Through the courtesy of Mr. Garroway, Mr. Van Doren, and the "Today" production staff, as well as efficient personnel of NBC personnel in Washington and New York, the script of the Van Doren-narrated Harpers Ferry portion of the August 26 show has been made available. Because it is an accurate word picture of persons, events, and places which appropriately fitted the scenes of, and were associated with, historic old Harpers Ferry, I ask unanimous consent, Mr. President, that the portion of the script referred to be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

CHARLES VAN DOREN—HARPERS FERRY—BROADCAST AUGUST 26, 1959, OVER THE NBC TELEVISION NETWORK "TODAY" PROGRAM

DAVE GARROWAY. Charles Van Doren has been doing another of his overlooked vacation spots this morning. So let us take a trip with Charles down to the Blue Ridge Mountains and the historic old town of Harpers Ferry.

Mr. VAN DOREN. Harpers Ferry, at the confluence of two mighty rivers, the Potomac and the Shenandoah—Shenandoah: I think that's the most beautiful word in the American language. A town well remembered for what John Brown did there a hundred years ago. And, incidentally, in October, in and around Harpers Ferry, they'll be celebrating the 100th aniversary of that great event.

But I don't want to dwell on that story. I think it's familiar to all of you. Instead, I'd like to take my cue from a much more famous American than Brown—even than John Brown—Thomas Jefferson.

Standing on this rock, about a century and a half ago, Jefferson said this: "You stand on a very high point of land. On your right comes up the Shenandoah, having ranged along the foot of the mountains a hundred miles to find the vent, and on your left approaches the Potomac in quest of a passage also.

"In the moment of their junction they rush together against the mountain, rend it as under they pass off to the sea. The scene is worth a voyage across the Atlantic."

As you can see from the picture, Jefferson's words are still true today. It's a sight no one really should miss, a sight to which neither this picture or my words can do justice.

The past lives in Harpers Ferry, not only in its scenery but in the town itself. This is how Harpers Ferry looked when Jefferson

visited it, and it hasn't changed a great deal since.

As you can see from this picture, the main street of Harpers Ferry is just about as it was at the time of the Civil War and perhaps even prior to it. As you walk through the town you're constantly reminded of the past. For example, by ruins of an old Episcopalian church, and also by the cemetery that will evoke memories of an American and of sturdy pioneers of a long-dead period. Maybe not so long dead. I guess there are still pioneers around.

You'll come across the building where John Brown and his little band tried to hold out against the Federal troops commanded by none other than Robert E. Lee. Everybody remembers the John Brown raid of 1859, but we tend to forget that an important Civil War battle was also fought here in 1862, and another one around here in sixty-four.

Harpers Ferry was important for two reasons—its strategic location at the meeting of the Potomac and the Shenandoah, and because of the large arsenal that Brown had tried to take in 1859, seen here as it looked at the beginning of the Civil War in 1861. Well, as I say, history lives in Harpers Ferry, but I am not sure that's the most important reason why I love the city—the town. If you'll look at this picture, here, I think you'll see why I love it (shows picture).

Since the rivers make a cut through the mountains here, and it's the only place to go west, the railroads come through, too, and you can see two railroads coming across the river here. They cut through a great tunnel which follows the river right underneath this mountain on which these two people are sitting, and the rock walls are very high and precipitious around the rivers, both rivers here at the town of Harpers Ferry.

And when the trains come through there they blow their whistles and it makes the most eerie and mysterious, almost otherworldly sound as it echoes back and forth between those great cliffs. And if you love trains, as I do, I think it might be worth a trip just to hear the sound of those whistles.

You may not hear it much longer. Of course, the whistles are not really steam whistles any more. They're imitations, but they still sound pretty fine.

If you want details on hotel accommodations, meals and so on, write to the Conservation Commission, Charleston, W. Va., for details about Harpers Ferry.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Analysis of Public Works Bill Veto Message

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. CANNON. Mr. Speaker, an analysis of the veto message on the public works appropriation bill for 1960—H.R. 7509—shows clearly that the basis of the President's objection to the bill is the unbudgeted construction starts. No reference is made to unbudgeted general investigations and preconstruction planning items. Items in these categories do not represent substantial dollar commitments and the absence of any reference to them in the veto message warrants the conclusion that the President has no objection to them. Unbudgeted items added by the Congress in these two categories are:

Rivers and harbors and flood control:	
General investigations	89
Advance planning	32
Subtotal	121
Bureau of Reclamation:	
General investigations	1
Advance planning	0
Subtotal	1
Total	122

The veto message makes no reference to increases or decreases made by the Congress on budgeted items. It can therefore be assumed that there is no objection on the President's part to the individual project figures in H.R. 7509 for all projects which were budgeted.

The only reference which the veto message makes to power facilities concerns the Trinity River project in California. The statement concedes that funds for starting Federal construction of these facilities are necessary unless partnership development with Pacific Gas & Electric Co. is authorized. In the absence of any other reference to power facilities, it may be assumed that there is no objection to other adjustments made by the Congress in the power program.

The following two lists indicate which unbudgeted items would remain in the bill and which would be eliminated if the veto is sustained:

Unbudgeted items remaining in the bill if veto is sustained

GENERAL INVESTIGATION ITEMS

Arizona:	
Gila River below Painted Rock Dam	$20,000
Gila River, Phoenix metropolitan area	30,000
Arkansas: Benton Dam survey	5,000
California:	
Dry Creek resurvey	$50,000
Napa River	5,000
Soquel Creek	3,000
Sweetwater River	40,000
Connecticut:	
Connecticut River at Essex	5,000
Popuonock River, Groton	5,000
Delaware:	
Indian River Bay via Peppers Creek to Dagsboro	9,000
Broad Creek River, Sussex County	5,000
Florida:	
Pensacola Harbor	7,500
Tampa Harbor (Ybor Channel)	27,000
Georgia:	
Oostanaula River	25,000
Savannah turning basin	4,000
Tugaloo River, Georgia and South Carolina	26,000
Illinois:	
Illinois River	25,000
Little Calumet River	10,000
Indiana: Michigan City	8,000
Kansas:	
Cow Creek	20,000
Three Mile Creek, Leavenworth	5,000
White Clay Creek, Atchison	8,000
Kentucky:	
Bunches Creek	15,000
Kentucky River	12,000
Licking River Basin	20,000
Louisiana:	
Bayou Bartholomew and tributaries	25,000
Bayou Bonfouca	10,000
Calcasieu River salt barrier	9,000
Maine:	
Kennebunk River	9,000
Monhegan River	2,500
Portsmouth Harbor, Piscatague River, Maine and N.H	9,000
Searsport Harbor	9,000
Stave Island Harbor	8,000
Maryland: Wicomico River	15,000
Massachusetts: Town River survey	9,000
Michigan:	
Detroit metropolitan area	5,000
Holland Harbor: Lake Michigan-Lake Macatawa Channel	13,500
Kawkawlin River	8,000
Ontonagan Harbor	8,900
Red Run-Clinton River	10,000
Traverse City Harbor or Refuge	5,000
Minnesota: Levee Wall at Winona	9,000
Mississippi: Okatibbe Creek	25,000
Missouri: Clarksville	6,000
Nevada: Las Vegas Wash	9,000
Nebraska:	
Missouri River slackwater navigation	10,000
Republican River	15,000
Missouri River bank, stabilization and navigation, Sioux City to Yankton	20,000
New Jersey:	
Newark Bay—Passaic River Channel	15,000
Sandy Hook Inlet (Shrewsberry River, N.J.)	25,000
New York:	
Buttermilk Channel	10,000
Cazenovia Creek	10,000
Hudson River siltation	114,000
Little Neck Bay	9,000
New York State Barge Canal	10,000
New York Harbor deepwater anchorage	10,000
Tonowanda Creek	32,000
North Carolina:	
Rogue Inlet and Swensboro Harbor	$15,000
Cape Fear River	10,000
Rollinson Channel-Hatteras Harbor	6,500
Shallote River	7,500
Wrights Creek	10,000
North Dakota:	
Missouri River bank stabilization, Garrison to Oahe	10,000
Souris River	10,000
Ohio:	
Chagrin River	10,000
Crab Creek at and in the vicinity of Youngstown	30,000
Mad River drainage basin	22,000
Sandusky River basin	60,000
White Oak Creek	10,000
Oklahoma: Oklahoma City floodway extension	6,000
Oregon:	
Rogue River	11,000
Umpqua River, north to Reedsport	11,000
Walla Walla River, Milton Freewater	13,500
Willow Creek	18,400
South Carolina: Santee River and tributaries	30,000
Texas:	
Arkansas-Red River pollution survey	75,000
Big and Little Vince Bayou	21,000
El Paso	20,000
Guadalupe River	11,000
Gulf Intercoastal Waterway Channel to Port Isabel	7,500
Lake Kemp	35,000
Neches River	10,000
Salt Fork and Prairie Dog Town Fork of the Red River	90,000
San Jacinto survey	15,000
West Fork, Double Bayou	2,000
Utah: Great Salt Lake (Saltair)	25,000
Washington:	
Ben Franklin Dam	20,000
Swinomish Slough	20,100
West Virginia:	
Deckers Creek	15,000
Twelve Pole Creek	10,000

ADVANCE PLANNING ITEMS

Alabama: Holt lock and dam	150,000
Arkansas:	
DeGray Reservoir	150,000
Gillham Reservoir	80,000
Illinois: Subdistrict No. 1 of Drainage Union No. 1 and Bay Island Drainage and Levee District No. 1	50,000
Indiana:	
Clinton (deferred for restudy)	5,000
Sugar Creek levee	15,000
Terre Haute-Conover levee (deferred for restudy)	2,000
West Terre Haute	30,000
Iowa:	
Green Bay Levee and Drainage District No. 2	75,000
Saylorville Reservoir	200,000
Kansas:	
Frankfort	50,000
Marion Reservoir	25,000
Kentucky: No. 2 Green Reservoir	50,000
Michigan: Hammond Bay Harbor	20,000
Missouri: Marion County drainage district	73,000

Unbudgeted items remaining in the bill if veto is sustained—Continued

New York: Herkimer	$48,000
Ohio: Belleville locks and dam, Ohio and West Virginia	125,000
Oklahoma:	
Lukfata Reservoir	50,000
Pine Creek Reservoir	80,000
Oregon:	
Willamette River basin channel improvement and major drainage: Coyote and Spencer Creek	50,000
Yaquina Bay and Harbor	100,000
Pennsylvania: Turtle Creek	$25,000
Texas: Matagorda ship channel: 36-foot channel	150,000
Virgin Islands: Christiansted Harbor (inactive)	3,000
Washington:	
Columbia River between Vancouver, Wash., and The Dalles, Oreg.: (b) Bingen Barge Channel	10,000
Little Goose lock and dam	450,000
Wisconsin:	
Bad River:	
(a) Mellen Channel	$25,000
(b) Odanah, moving village and raising school	25,000
Eau Galle River	75,000
Saxon Harbor	31,000
FLOOD CONTROL, MISSISSIPPI RIVER AND TRIBUTARIES	
Construction and planning:	
Greenville Harbor	60,000
Lower White River	107,000

Unbudgeted construction items to be eliminated if veto is sustained

CORPS OF ENGINEERS

Project	Benefit-cost ratio	Total estimated Federal cost	Appropriation to date	Amount in H.R. 7509
Arkansas: Beaver Reservoir [2]	1.1	$56,100,000	$1,291,000	$1,500,000
Alaska: Dillingham Harbor	1.3	412,000	6,000	406,000
California:				
Mill Creek levees	2.1	1,740,000	107,000	500,000
New Hogan Reservoir	1.7	19,300,000	740,000	1,500,000

Long-Range Study of Educational Policies and Problems by Texas Research League

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. JOHNSON of Texas. Mr. President, Orange County, Tex., will soon be the scene of a major, long-range study with regard to educational policies and problems. The study will be made by the Texas Research League.

Because of the novel and interesting approach being taken to educational problems in Orange County, and because of this firm evidence of cooperation at the local level, I ask unanimous consent that an aticle entitled "Historic County Schools Study Starts Soon," published in the Orange (Tex.) Leader of August 23, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HISTORIC COUNTY SCHOOLS STUDY STARTS SOON—TEXAS RESEARCH LEAGUE MAY SET PATTERN HERE

A historic survey of school district organization and related problems gets underway in Orange County in the near future.

It will be made by a nationally known and respected factfinding agency, the Texas Research League.

And it is expected to develop a pattern of approach which can be used by other Texas counties faced with similar school district problems.

Announcement of the official acceptance by Texas Research League of an invitation to make the survey was made yesterday by George D. Craft, chairman of a citizens' shool study committee appointed some months ago by the county board of education.

Craft said a letter was received late last week notifying his committee that the large group of leading Texas businessmen and industrialists on the Texas Research League board of directors had unanimously approved the Orange County survey.

Executives of the research organization had advised earlier that the study would be made if approved by its screening committee and members of its board of directors.

The letter to Craft was signed by B. S. Sines, of Houston, chairman of the Texas Research League board.

It pointed out the understanding of the league that the purpose of its survey is to provide the facts on which the school boards and other school officials of your county may base a sound district organization plan which will assure a good system of education for your children in the most economical manner.

Sines went on to say that the favorable action of the league's directors was taken in the belief that the study will not only benefit the people of Orange County, but will also develop a pattern of approach which can be used by other Texas counties faced with similar school district problems.

He added, "An important factor prompting the league's acceptance of your study request was your committee's assurance that the undertaking has the sympathetic support of your county school board, the various local school boards, your school administrators and the various official taxpayers and other citizen groups having an interest in the problems facing the schools of Orange County."

This was followed by the comment that the success of the survey will depend very importantly on the cooperation which these persons and groups will give the league's research team in its factfinding efforts.

A part of this cooperation will be the payment by Orange County interests of $4,500 toward costs of the survey which are not included in the league's current operating budget. The citizens' committee will meet during the next few days to make plans for raising this money.

Texas Research League will finance an additional $5,000 of the cost out of its own funds, which are provided by the Texas business and industrial firms that support the independent factfinding agency.

According to Sines, the league's research staff will begin the study in the near future. Details of the project are to be worked out by the organization's executive director, Alvin Burger, and the citizens' study committee.

In conclusion, the Texas Research League chairman commented, "The Texas Research League undertakes this survey as a public service. Our board of directors sincerely hopes that the results of the project will contribute to the solution of the financial problems facing your school districts and to the general improvement of public education in Orange County."

Texas Research League was organized by Texas businessmen and industrialists a number of years ago as an agency for doing research work necessary to good government. Its assistance has been officially requested a number of times by the legislature and State agencies and some of its reports have attracted nationwide attention.

The Orange County school study will be the league's first factfinding mission below the level of State government.

The survey was arranged for the committee by Clyde McKee, chairman of a subcommittee appointed for the purpose.

Immediate responsibility for coordination of the project will be in the hands of Jim McGrew, research director for the league at its Austin headquarters.

Fieldwork will be under the direction of Glenn Ivy, research associate. He already has considerable experience in this type of study gained from compiling in 1955 an exhaustive and widely read report on school district organization in the State for the Texas Education Agency.

Ivy also has had extensive experience in property taxes as a result of research work which he did last year while the league was working with the Texas State Tax Study Commission.

Americans Provided Best and Cheapest Food Anywhere in World While Farm Program Has Operated—Benson Works To Destroy This Program—Farmers Enter a New Depression—A Report on Agriculture

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. COOLEY. Mr. Speaker, as the 1st session of the 86th Congress draws to a close, I feel it is my duty, as chairman of the House Committee on Agriculture, to review for Members of the House the work of our committee and of the Congress in behalf of agriculture and to bring into proper perspective for the Nation the general circumstances of our farmers and their families.

In this session of Congress, as in past sessions, Mr. Ezra Taft Benson, the chief agriculture officer of our country, has placed roadblocks and obstacles in the pathway of progress.

The Secretary of Agriculture has not provided leadership commensurate with the responsibilities of his high office. On the contrary, he has continued his efforts to divide the agricultural forces of our country and to array consumers against producers and to bring the farm program into disrepute. He has not championed the cause of agriculture nor has he demonstrated a willingness to compose differences with those who do not see "eye to eye" with him. He has been stubborn and unrelenting.

Mr. Benson has not presented a single new thought nor has he proposed a single new program, nor has he been courageous enough to advocate the outright repeal of a single law or program which he has so constantly and consistently criticized. He says that he dislikes the production adjustment programs and the price-support programs but when challenged to do so he refuses to advocate the repeal of either. He seeks only to modify the price-support programs and to lower prices to starvation levels.

"Freedom" and bankruptcy for the farmers of America is Mr. Benson's program.

Unfortunately he does not understand the plight of our farmers nor does he understand their problems, and he is definitely not in favor of a Federal farm program for the farmers of our country. He believes in letting the farmer earn his living "by the sweat of his brow" and to live by the harsh and cruel law of supply and demand without any aid or assistance from the Government, such as are extended to other areas of our economy.

Certainly he should know that the farmers of America have mastered the techniques of production and are now capable of producing more food and fiber than the Nation can possibly consume. Unless our farmers are permitted to exercise some control over production our supplies will be abundant, our surpluses will accumulate, prices will deteriorate, and farmers will suffer. He wants the farmer to go it alone while every other great segment of our economy enjoys a high degree of Government protection.

Our Secretary just does not want to understand the farm program which operated successfully for 20 long years and under which our farmers and the people of our Nation prospered. He wants to destroy the program and to permit our farmers to bury themselves beneath the abundance they are capable of producing.

Mr. Speaker, we hear a lot of talk about the administration's farm program.

There is no such thing. I have challenged the Secretary, and I now challenge any Member of this House to tell us what the Eisenhower-Benson farm program really is. We know and we understand the program which operated so long and so well and we know that under that program America has been the best fed nation on earth and we know that the consumers of America have had more, better, and cheaper food than at any other time in all history.

THE CONSUMER

The average worker in the United States in 1958 spent only 25 percent of his earnings to buy the average amount of food consumed by a family of three. Thirty years earlier the same food would have cost the same worker 48 percent of his earnings.

Over the 30-year period, with farm price support programs in operation in worker's earnings has been released by most years, 23 percent of the average lower food prices for other uses—to improve his home, send his children to college, buy an automobile, and in many ways to increase and dignify his standard of living.

Farmers in no other country of the world have lowered food costs, in relation to workers' earnings, so dramatically. Food costs, in spite of sharp increases in processing and marketing charges, are lower in the United States in terms of workers' wages than anywhere else in the world.

This has been made possible by the great forward strides in farmers' production efficiency, and we may credit the farm program as a dominant factor in bringing about this high level efficiency. With this farm program, the earnings of farmers were raised from the former low levels and they were able to invest in mechanization, in soil improvements, in chemicals, in new plant varieties, and in production methods which previously were impossible because the farmers were so poor.

Mr. Speaker, if all farm program costs had been added to the cost of food in 1958, the average worker would have spent only 26 percent of his earnings for food, as compared with 35 percent for the same food 10 years earlier, 41 percent 20 years earlier, and 48 percent 30 years earlier.

Yet, there is a movement abroad in this country to heap ridicule upon all farm price stabilization and production adjustment programs, and upon farmers as well. The movement aims to prejudice nonfarm people against farm people, and thus to destroy and foreclose a workable program aimed at economic justice for the people who produce our food and fiber.

Mr. Speaker, there are sly and insidious political calculations back of this movement, as some politicians bid for the vote of the cities, deserting our farmers because they now are so few.

THE BENSON PROGRAM

Mr. Benson has conjured up a program without real form or substance, which he glibly alludes to at every opportunity as the route to a free, prosperous, and expanding agriculture. In fact, however, the Benson program is an incredibly inadequate proposal involving unlimited free production, higher Government costs, and lower prices to farmers. The nearer he has moved agriculture toward his philosophy, the poorer our farmers have become.

The Secretary during his tenure has spent more money than the accumulated total expenditures by all his predecessors in this office during the prior 90-year history of the Department of Agriculture.

Yet in these 6½ years the net income of our farmers has been almost $20 billion less than in the 6½ years prior to his taking office. The earnings of our people in agriculture have been reduced drastically, while other areas of our Nation's economy have experienced unprecedented prosperity. Moreover, Government investments in surplus farm commodities have increased more than threefold, from $2,452 million on January 1, 1953 to $9 billion by the latest report.

And now the stage is set, as a result of Mr. Benson's dreamworld economic theories, for an even greater farm debacle within the next 2 years. Prices received by farmers are in a new downward swirl. They stand now at a level 17 percent below 1952. Hog prices have joined in the decline, falling in July to the lowest level for that month since July 1944. Economists are predicting a slide in beef cattle prices in the months ahead.

The situation demands action.

THE VETO

But, Mr. Speaker, the unyielding, uncompromising, negative position of Mr. Benson and this administration has brought about a paralysis in Washington where the interests of our farmers are concerned.

The veto power of the President, placed at Mr. Benson's disposal, has been raised as an absolute barrier between the farmers and their Government.

The President himself, in a special farm message shortly after this Congress convened, proposed further retreat of the Government from responsibility in the price stability of agriculture and from farm production adjustment undertakings. He called for outright repeal of the parity principle, which is the only means under law to determine a fair relationship of farm prices and costs to the total of the Nation's economy.

Notwithstanding the President's pronouncements, this Congress set out with earnestness and dedication to arrest the 6-year deterioration of our agricultural economy, and to return our farmers nearer to a parity position in our free enterprise society.

But, Mr. Speaker, it soon became crystal clear that no bill could become law unless it hewed to the line laid down by the President. Our efforts were scuttled by the President's negative power—the veto.

WHEAT NO. 1 PROBLEM

It was evident to the Congress and to the President, when this Congress convened, that the great accumulation of wheat surpluses presented the Nation with its No. 1 farm problem. The Congress passed a bill cutting the wheat acreage in 1960 by 25 percent below 1959. It would have brought wheat plantings down to 41 million acres and would have reduced production substantially. This would have been less than half the 84 million acres our farmers seeded to wheat 10 years ago. The legislation represented a willingness of our farmers to assume great sacrifices to bring down the wheat surplus.

The President vetoed the bill.

He condemned the legislation because it included price supports which sought to prevent great hardships to wheat farmers while they were reducing their crops so severely. He did this in the face of a Department of Agriculture statement that the price support would not influence the price of bread, and despite a sound showing that the legislation would save the Government and taxpayers approximately a half billion dollars over a 2-year period.

By this action the President has assumed full responsibility for the future buildup in wheat surpluses and for the huge costs of financing these extraordinary supplies.

TOBACCO BILL

The Congress passed a tobacco bill, the effect of which was to prevent increases in the support prices of tobacco, so that our tobacco might continue to compete pricewise in world markets. All interests in the tobacco industry supported the legislation.

The President vetoed this bill. I never have understood why.

Our Committee on Agriculture held hearings on long-range farm program proposals in an effort to bring general farm legislation before this session of the Congress. We sought to halt the dangerous decline in farm prices and to restore agriculture to an equitable position in the general economy. We would not accept the administration's proposals for agriculture. As a consequence, we were unable to develop legislation which would meet with the President's approval. The farmer does not now have, in the political alinement existing in the Congress, sufficient strength for a two-thirds vote in both Houses to override a veto of legislation in his interest.

Nevertheless, Mr. Speaker, the deep concern of the Members of this House for the well-being of agriculture is spread vividly in the records of our committee. I have been especially impressed and pleased by the dedicated work in behalf of agriculture by the newly elected Members of this body. Our committee records show that Members of the House have introduced to this date in the first session of the 86th Congress 461 bills dealing with conditions on our farms.

Our committee held 113 sessions.

We reviewed these bills and sent 118 to the Secretary, to determine his position upon them. Mr. Benson approved only eight of these bills, and most of these were of a minor nature. He disapproved, proposed changes, or did not report at all, with respect to all the

others. He rejected all legislation proposing fundamental improvements in the operation of farm laws to increase the income of farm families.

In fact, Mr. Benson's predisposition to oppose everything would be comical, if it were not so tragic.

SCHOOL MILK

He went so far as to send his assistants before our committee to oppose an additional national authorization of $3 million for the special school milk program, without which the program through which milk is supplied to children would have been closed down in many schools before the last school term ended. We passed the authorization bill, Mr. Benson notwithstanding and, not risking a chance of being overriden in the Congress on a milk-for-schoolchildren issue, the President signed it.

CORN GLUT

Early in the session it became evident that Mr. Benson's action drastically reducing the prices of oats, rye, barley, and barley and grain sorghums would severely aggravate the feed surplus situation, by influencing a shift from these small grains to the production of corn. To remedy this our committee developed a bill which would have balanced the price supports of the small grains to their feed value relationship with corn. The Secretary opposed this legislation. And now there is in prospect the largest corn crop in history, to add to the surplus and create graver problems for the livestock industry in the years ahead.

INDUSTRIAL USE RESEARCH

In the Agricultural Act of 1956 the Congress provided for the establishment of a Commission to examine the possibilities of new markets by increasing research in industrial uses of the products of our farms. The Commission made its recommendations. The administration opposed the legislation embracing these recommendations. Our committee worked throughout the session to develop legislation Mr. Benson would accept.

EGGS AND BROILERS

Our poultry industry suffered a price disaster in the spring of this year. It was ironic that the President, in his January farm message condemning the farm price support program, had singled out the poultry industry specifically as an example in agriculture where prosperity abided without the help of Government. Many hundreds and perhaps thousands of family enterprises in poultry were wiped out by the price debacle. The poultrymen appealed to the Congress and to Mr. Benson for help. Mr. Benson opposed legislation to deal with the long-range problems of the industry. He refused to ease the egg market glut by using funds which already were available to buy laying hens, although the product could have been used in a substantial way to improve the school lunch and relief food programs. He did inaugurate a modest egg-buying program, the effect of which came too late to aid many family poultry farms.

REA AND THE VETO

The Congress approved a bill to return to the Administrator of the Rural Electrification Administration the full loan-making authority, so that such authority would not rest with an unsympathetic appointee of the Secretary of Agriculture. Mr. Benson opposed the bill. The President vetoed it. The Senate voted to override, but the House failed to cast the necessary two-thirds vote to set aside the veto.

FOOD FOR THE NEEDY

Many bills were presented to provide for more effective distribution of surplus foods, through a food stamp plan, among needy people. Mr. Benson opposed all these bills.

COUNTRY LIFE COMMISSION

The bill to establish a bipartisan Country Life Commission, to study the most pressing problems of the changing rural scene, drew a neutral report from the Department of Agriculture. This Commission would have been similar in its operations to one appointed by President Theodore Roosevelt in the early part of the century and which made recommendations which brought about substantial improvements in the farm economy and in country living.

HOGS

As the autumn marketing season approached, it became increasingly clear that a crisis was building up in farmer prices for hogs. When July prices for hogs dropped to the lowest level for that month in 15 years there no longer was any doubt that positive measures should be taken to forestall a price catastrophe which might bring grave consequences to the economy of the Midwest and in some other areas of the Nation. Several bills were introduced, proposing various ways of dealing with the situation. Our committee brought up for consideration the bills proposing a program of incentive payments to encourage the marketing of lightweight hogs and thereby ease market gluts. This approach was supported by the National Planning Association, a nonpartisan body. Mr. Benson opposed it. Our committee reported a bill embracing this approach to the hog price problem, but with the opposition of the administration it did not become law.

The Secretary of Agriculture has surplus removal funds already available to initiate a pork purchase program, with the pork to be used in schools and for relief food. It is my hope that he will use his authority and the funds the Congress has provided, in the manner and to the extent necessary, to maintain the maximum stability in the hog markets under the pressures of huge supplies during the impending marketing season. Our bill encouraging lightweight marketings would deal more effectively with the problem, at smaller expense, with the major benefits going to farmers rather than to meat processors; but the Secretary can do an effective job with the authority and funds already at hand, if he will use them wisely.

We have sent to the Secretary, in this and previous Congresses, bills proposing revisions in the present price support and production adjustment program. We forwarded to him bills proposing two-price or domestic parity systems for various commodities which would let these crops move competitively into world markets while maintaining a reasonable price in our domestic markets. We sent to him proposals for production payments, compensatory payments, or marketing equalization payments to farmers. He has returned them with the Department's stamp of disapproval.

In these circumstances I have set forth, Mr. Speaker, we have been unable to put on our statute books the public policies so sorely needed to stop the piling of surplus upon surplus, reduce Government costs and to arrest the new and deeper depression that is settling upon our farms.

ACCOMPLISHMENTS

We have, however, brought forward, with the prospect of Presidential approval, legislation to extend and improve Public Law 480, the Agricultural Trade Development and Assistance Act. This bill embraces a section calling upon the Secretary to initiate a food stamp plan for a more adequate distribution of surplus foods among needy people. It includes another section which should prevent the destruction of the extra long staple cotton production industry in the United States. I hope that when the President signs the Public Law 480 extension bill it will include these provisions, although his Secretary vigorously opposes any food stamp plan.

We passed and the President signed legislation important to cotton producers, in that it provides a sound base for making cotton acreage allotments.

Legislation was enacted to assure the operation of special school milk program throughout the last school term, and the authorization for this program was increased by $6 million to $81 million for the school term now commencing and by $9 million to $84 million for the 1960–61 school term.

We took steps to improve farm credit operations, crop insurance, pest control and several other laws important to agriculture.

We approved numerous watershed projects, for soil and water conservation.

Mr. Speaker, while our efforts to write general farm legislation have been thwarted by the administration, our studies and our work should be of substantial value in the development of sound farm policies when we have an administration sympathetic to the needs of the people who produce our food and fiber.

I would remind the House that before Mr. Benson became the Secretary of Agriculture we had a farm program under which for 11 consecutive years the average prices paid to farmers were at or above 100 percent of parity. I would point out that this program operated for two decades prior to 1953 at an actual profit of $13 million on Commodity Credit Corporation price supports for the basic crops. CCC operations for all crops including perishables and nonperishables, cost only $1,064 million over a 20-year period.

This program which worked so long and so well, at so little expense, now is a virtual shambles.

THE GOVERNMENT AND FARMERS

Mr. Speaker, our Government has given labor the minimum-wage and collective-bargaining laws. We have clothed industry with the corporate structure and the many Federal and State statutes which regulate competition. With the help of these Government aids and regulations, both labor and industry have built up a marketing structure which maintains price and wage rates at balanced levels while adjusting supply to demand. How, then, can the modern, highly mechanized farmer survive, when he must do all his buying in the protected market of industry and labor, and do all his own selling at auction, with no protection?

Surely our national interest requires that we have a farm program which will enable farmers to adjust their marketing to available outlets and demand—at prices in line with their costs, as is essential in any successful business.

Now, in conclusion, Mr. Speaker, I say this:

The well-being of agriculture is a matter of concern to all the people. Our Government research, conservation, and educational programs, combined with the intelligence and labor of our farmers, have given us the most efficient agricultural production in the world. They are giving consumers the cheapest food—in relation to wages—on record. Our farm marketing and pricing machinery, however, is woefully behind the times. Without governmental assistance in the marketing and pricing fields, the exploding production technology on our farms will surely proceed to create a disastrous economic situation for agriculture.

Government cannot now stand by while propagandists cry that all old programs have failed and all new programs are doomed to failure. This Government of ours, representing all the people, cannot say there is nothing it can do to avert the impending economic misery of the farmer. This Government can and must act to salvage some economic justice and stability for farmers—and protect everyone against the ruinous imbalance arising from the abnormal rate of technological advances in production, in relation to available market outlets.

This Government has a moral, an ethical, an inherent, and a constitutional obligation to establish public policies and programs that will open to the men and women of agriculture the opportunity for fair returns on their management, their risks, their capital investment, and their labor on a basis comparable with the workers in all other undertakings in this free enterprise economy and in this democratic society.

The safety, the health, the aspirations of all the people—the strength of our Nation—demand this.

Wisconsin "Tops" Soviet Union in Cheese Production

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, August 29, 1959

Mr. WILEY. Mr. President, during these days when the Soviet Union is experiencing growing pains, in the economic, military, scientific, and other fields, we receive repeated reports of bragging about their program.

Among these claims, for example, is that they have made a 500 percent increase in production over pre-World War years of a product for which my home State is famous, that is, cheese.

At this time I want to set the record straight.

Now, it may well be true that they have increased cheese production 500 percent. However, the real facts in cheese production illustrate that my home State of Wisconsin—with only about 2 percent of the population of the Soviet Union, far out-produces the Soviet Union in cheese.

In 1958 the Badger State output amounted to 280,000 metric tons of cheese; by comparison, the production of the Soviet Union totalled only about 150,000 metric tons, approximately 23 percent of the cheese production in the United States.

For a further comparison of cheese production—in which Wisconsin "tops" the Soviet Union—I ask unanimous consent to have the text of a release issued today printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

WILEY HAILS WISCONSIN CHEESE OUTPUT AS SYMBOL OF FREE ENTERPRISE TRIUMPH OVER COMMUNISM; WISCONSIN WITH POPULATION OF 3.8 MILLION PRODUCES ALMOST TWICE AS MUCH CHEESE AS SOVIET UNION, POPULATION 208 MILLION

Senator ALEXANDER WILEY, Republican, of Wisconsin, ranking Republican member on the Senate Foreign Relations Committee, today hailed Wisconsin's record of outproducing Russia in cheese as a symbol of triumph of free enterprise over communism.

"Currently, the Communist leaders brag about the stepped up production of consumer goods under their system. The Soviets are advertising the fact that their cheese production is up 500 percent since the pre-World War years. The fact is, however, that the State of Wisconsin, alone, now producers almost twice as much cheese as the whole Soviet Union. In 1958, the Badger State output amounted to 280,000 metric tons of cheese; by comparison, the production of the Soviet Union totaled only about 150,000 metric tons—approximately 23 percent of the cheese production in the United States. For further comparison, Russian cheese production amounts to 1.6 pounds per person, while the United States production amounts to 8 pounds per person—according to statistics released earlier this month by the United Nations Food and Agriculture Organization.

"Globally, the production of cheese between the years prior to the Second World War and 1958 increased about 70 percent. During this same period, American cheese production more than doubled and the United States tops the list of cheese producers. Next in importance are France, Italy, the Federal Republic of Germany, the Netherlands, the Soviet Union, Denmark, and Switzerland.

"Although the United States is the world's No. 1 cheese producer," the Wisconsin Senator pointed out, "statistics illustrate that the consumption of cheese in some countries far exceeds that in the United States. Here the per capita consumption is approximately 8.5 pounds. This compares poorly with higher consumption of 19.5 pounds in Norway and 18.7 pounds by the Swiss (who were the pre-world war champions but are now outperformed by the Norwegians.)

"Consequently, the United States still represents a large untapped market for the cheese industry. If the challenge of increasing consumption can be met successfully and will result in a per capita increase, this should substantially brighten the outlook for the American cheese industry. This should be particularly important to Wisconsin since it produces about 44 percent of all American cheese.

"The cheese consumption figures for the United States illustrate that what may be considered a luxury in Russia is everyday diet in this country. In the United States, a pound of hard cheddar cheese sells for about 58 cents, which would mean that an average industrial worker would have to put in about 16 minutes of work to buy a pound of cheese. In Moscow, a pound of the cheapest hard cheese sells for 11 rubles, and comparatively, would require 2 hours and 34 minutes of work.

"In attempting to show that the lot of the Soviet workers is not inferior to that of the American working class, the Communist leaders have denied that the American automobiles, the American home, and the American goods exhibited in the Moscow fair can be afforded by the typical American workingman. As usual, the Soviets are unlikely to accept our superiority in production or our ability to better provide the people's needs. Therefore, although I am not in favor of an 'open arms' welcome for Khrushchev when he comes to this country, I would be happy to send him some samples of Wisconsin cheese, which any American can afford, to help him find out for himself what the advantages of free enterprise are, and what the life and diet of an average American are like," Senator WILEY concluded.

Rescue the World Court

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. McDOWELL. Mr. Speaker, last week, in a major speech which he delivered at the 82d annual meeting of the American Bar Association, the U.S. Attorney General William P. Rogers called

for repeal of the so-called Connally amendment.

Under this amendment the United States decides for itself what disputes it will put before the International Court of Justice.

It is this amendment, Attorney General Rogers said, which is partly to blame for the minor role the Court has taken in settling international disputes. In its 13 years of operation, it has decided only 17 major cases.

Those lawyers who heard the speech say it was the strongest plea to date by any top official of the Eisenhower administration for repeal of the amendment.

The Attorney General pointed out that France recently withdrew a similar provision and that now the United States is alone among 10 NATO nations to continue to insist on such a reservation.

President Eisenhower told the Congress in his state of the Union message that U.S. relations with the World Court should be reexamined "to the end that the rule of law may replace the rule of force in the affairs of nations."

Senator HUBERT H. HUMPHREY and I have introduced resolutions calling on the Senate of the United States to repeal the Connally amendment. The State Department has endorsed our proposal, but nothing much else had happened until the speech by Attorney General Rogers.

I am delighted that the Attorney General has now come forward to support this important step.

I include here the text of my House Resolution 267, an editorial from the Washington Post of August 24, 1959, and the text of the splendid speech by the Attorney General of the United States to which I have referred:

HOUSE RESOLUTION 267

Resolved, That it is the sense of the House of Representatives that the determination of whether an international dispute to which the United States is a party involves matters which are essentially within the domestic jurisdiction of the United States, and is therefore not within the compulsory jurisdiction of the International Court of Justice, should be made by the Court itself rather than by the United States; and that any provision of law or resolution to the contrary should be repealed or otherwise nullified.

[From the Washington Post, Aug. 24, 1959]

RESCUE THE WORLD COURT

What has happened to the movement to rescue the World Court? A few months ago a considerable head of steam was built up behind the demand for repeal of the Connally amendment, which has gravely limited the usefulness of the Court. President Eisenhower had said in his state of the Union message that U.S. relations with the World Court should be reexamined "to the end that the rule of law may replace the rule of force in the affairs of nations." Vice President NIXON, Charles S. Rhyne, past president of the American Bar Association, and others stirred up a great deal of interest in the subject. Senator HUMPHREY introduced a resolution to repeal the Connally amendment. The State Department endorsed the resolution in a letter to the Senate Foreign Relations Committee in April, and since then the proposal has not moved off dead center.

This is especially unfortunate because it leaves the United States in the position of holding back in the drive for substitution of judicial processes for force in the settlement of international disputes. This country can and does suggest that many international controversies be decided by the World Court, but it is an empty gesture. Through the Connally amendment the Senate asserted the right for this country to decide for itself in each case whether any dispute laid befor the World Court is within its domestic jurisdiction. That gives every other country against which the United States may bring a case in the World Court a similar right to escape a judicial determination by asserting that the case is domestic regardless of what may be involved.

Every reason of justice and self-interest cries for removal of this court-crippling device. It would be especially salutary if President Eisenhower could inform our allies on his forthcoming visit and Premier Khrushchev on his September tour that the United States is accepting the compulsory jurisdiction of the World Court, without any strings attached.

Responsibility for the present inaction seems to be shared about equally by the administration and the Foreign Relations Committee (which reportedly is reluctant to move because of opposition mail). In any event, the President is in the best position to break the deadlock. Why doesn't he send up a rousing message asking for immediate passage of the Humphrey resolution as a means of striking a blow for world law.

ADDRESS BY HON. WILLIAM P. ROGERS, ATTORNEY GENERAL OF THE UNITED STATES, BEFORE THE GENERAL ASSEMBLY, 82D ANNUAL MEETING, AMERICAN BAR ASSOCIATION, MIAMI BEACH, FLA., AUGUST 26, 1959

It is a great honor and privilege again to address the annual meeting of the American Bar Association. This association is the largest and most influential group in the legal profession. What you think and do has a significant impact on the administration of justice and on public affairs.

We in the Department of Justice have a common objective with you in seeking constantly to improve our system of justice so that it may better serve the people of our Nation. In pursuit of this objective there may be, on occasion, an action taken or a statement made by this association, or one of its numerous committees, with which we are not in full accord. But I want you to know that I am well aware, particularly from reading some of my mail from you, that this occasional lack of togetherness is mutual.

Notwithstanding any infrequent minor differences, we in the Department know that the American Bar Association is earnestly and effectively striving to improve our profession and has made significant and important contributions to that end. The support you have given to the Department of Justice, especially in certain difficult and sensitive areas, has been of the highest order and I want you to know that I, and all of us in the Department, sincerely appreciate it. May I also commend the association for its splendid record of achievement this year under the outstanding leadership of your president, Ross Malone.

What is the responsibility of our profession in today's world? As I see it there are two broad areas to be considered.

First, the administration of justice in the United States is on display in every part of the world. When we talk about competing with international communism in the realm of ideas, we are talking in large measure about the ideas which are the basis of our legal system.

Second, in the long view the main hope for peace is that nations will be wise enough not to rely on sheer strength in dealing with each other but will move toward establishing systems based on considerations of law and justice in the resolution of international disputes. Nations have readily paid lipservice to the soundness of this proposition but progress in this area has been tragically slow.

Dramatic events in the past few weeks and those indicated in weeks to come suggest that we are at a point in our international relations at which our profession will have new opportunities to serve our Nation in these two areas.

As to the first, although Soviet leaders are still firmly committed to the policy of world domination there is hope today that they may be willing to permit a freer flow of ideas between our two countries than they have in the past. For this reason I believe the time has come when we should act and speak more vigorously and effectively for those ideals and ideas which have given this country its strength. People throughout the world, even to some extent in the areas controlled by the Soviet Union, may have an opportunity to get a more accurate picture of America and the meaning of justice and freedom here as contrasted with the Soviet Union.

In this international competition we must not fall into the trap of emphasizing material considerations to the exclusion of all else. To some of the uncommitted nations of the world the Soviet system of state controls and planning may seem attractive. The Russians point to the fact that their economic system has been applied in a country which was initially very backward in technology, with a low standard of living compared to the West. Because a similar situation exists to some degree in several of the new nations of the world, they see a parallel that has some surface attraction.

But the situation is different when it comes to the appeal of ideas. Freedom under law is one of the most powerful ideas ever conceived by the mind of man. Its appeal will continue to grow in the uncommitted nations of the world. It has not been too long since many of these nations completed their successful struggle for independence. With national freedom there has arisen a great awareness of and interest in the concept of individual freedom. Thus the free world has an unusual opportunity in the years ahead to place in bold relief the weaknesses of the Soviet system compared with the strength of ours.

Why does the legal profession have a responsibility for this? Because we are daily involved in the proceses of justice, and its administration is our business. We are officers of the courts of the United States and should be the leading spokesmen for presenting the case of freedom to the world. The merits of the case have to be articulated more effectively than has been done in the past. In the world in which we live it is not enough to be convinced that our system holds forth the greatest promise of individual liberty for people all over the world. We should present the true picture of a system of liberty under law to those who do not fully understand it or who may have been misled by Soviet propaganda. This must be done so that people will realize the importance of maintaining free governments and not succumb to the Soviet scheme for world domination.

These are a few of the truths which need to be dramatized:

1. We cannot rest our case on the size and productivity of our farms, factories, and mines, nor even on the excellent wages and working conditions of the American people. These are important, but they are the by-

product of freedom—not its source. The source of strength in a democracy is the freedom of the individual to think, speak, and do the things he decides to do as long as he does not transgress the rights of others. We must point out, too, that these freedoms are not a matter of grace but are guaranteed and protected by our legal system.

2. The land and the tools of production in our Nation are owned by the people, not by the Government as in Russia. It should be emphasized that our legal system protects this ownership against intrusion by any other individual or by the Government itself. Under this system in which the free initiative of the individual plays the major role the United States has achieved the greatest distribution of wealth among its people and has come closest to the ideal of prosperity for all.

3. We are a government of law, not of men. Regardless of wealth, power or station, no one is above the law in the United States. For this reason our people need never fear that they may become the victims of ruthless political leaders. Thus the fact, now generally conceded by everyone, that under Stalin thousands of innocent victims were killed and tortured in the Soviet Union, seems almost beyond belief to a free people. Yet, because the law in the Soviet Union is what the Communist Party says it is, many of those who acted in concert with Stalin in perpetrating these atrocities apparently have not been prosecuted nor has retribution been made for the wrongs committed.

4. We must constantly emphasize that the will of the people is controlling in the United States. Under our legal system public officials are responsive to the will of the people. Our Nation will never start a war because our people fervently want peace. Anyone who believes that our Nation might act in a manner inconsistent with the will of the people in maintaining peace is ignorant about how our system works.

These are merely a few ideas which can be emphasized. There are a great many others, of course, with which we are all familiar and with which you and this association will be concerned in the future. For the past several years this association has done an excellent job in awakening the public to the significance of the rule of law. I commend you particularly for the vigor and imagination with which you are planning to cooperate in the future with the legal professions of many other nations to intensify interest and support for the rule of law in resolving international disputes.

President Eisenhower expressed the thought well in his letter to Mr. Malone when he said:

"Peace cannot prevail until men and nations recognize that their conduct must be governed by respect for and observance of the law. The American Bar Association by seeking to promote this principle is helping to advance the cause of enduring peace in the world."

In this connection we should keep in mind that there is a good likelihood that the exchange programs between East and West will continue, and may even be expanded in the future. As you know, the exchange programs now in effect include representatives from industry, agriculture, medicine, student groups, the arts and sciences, athletics, and many other fields, but there has been little exchange between members of the legal profession.

It is my opinion that the legal profession should give its support to a carefully planned exchange program of lawyers and judges in order that the Soviets may study our constitutional system and the operation of our courts and that we be given an opportunity to study the system in effect in the Soviet Union. Because of fundamental differences the systems are in no sense similar but exchanges would provide a method for our profession to increase its knowledge of their system. At the same time there may be some value in having the Russians who come to our country judge for themselves the comparative merits of the two systems. In any event the exchanges would provide a means to dramatize more effectively to the rest of the world the contrast between a free system of government and a regimented system under Communist control.

Turning now to the second area, I believe we have a responsibility to work for the establishment of systems of law and justice to deal with international disputes.

In his state of the Union message this year, President Eisenhower said:

"It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations."

The attainment of this high goal will not be achieved by any single stroke or by any single government. In fact, because the Soviet Union seems intent on world domination which is the antithesis of the rule of law, the concept is apt to seem illusory and of no practical importance in today's world.

The point to bear in mind is that there is no other way to travel which provides hope for peace. Despite the discouragements which may arise the United States must take the lead in an effort to make progress along this road. Certainly, in the foreseeable future, if it is necessary to live in a world in which the settlement of international disputes will depend principally on factors of terror rather than on justice, then we should make it clear that such an uncivilized stalemate is not of our choosing.

Following the state of the Union message, and as part of the intensification of effort referred to by the President, both Secretary of State Dulles and Secretary of State Herter supported a proposal in the Senate of the United States to strengthen the International Court of Justice by repealing the so-called Connally amendment.

This Court, as you know, was created by the United Nations in 1945 to decide legal disputes between nations. It sits at The Hague and is composed of 15 judges elected by the General Assembly and the Security Council of the United Nations.

When established, the Court appeared to hold great promise, but through no fault of its own it has played a minor role in the settlement of international legal disputes. In its 13 years of existence it has decided only 17 contentious cases.

The Court has suffered because some nations have refused to accept the Court's jurisdiction at all and as to many disputes it has no jurisdiction unless the nations agree that it has in the particular case. The blame—some might prefer to use the word responsibility—for this latter condition rests in some degree, at least, on the United States.

The United States accepted the jurisdiction of the International Court in 1946. The history of our declaration of acceptance is significant.

The resolution introduced in the Senate with bipartisan support contained a reservation excluding from the Court's jurisdiction "disputes with regard to matters which are essentially within the domestic jurisdiction of the United States."

Public hearings were conducted on the resolution in this form, and it was unanimously endorsed by the Senate Committee on Foreign Relations. Its report stated:

"The question of what is properly a matter of international law is, in case of dispute, appropriate for decision by the Court itself, since, if it were left to the decision of each individual state, it would be possible to withhold any case from adjudication on the plea that it is a matter of domestic jurisdiction."

Nevertheless, on the floor of the Senate the Connally amendment was adopted adding to our reservation the clause "as determined by the United States of America."

Thus, in the declaration of acceptance by the United States our reservation is that the Court shall not have jurisdiction of "disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America as determined by the United States of America."

We were the first Nation to provide that the jurisdiction of the Court should be determined not by the Court but by us. Following our example seven other nations made similar reservations.

Furthermore, the rule of reciprocity applies so that any nation may invoke the terms of the reservations of any nation with which it is involved in a dispute.

It is plain to see why the existence of this type of reservation has had an impact on the effectiveness of the Court. Imagine the impairment which would result to the court system in the United States if the defendant in a law suit had the right to determine for himself whether his case was within the court's jurisdiction.

The Court's statute explicitly limits its jurisdiction to international legal disputes. By the plain terms of the grant, it has no jurisdiction over domestic matters. So the "as determined by the United States of America" clause adds up, in the eyes of other nations at least, to a vote of no confidence that the Court will limit the cases it hears to those within its jurisdiction.

There are those who are concerned that the Court might exceed its jurisdiction. It is argued that our sovereignty might thus be impaired. As a practical matter the argument as to possible loss of sovereignty is not persuasive.

The International Court of Justice, in the final analysis, depends largely on world opinion for the enforcement of its decisions—in fact, for the participation of the nations. It has carefully stayed within the limits of its jurisdiction as provided by its basic statute. There is no reason to believe that the Court would invade areas properly reserved to domestic jurisdiction.

In July of this year, France, surely as sensitive as we are in matters of sovereignty, withdrew her reservation containing the equivalent of the Connally amendment.

Thus, today six NATO nations have not even deemed it necessary to make any express reservation with respect to domestic disputes. Three others—Canada, Great Britain, and now France—have done nothing more than make explicit the exclusion of domestic questions from the Court's jurisdiction. Hence, of the 10 NATO nations which have accepted the Court's jurisdiction, the United States is the only one which denies to the Court the right to determine its own jurisdiction.

For more than 50 years our statesmen have advocated an impartial international court to decide disputes between nations. In 1907, Secretary of State Elihu Root, in his instructions to our delegates at the Second Peace Conference at The Hague, said we should develop a permanent tribunal composed of judges who will devote their entire time to the trial and decision of international causes by judicial methods.

In 1925, President Coolidge, in his inaugural address, advocated the "establishment of a tribunal for the administration of even-handed justice between nation and nation." As he put it, "The weight of our enormous influence must be cast upon the side of a reign, not of force but of law and trial, not by battle but by reason."

Every President since World War I has advocated the submission of international legal disputes to a judicial tribunal.

A half century of debate has resulted in little progress. It must be obvious to everyone that action in this field is long overdue. That is why our profession should urge the Senate of the United States to act at the earliest possible time on this important matter of the jurisdiction of the International Court of Justice.

Finally, let me turn for a moment to the question of international agreements. The nations of the world today are in almost constant discussion and negotiation at the conference table. The purpose of the meetings is to arrive at agreements for the settlement of critical world problems.

From the standpoint of a lawyer, it is discouraging to see how often in important international agreements no provision is made for settling disputes which may arise about the interpretation of the agreement.

And an agreement, as every lawyer knows, may solve a lot of problems or may cause a lot of problems. It depends on how well the agreement is drafted and on the frame of mind of the parties to it.

Lawyers know, too, that it is not possible to draft an agreement to eliminate all possible future differences as to its meaning which might arise.

For that reason, even after exercising all possible care in drafting agreements, we know there must be a court—or at least some method agreed upon by the parties—to resolve disputes which may arise as to the interpretation of agreements.

The same principle, of course, applies to nations. For when two or more nations make an agreement, notwithstanding every effort to make the agreement as clear as possible, they know that disputes about the interpretation of it may arise. If no provision is made for disposition of these disputes, each nation will naturally insist on interpreting the agreement for itself. Thus, rather than resolving differences, the agreement may give rise to new tensions and recriminations.

Last April the Vice President in a significant address urged that the United States take the initiative in future agreements to secure the inclusion of provisions to the effect "(1) that disputes which may arise as to the interpretation of the agreement should be submitted to the International Court of Justice at The Hague; and (2) that the nations signing the agreement should be bound by the decision of the Court in such cases."

Certainly this basic idea deserves our support. A well-understood policy among nations to refer disputes with respect to the interpretation of treaties and other international agreements to the International Court of Justice, or some other impartial tribunal, would be a great step forward on the road to a rule of law among nations.

Knowing that an impartial tribunal would resolve any dispute as to meaning would strengthen the force of the agreement and cause less controversy about it.

The fact that we may not be successful in securing agreement to such a clause in all cases does not mean that we should fail to try. The fact that the Soviets, for example, might not agree to such a policy is no ground for not advocating it. The more often the Soviets oppose reasonable methods to solve world tensions, the more the nations of the world will come to recognize the significance of the Soviet policy of world domination.

For the reasons I have indicated, I hope that the American Bar Association will continue to give its vigorous support to the rule of law in the resolution of international disputes.

No one need point out that because of the present Soviet policy this seems less like a goal than a mirage. Nevertheless, we must believe in it and we must believe it is possible to attain. More than that, we must make some progress along this road.

Our Nation has no goal of world conquest, no intention of infringing the liberties of any people, and no desire other than to deal justly with the other nations of the earth. But there are persons in the world who are skeptical about this. Thus I believe that the members of our profession should make clear beyond any doubt that the United States has but this single goal—that the family of nations may live together in peace under law.

Tendency To Merchandise Candidates Over Television and Radio

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. NEUBERGER. Mr. President, a good many thoughtful people fear that Madison Avenue, combined with television, may someday reduce the selection of political candidates not to merit and intelligence, but to superficial appearance and similar ephemeral qualities.

A very perceptive column has been written on this unfortunate trend by Mr. J. W. Forrester, editor of the Pendleton (Oreg.) East Oregonian, on his editorial page for August 21, 1959. Mr. Forrester not only voices some suggestions to prospective candidates, but he cites the fact that aspirants for some of the highest offices in the land already have been merchandized like shirts or gloves rather than as people who would lead the greatest democracy on earth.

I ask unanimous consent that this column from the Pendleton East Oregonian be printed in the Appendix of the RECORD, perhaps as a warning to us and to the American public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OF CABBAGES AND KINGS

(By J. W. Forrester)

"The time has come," the Walrus said, "to talk of many things: Of shoes—and ships—and sealing wax—of cabbages—and kings."

Another election year is just around the corner (enjoy this "breather" to the fullest) and with it comes resumption of the debate that swirls around the place Madison Avenue and television have preempted in campaigning.

Some are convinced the day is not far off when the clever men of Madison Avenue will "sell" a completely unqualified candidate by putting the right words in his mouth and restricting his campaigning solely to television. They will make him sound wise and by freezing him within the confines of television nobody will be able—because they won't we permitted to question him—to find out that he actually is foolish, uninformed and misinformed on all the issues that count.

This is a chilling prospect. We want to think that it can't happen. We want to think that energetic reporters will always be around to give the voters an accurate picture of all candidates.

But, let us not be deluded about the magic of television in politics. The candidate who uses it well can make a lot of hay with the voters. President Eisenhower set an example for candidates who want to use TV and we may be sure the lessons were not lost on them. Robert Montgomery was employed by the Republican Party to teach Mr. Eisenhower how to use TV properly and under Mr. Montgomery's tutelage and the President has shown constant improvement. He has become increasingly effective. If you will recall Mr. Eisenhower's first appearances on TV in 1952 you know that Mr. Montgomery started with a very raw recruit.

We got on this subject after reading a special issue of the County Officer magazine, devoted entirely to county public relations. Several phases of the subject are discussed. An entire section covers campaigning on TV. Because you are going to see and hear many candidates on TV next year we thing you'll be interested in one part of this section on campaigning on TV, as prepared by the National Association of Broadcasters. It deals with your television appearance and says this:

"Personal appearance is of vital importance to the success of your television talk. Your clothing and mannerisms must be pleasing to the eye but not distracting.

"In dressing for television, don't wear sharp contrasts. The male speaker should never wear a white shirt or a white pocket handkerchief, as white "washes out" on the TV screen. Pick a light blue or gray shirt. Avoid large-figured ties; these tend to distract the viewer. If you are bothered with dandruff, don't wear a dark blue or black suit as the camera will pick up the telltale flakes on your shoulders.

"The woman speaker likewise must avoid white dresses or blouses. Don't wear dresses with a large print and take care in selecting your jewelry. Too much glimmering jewelry will reflect the studio lights. You may feel like the breath of spring with a lovely corsage on your dress, but if the flowers are white your viewer will see only a blur on your shoulder.

"Most men do not require makeup for television. However, if your skin is exceptionally oily you may need to use a little powder. Pancake makeup may be required if you have dark shadows around your eyes or a heavy beard line. Consult with the station makeup personnel on this point. And don't forget that bald head. It's apt to shine under the lights, so soften it with a little powder.

"It isn't necessary for a woman to be made up by the studio professionals. You may use your own cosmetics, but avoid heavy makeup, lipstick, etc. Prepare your face as you would normally—the camera has X-ray eyes and heavy makeup looks unnatural.

"If you wear glasses, don't try to go without them during your television appearance. Your eyes are accustomed to the glasses and will react unnaturally without them. The station lighting crew will arrange the lights to avoid a glare from your specs.

"Posture is extremely important to your TV appearance. Generally you will be seated during your talk. Sit on the edge of your chair if possible (this will remove the temptation to slump), throw your shoulders back and keep your head high and chin out. When you drop your chin your hairline is accentuated and this usually is not an attractive feature. If you are seated at a table, rest your arms on the table, but don't rest your weight on your arms. This will throw your shoulders out of line.

"When standing, maintain a relaxed stance but don't look as though you are falling apart. Stand with your feet apart, your shoulders back and your head high. Move slowly, but naturally. You may even want to sit on the edge of the table at times—

this gives you a natural, relaxed air, but keep your back straight, don't slump.

"Keep in mind throughout your talk that no matter how far away the camera may be, it is still possible to take a closeup of your face. You will have no way of knowing when a closeup is being taken, so act accordingly at all times.

"Above all else—relax, be natural, be friendly."

Fiscal Irresponsibility

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. CURTIS of Missouri. Mr. Speaker, here are three more editorial comments on the fiscal irresponsibility this Congress is exhibiting in failing to grant the necessary flexibility to the Treasury Department in managing the Federal debt by removing the interest ceiling on long-term Federal bonds.

These editorials are from the St. Louis Post-Dispatch, August 25, 1959; New York Times, August 27, 1959; and New York Herald Tribune, August 27, 1959:

[From the St. Louis Post-Dispatch, Aug. 25, 1959]

INFLATIONARY VOTE

President Eisenhower is reported in dispatches from Washington to be considering a public appeal in behalf of legislation to enable the Treasury to stimulate the Government bond market by raising interest rates above the 4.25 percent ceiling on long-term securities. Needed though the legislation is, such a move seems foredoomed to failure in view of the 14-11 party-line vote by which the House Ways and Means Committee turned it down.

Although we often disagree with Representative RICHARD M. SIMPSON, of Pennsylvania, the top Republican on the committee, in this case he is right in describing the committee action as "incredible folly." As he observes, the Government will be forced to borrow in the short-term money market in competition with State and local governments, business, and consumers. This is likely to force upward the cost of short-term money and to inflate the supply of credit.

The surprise action of the committee is difficult to understand, since it was a reversal of an August 12 decision to approve the measure. As part of that decision the committee included a directive which said, in part: "It is the sense of Congress that the Government shall take into account—the importance of achieving the maximum sustainable rate of economic growth, maintaining reasonable stability of the purchasing power of the dollar, and assuring that the cost of managing the public debt is kept to the minimum consistent with these vital objectives."

The 14 Democrats who voted to suspend action for this session on the legislation must know they voted against "economic growth." The Treasury should be enabled to compete with other borrowers in the money market. The discarded compromise bill would have permitted it to do so for 3 years, a reasonable period. The author of the measure, Democratic Representative HARRISON, of Virginia, joined the 10 committee Republicans in voting for the bill. It is too bad he could not have persuaded two additional Democrats to join him.

[From the New York Times, Aug. 27, 1959]

THE INTEREST CEILING ISSUE

President Eisenhower at his news conference Tuesday renewed—and in the most emphatic manner—his request first made to Congress on June 8 that the existing ceilings applying to interest rates on Government bonds be removed or liberalized.

The ceiling on marketable securities is 4¼ percent, and applies to issues with maturities of 5 years or longer. This legislation is in the nature of an anachronistic accident. It has no logical relationship to present conditions in the bond market. It was enacted in 1918 in connection with the second Liberty Loan financing of World War I, and was based on conditions then contemporary but today purely history.

What makes this legislation imperative is that the Treasury must raise vast sums in the months ahead in order (1) to fund a constant procession of maturing obligations, and (2) to raise new money to pay for the appropriations voted by Congress and not covered by taxes. As much as possible of such financing should take the form of securities designed to appeal to savers since, when money is raised through savings, it has no inflationary effects. In practice this means that, broadly speaking, it should be raised through the sale of long-term securities. But with business in a boom phase at present, the demands of borrowers of all categories in the money market are extremely heavy. These demands, competing for a comparatively limited supply of funds, have driven interest rates sharply upward. With the market rate on comparatively long issues above 4¼ percent the Treasury finds itself in a position in which it has no alternative but to raise its funds through the sale of short-term paper, a procedure inflationary in its implications because it involves the creation of bank credit or expansion of the money supply.

The present ceiling on savings bonds, from which the President has also asked relief, is roughly 3¼ percent, a rate that makes it impossible for the Government to compete actively with other available outlets for savings. This is not ohly a grave injustice to the 40 million patriotic holders of savings bonds in the Nation, but it is a potential threat of the most serious kind to the whole Government savings bond program, itself a major bulwark against monetary inflation.

Savings bonds outstanding total $50.5 billion. That figure exceeds by $2 billion the total of all publicly held marketable issues of the United States Treasury with maturities of 5 years or longer. Every dollar that is withdrawn by a savings bond holder is a dollar that the Treasury will have to replace, and that, so long as present interest limitations remain in effect, it will have to replace by raising the money through methods highly inflationary.

[From the New York Herald Tribune, August 27, 1959]

PLAYING POLITICS WITH THE PUBLIC DEBT

The question of lifting the 4¼ percent ceiling on interest rates for marketable Treasury bonds, according to SAM RAYBURN, is a dead issue in this session of Congress. But he did leave the door open yesterday for a possible boost in the ceiling on series E and H savings bonds from the present 3¼ percent to 3¾ percent.

The Democrats have hoped to use the bond issue to tag the Republicans a "high interest rate" party. But it would be politically ticklish to oppose a clearly merited rise in interest rates on savings bonds, which are held by 40 million Americans, most of them voters.

The 3¼ percent rate now makes these bonds a poor buy; for the past 12 months, in fact, sales have lagged behind redemptions. In July $350 million were sold, $507 million redeemed. Not only is the Treasury over a barrel but the small investor isn't getting a fair shake.

Action to provide an equitable rate on these bonds is needed, but action to free rates on regular Treasury bonds is equally urgent. Bonds already issued are selling in the open market at prices yielding more than 4¼ percent, so that new long-term issues (the only ones to which the ceiling applies) can't be sold. Sound management of the Nation's $290 billion debt is one of the pillars of fiscal stability and is impossible without long-term borrowing. Within the next 12 months the Treasury will have to borrow $85 billion to cover maturing securities, redemptions and seasonal cash needs. Unless Congress acts, this will have to be done without access to long-term funds. Speaker RAYBURN knows this. Senator JOHNSON knows it. It's up to them to put politics aside, and act promptly to free the Treasury from artificial and fiscally dangerous restrictions.

Eisenhower's Trip to Europe: A Triumph

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. WILEY. Mr. President, in a world torn by conflicts, it is always refreshing when events occur to illustrate understanding and good will between people and nations.

Currently, the mission of President Eisenhower to Europe for talks with the heads of the West German, British, and French Governments represent one of those heartwarming events.

Daily, our newspapers are carrying accounts of the accolades showered upon our President first by the citizens of West Germany, then in Great Britain, and we would hope, also, in the upcoming visit to France.

Rarely in history has the head of any nation been so beloved, not only by his own countrymen, but by people around the globe. Our Nation can, indeed, be proud that we have as Chief Executive a man so highly esteemed in the eyes of the world.

From all accounts, the trip may well result in a significant revitalization of the bonds of friendships for the American people, as expressed in the friendly greetings and receptions now being extended to him.

Perhaps this kind of communion between human beings may be successful in accomplishing far more in resolving differences and misunderstandings between nations than more formal conferences of heads of states.

Overall, the art of friendly diplomacy—for which President Eisenhower has a unique talent—will, I am confident, contribute much the world peace—to a lessening of conflict—to an era in which people around the globe can share proportionately of the benefits of the inventive genius of mankind and of the natural resources of the earth—dedi-

cated, not to destructive goals, but to benefiting mankind.

At this time, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials: "Ike's Triumph," from the Milwaukee Sentinel, and "Eisenhower: Symbol of Peace," from the New York Times, reflecting the wonderful way in which the President has been received on his mission of peace.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Sentinel, Aug. 29, 1959]

AS WE SEE IT: IKE'S TRIUMPH

President Eisenhower has completed the German segment of his mission to Europe in a triumph of unity and purpose. He has begun the British segment in a spirit of warmth and friendliness.

The overwhelming welcomes he received from the West Germans and the English was matched by the accord he has been reaching with their leaders.

To Chancellor Adenauer he proclaimed American determination to bring to an end the tragic division of Germany and until such time to protect the freedom of West Berlin.

These are not new or startling affirmations, put they needed to be said. In this connection, it is our opinion that Premier Khrushchev did the West a favor by sending a note to Bonn, timed to coincide with the President's arrival.

He did not say anything new, either, and as usual the fist was clenched behind the smile. But by warning that Soviet power could crush West Germany and all its allies, including us, Khrushchev called attention to these truths:

That in this cold-war world neutrality is a deadly illusion (as Nehru of India is painfully finding out); and that weaknesses and festering differences among the allies abet the Communist design of conquest.

"Germans trust Eisenhower"—thus read signs that greeted the President.

Let us hope our other allies will be equally convinced they may trust him not to appease communism in his talks with Khrushchev, never to surrender principle to expediency, never to compromise his belief that unity of the western alliance is really the hope for salvation of the world.

[From the New York Times, Aug. 30, 1959]

EISENHOWER: SYMBOL OF PEACE

As the 20th anniversary of the outbreak of the Second World War rolls around this week another American President is being hailed in Europe as the symbol of peace and freedom in a manner comparable only with the great ovations accorded President Wilson more than 40 years ago. Like President Wilson, President Eisenhower is trying to cope with the problems resulting from a world catacylsm. His task is even more formidable because the issues go deeper, the stakes are higher and the menace to peace is greater and in the atomic age more terrifying.

But President Eisenhower can draw on the lessons of history to back him up in his enterprise and in the solutions he proposes. Europe blundered into the First World War mainly because of the rivalries of the European nation-states and the failure of European diplomacy to exert itself. Because of the same rivalries, President Wilson not only failed to realize his ideals but also consented to the Versailles Treaty, which Western statesmen today frankly indict as a mandate of unhappy consequences. It bred economic disorder. It gave unexpected aid to the rise of Hitler who, in conspiracy with Stalin and aided by Western appeasement, plunged the world into a new war that enslaved even the nations Versailles had liberated.

It is in the light of this history that President Eisenhower's exertions must be viewed. He is throwing the powers of the American Presidency and his own authority and prestige into the scales in a supreme effort, first to rally the West against further Soviet aggression, and second to ease the cold war by persuading the Soviets to agree to a peace settlement on terms the West can accept.

For the same purpose he seeks to abate the remaining national rivalries in Europe by supporting, as he again emphasized in Bonn, the closer union of Western Europe. This has already led to the miracle of the French-German reconciliation and is also both the key to a solution of the principal outstanding problem, the reunification of Germany, and a herald of a future United States of Europe, in which rests the best hope for the peaceful liberation of the enslaved nations.

In short, he is working for a peace settlement that will rest not on a mandate but on the agreements of all concerned. And in keeping with both American ideals and enlightened self-interest, he is the most ardent exponent of the policy initiated under his predecessor which, instead of squeezing the vanquished to the ruin of all, extended massive aid to victors and vanquished alike and is still extending it to those in need of it to make this a better world for all.

These are the aims, purposes and policies he is presenting to Europe. In comparison with them all tactical or even selfishly national considerations become secondary. He has found full understanding for his endeavor in Bonn, seems to be finding like understanding in London, and should find it in Paris as well.

On Right Track

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Journal American of August 21, 1959:

ON RIGHT TRACK

We congratulate Governor Rockefeller on the excellence of the three-man harness racing commission he has just named to supplant the former one-man czaristic rule.

This is the goal for which this newspaper campaigned vigorously for months until Governor Rockefeller called the legislature into special session to enact much-needed reforms.

The best-known member of the new commission is of course James A. Farley in whom the public has great confidence—and justifiably so. The chairmanship goes to Buffalo Sheriff Robert A. Glasser, a law enforcement officer of proven worth and experience. The third member is Public Service Commissioner Spencer B. Eddy, one of the best-informed men on racing in the country.

We hope the first act of the commission will be to see what unexpected moneys can be recovered from the old harness racing construction fund by which the State was obligated to use taxpayer dollars to refurbish the tracks. These funds, which run into the millions, could better be used for education, hospitals, cancer research, etc.

Bottleneck on Judgeships

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, August 31, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two more recent items concerning the backlog of judicial nominations in the Senate Judiciary Committee. They are an editorial, "Congress and the Judges," from the New York Times of Sunday, August 30, 1959, and a column by Peter Edson entitled "Bottleneck on Judgeships," which appeared in the Washington Daily News on Tuesday, August 25, 1959.

There being no objection, the editorial and column were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 30, 1959]

CONGRESS AND THE JUDGES

The failure of Congress to meet the urgent need for more Federal judges has become a national disgrace—one that works a grave denial of justice to the American people through delays in undermanned and overburdened courts. Congress has failed in two ways: by not creating new judgeships and by Senate slow motion in approving Presidential appointments to fill existing vacancies.

Long ago the Judicial Conference, made up of the Chief Justice of the Supreme Court and the chief judges of the circuit courts of appeals, recommended the creation of more than 40 new seats on the Federal bench in areas where calendars are the most congested. Each year for the past 3 years a bill to do this has been introduced in Congress which each year has gotten nowhere.

In the Judiciary Committee of the Senate, of which JAMES O. EASTLAND, Democrat, of Mississippi, is chairman, there lie buried by inaction more than 20 judicial nominations, one for as long as 7 months, while incumbent judges on the depleted benches struggle in vain to keep up with their calendars and litigants wait for years before they can be heard. Politics and personal pique have produced most of the gum in the legislature's gears—maneuvering for partisan advantage and resentment over favorite candidates ignored.

Facing up to the need for new judges, Attorney General Rogers has cited a sound principle and at the same time has proposed its violation—but, we must say, in a very good cause. He said that President Eisenhower has always thought "you shouldn't approach appointments to the Federal bench in a partisan way." Then Mr. Rogers pledged, with the President's approval, that if Congress creates additional judgeships the administration will fill half of them with Democrats.

Well, if party politics can't be divorced from judicial appointments in this imperfect world, it is obviously best to strike an even political balance—especially if it will spur Congress to action on the new judgeships measure. And action is what is needed now, both there and on the judicial appointments in the Senate.

[From the Washington (D.C.) Daily News, Aug. 25, 1959]

BOTTLENECK ON JUDGESHIPS

(By Peter Edson)

Plain old politics of the low down variety is held responsible for holding up confirma-

tion of 20 of President Eisenhower's nominations for Federal judges this year. Eighteen of the 20 nominees are Republicans.

The bottleneck is the Senate Judiciary Committee under Chairman JAMES O. EASTLAND, Democrat, of Mississippi. But Republicans charge that this course of inaction has the approval of Democratic Majority Leader LYNDON JOHNSON, of Texas.

This is SPOP—standard political operations procedure. Democrats hold up confirmation of Republican nominees in the hope they can block them completely or force deals to get a few more Democrats on the bench. If this delay can be extended to 1961, when the Democrats hope to have a President of their own party in the White House, then all Republican nominations can be dumped in the ashcan and Democratic substitutions made.

The Republicans played this same game in 1948, when they thought Gov. Thomas E. Dewey was a shoo-in for the White House. The GOP lost on that bet, but it now gives the Democrats a precedent to follow.

The monkey wrenches this throws in the Federal legal machinery, however, slows down the wheels of justice appreciably. When there are vacancies in any court, its docket becomes jammed with untried cases.

What these delays do to the nominees is even worse. A lawyer can't get new legal business if he is being considered for a judgeship. And when an appointment is held up for months by the Senate, it becomes a personal matter which damages the nominee's standing.

John C. Tucker of Beamont, Tex., recently asked President Eisenhower to withdraw his nomination as judge for the eastern district of Texas because of delay in confirmation. This was a case where Senator JOHNSON, who was opposing Judge Tucker, won out.

Thirteen of President Eisenhower's nominations for the Federal bench have been pending 4 to 7 months.

Two were sent up last January. They are George L. Hart, Jr., of Washington, for the District of Columbia and Walter A. Gordon of California for the Virgin Islands.

Five more nominations were sent up in February. One that really hurts is the nomination of District Judge Phillip Forman of New Jersey to the Third Circuit Court of Appeals.

Others are Bailey Aldrich of Massachusetts to the first circuit, Anthony Julian to Massachusetts, Leonard P. Walsh to District of Columbia, Myron D. Crocker and Fred Kunzel, both of the southern district of California bench.

Three more nominations that went up in March and are still hanging fire are Harold K. Wood to eastern district of Pennsylvania, Lloyd F. MacMahon to southern district of New York, and Judge Henry J. Friendly of New York to second circuit. This last nomination may be cleared soon.

In April, two more nominations were sent up, while in July and August, the list was seven.

In the cases of some five other vacancies on the Federal bench, it is expected that recess appointments will be made after Congress adjourns.

Hon. J. Bayard Clark

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. KITCHIN. Mr. Speaker, I desire to join my colleagues in paying tribute to an outstanding North Carolinian and a truly great American who has passed to his reward. While it was not my privilege to serve in this body with the Honorable J. Bayard Clark, I know of his long and able public service and have been intimately acquainted with the Clark family through long friendship with his distinguished brother, Jim Clark, of my hometown. Mr. Clark sprang from an illustrious family, and throughout his life demonstrated a keen interest in the affairs of his State and Nation. The works he did in life remain as an imposing monument to his memory.

My heartfelt sympathy goes out to his beloved wife, daughters and sons.

"All or Nothing": Editorial on the Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. SPARKMAN. Mr. President, a few days ago there appeared an editorial entitled "All or Nothing." It has to do with the housing bill that recently passed both Houses of Congress by an overwhelming majority and is now before the President awaiting his action on it.

I think it is a very fine editorial. It presents the problem in a very clear, understandable way. I commend its most careful reading to the Members of the Senate.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL OR NOTHING

It seems plain that if there is going to be any housing legislation in this session of Congress, including new FHA loan authority, the President is going to have to accept the pared-down bill now emerging from Congress. The House decision not to strip the bill of its college classroom loan features, and the refusal to separate the FHA provision as requested by Mr. Eisenhower, indicate that legislators are undeterred by the threat of another veto. It is scarcely conceivable that Congress would make a third attempt to pass a bill if a second failed to obtain Presidential consent.

The choice before the President thus may be an unlovely one from his standpoint, but it is a political reality. Administration representatives and Republican legislators cannot be blamed for seeking to follow Mr. Eisenhower's wishes, but they would be very unwise to advise him again to thwart the majority view. In point of fact, even though substantial parts of his program remain to be finally enacted, Mr. Eisenhower has fared very well with the Democratic Congress through cooperation of the leadership. His budgetary dilemma is a real one, complicated by the administration's reluctance to face the need for a general tax increase; but already Congress has been intimidated too much, we think, in its consideration of national needs by scare talk about spenders.

Neither the President nor Congress can afford to take an all-or-nothing position. Congress is going a considerable part of the way to meet the President on one of his three "must" items with the gasoline tax increase to finance highways. Mr. Eisenhower ought in turn to be willing to compromise on housing. For its part Congress could make the compromise easier by overcoming its pique about administration monetary policy and raising the interest rate on long-term Treasury bonds—something most legislators must recognize is necessary.

Laos and the Big Lie

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks I include an editorial, "Laos and the Big Lie," appearing in the August 24, 1959 issue of the Washington Star. The editorial well states:

At a time when Premier Khrushchev is preparing to visit the United States for the avowed purpose of trying to effect a thaw in the cold war, it seems more than a little strange—to put it mildly—that the Soviet and foreign ministry has gone out of its way to to give full support to Peiping's lie about American operations in Laos.

It is very evident that the attack on Laos is not desultory action, but is an organized military action.

It would be interesting to know, first, how many Soviet and Red Chinese airmen who have been integrated into the North Vietnam Air Force.

Second. How many Chinese Red Army and naval officers and men have been integrated.

Third. The number of planes that have been sent from the Soviet Union.

Fourth. How many jungle tanks.

If our intelligence has no knowledge, they should look into the actions and contributions of Red China and the Soviet Union in this respect and other respects at once.

The editorial follows:

LAOS AND THE BIG LIE

At a time when Premier Khrushchev is preparing to visit the United States for the avowed purpose of trying to effect a thaw in the cold war, it seems more than a little strange—to put it mildly—that the Soviet Foreign Ministry has gone out of its way to give full support to Peiping's big lie about American operations in Laos.

The lie accuses our Government of numerous villainies. These include (1) a conspiracy to stir up civil strife throughout the Buddhist kingdom, (2) the maintenance of military bases there, and (3) imperialistic control of the country's economic and military forces, with a view to undermining the security of Red China. In short, according to Peiping, the United States is using Laos in an aggressive way that menaces the peace of all Asia.

Actually, of course, the truth is that the little kingdom—which is supposed to be free and independent under the 1954 Geneva agreement ending the Indochina war—is in trouble solely because it is gravely infested with Communist rebels armed with modern weapons from neighboring Red China

and Red North Vietnam. These rebels, who may launch an all-out military attack when the rainy season ends in October, have only one objective, which is simply this: To subvert the country and drag its 2 million people behind the Bamboo Curtain for the greater honor and glory of the Mao Tze-tung regime in Peiping.

As for our American position, the fact is that we have no bases of any kind in Laos. More than that, our military aid to the country involves merely light equipment, and only about 80 of our officers—in keeping with agreements altogether justified in terms of international law—serve there as advisers to the government. Accordingly, as our State Department has emphasized, Peiping's accusations against us amount to total falsehoods deliberately contrived to keep the pot boiling in southeast Asia.

Yet, even though it undoubtedly is well aware of all this, the Kremlin has chosen to echo the substance of Red China's lie. Americans must therefore be pardoned if they wonder about what goes on in Mr. Khrushchev's mind as he supports such mendacity in one breath and speaks glowingly, in the next, about how anxious he is to promote friendship and trust between his country and ours.

Business and Community Leaders, Such As Moe Lerner, Symbolize Our American System

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. RANDOLPH. Mr. President, there has been much comment in the press concerning the forthcoming visit of Premier Khrushchev as to what we should show him and who he should meet.

It is generally agreed that he should see significant examples of our American way of life—our industries, our small businesses such as the corner drugstore, our homes on different economic levels and other illustrations of our concept which stresses the importance and dignity of the individual.

He should also have an opportunity to meet some of the people who symbolize the fact that it is not as important into what circumstances a man is born as where and how he goes from there.

Here in our beloved land there is almost unlimited opportunities for advancement. There are hundreds of thousands of men and women who have risen from humble and modest beginnings to positions of trust and leadership.

One of these active personalities is Moe Lerner. It has been my privilege to know this dynamic business executive and contributor to community progress for many, many years.

It has been a source of personal satisfaction to cooperate with Mr. Lerner in the Lafayette Square USO Club, Washington, D.C. He is now the chairman of its operating committee.

I wish that the schedule of the top Soviet spokesman would bring him into contact with the "Moe Lerners", who are so typically representative of our country.

I ask unanimous consent to have the article, "Mighty Moe: Man on the Go," by Gusti Buttinelli from the Washington Daily News for August 28, 1959, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIGHTY MOE: MAN ON THE GO

(By Gusti Buttinelli, owner, Gusti's restaurants)

Those sleek, long limousines which haul you from the airport to your door, or vice versa, offer a whale of a bargain to those on the fly.

For a buck and a quarter or so, the tab depending upon where you live, the Airport Transport buggies hoist you home from the plane station 24 hours a day in rain or shine.

The outfit's smooth sailing isn't accidental. It is the result of hard work and know-how by Moe Lerner, the energetic guy who owns and operates the business.

Moe has a fleet of 300 vehicles going for him. These cover 7 million miles a year averaging 1,400 trips and 5,000 passengers daily.

The 300 drivers with the company feel their boss is a right Joe. He has set them up with insurance plans, vacations, Christmas remembrances, and many other pluses in their jobs.

Moe's interest in his men stems from the fact that he, too, came up the hard way. His story is the kind that Ike could tell Khrushchev—that of an American kid without a silver spoon in his mouth who made something of himself.

Here was a youngster who began earning his living at 10 selling newspapers in the subways of New York. His father died when he was 14, causing him to become the sole support of his family.

Moe kept himself in top physical shape at a New York Boys' Club. He won the group's bantamweight boxing championship and went as far as the finals in a tryout for the Olympic boxing team.

This recognition got him a job at Finchley's, a fancy men's shop on Fifth Avenue, where he served such people as the Prince of Wales, Jimmy Walker, and Woodrow Wilson.

Later a hobby and a natural skill working with metals led to a silversmith's position with a famous silver company. At 18 he took over the operation of a bankrupt garage in the tough waterfront area. Manager Lerner put in his licks 14 hours a day, 7 days a week and converted the enterprise into a profitable one for which he was given a half interest in the firm. During this period, he learned the ins and outs of truck and car maintenance—a knowledge which stood him in good stead for the future.

Moe eventually built the garage into a succesful trucking, warehouse, and distribution business. He disposed of his New York holdings when he took over Airport Transport in 1946.

If you measure Moe by his legion of friends, you would run out of rulers. The great respect in which he is held here was indicated by the large turnout at a recent testimonial tossed in his honor.

The major factor in Moe's happy life is his sweet frau, Sis, who was his childhood sweetheart. They have two sons, Robert, 19; Joseph, 3; and a daughter, Phyllis, 9. Moe is a charitable and religious man whose creed is best expressed by his actions in helping others.

Whatever he's doing, whether shooting par golf or hustling on the job, you can be sure that mighty Moe is a man on the go.

Maj. Gen. William P. Fisher

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. KITCHIN. Mr. Speaker, this seems to be the year for many changes in key command and staff officers in the armed services. Recently we were informed that Major General Michaelis was leaving his assignment as Chief of Legislative Liaison for the Army. Now, I have been told that Maj. Gen. William P. "Bill" Fisher, Director of Legislative Liaison for the Department of the Air Force has been assigned as Commander, Eastern Transport Air Force, Military Air Transport Service at McGuire Air Force Base, N.J. He will be leaving here about the 10th of September. He is a personal friend and one of my most distinguished constituents.

General Fisher has been the Director since March of last year and has done an outstanding job in handling the very difficult task of providing Congress with prompt and accurate answers to its many inquiries. He has rendered invaluable assistance to the Members of Congress and their constituents in efficiently and effectively helping to solve their innumerable difficult problems.

General Fisher has a long history as an enthusiastic pilot and as a highly respected commander. His impressive combat record is filled with repeated praise of his ability as an outstanding leader and his easy, sensible way of doing things. These attributes were recognized early in his career when he was given command of the 20th Bomb Squadron at Clark Field prior to Pearl Harbor. Wounded during the bombing there, he lead his squadron from Bataan to Mindanao where he became an infantry commander when his unit joined the ground fighting against the Japanese until we were forced to leave the Philippines.

After a short tour in the United States, he went to the China Theater in command of a B–24 Group. This was the beginning of a long series of assignments in strategic bomber operations, including duty with the Strategic Air Command. His duties included those of wing, base, and air division commander, Inspector General of the Strategic Air Command, and Deputy Commander of 8th Air Force.

He served for a year on the faculty of the Air War College and headed the Far East Air Forces Bomber Command during the Korean war. As a command pilot and command observer, General

Fisher has logged more than 6,600 hours in jet and conventional aircraft and flew 59 combat missions during World War II and Korea.

General Fisher's decorations include the Distinguished Service Medal, Legion of Merit with three Oak Leaf Clusters, Distinguished Flying Cross with one Oak Leaf Cluster, Air Medal, Purple Heart, and Presidential Unit Citation with four Oak Leaf Clusters.

I regret that he is leaving Washington, but know that he is looking forward to commanding another flying organization in one of the combat arms of the Air Force. I am certain that many of us will see more of General Fisher as this outstanding officer assumes positions of increasing importance as the continues his successful Air Force career.

Safeguarding Our Scenic Shorelines

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. DOUGLAS. Mr. President, the distinguished junior Senator from Oregon [Mr. NEUBERGER] has been a leader in the field of conservation of natural resources ever since he entered the Senate in 1955.

True to his tradition, he is now a vigorous and effective sponsor of bills for national shoreline parks in such scenic areas deserving of preservation as Indiana Dunes on Lake Michigan, Oregon Dunes in his own State along the Pacific Ocean, and Padre Island beside the gulf coast.

In the New York Sunday Times for August 30, 1959, Senator NEUBERGER has written an excellent and comprehensive article entitled "Plan for Shoreline Parks," which summarizes the efforts of many of us in the Senate to preserve these lovely shorelines and seacoasts before it is too late. I commend the New York Times for publishing this splendid article. I commend the Senator from Oregon [Mr. NEUBERGER] for writing it.

The Senator from Oregon emphasizes what many of the rest of us know to be true: That this is a nationwide movement to protect our scenic shorelines, because Americans know that each has a heritage in the relatively few outdoor areas beside our oceans and lakes which still are susceptible of being established as national parks, monuments, or seashores.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 30, 1959]

PLAN FOR SHORELINE PARKS—U.S. SENATE BILLS WOULD SET ASIDE RECREATIONAL AREAS ON SEACOAST AND IN THE GREAT LAKES REGION

(By RICHARD L. NEUBERGER)

Nearly all the great national parks of the United States are in mountain ranges—Grand Canyon, Yosemite, Crater Lake, Rainier, Shenandoah, Yellowstone, Zion, and most of the rest. In the process of setting aside these magnificient upland reserves, the Nation has neglected another realm which is equally alluring to the tourist and the seeker of outdoor recreation. This realm consists of the seacoasts and shorelines of the United States, which are among the most beautiful on earth. Indeed, the first settlers in America found pleasure and inspiration where white-maned breakers spent their strength on sandy ocean strands.

Today, a belated effort is underway in the U.S. Senate to add headlands and beaches to the gorges and alpine peaks which already are part of the national park system. This effort is expressed in an omnibus bill that would create some 10 waterside parks on four picturesque shorelines. The shores are those of the Atlantic, Gulf, Great Lakes, and the Pacific. No major coast has been omitted.

TEN PROPOSED PARKS

Principal authors of the bill are Senator JAMES E. MURRAY, of Montana, chairman of the Senate Interior Committee; Senator CLINTON P. ANDERSON, of New Mexico; Senator PAUL H. DOUGLAS, of Illinois; and the writer of this article. The 10 national shoreline recreational areas proposed for inclusion in the country's park network, with the maximum acreage of each, would be as follows:

Cape Cod, Mass., 30,000 acres.
Padre Island, Tex., 60,000 acres.
Oregon Dunes and Sea-Lion Caves, Oreg., 35,000 acres.
Indiana Dunes, Ind., 5,000 acres.
Point Reyes, Calif., 35,000 acres.
Cumberland Island, Ga., 25,000 acres.
Huron Mountains, Mich., 90,000 acres.
Channel Islands, Calif., 76,000 acres.
Pictured Rocks, Mich., 100,000 acres.
Sleeping Bear Dunes, Mich., 26,000 acres.

The four at the top of the roster—Cape Cod, Padre Island, Oregon Dunes, and Indiana Dunes—have been specifically recommended by the National Park Advisory Board as having qualities worthy of this recognition. It is these four areas around which most of the controversy revolves, because they probably will be reserved first. In fact, along with Senator GORDON ALLOTT, of Colorado, I also am sponsoring a bill at the request of the Eisenhower administration which would authorize three shoreline parks, to be selected administratively by the Secretary of the Interior.

THE OREGON DUNES

The three probably would be chosen from among the leading four in the omnibus bill, and the Interior Department has gone so far as to disclose that Oregon Dunes would have an excellent prospect of being among these.

The omnibus shoreline bill authorizes $50 million for the acquisition of land for the parks. The administration bill is considerably more modest in this respect—$15 million. Furthermore, the omnibus bill specifies 10 additional seashores or Great Lakes shorelines to be studied by the National Park Service "for the purpose of determining what action should be taken by the United States to save and preserve them." They are these:

Fire Island, N.Y., 3,540 acres.
Cape Flattery, Washington State, 16,000 acres.
Leadbetter Point, Washington State, 4,250 acres.
Mosquito Lagoon, Fla., 9,700 acres.
Pigeon Point, Minn., 6,400 acres.
Debidue Island, S.C., 8,400 acres.
Kiawah Island, S.C., 7,300 acres.
Popham-St. John, Maine, 1,100 acres.
Parramoure Island, Va., 6,250 acres.
Smith Island, N.C., 11,900 acres.

Intensive congressional interest in this question dates from several years ago, when the National Park Service published, with funds given by an unidentified private benefactor, a brochure entitled "Our Vanishing Shoreline." It revealed that, while the Nation's conservationists had been guarding the mountains and hills, the seashore was being exploited and gobbled up.

This survey showed, for example, that of the 3,700 miles of shoreline in the Atlanitc and gulf coasts, only 240 miles were in Federal or State ownership for public recreational uses. And it disclosed that time was running out. Where a lovely 30-mile beach could have been purchased for national seashore park purposes in 1935 at a total cost of $260,000, the cost per mile by 1957 would have been $110,000.

Specific National Park Service studies of the Atlantic and gulf coasts, and then of the Pacific coast, soon followed. These studies furnish the basis for the recommendations contained in the omnibus bill now before the Senate Interior Committee. Senator MURRAY already has ordered public hearings to be held on the Oregon Dunes and Sea-Lion Caves Seashore at Reedsport and Eugene, Oreg., during the first week in October. Hearings are expected slightly later at Padre Island, in Texas. A special Interior Subcommittee headed by Senator ERNEST GRUENING, of Alaska, recently toured the Indiana Dunes region and made on-the-spot observations.

"Our organization regards the rescue of America's majestic shorelines as the most compelling outdoor issue of this era," declares Joseph W. Penfold, conservation director of the Izaak Walton League of America. "It is almost too late now. If we delay for many more years, expenditures to purchase the land not only may be prohibitive but steam shovels and bulldozers will have torn away many dunes and beaches, which can never be restored to their former grandeur and solitude. This is a national problem of great and crucial importance."

Practically all the shorelines proposed as national parks have one essential element in common. They offer outstanding recreational opportunities where land and water meet. Otherwise, they are strikingly different in appearance and character. Padre Island and Indiana Dunes are gleaming white beaches which are comparatively flat as a contour.

By contrast, Oregon Dunes are among the highest billows of sand in the world, and timbered mountains loom in the background. The shorelines of the Great Lakes are caressed by fresh water, whereas the Atlantic and Pacific shorelines are rimmed and crusted with salt.

OPPOSING VIEWS

Controversy surrounds some of the national seashore proposals. Although they are 3,000 miles apart in location, both Cape Cod and Oregon Dunes have witnessed protests by cottage owners, who fear they will be displaced, and by taxpayers' groups, who claim that valuable property will be removed from the tax rolls in order to make room for the parks. In addition, at Indiana Dunes, there are claims by Indiana political leaders that the Lake Michigan strands and inlets might more profitably be made the site of a vast steel mill and ore dock.

Interest in the situation is so great that an enterprising newspaper near the Oregon Dunes, the Eugene Register-Guard, assigned a reporter and photographer to study the Cape Hatteras national seashore, on the opposite side of the continent, along the North Carolina coast. This is the only such shoreline reserve thus far established by Congress. It was set aside some 6 years ago. The writer for the Register-Guard, A. Robert Smith, discovered that many of the arguments then voiced locally against the Cape Hatteras Park were almost identical to those opposing Cape Cod, Oregon Dunes, and Indiana Dunes today.

Mr. Smith reported, however, that many original adversaries of the Cape Hatteras seashore had become its enthusiastic backers,

as the years have passed. He also noted that the 100,000 visitors a year who traveled to the area just before the national park was created, burgeoned to 348,000 last year.

A leading banker in the vicinity of the park told Mr. Smith that, while it was true some property had been taken off assessment lists in order to make the park possible, nearby property remaining in private possession had soared in value 50 to 100 times. This more than made up the difference to taxing authorities. "The fishing business is gone," this banker added. "If it hadn't been for the Hatteras Park, I don't know what we would have done."

Senator JAMES E. MURRAY, who has been in the Senate since 1934, has been urging his Interior Committee to hurry in its action on the omnibus national seashore bill. He recently told us that, in the quarter of a century since he entered Congress, costs of acquiring some of this shoreline land actually have gone up as much as 3,000 percent.

"In 1935," Senator MURRAY said, "there was a magnificent 70-mile stretch of ocean beach on the Delaware-Maryland Eastern Shore which could have been acquired for $2 a front foot. Most of this stretch is beyond preservation today. It has already been subdivided and developed." And the cost of the Cape Cod national seashore alone is estimated as approximately $16 million, whereas it might have been purchased a few years ago for less than $9 million.

Dr. Conrad L. Wirth, director of the National Park Service, and his associates hope that some private benefactions may help to ease the pressure on the Treasury in buying the land required to safeguard representative scenic sections of the Atlantic, Gulf of Mexico, Great Lakes, and Pacific coasts. Such a donation occurred in the towering Grand Tetons 30 years ago, when John D. Rockefeller, Jr., and his family bought up the land around Jackson Lake in Wyoming, which eventually became the citadel of one of our most stirring alpine parks.

Between 1916 and 1958, annual visits by tourists to the national parks of the United States soared from 400,000 to 58 million. If this rate of increase should continue, not even the 20 national shoreline parks sought in our omnibus bill will be sufficient to assure Americans of the future the travel opportunities which ought to be theirs.

Pothole Drainage Problem

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. SAYLOR. Mr. Speaker, the most important waterfowl production area remaining in the United States is localized in the prairie pothole sections of Minnesota, North Dakota, and South Dakota. Within some 140 counties in these States, over a million potholes totaling some 4 million acres of wetlands are concentrated. The potholes are water-holding depressions varying in size from fraction acre puddles to shallow lakes covering hundreds of acres. They vary in depth from shallow temporary areas containing a few inches of water in wet weeks of early spring to semipermanent and permanent water areas 6 feet or more in depth which retain water the year round in seasons of normal precipitation. The deeper and more permanent potholes are the less numerous.

In recent years, the tristate area of Minnesota, North Dakota, and South Dakota has produced an average of 4 to 5 million ducks annually or nearly three-fourths of the ducks produced in the United States south of the Canadian border.

Because of its importance from a production standpoint, preservation of the U.S. prairie pothole region as a breeding area for waterfowl has been of major concern to the Fish and Wildlife Service. For over 10 years the Service has been concerned with loss of breeding habitat to farm drainage in this area. Studies conducted by the Service during 1949 and 1950 indicated that during those 2 years more than 32,000 water areas valuable to waterfowl were eliminated annually in this region. Estimates for the 12-year period 1943–54 are that about 350,000 potholes valuable to waterfowl were drained. Additional studies have shown that, while the rate of loss declined somewhat during subsequent years, substantial loss of valuable breeding acreage has continued. During the past year the rate of loss has again increased.

A major factor in sustaining the program of farm drainage in the pothole area has been the subsidy payments and the technical assistance provided by the Federal Government. For at least 8 years the Fish and Wildlife Service has studied this situation in an effort to find alternative uses for wetlands which farmers could adopt and other means of discouraging pothole drainage. To date this effort has not been successful. It appears therefore that as long as Federal subsidies and technical assistance without cost to the farmer are available, drainage of farm wetlands and loss of valuable waterfowl breeding habitat in the prairie pothole sections of Minnesota, North Dakota, and South Dakota will continue.

Faced with the above situation, the Fish and Wildlife Service, several years ago, began thinking in terms of a more positive program to preserve pothole wetlands as waterfowl breeding habitat. Additional field studies were initiated to determine which of the 140 pothole counties in the tristate area contained the most and best remaining habitat for waterfowl production. As a result of these studies, it was determined that there were 90 counties which contained the best remaining waterfowl production habitat. This total of 90 counties includes 22 counties in eastern Minnesota, and 34 counties each in eastern North Dakota and eastern South Dakota.

The enactment of Public Law 85–585 provided amendments to the Migratory Bird Hunting Stamp Act, authorizing the Secretary of the Interior to acquire by lease, purchase or other means, small wetlands and pothole areas to preserve them for waterfowl production. The amendments also provided, through the increase of the duck stamp cost from $2 to $3, additional funds to finance the future acquisition of such areas. The Fish and Wildlife Service, through the field staff of the Bureau of Sport Fisheries and Wildlife, currently is initiating a long-range program to preserve selected pothole wetlands within the 90-county delineated area in Minnesota and the Dakotas by lease and purchase.

This program of small wetland acquisition has not yet progressed to the point where the degree of its success in future years can be appraised. There is no question, however, that continued Federal subsidies and free technical assistance to the landowner for drainage of potholes will make acquisition of pothole wetlands by the Service for waterfowl breeding habitat more difficult and more expensive than would be the case if they were not available.

The overall problem of preserving wetland habitat for waterfowl breeding and for other wildlife is recognized and appreciated by the State fish and game agencies in the prairie pothole States. The Minnesota Conservation Department has acquired about 56,100 acres of land under its wetland preservation program since October 1951, at a cost of about $1,770,000. The South Dakota Department of Game, Fish, and Parks has acquired about 30,100 acres using $754,327 of Federal aid funds, and in the past 20 years has also purchased about 30,000 acres with its regular funds. North Dakota has acquired about 15,000 acres of wetlands at a cost of about $212,000.

This year we all anticipate a drastic reduction in hunting seasons and bag limits for ducks and coots, especially in the Central, Mississippi, and Atlantic Flyways. These cutbacks may reduce the hunting season to 40 days in the Atlatic and Mississippi Flyways, and 50 days in the Central Flyways.

These drastic reductions will be necessary because of reduced waterfowl breeding this year in the prairie pothole region of the continent. The waterfowl reduction has resulted from widespread drought from the destruction of breeding areas by drainage and other factors. While widespread drought produces a sudden spectacular reduction in duck breeding habitat and in duck production, these losses are temporary and the naturally prolific birds can restore their populations to former levels when normal water conditions return to the prairies.

There can be no such recovery by waterfowl populations from extensive drainage programs. Insofar as breeding waterfowl are concerned wholesale pothole drainage is the establishment of permanent drought.

To those who may question this statement, the State of Iowa can serve as an example. In 1900 numerous potholes and sloughs in Iowa produced vast numbers of ducks, including nearly all of our important game ducks. Today the production of waterfowl in Iowa is but a fraction of that of a short half century ago. The difference in this production lies in the almost total con-

version for agricultural uses of the sloughs and potholes which once constituted some of the finest duck breeding habitat on the North American Continent.

There can be no question but that we must move quickly tho preserve these pothole areas. Ducks and other migratory waterfowl need water—and they need it badly.

Wisconsin's Progressive Rehabilitation Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. WILEY. Mr. President, urbanization, population mobility, postwar restlessness, and other social changes have produced in recent years many problems which this country has not previously known. We have a growing crime rate, a juvenile-delinquency problem, and, in some places, unfortunate racial tensions. The newspaper headlines are often alarming, and at times the impression is conveyed that we are unable to effectively cope with the new problems. But what must be realized is that new problems require new remedies, and only creative thinking and action will produce the needed improvements.

It is, therefore, with great interest and satisfaction that I have recently read the reports on Wisconsin's program of crime correction. Wisconsin, as you know, has a very low rate of crimes of violence, and, in fact, many experts describe Wisconsin as having practically no organized crime in comparison with other States. Even so, there are about 8,100 persons under State supervision for crime, at this time. But it is the way these criminals are dealt with that shows the merits of advanced crime-correction programs.

Now we no longer talk about "crime and punishment," for what we are after is rehabilitation rather than punishment. Society is not any more interested in an "eye for an eye"; instead, it wants to concentrate on turning the criminal violator into a productive and law-abiding citizen. It is in this direction that Wisconsin has made tremendous progress.

Of Wisconsin's 8,100 offenders, only about 3,000 are in correctional institutions. About 2,550 are on parole and the other 2,550 are on probation. These violators are put on probation and parole because the authorities believe that is the best way to restore them to a position of good citizenship. We have learned from a long history of prisons and incarceration that long confinement does not stamp out crime—but quite often encourages recidivism. In putting as many of its violators on probation and parole, Wisconsin in fact demonstrates its confidence in the theory that the best way to restore a man to good citizenship is by giving him another chance, under State supervision, naturally, but in free society rather than in a prison.

Of the total violators released on parole in Wisconsin, about 19 percent have their paroles revoked during the first 6 months and about 24 percent during the first 2 years of probation. Some of the revocations are for new offenses, but a great many are merely precautionary as in cases where parolees have been found in bad company or have given indications that they might be getting into trouble. Still, records indicate that at least three-fourths of those paroled are able to make their way for 2 years, and with that headstart there is a good chance they will be able to go all the way.

Wisconsin's high rate of probation and parole produces not only better results in terms of rehabilitation, but has also a good effect on Wisconsin's expenditures on prisons and prison maintenance. The Wisconsin director of the division of correction, Mr. Sanger B. Powers, says that if all 5,100 on parole or probation were to be imprisoned, the State would need three more institutions which would cost about $51 million to build. The State, in addition, would have to provide $9 million a year more to operate these prisons. The State enjoys an additional savings through the fact that those on parole and probation earn as much as $16 million a year, with which they support themselves and their dependents. If they were incarcerated the State would not only have to provide the money to pay for prison maintenance but would also have to support many of the dependents of the prison population, who would undoubtedly be on relief in many instances.

That Wisconsin's progressive program for the correction of crime and the rehabilitation of criminals is a success has been demonstrated over the past few years. I believe that Wisconsin's parole and probation system is one of the things the State can well be proud of. I do hope that similar creative measures are made available and are applied, both in Wisconsin and elsewhere, in order to solve some of our society's other social ills.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published by the Green Bay Gazette on "Crime and Punishment in Wisconsin."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, July 29, 1959]

CRIME AND PUNISHMENT IN WISCONSIN

Wisconsin has a very low rate on crimes of violence. In fact many experts in this field describe Wisconsin as having practically no crime in comparison with other States. Even so, there are about 8,100 persons under State supervision for crimes at this time. Thus when people say Wisconsin has practically no crime they are referring to the flourishing rackets which make a business of criminal activities in some other States. They are referring also to the collaboration of political figures with known criminals which is common in some States but practically unknown in Wisconsin.

In spite of the comparatively favorable record of Wisconsin the State prison at Waupun with a capacity of 1,200 prisoners is now accommodating 1,523. Likewise at the State reformatory at Green Bay 1,040 inmates are being cared for in an institution built for 678. Even so Wisconsin has fewer persons incarcerated as punishment for crime than most any other State would have under the same circumstances. The reason for this is the extensive use of paroles and probation as the means for rehabilitating persons convicted of crime. Of Wisconsin's 8,100 offenders only about 3,000 are in correctional institutions. About 2,550 are on parole and another 2,550 are on probation.

Thus Wisconsin has a double advantage in that it starts with less crime and it uses prison confinement in fewer of its cases than is the practice elsewhere. Sanger B. Powers, director of the State division of correction, points out that Wisconsin has a great financial advantage through its policy of using parole and probation extensively. He says that if all 5,100 of those on parole or probation were to be imprisoned the State would need 3 more institutions costing about $51 million to build. In addition the State would have to provide $9 million a year more to operate them. He says that the capital investment and the operating costs would pay for needlessly holding people in custody since they are now getting along very well under parole and probation. The State enjoys an additional savings through the fact that those on parole and probation are earning about $16 million a year with which they support themselves and their dependents and on which they pay taxes. If they were incarcerated of course the State would have to provide the money to pay the costs of those in prison as well as to support their dependents who would undoubtedly be on relief in many instances.

Mr. Powers points out that persons convicted of crime are never put on parole or on probation with the idea of saving money. They are so treated because the authorities believe that is the best way to restore them to a position of good citizenship and it is purely incidental but nevertheless important that there is a substantial financial gain for the people of Wisconsin.

In addition to those put on probation before they enter an institution and those paroled because they have indicated they will be able to make their own way with some help, Wisconsin also has a group on mandatory parole. This group is made up of prisoners who have served their sentences less the time off for good behavior and therefore must be released but virtually none of them is released without being placed under supervision for a time.

Of the total released on parole about 19 percent have their paroles revoked during the first 6 months and about 24 percent during the first 2 years of probation. Some of the revocations are for new offenses but a great many are merely precautionary as in cases where some parolees have been found in bad company or have given other indications that they might be getting into trouble. All in all the record indicates that at least three-fourths of those paroled are able to make their way for 2 years and with that start there is a good chance that they will be able to go all the way. Wisconsin's parole and probation system is one of the things this State can well be proud of and citizens should insist that those in the welfare department be given every help possible in maintaining it successfully.

Walter L. "Bull" Durham

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. EVERETT. Mr. Speaker, the latter part of last week Walter L. "Bull" Durham, the dynamic voice of the Midsouth farmer for two fruitful decades, died in his sleep in Memphis, Tenn.

Mr. Durham was the agricultural editor of the Commercial Appeal, one of the Nation's leading newspapers.

In his passing not only the Eighth Congressional District of Tennesse, which I have the honor to represent, but Memphis, Tenn., and the Midsouth as well, have lost a great benefactor of all mankind and those who till the soil in our congressional district have especially suffered a great loss.

His work can best be extolled by a statement issued following his death by Mr. Frank Ahlgren, editor of the Commercial Appeal in Memphis, Tenn.:

Mr. Durham's death comes as a great shock to me.

Walter and I have worked together for 22 years now. I like to think of him as I saw him last night (Thursday) while we were both working on the election. He was a newspaperman to the last. There he was as interested, enthusiastic, and vibrant as in the past.

TOUCHED MANY LIVES

His impact on this area was tremendous. He was a good newspaperman, a friend, and a counselor.

I can think of no man who has touched so many lives with his helpfulness and sincerity of purpose. Since 1939, he had directed our plant to prosper program, bringing him into contact with hundreds of thousands—and he was always helping. Only a few days ago he was working on plans for the 16th plant to prosper program.

I have lost not only a close associate but a close personal friend.

Mr. Durham used to entertain his associates with stories of the year he represented Lauderdale County in the Tennessee General Assembly and his work in the Nashville and Jackson, Tenn., bureaus of the Commercial Appeal.

WAS LICENSED LAWYER

Mr. Durham's versatility was shown by the fact that in addition to being a newspaperman, he was a licensed lawyer and a member of the Tennessee Legislature when only 21.

He was born in Mineral Wells, Tex., where his father was superintendent of a hospital. A short time later the family moved to Ripley, Tenn., where his father became county register. They also lived in Henning, Tenn.

Mr. Durham attended school at Ripley, Castle Heights Military Academy at Lebanon, Tenn., the University of Tennessee, and Columbia University where he studied journalism and law.

After college he returned to West Tennessee and published a group of small newspapers. He was elected to the legislature in 1931. He published a weekly newspaper in Bruceton for a while and then worked on the Daily News in New York City.

Returning to West Tennessee again in 1935, he joined the Commercial Appeal and worked in the Jackson and Nashville bureaus before coming to Memphis in 1937. He served as tristate editor and general assignment reporter before being named agricultural editor.

An editorial that appeared in the Commercial Appeal is attached hereto:

WALTER DURHAM

News of the death of Walter "Bull" Durham brought sincere regret to thousands on thousands of men and women in Memphis and the entire Midsouth for a variety of reasons. Unquestionably, the first and keenest reaction was the feeling that everyone who knew him had lost a true friend.

Walter Durham in his years of unselfish service did a great many things that were unusually worth the while and the value of his achievements was invariably enhanced by the great talent he had for sympathetic, kindly, understanding respect and affection for his fellows. We have never known a man from whom the spirit of good will emanated more genuinely and consistently.

The outstanding monument to Walter Durham's life is to be found in the contribution he made to the farm people and agriculture in the Midsouth as a whole and especially in the Arkansas, Mississippi, Missouri, and Tennessee areas that took part in the Commercial Appeal's plant to prosper work. He was director of the plant to prosper bureau for 20 years and in that time touched for good no less than hundreds of thousands of lives. Added to that was the wide influence his farm program over WMC gained and held.

Not many men have come to any undertaking more fully equipped than was Walter Durham when he began his career as friend and mentor of Midsouth farmers. He had worked in high school and college journalism. He had been with a metropolitan newspaper in New York City. He had served a term in the Tennessee General Assembly. He had a license to practice law. He had owned and published smalltown weekly papers and he had some experience of his own on the land. On the Commercial Appeal he had handled a variety of responsible assignments.

Hardly any man of our acquanitance had more constructive curiosity than Walter Durham. He read omniverously for years. He was interested in politics and in economics and in the social order. He was a good companion and an engaging conversationalist who loved a good story as much as anyone. His varied training and his diversified interests enabled him to see his own specialty in true relation to the community as a whole and to serve it the better on that account.

To Walter Durham had come a multiplicity of prized awards from farm organizations and publications and from civic groups for outstanding public service. He was greatly moved by each and every evidence of the esteem of his associates and friends, but he wore his honors with a modesty that was deep and real.

A stream of tributes has come to this office, testifying to Walter Durham's usefulness and goodness. He truly won and richly deserved them all.

Also attached is an editorial that appeared in the States-Graphic at Brownsville, Tenn., edited by Mr. Paul Sims:

"30"

The passing of Walter "Bull" Durham, Memphis newspaper man, who died in his sleep there last Friday morning, removes from the ranks of Tennessee journalism one of its best known and most beloved men.

For many years as director of the Commercial Appeal's plant-to-prosper program, he distinguished himself as a brillian writer and a good friend of the farmers of the tristates area. He loved to visit in the farm homes from year to year and to recount the progress that was being made.

Mr. Durham began his newspaper career on a small newspaper in west Tennessee, a profession he was destined to follow the remainder of his life. A dedicated newspaperman to the end, he spent Thursday night at his office aiding in the handling of the Memphis city election.

It was my good fortune to know him over a long period of years. I was always glad to count him as a friend. His passing is a source of genuine personal regret.

Also an editorial from the Crockett Times at Alamo, Tenn., edited by Mr. Leslie Sims, is included:

The passing of Walter "Bull" Durham, plant-to-prosper director and agricultural editor of the Commercial Appeal, is mourned by a legion of friends throughout the Midsouth.

We became acquainted with him over 30 years ago as a neighbor publisher of the Halls Graphic, one of his first newspaper ventures. He has been a very dear friend throughout the years and we are deeply grieved by his passing.

He was never too busy to assist us in any way or to do us some special favor throughout his long career.

Three times (1947, 1950, and 1953) he presented this newspaper the Commercial Appeal's newspaper trophy for outstanding editorial contribution to the plant-to-prosper program. These trophies are proudly displayed in our office.

The Steel Strike

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials—one from the Boston Herald and one from the Boston Traveler—commenting upon the factual report issued by Labor Secretary Mitchell on the steel strike.

I have been impressed by the support which Secretary Mitchell has received from the Nation's press, including two Boston newspapers represented by these editorials.

Clearly Secretary Mitchell has performed a service to the Steelworkers Union, to the steel industry, and to the American public in releasing this statistical background.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston Herald, Aug. 21, 1959]

WHAT THE STEEL "FACTS" DO

We have said that factfinding in the steel strike would settle nothing. And sure enough, both sides, union and management, endorse Secretary Mitchell's statistical findings, without, however, agreeing on what to do about them in the matter of a new contract.

This is because the difference between the two sides is now and has been right along a difference in philosophy and not a difference of factual information. Each side has presented its own version of the facts to win the support of the public. The actual basis of settlement is elsewhere.

The Steelworkers Union believes that the steel companies are prosperous enough to part with more of their profits to the employees; the steel companies do not believe profits should be a measure of wages. This cannot be settled by discussion across the bargaining table. This difference of philosophy can be adjusted only by the contest of economic strength now going on in the form of a strike.

If the factfinding does anything, it will be through the pressure of public opinion. Yet Secretary Mitchell has most carefully avoid d any explicit recommendation that might guide the public to make a decision. If there is, as he says, an area of possible agreement marked out in his report, it is not easily discerned.

Have the steel companies been making such astronomical profits, as claimed by the union's president, that the equity of a wage increase is clear? The Mitchell report does not indicate so. Profits after taxes as a percentage of sales have been higher than for all manufacturing, but such profits must in general be higher in industries with high capital investment (like steel). And net profits as a rate of return on investment have been less than in all manufacturing during most of the postwar years.

Have steel prices been raised exorbitantly, as claimed by the union? Steel prices have indeed, the report says, risen higher and faster than wholesale prices in general and much more than retail prices. And the increase in steel prices has exceeded the rise in employment cost per ton of steel produced. But employment cost per man-hour has risen faster than steel prices. This apparent disparity is the result of increased productivity.

(And it might be pointed out that most of the increased productivity is the result of better tools and techniques made possible by the profits of the industry.)

And what of the comparative scale of pay in the steel industry? Measured in terms of average hourly earnings, steel wages are higher than those in most other industries. Steel wages plus fringe benefits have risen more than output per man-hour.

And what does it all mean? It seems to mean that in the battle of "facts," the steel companies have come out a bit better than the union; that though both sides carefully selected their facts, the union selection was the more unbalanced.

Perhaps this is why Union President McDonald makes his cryptic comment on the Mitchell findings. They show, he says, the ability of the industry to share a portion of its gains in productivity with the public, the workers in the industry and the stockholders. And the stockholders?

Omitted in the report is the factual approach to one problem that has piqued our interest: If steel prices have been increased excessively, what has happened to competition? Is there in truth a way of "administering" prices that escapes the competitive challenge of 250 domestic steel producers, not to mention foreign producers and producers of aluminum, copper, cement, lumber, plastics, and other rival materials?

Omitted also in the report is the problem of restrictive union rules which prevent management from operating with full efficiency. These are losses that everybody has to pay for.

The administration has acted to prevent the American people from swallowing the one-sided facts presented by the union and the industry. In this negative sense, the Mitchell report serves an important function.

But, alas, there remains the great unanswered question: Is the power to close down an entire industry a safe power to entrust to an organized group largely immune from ordinary legal restraints, and does such power tend to favor such a group unduly as against the rest of the economy? It's a question that needs answering.

[From the Boston Traveler, Aug. 21, 1959]

FACING THE FACTS

The report just released by Secretary of Labor Mitchell on the statistical background of the steel industry is a strong argument for a quick settlement.

Mitchell does not take sides in his findings. But neither does he sugar his facts. He points to healthy conditions on both sides, labor and management alike, and leaves the public more than ever convinced that the strike should end without delay.

Steelworkers' average earnings already are well ahead of industrial earnings in general.

Steel industry's profits after taxes, in relation to sales, have been higher than for manufacturing as a whole.

Thus both sides have been economically healthy. So why the dispute?

Mitchell's impartial report, while drawing no conclusion, leaves the bystander feeling that there's no point in wasting sympathy on either side.

It's time for both parties involved in the strike to stop stalling and to negotiate a sincere approach to a settlement before the damage spreads.

What Tom Dooley Knows

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks, I include an editorial relating to Dr. Thomas Dooley, M.D., entitled "What Tom Dooley Knows," appearing in the Boston Globe of August 24, 1959.

As everyone knows, there is no more living person dedicated to this cause of suffering mankind in practically a forgotten area of the world than Dr. Dooley.

The editorial well says:

Tom Dooley, whether he lives 5 months or 5 years or 50 years, has had a life more filled with accomplishments than most men.

How true.

It is the prayers and hopes of countless of millions that the health of Dr. Tom Dooley will improve enabling him for many years to do his great work in the service of God and of mankind.

The editorial follows:

WHAT TOM DOOLEY KNOWS

(By Uncle Dudley)

Tom Dooley says that he's going back to Laos—going back to southeast Asia and the 30-mat hospital, no beds—that he set up on the "edge of tomorrow," where he sought and found how to serve.

The missionary, Dr. Thomas Dooley, will be leaving the safe and comfortable womb of a great specialized New York hospital, where he learned the other day that at 32 he had cancer of the lungs. He'll be leaving to work as long as he can among people who go to bed hungry at night, live in grinding poverty, mostly never have seen a doctor.

(Yet, when he came back to this country last year he wrote never had he seen anyone out there with a neurosis.)

For Americans who have worked themselves into a state of fear about cancer, heart disease, and some of the other killers, Dr. Dooley's case is a horror story. Dr. Dooley himself obviously does not think so. Nor do many of his fellows in the profession.

Here they remember another surgeon, who underwent surgery for cancer in middle age and achieved an international reputation and honors for 17 years more, almost no one the wiser. They also recall the New York doctor, known throughout the world, who lived for years with acute heart disease, slipping off now and then to come to Boston for secret treatment, in the meantime establishing an institution that will be a living monument to his selflessness and courage. Or the Massachusetts octogenarian who was operated on for "inoperable" malignancy and has been blithely carrying on as a family doctor for years. And there's also the internist who faced surgery for incurable disease, was glad that he "had time to set his affairs in order," and then was found to have a harmless obstruction.

This is not to say that every story has a happy ending—to be a pollyanna about ravaging diseases of which we still know, with all our vast programs, far too little. It is to decry the kind of fear in which this Nation, with the most comfort, widespread luxury, the best food, the highest standard of medical care, has steeped itself.

The result tqo often is that we are living scared. We act as though the end all of life is to prolong life and in prolonging life to create insuperable new problems for ourselves.

Tom Dooley, whether he lives 5 months or 5 years or 50 years, has had a life more filled with accomplishment than most men. Perhaps that is why he could take bad news about his body with anger, because it might cut short his mission, and with the gaiety of selflessness and a quip for the irony of the situation in which he finds himself.

In his book, "The Edge of Tomorrow," with which he has helped finance the work of his medical mission, Dr. Dooley said that it is sometimes hard to see God "when you are plunged into bleating materialism." But because of the solitude in the jungle it is easier to see Him "in the tropic rain, in the monsoon mud, in the tangy sweet smell of the earth * * * the frangipani, the tamarind trees * * * the quiet and peace of the hills and valleys."

And he really lets us in on the secret when he concludes that "life can signify much. We must just listen to the voices which are inside each of us. * * * A man working in this world without tapping his own reservoir of spiritual strength is like a twin-engined plane flying with only one motor. He may get there, but it will be mighty difficult."

Agricultural Experiment Stations Contribute to American Life Through Research

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. NEUBERGER. Mr. President, the launching of the first Russian sputniks

less than 2 years ago gave the words "basic research" special significance for Americans. Today the impact of research—both basic and applied—is manifested in every aspect of our life. We know that when man flies to the moon or conquers cancer or builds a better mousetrap, research will have played an important, if not the most important, role in that success.

Although it does not have the glamour of the launching pad and the countdown and thus has not received the spotlight given technological research, agricultural research has been an important part of American life for many years. The agricultural experiment stations, operated through the Department of Agriculture with the cooperation of many State agricultural colleges, are as significant to rural America as the mail order house or good harvest weather.

I was pleased that the Senate and House increased the 1960 appropriation for the Agricultural Research Service from the $64,240,000 recommended by the administration to $67,722,490.

The causes which these funds will serve are many, Mr. President, even in my own State of Oregon—where pears, peas, and potatoes are among the variety of crops that will be improved through agricultural research. Because it so well describes the value of agricultural experiment stations and their research contributions, I ask unanimous consent that an editorial from the Pendleton East Oregonian for August 4, 1959, entitled "Work of the Experiment Stations," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORK OF THE EXPERIMENT STATIONS

Anybody who looks closely at the economy of Oregon concludes that it will be expanded according to efforts in the direction of full utilization of wood, doing a better job in all facets of agriculture, and putting water resources to full use. It is our opinion the greatest opportunity for expansion is in agriculture.

An obvious need in agriculture is to bring the crops-animal ratio into better balance. Oregon swings too far on the crops side. Another need is to do a better job with those crops we presently produce, to improve quality and boost quantity. And another need is to develop effective cures for the many diseases that attack so many crops.

The job is being approached from several directions and at several levels. The primary responsibility is upon Oregon State College and U.S. Department of Agriculture personnel at the State's experiment stations.

With the committee on agricultural extension service and experiment stations of the State board of higher education we visited four experiment stations last week, three at Medford and the other at Klamath Falls. We saw and heard of two projects that are ideal illustrations of the importance of experiment stations in the agricultural economy of Oregon.

The pear crop of the Rogue River Valley is worth many millions of dollars annually—latest estimate by the Jackson County extension office is that the annual return from the fruit crop in that county is aboutt $19 million. This immense resource is being threatened by a condition that is called pear decline. Pear decline rapidly reduces the crop and finally destroys the trees.

An entomologist from Oregon State College has been working on the problem for about a year. He has reason to believe he may be close to an answer.

In order to increase production many orchardists have increased use of commercial fertilizers and irrigation. Because that seemed sound the entomologist looked in many places for the causes of pear decline before he had to come to the undeniable conclusion that pear decline was most prevalent in orchards that had been heavily fertilized and irrigated. Those orchards lightly fertilized and irrigated showed little or no signs of pear decline. So, he is about to say to the orchardists that the theory that if a little is good a lot is better does not hold true in the raising of pears. If he is right and pear decline can be eradicated the victory will be immensely important.

In Klamath County the potato crop is the county's greatest agricultural money producer. Throughout the county potato production has been dropping, both in quality and quantity.

Agronomists are not quite ready to say that they have the answer but they will tell you that they think they have it. There is a parallel to the pear problem in Jackson County.

For many years it has been thought in Klamath County that the best potato producer was the man who rotated potatoes with alfalfa and clover. It has been discovered that that wasn't true. Rotation of those crops with potatoes was exactly the wrong thing to do. The farmer who was thought to be lazy because he didn't practice rotation has not had the production and disease problems that have hit the fields of the "efficient" farmers.

These are examples of the tremendous importance of experiment station work in crops that are basic to the economies of Jackson and Klamath Counties. The same type of work is going on at experiment stations throughout the State on crops and animals.

Farmers who directly benefit from experiment station work are, of course, the big winners. But it would be shortsighted to look no further. Improving pear production and potato production goes far beyond aiding the economies of two counties and the farmers of those counties. It benefits every resident of the State of Oregon. If all who live in this State are to prosper agriculture must produce more and more.

Caution Needed in Applying for Public Lands

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ASPINALL. Mr. Speaker, correspondence reaching Members of Congress clearly demonstrates the need for caution in hiring "land locators" or "agents" to prepare applications for public lands.

A new Bureau of Land Management pamphlet, "Information on Public Lands," contains sound advice for veterans and others seeking a tract of public land. Copies may be obtained from local Bureau officers or the Bureau of Land Management, Washington 25, D.C.

Extracts from the pamphlet follow:

See the land and examine it in person. Don't buy or apply for lands you have not seen. The Government usually requires it, and besides, it is good business sense.

* * * * *

Know the law and regulations. Even if someone else is handling the details for you, find out for yourself what he is doing and why. Don't pay anyone to do anything until you know the official requirements.

If you hire someone to locate the land for you, know exactly what services you are paying for. Do not pay for services you do not get or cannot use.

* * * * *

Land locators and filing services have offices in many western cities. For a fee they will examine the status of lands on the public land records, inspect the characteristics of public lands on the ground, fill out application blanks, and prepare supplementary information that may be required with the application.

However, be careful. None of the land locator services is licensed or regulated by the Federal Government. Some unscrupulous operators have led some people to believe that hiring them will result in obtaining Federal land, even though most of the applications they file will be rejected. Before you hire a land locator, you should be sure that you are dealing with a reliable person and that you understand fully the extent of the services which he will provide.

In the real estate business, realtors do not usually earn their fee until the final sale has been completed. Until that time, a person only makes a deposit of earnest money to show his good faith. If the realtor fails to complete the sale, he will return the money deposited. People doing business with land locators or filing services would do well to obtain similar agreements. A person then would not lose his money if his application is later denied. Such arrangements, of course, have to be worked out directly with the locator or filing service.

The Government does not require or encourage the use of land locator services. All applications received by the Bureau of Land Management are considered on their own merits. No one would receive any kind of special treatment or consideration simply because he had filed his application through a land locator. All BLM information, data, records, maps, and other materials which are available to land locators and filing services are also available to anyone who is interested in filing an application. Land locators receive no special or "inside" information that is not available to anyone else.

* * * * *

Buying public lands, like buying any real estate, is a serious investment. For your own protection, you should always see and personally examine the lands.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two issues

of the GTA Daily Radio Roundup, prepared by the GTA Public Relations Department, St. Paul, Minn., on Wednesday, August 19, and Friday, August 21, 1959.

There being no objection, the publications were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF AUGUST 19, 1959

There's so much loose talk and misinformation being passed around about the farm situation and food prices that it is no wonder many city people are confused. So it is refreshing to pick up a newspaper that's giving out with the facts on this matter. We're talking about an editorial in the August 19, St. Paul Pioneer Press. It's titled "The Other Side to Farm Surpluses," and we thought you'd be interested in hearing some of what it has to say.

First, the editorial warns that the cost of living is not as stable as it looks on the surface. It hints that those national leaders who boast about how they've kept inflation under control have had the wool pulled over their eyes. What's actually been happening, the Pioneer Press editorial says, is a far different story. Here are a couple of paragraphs—quoted directly from the newspaper:

"What made the price index appear stable was the fact that food prices were declining at an annual rate of 5 percent, but other nonfood commodities and services rose 2 percent. Thus a major factor was the abundance and relative cheapness of food items, which offset the rise in the remainder of the items going into the index."

In other words, a farm subsidy to both consumers and business people. But let's read on:

"This is a reminder to the critics of the farm program that, whatever its shortcomings, taxpayers get something back. One of the favorite criticisms is against the payment of crop supports, which keep on adding to the surplus production of the farms," the St. Paul newspaper says. "But at any rate, the country has an abundance of food, and everyone in his capacity as a consumer gets a dividend in the relative cheapness of food. This was the dominant factor in keeping the cost of living from going up," it concludes.

Well, that's no secret to farmers. They've seen it going on since way back in 1952. But we're happy to see city people getting the story straight, at least in some of the big newspapers. It certainly is a contrast to the propaganda coming out of the Secretary of Agriculture's office, telling people that farm prices are too high and that makes food prices high. Neither statement is true, of course, but some people don't question what they read or hear.

And speaking of consumers "getting something back" for their tax money spent on farm programs, we notice in the Wall Street Journal that food surpluses are proving a big help in areas of heavy unemployment. With the steel industry shut down, Uncle Sam is distributing flour, rice, eggs and other abundant foods to workers who are broke. And that helps take quite a relief load off the local taxpayers.

So when the story is truly told and understood, the abundance produced by American farmers is indeed a blessing. Farmers have always been proud of their ability to feed the Nation, with some to spare. What they ask in return is legislative machinery to smooth out the highs and lows in production, and realize a fair return for their labor, investment, and management.

GTA DAILY RADIO ROUNDUP OF AUGUST 21, 1959

The harbor at Duluth-Superior, the largest inland port in the world, is bustling with new activity these days. Strange ships, with salt-water crews, are sailing the inland seas all because the centuries-old dream of a St. Lawrence Seaway has finally been realized. For the first time, the grain farmers of the upper Midwest, through their giant GTA elevator at Superior, are loading grain into ships that sail direct to the salty seas.

The seaway is a mighty accomplishment. Some hail it as a magic wand of progress that will transform the economy of the Midwest, maybe even put farmers on easy street. But let's slow down here for a minute, and while we are hailing the seaway's benefits let's look at some of its shortcomings. First of all, the upper leg of the seaway, the part that reaches to the farmer's elevator at Superior, is icebound about 5 months of the year. And the channel is only 27 feet deep, which isn't enough for the big-sea ships so it is the smaller ones that reach Duluth-Superior. We've just been talking with some of our GTA people who handle shiploading at the big elevator and they say that the high-sided ocean ships take sometimes twice as long to load as the long, low Great Lakes boats. That means more expense, of course.

And here's another point. As more grain is being loaded out on the St. Lawrence Seaway, less is being shipped by barge down the Mississippi for loading into ships at gulf ports. It's too early to tell yet whether the St. Lawrence will mean a bigger market or just a shift in shipping points. We notice that southern and eastern Congressmen are concerned enough about this to take action. They're trying for a law to tie up certain Great Lakes grain shipments so their ports will get the business back.

There are other troubles along the big ditch too, but that's enough to give you the idea.

Here at GTA we're primarily interested in how the seaway can benefit the farmer and his family. If it will mean more markets, more total co-op savings, that's all to the good. But nothing of the sort has been proven yet. Researchers say it costs 12 cents a bushel less when grain is loaded in an ocean vessel at Superior, going direct to, say, Casablanca or Rotterdam than when it is shipped by rail to an east coast port before being loaded on a ship. But who gets the 12 cents? Not the farmer. He's already paid to get his grain to the terminal market. And the Seaway hasn't lowered those freight charges a penny.

So it looks like any benefit the farm families get from the seaway will be indirect. The big exception will be the savings that might be realized through the grain marketing businesses that farmers own themselves, their cooperatives. And it has always been true that farmers benefit the most when they do business with their local cooperatives and with GTA the co-op way.

Aid for Redevelopment of Depressed Economic Areas

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mrs. KEE. Mr. Speaker, I feel compelled to make one more plea before Congress adjourns for action by the the House on legislation to set up a program of cooperative Federal-State aid for the redevelopment of depressed economic areas.

Many sections of our Nation are suffering from persistent and substantial unemployment. This is a serious problem that time will not solve. Nor will it go away if we simply close our eyes to it.

These depressed areas need help, Mr. Speaker. They must be given assistance in rebuilding their economy and in attracting new industry that will create permanent jobs.

The Senate has passed an area redevelopment bill. The House Banking and Currency Committee approved a bill last May. The bill is still pending in the House Rules Committee.

If Congress adjourns without acting on this legislation, Congress will have to face up to this problem next year. We cannot escape it.

Mr. Speaker, it is unthinkable that in times of unprecedented prosperity for the country as a whole we will permit large pockets of depression to exist.

The people in these areas are suffering. Hundreds of thousands of them depend upon gifts of surplus foods to feed their families. They need help—not handout—to keep their children from from starving but just which will enable them to support their families and lead useful, fruitful lives.

South Korea Skies Clear

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article from the Christian Science Monitor of August 19, 1959, by Robert T. Oliver entitled "South Korea Skies Clear" be printed in the Appendix of the RECORD.

In this excellent article Mr. Oliver points out that never in the 4,300-year history of Korea have the people had such great hopes as are now known in the Republic of Korea. The advances that have been made since the formation of the Republic in 1948 have been most encouraging.

Mr. Oliver notes, for example, that whereas in 1948, 54 percent of all South Korean farmers were tenants on the land, today tenant farmers number less than 10 percent. Educational developments have also been most encouraging. Today 96 percent of all South Korea's farm children are in school from the ages of 6 to 11, and there is not a farm village in the land that does not have its elementary school.

I am confident that the progress that is being made in the Republic of Korea will continue and the people of that brave land will have a continually rising standard of living.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH KOREA SKIES CLEAR

(By Robert T. Oliver)

Like the dim glow that begins to show through heavy banks of black clouds after

a long spell of bad weather, there is promise in sight of a better day coming for South Korea's 15 million farm dwellers.

No miracle is going to bring sudden or substantial prosperity to the hard-working families that slough through the mud of the rice paddies to produce the principal wealth of that ancient and war-battered peninsula. But the upswing rests on solid economic facts. When harvest time comes in October, the month of "high skies and fat horses," Mr. and Mrs. Song Tai Ha (Korea's typical farm family) will be better off, and have better prospects, than ever before.

This summer has been a mixture of good and bad weather. Heavy rains that began on June 30 and lasted for 10 days brought 10 inches of rain to the Seoul area, and precipitated the worst floods in 26 years on the farmlands above Pusan. Damage amounted to 4 billion hwan (approximately $8 million) with 7,000 people rendered homeless and 111 casualties (including 57 fatalities). Some 11,200 acres of farm paddies and other crop fields were laid waste, a tragic loss in a land where the average farm's size is 2½ acres.

KIMCHI BRINGS SMILES

Nevertheless, in a letter from an informed friend in Korea, dated July 16, the news is largely good: "Our rainy season is over and we are enjoying beautiful warm weather. The people are looking forward to a good crop. This year we had a bumper crop of barley and the rain has also been favorable for the round cabbage, squash, and other vegetables, as well as the watermelon. With cabbage so plentiful and cheap everyone can eat a lot of kimchi this year."

When kimchi is plentiful, Koreans, as every GI who has served in Korea knows, are all smiles. This pickled vegetable, heavily spiced with garlic and red pepper, is next to rice the staple of the Korean diet; and even many Americans have found it not only nutritious but also a tasty dish.

For the last 3 years the rice crops has exceeded the pre-1945 average, and it gets better each year. Results are flowing steadily from the repair of war damage, improvements in transportation, increase in the flow of fertilizer (and improved distribution), and steady progress in checking plant disease and improving seed quality.

An even greater impetus was given to the workers in the rice paddies by the sweeping land reform laws that were adopted in 1949, promulgated in 1950, and that have become increasingly effective through the better governmental administration accompanying the general recovery from the wartime conditions.

OWNERSHIP SPURS INTEREST

In 1948, when the Republic of Korea was inaugurated, 54 percent of all South Korean farmers were tenants on the land, and an additional 25 percent were part tenants. Rentals averaged 35 percent of the crop yield. Now tenantry on Korean farms is below 10 percent, and the annual payments-in-kind for the purchase of the land is about 20 percent of the annual harvest.

The difference not only in cash but also in satisfaction and in the release of initiative is enormous. Farmer Song Tai Ha nowadays works in the late fall and early spring to repair irrigation ditches and dikes that protect land that is his own, rather than leaving them to the dubious care of absentee landlords. He takes a new pride in fields that he can now leave to his own eldest son.

How much better off are the farmers of South Korea today than they were 2 or 3 years ago? On the land crops ripen slowly, and real progress has to be measured in decades, not in years. But the facts all point toward better times.

For one thing, over 96 percent of all South Korea's farm children are now in school from the age of 6 to 11. There is not a farm village in the land that does not have its elementary school, with a middle school near at hand, and a high school not much farther away. And there are 78 colleges and universities in the Republic that enroll more than 80,000 students. No longer is the land (constantly shrinking in ratio to the population growth) the only outlet for Farmer Song's sons and daughters.

INFLATION CHECKED

For another thing, the inflation that raced ahead in South Korea for 12 years from 1945, averaging 219 percent per year, has during the last 2 years been brought to a slow pace of only 4 or 5 percent a year. This means lower prices when the rice is sold, but also lower prices for what the farmer must buy.

Moreover, better management of the grain-import program is now resulting in the grains reaching Korea from America in midwinter, when they keep prices from reaching astronomical peaks, rather than coming in late spring or midsummer to compete with the sale of the ripening crops.

Farmer Song now has a small bank account, for 54 percent of all South Korea's extant currency is now on deposit. He may even have a life insurance policy; for renewed confidence in the stability of the hwan has revived the ancient and popular life insurance business.

As in all the developing countries of the world, South Korea's farmers remain among the last portions of the population to experience beneficial effects from our program of economic aid. First transportation and communication facilities must be repaired, then electric power developed, then mines and factories had to be activated. But fertilizer is flowing in; the new Chungju fertilizer plant is near completion and a second is abuilding and the new banking and cooperative developments are meshing Farmer Song into the pattern of general economic improvements.

For old Mr. and Mrs. Song Tai Ha the present rewards are small. But they can look to the future of their sons and daughters with greater hope than has ever been known in the 4,300-year history of their ancient land.

Insult to Hawaii

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. INOUYE. Mr. Speaker, on Friday, the 21st day of August 1959, I was privileged to witness the signing of the Executive proclamation by the President of the United States officially admitting Hawaii into the sisterhood of States as the 50th State of our Union. Many distinguished Americans, including our honorable Speaker, were present at this White House ceremony.

The absence of another distinguished American, the Honorable John Anthony Burns, the last Delegate to the Congress of the United States from the Territory of Hawaii, was painfully noted. I was shocked to learn that Delegate Burns was not invited by the White House to be present at this historical occasion. Many of those present at this White House ceremony sincerely felt that Delegate Burns, the gentleman from Hawaii who worked tirelessly, courageously, and successfully for Hawaiian statehood, should have been invited to the White House.

I am including herein two editorials from the newspapers of the new and sovereign State of Hawaii that eloquently express the concern of the people of the 50th State over this unfortunate incident:

[From the Hawaii Times, Aug. 22, 1959]

INSULT TO HAWAII

Somewhere in Washington as, amid happy White House ceremonies, a grinning President Eisenhower went through the motions that created the islands of Hawaii into the 50th State of the United States of America a gray-haired man sat ignored by official Washington.

He was John A. Burns, Hawaii's last Delegate to Congress.

Up until the minute that the final stroke of a Presidential pen brought an end to his official office, John A. Burns had represented and served all the people of Hawaii in the Halls of Congress.

That Burns represented and served his people well and with exceptional success is a matter of obvious facts and official records. He championed and fought for the inherent rights of the people of Hawaii. More than any other Delegate before him he made those who operate the U.S. Government realize and appreciate the importance of Hawaii and its people to the welfare of America. He spearheaded the final drive for statehood for Hawaii. And Hawaii, after almost half a century of effort, was granted statehood.

Yet, this man of Hawaii was not extended the simple courtesy of being invited to the White House ceremonies that created the Territory of Hawaii into the State of Hawaii.

This ignoring of John A. Burns—whatever the reason may have been—was unfortunate to say the least and inexcusable. It was a direct insult to all of the people of Hawaii, who twice elected him as their Delegate to Congress.

[From the Honolulu Advertiser, Aug. 22, 1959]

NOT INVITED

Yesterday at the White House a group of invited guests watched President Eisenhower sign the proclamation admitting Hawaii to the Union.

Conspicuously not among the witnesses was John A. Burns, who with the scratching of the President's pen went out of office and into history as Hawaii's last Delegate to Congress.

He wasn't invited.

He should have been. Burns served Hawaii honorably and well through two terms, the only official under Territorial status elected by all the people.

He personally and the office he held deserved an invitation to attend the moment of triumph he helped to bring about.

Resolution of Loyal Lodge No. 252 of the Sons of Norway, Relating to Proclamation of Leif Erikson Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an interesting resolution recently adopted by Loyal Lodge No. 252 of the Sons of Norway, favoring the proclamation of Leif Erikson Day. We in New York State have new and deeper ties with the great country Norway than we had a short time ago. I am very anxious that the resolution be made a part of the RECORD.

There being no objection, the resolution, was ordered to be printed in RECORD, as follows:

LODGE LOYAL, No. 252,
SONS OF NORWAY,
St. James, Long Island, N.Y.,
August 7, 1959.

To Whom It May Concern:

Whereas Sons of Norway, Loyal Lodge No. 252, is a membership association duly incorporated under the laws of the State of New York, with its clubhouse and principal place of business or activity at Seventh Street and Fourth Avenue, St. James, Suffolk County, N.Y.; and

Whereas Sons of Norway, Loyal Lodge, No. 252, is an association composed of persons of Scandinavian origin and their descendants interested in preserving the history, customs, and traditions of their forefathers; and

Whereas this lodge wishes to cooperate in the movement to have Congress establish Leif Erikson Day as a national holiday in honor of the many persons of Scandinavian heritage who have contributed and are presently contributing to the development of these United States: Now, therefore, be it

Resolved, That Sons of Norway, Loyal Lodge No. 252, of St. James, Suffolk County, N.Y., respectfully petition the Congress of the United States for the establishment of a national holiday to be known as Leif Erikson Day.

This is to certify that the foregoing is a true and exact copy of the resolution duly moved and adopted at a meeting of Sons of Norway, Loyal Lodge No. 252, held at the meeting hall of said association at St. James, N.Y., on the 3d day of July 1959.

HARRY TABIASSEN,
ELVIDA THOMASSEN,
Secretary.

Interest Ceiling

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues a letter written by Prof. J. M. Culbertson to the editor of the New York Times and printed in the New York Times on Tuesday, August 18, 1959, under the heading "Interest Ceiling Opposed."

INTEREST CEILING OPPOSED—REMOVAL OF TOOLS TO MODERATE BOOM DEVELOPMENT CRITICIZED

To the EDITOR OF THE NEW YORK TIMES:

We face now a problem of economic stabilization that is unusual and perplexing, one that could fail disastrously to solve. Since we are in the early stage of a cyclical upswing and the widespread inflation neurosis will tend to exaggerate expansive forces, maintaining economic stability is likely to require in the near future a Government policy of restraint on total demands.

Therefore, this is an appallingly bad time to take away from the Government its tools for moderating boom developments. Yet this will be the outcome if Congress does not remove the 4¼-percent ceiling on interest rates on Government bonds.

It should be understood that the existence of this ceiling is not a part of any rational system of Government economic policy, but rather is an historical accident. The provision stems from the Third Liberty Bond Act of 1918. It was passed by Congress with reference to particular security sales during the First World War. It has remained on the books so long because it has not mattered; market interest rates have been below the ceiling.

The intervening decades included the 1920's, when repayment of Government debt and price stability contributed to decline in bond yields, the great depression of the 1930's, the period of controlled war finance and the postwar period of supported Government bond prices.

CAPITAL DEMANDS

But now this is past. We have come to a time of high prosperity, strong capital demands and inflationary fears. Consequently interest rates are high. Now, the 4¼ percent interest rate limitation does matter. It is an anachronism that may do serious harm unless it is removed.

Our only ready defense against excessive and inflationary expansion in total expenditures is the monetary policy of the Federal Reserve and the debt management policy of the Treasury. To restrain expenditures with fiscal policy by raising taxes or reducing expenditures can be done only by Congress when it is in session. The chances that timely action of this sort could be achieved are slim.

If the Treasury is debarred by law from meeting the market rate of interest on its bonds it has no choice but to replace its maturing bonds and meet all its other financing needs by selling short-term securities. Such securities are relatively liquid; they serve as a money substitute. This sort of shift in the composition of the Government debt tends to cause easy financing conditions and expansion of expenditures.

Just as the policy of supporting prices of Government bonds earlier made the Federal Reserve an "engine of inflation," so the interest rate limitation can make one of the Treasury.

No valid argument has been offered for permitting the 4¼ percent limitation to become effective, but a variety of motives operate in this direction. Supporting cheap money and twisting the tail of the Wall Street bankers has always been a popular political game in this country. Some Congressmen are piqued at the Federal Reserve for its past actions or words. There is a school of thought that moderate inflation is harmless and Government policy should be less concerned with it.

But, surely, if the Nation is to be committed to some new approach or new theory of economic stabilization, this should be done only after open and conscientious discussion and after there have been established agencies with clear policy directives and adequate powers to carry out the policies.

For the Congress at this critical time simply to tie the hands of the Treasury by leaving the 4¼ percent limitation on the books and then pack itself up and go home—this would be dangerous irresponsibility.

J. M. CULBERTSON.

MADISON, WIS., *August 13, 1959.*

Archer Fullingim Reviews Dr. Cotner's Life of Jim Hogg With Both Barrels

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. YARBOROUGH. Mr. President, Archer Fullingim, who grew up on the American high plains, graduated from Stanford University and now is editor of the weekly Kountze News in Hardin County in the Piney Woods of east Texas. He is one of the few present day country editors cut in the bold, outspoken, courageous mold of Texas' great country editor, Jim Hogg. And Jim Hogg was Texas' greatest Governor.

Fullingim knows Texas and Texans of this and past generations. So by knowing Texans at the grassroots, he has special qualifications for reviewing a recent definitive life of James S. Hogg, one of Texas' four greatest statesmen. The others were Stephen F. Austin, Sam Houston, and John H. Reagan.

Dr. Robert C. Cotner, of the University of Texas history faculty, has written the definitive life of Hogg in the language of ivy towers, tireless research, and historic accuracy. Now Archer Fullingim, articulate and earthy, has reviewed Dr. Cotner's Hogg in his free-swinging, uninhibited style that Texans love. It is the type of frank, outspoken journalism that was prevalent in Texas in Hogg's day two generations ago, but is largely nonexistent now. Fullingim knows his contemporary Texas like Dr. Cotner knows Jim Hogg. Having grown up in the shadow of the Hogg tradition in those east Texas Piney Woods 12 miles from the place where Jim Hogg lived as a district attorney, I believe I can sense the feeling of the Hogg men, and I believe Fullingim catches the spirit of Hogg in this review.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Archer Fullingim's review of Dr. Cotner's life of Jim Hogg, printed in the Kountze News on July 30, 1959 under the title "The Printer Fires Both Barrels."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kountze (Tex.) News]

THE PRINTER FIRES BOTH BARRELS

It's been 70 years since James Stephen Hogg, the first native to be elected Governor of Texas, was inaugurated on a reform platform that promised to wrest control of the State of Texas from the corporations. And in reading the new biography of Hogg by Dr. Robert C. Cotner, history professor at the University of Texas, one becomes slowly aware that Texas in 1959 is in much the same shape as it was in the 1880's, except that then Texas was the ruthless, greedy grasp of nine eastern railroads, and now is in the merciless, greedy grip of petroleum and gas corporations—which are sending millions of dollars out of the State each

year, just as the railroad companies did in the 1880's, and are trying to saddle a sales tax on the people of Texas. In reading the Hogg biography one becomes acutely conscious of the parallel between the Texas of 1889 and the Texas of 1959. It is as if history were repeating itself with only the names changed to protect the innocent. The sad thing about it is that in 1959 there is no James Stephen Hogg around to protect the people and enforce the law. For the plain people of Texas do not control the wealth of this State in 1959. Theirs is not the ability to pay taxes. The petroleum and gas industry has the ability to pay taxes, as reflected by their huge profits, and through the industry's control of the legislature, particularly the Senate, has haughtily, relentlessly tried to force a sales tax through the legislature for 6 months, in the regular session and two called sessions. The railroads and insurance companies and daily newspapers that fought James Stephen Hogg (and lost) have their counterpart today.

This column has often said as a matter of fact that Hogg was Texas' greatest Governor but this writer has not been alone in hailing the greatness of Hogg. Every Governor for the last 40 years (except Farmer Jim Ferguson and Pappy O'Daniel) has mentioned Hogg in the same breath with Sam Houston and Stephen F. Auston. In 1951, Allan Shivers declared that year as the James Stephen Hogg Centennial Year. The same year, the Dallas State Fair set aside October 12 as James Stephen Hogg day. In 1958 Price Daniel said that "much of our State government as we know it today can be traced to the program of Jim Hogg."

But until Professor Cotner wrote this 617-page biography of Hogg (price: $7.50) Texans did not know exactly why Hogg was such a great governor. Seventy years is a long time, and most of the people who were living and voting in 1890, are dead now, and from now on Texans will have to rely on history for their information about Hogg. The Texas history books touch on Hogg briefly, and his praises are not sung by the daily press for a reason.

The bitterest enemies of Hogg in 1900 were the Dallas News, the Houston Post, and the San Antonio Express, three papers which have always lined up with the corporations against the plain people. And one can make a safe guess as to how the piddling Beaumont papers lined up, just like the rest of the Republican press, for Hogg's enemies always carried Jefferson County. All of these papers, judging by their consistent failure to even mention the gigantic feats accomplished by Hogg, apparently want Texas to forget Hogg, or maybe now they are ashamed of the rascally, lying role they played in the Hogg career, and just as these papers lined up against Hogg in 1890 for the railroads, the trusts and corporations, so are they today lined up against the plain people and for the oil and gas industry and ever other domineering corporation. (If Hogg were attorney general or governor today, the Southwestern Bell Telephone Co. would not last 2 hours.) The same enemies Hogg had in 1890 are the same enemies Price Daniel has down at Austin—only the names have changed—in his battle to tax those who have the ability to pay. But the big difference is that Hogg, a 6-foot-3 giant of a man, weighing 280 pounds, carried the battle to the enemy, the railroads and corporations. He threw everything he had at them, because as he said over and over, "if Texas dose not control the corporations, the corporations will control Texas." Hogg did not use diplomatic language. He called them scoundrels and scalawags.

* * * * *

No governor has been elected in Texas since Jimmy Allred who was not the fair-haired lad of the petroleum and gas corporations.

At this point I am proud to say that I think if Ralph Yarborough were governor, like Hogg, he would not give an inch. He would have already taxed those most able to pay.

One becomes coldly transfixed in learning that back in the 1880's and 1890's, the Dallas News took the lead among daily papers in pinning a Communist label on Hogg. The News actually used the word "Communist." Hogg scarcely knew about communism then but it did not take him long to find out and squelch the Dallas News in his reply.

But why was James Stephen Hogg a great governor? Why is he still an inspiration to the plain people in this year of 1959? Why is it that politicians, bought and paid for by the petroleum and gas industry for 20 years, will hypocritically sing the praises of Hogg but are afraid to take one little timid step to emulate him? So here are some of the things you should know about James Stephen Hogg in 1959, the better to evaluate your governor, your legislators, your President, even your own conscience:

Hogg was born at Rusk in 1851. He was the son of a Confederate general who died in the Civil War around Shiloh. At the time the war started, Hogg's father owned a huge plantation, Mountain Home, 20 slaves and 20,000 acres of land. The Hogg family lost everything as a result of the war. James became a printer's devil on the Rusk Texas Observer and became an expert printer by the time he was 16. In his late teens, he worked on papers at Quitman, Cleburne, and Tyler. He farmed on the halves and then went back to printing. He established a triweekly paper at Longview. He studied law at Tyler and was elected county and district attorney of seven counties. He prosecuted the first man ever to be hanged in Van Zandt County. He won fame as a prosecutor. He attended the famous "car shed" Democratic convention in Houston and made a favorable impression. He gradually acquired a reputation as a reformer and as a man who believed in enforcing the law. In 1887, he was elected attorney general at the age of 36. As soon as he got to Austin, he took out after the railroads and fraudulent insurance companies, both of whom were robbing the people, to put it bluntly. Freight rates were so exorbitant that one marvels how the railroads got by with it as long as they did, but one must remember that a big man in Texas railroads at that time was one Jay Gould, of Wall Street fame, and Hogg took him on too and taught Mr. Gould to stay out of Texas.

The railroads were not only robbing the shippers, but they had seized more than a million acres of public lands illegally. You see, in order to get railroads, the State had given 40 sections of land (a section has 640 acres (for every mile of railroad built in the State, and 16 sections for every mile of switches and sidings. It was under the switches and siding category that the railroads really made a killing, but before Hogg got through with the railroads the State of Texas had recovered 1,300,000 acres of public land for the State.

Hogg established the railroad commission which regulated the railroads, their bonds, rates. Hogg appointed Mr. Reagan the first chairman of the railroad commission. Reagan had been in Jeff Davis' cabinet in the Confederate States of America. Reagan had been a frequent visitor in the home of Hogg's parents before the war—other visitors were Sam Houston and Texas revolutionary heroes. Before the railroad commission went into action, the railroads controlled Texas, but after Hogg and Reagan Texas was master in its own house.

Hogg ran the Waters-Pierce Oil Co., owned by John D. Rockefeller, out of Texas, and made it pay a fine of $1,808,483, for violation of Texas' antitrust law, the biggest fine ever assessed and ever paid in the world. Hogg sent a deputy to New York City to arrest him and bring him back to Texas, and the deputy almost did it, but in the end John D. stayed holed up in New York, but it was a good try and from then on John D. Rockefeller minded his p's and q's when it came to dealing with Texas.

Hogg forced insurance companies to invest 75 percent of their reserve in Texas, instead of taking it back to New York. In 1906, only about $1 million of the $40 million reserve was invested in Texas.

Hogg forced the big land and cattle companies in the Panhandle, including old Charles Goodnight, to give up land they had seized or fenced in illegally, and in doing this Hogg fought the land commissioner, Richard Hall, and the huge XIT (11 counties in Texas) ranch. Hogg refused to accept the capital of Texas from the XIT syndicate, the builders, because it leaked. Hall wanted to pay the syndicate off, but Hogg held out and made the builders fix the leaky roof. Hogg also uncovered the shady dealings of the land commissioner to the extent that Hall lost his office and was never elected to another. One of Hall's most mouthy defenders was the young editor of an Austin magazine, called the Rolling Stone. The editor was William Sidney Porter who later was to gain fame as a short story writer under the name of O. Henry.

(But before O. Henry became famous as a writer he was tried for embezzling funds from an Austin bank and was sent to the Federal pen for it. Some say O. Henry was guilty and some say he was innocent, but after bearing in mind the manner in which he maligned Hogg, I am now ready to believe that O. Henry was guilty.)

When 800 men from California rode a freight train into El Paso, en route to join Coxey's (jobless) army in Washington, D.C., they stopped in El Paso where they were welcomed, fed and feted. The Texas and Pacific railroad refused to let the men ride a freight train out of El Paso. Then all of a sudden the railroad announced it would let the men hop a freight. But about 100 miles out of El Paso, the freight stopped in the desert and put the men off without food or water. Hogg gave the railroad moguls the worst tongue lashing they ever got. He told them he would hold them responsible if any of the men suffered. He ordered the road to take the men back to El Paso or across Texas and be quick about it. The road never obeyed any orders so quickly.

* * * * *

But in view of the grip the railroads and land companies had on Hardin County political bosses of that period, it is understandable that Clark should carry Hardin County which has always had a hard core of conservative leadership that was wont to bend the knee to wealth and privilege. But of course not any more. For Hardin County, the county that voted for Clark, Pappy O'Daniel, and Jim Ferguson, also in the 1950's squelched Allan Shivers, Pappy O'Daniel, and P. Daniel, not to mention Ike, at the ballot box. But back in 1892, the railroads and the big land companies told their straw bosses in Hardin County what to do. Hogg carried Tyler and Liberty, as well as most of the counties in the piney woods.

If you have believed (as I have all my life) that Hogg had two daughters named "Ima" and "Ura," believe only the first half of it. He named his only daughter Ima from the heroine of "The Fate of Marvin," by Tom Hogg, of Scotland, an ancestor of Hogg. There was no sign of a daughter named "Ura." He had four sons.

Hogg was a poor man when he moved out of the governor's mansion in 1894 to a house in Austin, in which city he practiced law. But between 1894 and 1906 when he died James Stephen Hogg amassed a fortune of millions of dollars. He made his first mil-

lion at Spindletop when he and his associates established what later became the Texas Company. Then, before 1900, he bought the Varner plantation near West Columia. It contained about 2,500 acres. Hogg believed so strongly that oil was under Varner that he put it in his will that the land could not be sold until developed for oil. In 1917, oil was discovered at West Columbia and gushed under the Varner plantation. It has been said that at least $50 million of the estate Hogg left has been given to charity and educational institutions.

Did Hogg change in those 10 years after he left the Governor's office? No. He was until his dying day a sincere defender of the rights and liberties of the people. When he became a private citizen he used his own time and money to give leadership to the reform movement he had started and until the time was ripe for the transfer of the progressive leadership to the custody of his boyhood chum, Gov. Thomas M. Campbell. He had previously made another boyhood chum, Horace Chilton, U.S. Senator, not because Reagan, Chilton, and Campbell were friends of his boyhood, but because they believed as he did—they also believed that if Texas did not control its corporations, they would control Texas, as witness the eastern oil and gas lobbyists riding shotgun on the Texas legislature at Austin right this minute. Jim Hogg and John Reagan and Horace Chilton and Tom Campbell put them in their place and kept them there. In Jim Hogg's day, the corporation lobbyists did not have the nerve to ride shotgun on the legislature as the oil and gas lobby is doing now. It made Hogg want to puke to see their faces leering at the legislators and he did not stutter in telling them so, although Hogg was one of the most courteous, refined, and polite men who ever lived.

And when James Stephen Hogg died memorial services were held all over Texas and it was the greatest crowd that ever attended a funeral in Austin. This in contrast with the funeral of Joseph Weldon Bailey, at Gainesville some 20 years later. Bailey who was a villain in Hogg's life, was buried at Gainesville with a handful of people in attendance. Bailey had schemed to take over the senate seat of Horace Chilton, and had been accused of making a deal with Waters-Pierce Oil Co. Bailey lost out when the people of Texas began calling him "Coal Oil Joe."

Would that Price Daniel would read this book and take a leaf from it—it's not too late, Price. You can still make a name for yourself but you never will by being reluctant and hesitating. But you will have to start right now, Price, for time is running out on you. All you have to do is be like Hogg and accept no compromise and tell the lobbists that. Or you can be reluctant and hesitant and go down in history with A. Shivers as the most meaningless governor Texas ever had.

The Coming Visit of Premier Khrushchev

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mrs. KEE. Mr. Speaker, there can be little doubt that the world can look forward to a series of sensational developments in the coming months. A few weeks ago who would have thought that Premier Khrushchev of Russia would be invited to visit the United States as an official guest of the President? Or that Mr. Eisenhower would pay a return visit to Russia?

A large number of people in the United States are alarmed over this turn of events. They feel that by inviting Mr. Khrushchev to this country we will greatly dampen the hopes of people behind the Iron Curtain for eventual liberation.

Conduct of foreign policy is in the hands of the President. He made the decision to exchange visits with Mr. Khrushchev. He sincerely believes that by meeting Mr. Khrushchev face to face he can alleviate to some extent the tensions which threaten world peace.

Mr. Eisenhower is undoubtedly the most respected world figure now in public life. He is placing his tremendous prestige on the line in the hopes that he can bring about a settlement of some of the world's more serious problems.

I am sure the President recognizes the risks involved. We could be lulled into a state of false security and let up in our determination to counter the Russian's cold war plans. The visits could bring about a split among the Western allies. Mr. Eisenhower's present visit to Europe is an effort to prevent this from happening.

Now that the decision to launch a determined peace offensive has been made, Congress must support the President wholeheartedly. A division at home at this time could be fatal.

I believe the people also have the responsibility to see that Khrushchev is received politely and correctly. Nothing would be gained by insulting him. All of the things he stands for are abhorrent to the American people but let us remember he is a guest of the President and as such he is entitled to a polite reception.

I have stated that on the whole I believe some good can come out of the exchange of visits. Khrushchev's ignorance about America is appalling. He apparently honestly believes that large corporations in this country want war to increase their profits. He also seems to think that workers in this country are enslaved by the "bosses."

If these and other misconceptions can be erased by the visit, it will be worth whatever risks are involved.

Mr. Eisenhower is no babe in the woods at this sort of international diplomacy. Some people in this country have expressed fear that he will be "taken in" by Khrushchev, but there have been reports out of Communist China that the Chinese are fearful Khrushchev will be "taken in" by the President. So perhaps this could cut both ways.

It is important that the world be reminded of the total dedication of the people of this country to peace. Mr. Eisenhower's present trip to Europe and the exchange of visits later are dramatic proof of our desire to build a world in which people can live at peace.

If Mr. Eisenhower can make a breakthrough on this front, if he can reassure Khrushchev that our foreign policy is based solely on a quest for peace, then perhaps some of the suspicions which cloud international relations can be removed.

Let us not kid ourselves that Khrushchev will leave this country a different person. He will still be the ruthless dictator of an aggressive, powerful nation. But perhaps he will understand a little better our hopes for peace and our determination to secure a just and lasting peace even at the risk of using the tremendous power at our command if necessary.

Perhaps he will be more convinced than ever that he cannot win by bluff and that further aggression will be costly to his country.

As patriotic citizens, all of us, I know, hope that Mr. Eisenhower's venture into personal diplomacy will be a resounding success.

Khrushchev Is Swayed by Power, Not Reason

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I call to the attention of the Senate an article written by Henry Brandon, who is the Washington correspondent of the Sunday Times of London, and who has just returned from a visit to the Soviet Union.

This article, which appeared in the Washington Post of Sunday, August 30, 1959, is entitled "Khrushchev Is Swayed by Power, Not Reason."

Mr. President, it has been my contention all along that when Mr. Khrushchev comes to America for his visit, he should be shown not only the many advantages of our high standard of living, but that he should also be shown our military might. I am not of the school which believes we are second to Russia in military power, for I believe we are far superior to Russia. I believe the general feeling among some quarters that Russia is superior to the United States comes as a result of Russia not knowing exactly what we have, and also because of Mr. Khrushchev's own rantings about what he is going to do if we do not give in to him.

When Mr. Khrushchev comes to town, I hope the President will see to it that he gets an earful and an eyeful of what will happen to him and the Russians if they do not "come across" in negotiations. This is not a one-sided world, and it is time someone told Mr. Khrushchev. As this article points out, he is swayed by power, not reason.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 30, 1959]

KHRUSHCHEV IS SWAYED BY POWER, NOT REASON

(By Henry Brandon)

Shortly after my arrival in Moscow, a high Soviet official said to me: "Don't play political chess here; you can do that just as well in Washington and London. Speak to the people."

That was certainly good advice. I have spoken to as many ordinary Russian citizens as were willing to talk to me. A minority simply repeated what they had read in Pravda; an even smaller minority was afraid to talk at all, but encouragingly many, as I reported in my first article, were eager for thoughtful exchanges with a westerner.

One must ask oneself, however, how the international chess game looks from Moscow. Even the intelligent, well-read Russian cannot give you much guidance. He is well aware that he had no influnce on the Government's decisions in that field, and he also senses that his newspapers do not give him enough factual information to judge for himself.

Questions such as "What is the truth about Britain's relations with India?" or "What goes on in Spain, our newspapers never write about it?" were a good indication of how spoonfed the thinking Russians feel.

A STATUS QUO FIRST

There is today, however, fairly general agreement among diplomatic observers in Moscow that Khrushchev has set himself three major aims:

1. To negotiate with the West the acceptance of a status quo in Europe which would enable him to seal off his Socialist camp against Western penetration and consolidate his control over it.

2. To weaken the rear of the capitalist countries in the Middle East, Africa, and Asia by encouraging neutralism and by trying to establish influence in the underdeveloped countries.

3. To promote the Soviet Union to the status of an important international trader, because nowadays the flag follows trade and this would help to reinforce Soviet influence abroad.

Khrushchev's first aim obviously made him demand a change in the status of Berlin. When he launched his diplomatic offensive he did not perhaps expect the West to put up as strong a resistance as it has, and, faced with the possibility that the conflict could lead to war, he trimmed his sails. He is sensitive to the charge of having presented an ultimatum, because he does not want to be accused of creating tension.

Russians are bitter about Western efforts to rearm Western Germany, while knowing little about the rearmament of the East Germans, but they seemed to me unsure who is right over Berlin. On the whole, they think that Khrushchev has a reasonable case in demanding a change in the status of Berlin 14 years after the end of the war, yet they don't think of it as something important enough to go to war about.

Khrushchev knows that the Soviet people are fed up with war; that it would need a massive propaganda campaign to condition them for it. Deeply ingrained patriotism is the most reliable basis of support the Soviet Government has among the people, but it is something the Kremlin can appeal to only in extreme circumstances, such as a direct attack.

NO PLACE FOR MEDIATOR

Khrushchev, calculating and toughminded as he is, is not a man who can easily be swayed by reason—only by the realities of power. In negotiation with him, it is therefore important to be as firm as he is, and as one's own power position allows, but at the same time no less flexible than he is willing to be.

And since the United States likes to be judge of her own power, and Khrushchev will be influenced only by that judgment, it is difficult for third countries to mediate. That is also the reason why Khrushchev wants most of all to negotiate directly with the United States.

Another difficulty in negotiating with the Russians is that they lack a logical mind. They have no difficulty in believing two contradictory ideas at the same time.

Here is one of the causes of disagreement among the Western allies, who cannot agree on what Khrushchev's aims are in the Berlin crisis and therefore have difficulty in framing a common policy, whereas Khrushchev can keep the initiative with or without logic.

Yet another difficulty the West has in negotiating with Khrushchev is that he is convinced that time is on his side, though this is somewhat mitigated by his being himself in a hurry. One high Soviet official I saw who is close to Khrushchev said: "The West has the choice of negotiating with us or eventually with the German People's Republic, and that would mean a loss of prestige for you."

However, the situation is not quite so simple as that. The West's problem is that its juridical correctness is pitted against a perilous strategic situation. Russia's problem, even if she concludes a peace treaty with East Germany, is that she remains nevertheless responsible for the actions of her most dependent satellite.

Khrushchev is said to be not very hopeful of finding some accommodation with the United States now, his theory being that President Eisenhower is the prisoner of his own administration, that he personally would like an accommodation, but not his advisers. This is one reason why Khrushchev is said to be so anxious to meet the President either at a summit or in Washington.

The same high official suggested to me that if only the United States would not tend to back right-wing governments round the world, it would be easier to come to such an accommodation. I retored that it may be the existence of Communist parties abroad which has driven the United States to the other extreme, because Americans believe that Communists owe their allegiance to Moscow.

I then asked whether Communist parties abroad were likely to lose importance for the Kremlin now that Khrushchev is convinced the Communist system will triumph in any case because, he says, the world will recognize it to be the most successful system. But the answer was: "Communists all over the world are a community, just as the Arabs, for instance, feel that they belong together."

Yet, especially in the Middle East it seems that Khrushchev is more anxious to improve relations with the Arabs than to back his Communists in that area. In Iraq he has been careful not to rely too much on the Communist Party, and in Egypt he continued to give Nasser aid in spite of the latter's denunciation of communism. (Nasser, by the way, seems as unpopular in Moscow as he is in London.)

As one of the editors of Pravda put it to me: "It would be of no advantage to have only one or two Communists in Gen Kassem's government. It would mean responsibility without power."

In India, it seems Moscow would much prefer the Communists to lie low, fearing that otherwise Nehru's policy of nonalinement might be jeopardized.

As to the basic question whether the Soviet Union would be prepared to use her military power for ideological purposes, all foreign observers agree that she will use it only to protect her national security. But with the growth of Soviet power, the Russians' concept of what engages their national security has also grown.

In the Syrian-Lebanese crisis for instance, Khrushchev used his military power to halt developments which he believed could have injured Russian national interests.

All this confirms the assumption that Khrushchev has modified two basic concepts of Leninism; he believes that war is no longer fatally inevitable, because of the total destruction involved in nuclear war, and he believes that Russia's growing prosperity and power will become sufficiently contagious to promote world revolution by peaceful means.

For this reason, it is his third great aim to make Russia into a major trading power. He has realized that international trade, as Britian well knows and the United States is reluctant to accept, is a major factor in extending political influence on a worldwide scale. It would also help his 7-year plan.

From the frank disclosures at the last plenum of the central committee, it would seem that Russia's industry needs far-reaching modernization—not an epochal change comparable to the industrialization in the thirties, but a major overhaul which, combined with the steady need for ever-greater expansion, will impose a serious strain on Russian resources.

Aristov's disclosure that in the 15 Russian Republics 400,000 machines have become obsolete and need replacing gives one an inkling of the problems involved. Add the complaint of the leader of Komsomol, the Communist Party's youth organization, that in the last 2 years Russia's institutes have graduated 24,000 historians and only 41 industrial electronic engineers, and it is clear that the manpower for this overhaul is inadequate.

Khrushchev's hopes for overcoming or bypassing some of these vast problems are pinned to what has become in Russia a magic word: automation. There is no doubt that automation of industry, in a centrally planned economy and with a relatively low standard of living, can help in leaping over many stages that other countries had to pass through one by one. The handling of this key problem may well decide the battle between the free enterprise and socialist economies.

Here is something that governments, industry, and trade unions in the West should study carefully before it is too late. The United States refuses to trade with Russia on a large scale in the hope that this will slow down Soviet economic development. But the answer must lie fundamentally in a constructive plan which will increase Western productivity rather than in a defensive atcion that is bound to fail in the end.

The cost calculations, I am told, radically change with automation to such an extent that Russia could not only satisfy her own needs in products to which it can be applied but also some of those of the underdeveloped countries at almost no additional cost.

The problem Russians are most reluctant to discuss is Communist China, partly perhaps because they sense it is an embarrassing one, partly because they are really quite unsure what to make of it.

The Soviet Government is said to be fairly confident that for the present it will be able to "handle" Peking. This is based on the conviction that Russia is bound to remain militarily and economically superior for some years to come. But beyond that no Russian seems to be very sure of the future.

The defeatism of some of the Russians about China's ultimately overtaking Soviet Russia was reminiscent of British forebodings late in the last century about the United States. I sensed the same feeling of inevitability among many Russians today that China one day would outclass the Soviet Union.

But as if to comfort themselves, they added: "But I don't think we will become

enemies." The optimists always said: "China is now going through her Stalin period."

The great problem in East-West power politics will be how to keep international tension on a low flame. It will not be easy, for Khrushchev is a bully, and bullies behave reasonably only when bullied back. His instruments are the bulldozer, the crane and the big earthmovers.

But Russia's need now is not for radical innovations. It needs cautious, patient diplomacy to bring Khrushchev's basic policies to fruition. That would enable her to concentrate on her economic development, on the race with the United States. But it is doubtful whether Khrushchev has the talent for patience.

For the West, a relaxation of tension is also the better alternative. Admittedly, the influence the West could have on developments inside Russia is extremely limited.

However increasingly thoughtful people may be in Soviet Russia, their influence on Government policies is nil except on minor domestic issues. Nor does history show that a higher standard of life is a special safeguard to peace.

There are, however, signs of evolution in the Soviet Union which the West should welcome. There is definitely a need to assure the Russian people of more and wider contacts with the West. Tourism, student exchanges, contact among experts, trade, exhibitions, all need to be extended.

These are small, limited steps but they have already contributed to a remarkable change of atmosphere in the Soviet Union. The changes in Russia will not come from the top, where a "club of vested interests" rules, but from below, however slow such a growing-up process may be. We must think not only of the present, but also of succeeding generations.

Mood Establisher

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. BARING. Mr. Speaker, many of you remember Velma Johnston, better known as "Wild Horse Annie," who recently came to Washington and appeared before the Judiciary Committee in behalf of my bill to prohibit mechanized roundups of wild horses and burros. I believe she won the hearts of every Member, not only the subcommittee but members of the full committee who were in attendance as well.

Certainly everyone who knows Velma loves and respects her. I thought you might be interested to know that in addition to risking her life to break up unlawful raids of our dwindling herd of mustangs, in addition to her love for horses she has championed for so many years, Velma has written prize winning articles and beautiful poetry.

In a recent letter "Wild Horse Annie" enclosed the following poem entitled "Mood Establisher":

MOOD ESTABLISHER
(By Velma Johnston)

The Roaring Twenties were giddy and bright,
Like a golden bubble of sheer delight.
And we who have lived them can recall
The years that were greatest of them all.

With a shimmy, a shake, and a razz ma tazz,
That sizzling decade gave birth to jazz.
And the songs that were written in Tin Pan Alley
Were nasally crooned by Rudy Vallee.

Gershwin gave us the "Rhapsody in Blue."
We danced to the band of Ted Lewis, too.
We had Texas Guinan with her "Hello, Sucker."
And the last of the Red Hots, Sophie Tucker.

Ours was an eat, drink, and be merry nation
Of flappers and shieks and the lost generation;
Of flagpole sitters and dance marathons,
Companionate marriages and a game called mah-jongg.

We wore ourselves out through the Charleston rage.
Mickey Mouse was born in that golden age.
If you played a uke, you were definitely in;
And a great movie star was Rin Tin Tin.

Tom Mix and Tony were a top western pair,
Our hand-cranked Fords always got us there.
A gum-chewing, rope-twirling guy named Will
Crept into our hearts and remains there still.

These things we recall with a sigh or a smile:
Sexy Mae West with her sensuous guile,
The "Big Parade" and "What Price Glory,"
Each one a poignant World War story.

If we had It we were sure to please,
And skirts were worn above our knees.
Raccoon coats and porkpie hats
Were all the go at college frats.

Valentino the Great rode fame to its peak
In a torrid drama called "The Sheik."
We had bootleggers, hip flasks, bathtub gin;
And thrilled to the novels of Elinor Glyn.

Al Capone ruled with a tyrant's hand.
There was Teapot Dome and the Ku Klux Klan.
Coolidge was President for a while.
Will you ever forget Jimmy Walker's smile?

To play at the Roxy on the Gay White Way
Was the dream of each actor in his day.
And income tax was a small donation
To pay the expenses of our own Nation.

From the silent films came something new:
The actors acted and spoke lines, too.
The splendor of color bursts onto the screen
And our eyes fairly ached with what they'd seen.

Lindbergh gained fame with his triumphant hop
From New York to Paris—nonstop.
In spite of predictions we'd all go to hell,
We turned out, it seems, remarkably well.

Sports were their best in this golden decade;
Titles were lost and new heroes were made.
There were Babe Ruth swatting his way to fame,
And the "Galloping Ghost" of the gridiron game.

The famous long count in the prize fight ring
Ended Jack Dempsey's reign as king.
Man O'War ran and won his last race,
Then sired sons to win in his place.

From its crude start as a crystal set
Radio emerged as the best thing yet.
In a mighty crescendo everywhere
Restless America took to the air.

It came to an end, this fabulous time,
With the crash of the market in twenty-nine;
And the era that lived in a glorious blaze
Has taken its place with our yesterdays.

Interview With the Honorable Dorothy McCullough Lee, Chairman of the Subversive Activities Control Board

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 31, 1959

Mr. NEUBERGER. Mr. President, one of the outstanding public officials produced by my State of Oregon has been Dorothy McCullough Lee, former member of the Oregon State Senate and former mayor of Portland. At present Mrs. Lee is chairman of the Subversive Activities Control Board. In the Oregon Daily Journal of Portland, of August 25, 1959, appeared a most informative interview with Mrs. Lee written by Alicia Hart of the Newspaper Enterprise Association. Mrs. Lee has described some of her views as chairman of the SACB, as well as some of her experiences which stem from 30 successful years in public life. I aks unanimous consent that this interview with the Honorable Dorothy McCullough Lee, a resident of my home community of Portland, Oreg., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIGHT REDS IN HOME, SAYS DOROTHY LEE
(By Alicia Hart)

WASHINGTON, August 25.—The best way housewives can combat communism is to see that the reputation of their communities is as spick and span as the inside of their homes.

Who says so? Dorothy McCullough Lee, Chairman of the Subversive Activities Control Board, ex-mayor of Portland and one-time child prodigy. She believes women should tolerate no condition that degrades or denies anyone his constitutional rights, because the Reds are constantly on the lookout for such conditions to feed their anti-American propaganda machine.

"Women should do their best to make their towns shining examples of what our democracy stands for," she says. "They should make sure that nothing occurs in their communities that violates the democratic concepts on which this country was founded."

One way to put this communitywide housekeeping vigilance into action, she explains, is by organizing and joining responsible groups to correct abuses. "A lot can be done through organizing," she says, "but not everything." She feels that another effective combatant is to personally contact neighbors and alert them to undemocratic situations.

"The more shining examples that other countries can see of the United States and its people in action, the more persuasive we

can be in selling democracy to them," she says.

She regards her service on the SACB as one of the most important and challenging jobs of her life. SACB is a five-member group, appointed by the President. It determines whether groups accused by the Attorney General of conducting Red activities are actually Communist dominated.

Mrs. Lee insists that the job has no place for the so-called woman's intuition.

"The SACB is strictly an open court with all the constitutional safeguards provided," she says. "It's a very meticulous and legalistic operation. The closest thing you can compare my job to is being on the bench.

"In this type of work you can't use intuition. It's a factfinding job. You can't guess. You have got to listen to evidence and decide the case impartially."

Anyway, Mrs. Lee says that she seriously doubts that there is such a thing as woman's intuition, at least the way the term usually is used. "Actually," she explains, "intuition is not a flash out of the blue. I believe it's knowledge that's based on your past experiences in life."

If Mrs. Lee's definition is correct, friends say that she should be one of the most intuitive people in the world. For she has lived all over the globe and worked in a wide variety of important and interesting jobs.

"Since my dad was a naval officer," she says, "I spent most of my younger years globetrotting. I grew up in Hawaii, the Philippines, Japan, China, Guam, and all the European countries except Spain, Greece, and Turkey. I had little formal grade school education. We were never in any place long enough."

Mrs. Lee received most of her early education from tutors. Until she entered high school in Newport, R.I., her only classroom learning consisted of two brief grammar school enrollments in San Francisco, and Switzerland. Nevertheless, she was graduated in 3½ years when she was 16.

By the time she was 22, she had received her law degree from the University of California. In 1929, Mrs. Lee was elected to the Oregon House of Representatives where she served 3 years. Then she was elected to the State senate and served there until 1943.

During her years in the State legislature, Mrs. Lee was also chairman of the Oregon Crime Commission, a member of the Portland Traffic Safety Commission, and a municipal judge. In 1948, while serving as Portland's commissioner of public utilities, she was elected mayor. She stayed in office for the next 4 years.

In 1953, the State Department sent her to Germany as a civil and governmental affairs adviser to German city officials. Later, President Eisenhower appointed her to the U.S. Board of Parole. She joined the SACB in 1956 and became its Chairman the following year.

Mrs. Lee is married and has two adopted children.

Recreation and the Colorado River Storage Project

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. ASPINALL. Mr. Speaker, the reservoirs that have been constructed in connection with our Federal reclamation program are today being used more extensively for recreation than any of us anticipated. Literally millions of people are visiting these reservoirs every year and benefiting from their recreational values. In my opinion, recreation should be considered a major purpose in developing the Nation's water resources. In this connection, I would like to include an excellent article from the August issue of the Reclamation Era discussing the tremendous recreation potential that exists in connection with the reservoirs to be constructed as a part of the Colorado River storage project:

RECREATION AND THE COLORADO RIVER STORAGE PROJECT

Today, more than ever before, the out of doors is providing the recreation opportunities people of this country are seeking for their increasing leisure time. In the past 10 years visits to national parks have almost doubled and visits to State parks have slightly more than doubled.

One of the major attractions is water—a lake for boating, fishing or swimming, or to provide a scenic setting for a picnic or a compsite. More and more, recreationists are looking for water where they may launch their boats. It is estimated that more than 7 million Americans now own recreational boats, about three times as many as 10 years ago. Rivers, the seacoasts, and natural lakes help to meet the demand for places to use boats, but in many parts of the country these resources are being supplemented, to an increasing extent, by manmade lakes.

Studies conducted for the National Park Service in various sections of the country have added to our knowledge of preferences affecting the demand for water-connected recreation. In the Southwest, picnicking, swimming, and fishing were found to be the three most popular forms of outdoor recreation. In the Northeast, these forms of recreation were included in the four most popular activities. In studies made in river basins in the Plains States and in the Middle Atlantic region, these activities were also found to be among the five top-ranking activities.

Each of the surveys contained questions designed to measure the extent of unmet recreation demand. Two of the studies provided an opportunity for the individuals reporting to indicate the number of persons not taking part in various activitise who would do so if the activity were readily available. In both of these studies, boating was found to be the top-ranking activity in terms of the number of additional persons who would like to participate. Fishing was in second place, while other top-ranking activities were picnicking, swimming, hunting, and ice skating. These answers, and the answers to similar questions in the other surveys, show a consistent pattern of high popularity for recreational activities that required water areas.

Recognizing the popularity of water recreation and the public demand to use reservoirs for recreation, Congress authorized recreation as one of the beneficial uses of the Colorado River storage project. Here is an opportunity not only to enjoy water-connected recreation but to do so in a region of top recreational appeal.

The scenic and scientific values of the upper Colorado basin have been known since the days of the early explorers. In 1941 the National Park Service undertook an extensive study of the recreation resources of the entire river basin. The report of the survey states: "The Colorado River basin is one of the outstanding recreational regions in the United States because of its great variety of natural scenery, climatic conditions, areas, and objects of scientific interest, and abundant evidence of prehistoric occupation. * * * Here one may enjoy a large amount of sunshine and find perfect climates and settings for various types of outdoor recreation the year around * * *. The majority of the proposed reservoirs * * * will create new recreational resources benefiting the basin."

The Colorado River Storage Project Act provides the broadest authority relating to recreation at reservoirs ever authorized by Congress to best promote recreational development and operation to serve the public interest. Section 8 of the act states:

"In connection with the development of the Colorado River Storage Project by the Bureau of Reclamation, including participating projects, the Secretary is authorized and directed to investigate, plan, construct, operate, and maintain (1) public recreational facilities on lands withdrawn or acquired for the development of said project or of said participating projects, to conserve the scenery, the natural, historic, and archeologic objects, and the wildlife on said lands, and to provide for public use and enjoyment of the same and of the water areas created by these projects by such means as are consistent with the primary purposes of said projects."

Following enactment of this legislation, the National Park Service began studies and plans for recreational developments and facilities at those reservoir sites where construction of the dams, by the Bureau of Reclamation, was underway or scheduled at an early date. For a number of the areas, only preliminary general development plans have been prepared, because of limited access to much of the area surrounding the larger reservoir basins.

A preliminary general development plan has been completed for the Glen Canyon reservoir area. This reservoir will lie in the heart of the canyon lands of southern Utah and northern Arizona. This area is one of the most rugged, roadless, and inaccessible regions within the continental limits of the United States. Lands on either side of the river canyons present a profusion of greatly eroded winding gorges, ridges, and hills. In the background, sheer cliffs and mesa-topped buttes, broken by an occasional mountainous uplift, complete a landscape of vivid color and awesome space. With the reservoir, relatively easy water access will be available to this outstanding canyon country.

The plan for recreation use of the reservoir area shows three major developments. The major sites, when fully developed, will provide facilities for activities directly associated with water and for camping and picnicking, as well as meals, lodging, and other services to the public.

First to be developed is the Wahweap site, an area a few miles northeast of the dam, in Arizona and adjacent to a new major highway. Adequate topographic data has made it possible to prepare a master plan for the area. The plan has been approved, and construction is underway and will continue as rapidly as funds become available.

Other major development areas are proposed in the vicinity of Warm Creek and the Colorado River and where Bull Frog Creek enters the river.

Minor development sites have been chosen at Hole-in-the-Rock and Shock Bar. These sites will serve the boat traveler and fishermen and offer limited accommodations and services.

The Bureau of Reclamation has provided vista houses and parking areas on each side of the river below the dam and has provided uniformed guides who can give information to visitors interested in the construction of the dam.

It is expected that the Glen Canyon Reservoir area will be administered by the National Park Service as a national recreation area, similar to the Lake Mead National Recreation Area. As a start toward

that administration, Mr. James M. Eden was assigned, in May 1959, as project manager of the recreation area, with headquarters at the Wahweap site and residence in Page, Ariz. As funds became available, additional personnel will be assigned for administration, protection, and interpretation.

The Service estimated an expenditure of $10 million as the cost of Federal recreation development at the Glen Canyon area. Concessioners will, no doubt, spend at least $5 million on capital investments. It is expected that the recreational use of the Glen Canyon area will be well over a million visitor-days annually.

An outstanding point of interest for the recreationists who will be attracted to the reservoir is Rainbow Bridge. This unique natural feature, protected for future generations by establishment of Rainbow Bridge National Monument in 1910, is greater than any other known natural bridge in size, color, and in its almost perfect symmetry. The arch of salmon pink sandstone, curving in the form of a rainbow, rises 309 feet above the bottom of the gorge.

Concern over the possibility that the Glen Canyon Reservoir might actually damage the natural bridge has been based on such factors as the effect of a permanent body of water at the base of the abutements of the bridge, or of wave action against the abutements, the change in the water table, and the composition and porosity of the rock. Authority to take action to avoid the danger of gradual disintegration of the rock foundation of the bridge is contained in the Colorado River Storage Project Act. The act provides that as a part of the Glen Canyon unit the Secretary of the Interior shall take adequate protective measures to preclude impairment of the monument. Under the Secretary's direction, the Bureau of Reclamation and the National Park Service have made joint studies to determine the best means of providing adequate protection.

Among the other areas where general development planning has been undertaken are the Flaming Gorge and Navajo units of the storage project.

Flaming Gorge Reservoir will provide a large body of water in a semiarid region enhanced by outstanding scenic surroundings. Located near the Continental Divide, with its north-south belt of national parks, national forests and resorts, the reservoir will be located in a vacation area long of national interest. Existing recreation facilities in the reservoir area are limited, and recreation facilities will be needed on the shores of the reservoir to accommodate the many thousands of visitors to whom this outstanding scenic area will become accessible.

The Flaming Gorge unit is considered to be of national significance, and recreation planning includes two major development sites north of the national forest, on each side of the reservoir near the Utah-Wyoming State line.

Recreation development along the shores of the Navajo Reservoir will help meet the rapidly increasing needs for outdoor recreation in the San Juan River Basin, an area long known for outstanding recreational appeal. The dam is being constructed in a deep canyon on the San Juan shortly below the mouth of its tributary, Los Pinos, and the reservoir located primarily in northwestern New Mexico will extend into Colorado. Major recreation development are proposed on each side of the reservoir a short distance from the dam. Among these is the Currecanti, a main unit of the development located in Colorado, which will consist of two or three principal dams creating reservoirs for additional recreation.

The recreational opportunities to be afforded by reclamation reservoirs are discussed at only three such sites in this article. However, it is anticipated that the Colorado River storage project will provide similar opportunities at an estimated total of 15 reservoirs ultimately. These will be located in the States of Arizona, Colorado, New Mexico, Utah, and Wyoming.

The phenomenal recreational use of reservoirs indicates that these recreation developments will result in significant monetary benefits to the surrounding area, as well as providing substantial recreation opportunities.

Generosity of Thinking

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. GEORGE. Mr. Speaker, with all of the waste and extravagance which has been unearthed with respect to contracts entered into by the Pentagon, it is encouraging to read an editorial such as that contained in the Kansas City Times—the morning Kansas City Star—of August 24, 1959.

This newspaper is known for not holding any punches in its editorial columns. The writer of this editorial appears to be far more generous in commenting upon the Pentagon's contracting procedures and planning than are many Members of Congress.

One of the greatest wastes on the part of the Defense Department is its failure to utilize existing facilities, and an outstanding example is the one-half-billion-dollar Sunflower Ordnance Plant near Lawrence, Kans.

Evidently one branch of the service is not concerned with property, facilities, or equipment in the hands of another branch of the service which could be used to the advantage of the Government and at a saving to the taxpayer.

Since I have been extremely critical of the Pentagon for betraying the interest of the taxpayers, Mr. Speaker, I feel it is only fair that this editorial be included in my remarks and printed in the Appendix of the RECORD so that all Members may have an opportunity to read it:

A HOPE FOR FEWER ABANDONED DEFENSE PROJECTS

Within 10 days two defense projects that cost hundreds of millions of dollars have been dropped. The taxpayer is likely to wince and ask: Is this sort of thing necessary?

Well, it probably has been necessary in some cases. But certainly not in all. The well-known enthusiasm of military careerists for their own service undoubtedly results in some ultimately abandoned projects which never should have been started.

In fairness to defense leaders, however, they are responsible for keeping the country out in front with new weapons, planes, and other equipment. As Rear Adm. John T. Hayward, the Chief of Naval Research and Development, said recently, the experts in his line of work can never afford to be satisfied. It is their job to prevent possible lags behind. Russia, insofar as they have the resources. And they point out that even canceled projects usually contribute important knowledge for futture projects.

Technical developments are bound to antiquate some programs. Two of those recently discarded illustrate the problem. Several years ago the Navy and the Air Force agreed on a need for high-energy aircraft fuel for future speeds of 2,000 miles an hour. Now, after 5 years of effort, the construction of five specialized plants and an outlay of $200 million, the Pentagon has decided that it no longer has a requirement for a fuel of this kind. Advances in the field of ballistic missiles have reduced the needs for faster manned aircraft.

Achieving Price Stability as a Basis for Economic Growth in a Free Society

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. RAY. Mr. Speaker, under permission heretofore granted, I am glad to bring to the attention of all readers of the RECORD a significant and timely address delivered last week before the corporation, banking, and business law section of the American Bar Association, by the Honorable Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers. The title of Dr. Saulnier's address is "Achieving Price Stability as a Basis for Economic Growth in a Free Society."

In line with Dr. Saulnier's emphasis upon the importance of maintaining price stability, I am introducing today a bill to amend section 2, the declaration of policy, of the Employment Act of 1946, by adding at the end of that section the words "under stable prices."

Dr. Saulnier's address follows:

ACHIEVING PRICE STABILITY AS A BASIS FOR ECONOMIC GROWTH IN A FREE SOCIETY

Mr. Chairman, ladies, and gentlemen, I am pleased to have this opportunity to talk to members of the American Bar Association. The brief remarks I have to make I shall direct to a problem in which I know you are keenly interested: How best to achieve stability of prices in our economy:

There are special reasons why this problem should be of particular concern to the Nation's lawyers. The avoidance of inflation is vital, not only to the achievement of orderly and balanced growth in our economy and to the progressive improvement of our economic well-being, but also to the permanence and vigor of the political and social institutions for which you have a kind of trusteeship responsibility.

A continuing upward trend of prices, even if it proceeds only slowly at first, would have the effect of quietly abrogating all contracts involving stated money sums. As lawyers, you know the variety and scope of such contracts, and the harm that is done when, for reasons beyond the control of the parties immediately involved, such contracts fail to work out as planned and as expected.

The erosion of contractual commitments which even a slow inflation brings about is bad enough; but there are other consequences that are worse. If we were to resign ourselves to the continuance of a moderate degree of inflation, the actual persistence of this condition would in time, and probably without long delay, have a

seriously adverse effect on confidence. What had started as a slow rise could then become a rapid upward sweep. We would see not just higher consumer prices, but also the assignment of unreasonable money values to equity interests of all sorts. I doubt that anyone seriously believes that such a surge of inflation, and the speculative excesses that would accompany it, could end in anything but a drastic corrective adjustment.

There is a grave danger, also, that an upward creep of prices, if it persisted for any length of time, and even before it turned into rapid inflation, would incite clamor for direct governmental intervention. No one should fall into the error of thinking that direct controls would succeed in controlling inflation. Instead, they distort and damage the economy without reducing the inflationary pressures which are the root cause of the trouble. And, if direct controls are carried far enough, they do critical and irreversible harm to our free institutions.

An inflationary trend also has consequences for our world economic position. The harmful effects of cost and price inflation on our ability to engage in the international competition—which, whether we like it or not, does exist—is increasingly clear. Whatever the possibilities of rigging our home economy with escalator devices in an effort to escape the differential impact of inflation, gadgetry of this kind is not available to us in our international economic relations. Nor can we find a viable solution by raising tariff walls or placing restrictive quantitative limitations on our trade with other nations. How could such actions do anything but harm to the free world community in which lies security and hope for the strengthening and further spread of freedom and democratic institutions?

Fortunately, the principal areas of policy to which we must look for the actions that will help prevent inflation are clear. So also are the approaches to policy that should be taken in each of these areas. What is needed most is a good public understanding of the problem and, based on that understanding, public insistence that the needed policies are in fact pursued. I welcome the opportunity to speak before this group on the broad approaches to policy which, in my judgment, are appropriate to the task of achieving price stability as a basis for economic growth in our free society.

There is no single area of policy on which we can place full reliance in a program to achieve price stability. Action is required in a number of areas and the only effective strategy is to harmonize policies in all of them, so that they reinforce one another. Let me begin with the area of monetary and credit policy.

Under our governmental organization, general monetary and credit policies are formulated and administered by the Federal Reserve System, established by the Congress as an independent agency. The continuing task of Federal Reserve policy is to see to it that the Nation's money supply expands sufficiently to facilitate the growth of the economy, but not so fast as to permit, let alone to induce, an inflation of costs and prices and of money values generally.

It is not an easy task to tell, year in and year out, where the line is that divides the increase in money supply needed to help promote economic growth from the increase that will permit or, still worse, promote speculative excesses and an inflation of costs and prices. This is a difficult technical problem, and in a dynamic economy such as ours judgments will often differ, even among seasoned experts, as to what tactic is right and what tactic is wrong. But there is a more fundamental problem here. It lies in the fact that monetary policy questions assume a distinctive cast or form in a high-employment economy such as ours. It is absolutely vital that we understand this form of the problem if we are to fight inflation in ways that are consistent with our traditional institutions. Briefly, the problem is this.

When demands for credit and capital are high and rising, as they are in our economy today, they tend to outrun savings and, in consequence, interest rates tend to rise. This is not a contrived result, but the normal reaction of a competitive market. Yet it inevitably occasions protests against what is alleged to be an excessively restrictive monetary policy, or tight money. There are things that Government can and does do to make credit more readily available in areas of the economy where such steps are needed, but we must avoid like the plague the pseudoremedy of seeking to lower interest rates by permitting an inflationary expansion of credit. The problem cannot be solved by substituting more money and credit for an increased supply of real savings. This will only cause prices to rise and, by undermining confidence in the value of money, actually cause interest rates, so far as they are free to move, to rise still further.

This is the easy money solution to the savings shortage problem, and it will not work. It is the inflationary solution, and it must be resisted at every turn. The right way to resist an upward trend in interest rates, and the only way that is consistent with the avoidance of inflation, is to promote the higher rates of savings that are needed for accelerated economic growth. And this is a case in which we gain strength from success. By following a monetary policy that avoids inflation, we eliminate one of the major factors making for higher interest rates, which is the expectation by investors that the value of the dollar they lend will fall as prices rise.

The way we manage our Federal debt is the second major element in an adequate program for preventing inflation. The total of this indebtedness stands today at close to $290 billion; on a net basis, Federal debt is equal to about half the net private debt in the United States. It is no wonder, then, that public debt transactions are the most significant single factor influencing capital and credit markets. In the fiscal year 1959 the public debt increased by $8.4 billion, but the Treasury's refinancing requirements were, of course, much larger. In the fiscal year 1960, with a balanced budget there will be no increase in the public debt, but refinancing needs of publicly held securities, excluding regular weekly Treasury bills, are estimated to amount to around $20 billion.

These large amounts of funds must be borrowed economically, of course, but they must also be borrowed with an eye to the effect of the financing on the inflation problem, and thus on our chances for achieving balanced and sustainable economic growth. It would be entirely false economy to borrow at artificially low interest rates today and, in so doing, to create inflationary pressures that would sooner or later increase costs and prices generally, including the costs of operating the Federal Government.

This can happen if Federal obligations are placed in excessive amounts in the commercial banking system, and the more so when they are placed directly in the central banking system. This so-called "monetization" of the debt, if it occurs on a scale that involves an increase in money supply by more than is warranted by the growth of the economy's real output, can create a serious inflationary potential.

In order to avoid this result, Government must be free to compete in the capital markets with other borrowers, public and private, at competitive interest rates. When there are effective limitations in the way of its doing so, Government may be compelled to do excessive amounts of financing—whether new borrowing or the refinancing of maturing obligations—on a short-term basis through the banking system. This is not the way to hold back inflationary pressures. It is not the way to hold prices steady. It is not the way to promote balanced, sustainable economic growth. Our laws should not, as they do at present, put the Federal Government in the position of having to manage its debt in ways that may create inflationary pressures.

Third, I come to the Federal budget. I do not put this critical area of public policy in third place because it is less important than the two I have already discussed. Indeed, the importance of proper tax and expenditure policies is such that we may properly regard them as the sine qua non of effective public policy in preventing inflation and promoting economic growth. Their importance lies partly in the kind of taxes that are levied on individuals and business concerns, and the kinds of spending which Government does. It lies also in the relationship between aggregate revenues and aggregate expenditures.

For present purposes we need consider only the budget or fiscal policy that is appropriate to a period of high economic activity and rapid growth. Under such conditions—with the Nation prosperous, with production, employment, and incomes rising, and with capital and credit demands heavy—what is needed is a budgetary surplus. This would yield a number of significant benefits. Thus, when its budget is comfortably balanced the Federal Government avoids being an additional claimant on funds in the capital markets. Government becomes, on balance, a supplier of funds, thus tending to ease the pressure of demand on savings and moderating whatever tendencies there may be for interest rates to rise.

Furthermore, a budgetary surplus limits the Treasury's financing needs to the meeting of seasonal requirements and the refinancing of maturing obligations. This reduces the chances of Federal debt being monetized and creating a potentially inflationary expansion of the money supply. It also gives the Federal Reserve authorities a freer hand in the administration of monetary policy.

Finally, a budgetary surplus would bring closer to hand the opportunity for constructive tax reform and reduction. From such measures we can expect to gain a powerful stimulus to economic growth.

But a budget surplus at a time like this would have another, and in some respects even more important, beneficial effect. The budget is uniquely the mirror of government. We are judged in large part by our attitude toward fiscal questions and by the way we manage the financial affairs that are reflected in the budget. A balanced budget at this time would be a sign to the world that we not only know what the right fiscal policy is, but that we have the skill and the willingness to pursue the right policy.

These are the three areas of public policy most significant for the prevention of inflation. But there is a fourth that should be mentioned. I believe it is less well understood than the others.

Over the years, the Federal Government has developed a number of programs that have a more or less direct bearing on costs and prices. I shall not try to list them all, but let me mention a few.

For one thing, we limit the flow of goods into our country by tariffs and by other restrictive devices. By reducing supply and insulating domestic production from foreign competition, these measures keep prices

at higher levels than would otherwise prevail.

Also, the Federal Government is itself a very large buyer of goods and services. Indeed, in some parts of the economy its procurement, or that done by its various tiers of contractors, virtually dominates the market. Even apart from the magnitude of procurement demand, the methods which Government follows in letting contracts and executing purchases may also invite cost and price increases that could otherwise be avoided.

In addition, the Federal Government has, for various reasons, entered into large stockpiling programs. Beyond their direct budgetary impact, these programs have the effect of raising prices or of holding prices of many key materials at higher levels than would otherwise prevail.

Finally, the Federal Government has entered into enormously expensive programs for the support of agricultural prices.

This is not an exhaustive list, by any means, but it will suffice to illustrate what I mean by Goverment activities that have a bearing on costs and prices. The fact that much of the impact of these activities is inadvertent makes them all the more deserving of attention. The various programs were established to achieve specific purposes and they must continue to be operated with these goals in mind. But is it not also reasonable to expect that their cost and price increasing impact should be held to the minimum necessary for the achievement of program goals?

As you may know, a special group was organized recently within the executive branch—the Committee on Government Activities Affecting Prices and Costs—to study and follow these programs on a continuing basis. I would expect this group to be an increasingly important arm of governmental policy in seeking to achieve reasonable stability of prices.

So much for the major areas of Government policy that are important to the prevention of inflation. Let me turn now to some questions having to do with policies and practices in the private sector of our economy. I shall restriot myself here to two important matters: the pricing policies of business concerns, and the impact of wage increases on costs and prices.

In many manufacturing industries, companies are reputed to have a wide range of discretion in price setting, but this power to "administer" prices, as it is commonly called, may well be exaggerated. The initial or listed price is not necessarily the final or the actual one. This fact, however, does not diminish the importance of pursuing pricing policies that will help widen markets, help keep the cost of living steady, and help promote sustainable economic growth. True, prices cannot be set or changed without due regard to cost, but it is essential to the effective operation of an enterprise economy that business concerns explore and exploit the opportunities they have, within cost limitations, to reduce prices while maintaining a satisfactory profit rate. In this connection, pricing formulas that may be based on experience in a sellers' market that no longer exists, or on invalidated beliefs as to the habits and preferences of consumers, should be reviewed and, if necessary, revised. But as I have already noted, prices cannot be set, or reduced, without regard to costs. And, since labor is embodied in materials and equipment in addition to being used directly in production, it is idle to think that prices can be reduced significantly without due regard to unit labor cost (including the cost of fringe benefits).

This brings us to the important question of productivity, which inevitably arises when wages and prices are discussed in connection with inflation. The connection between productivity and prices is a simple one. It is the concept of productivity that enables us to translate wages or average hourly earnings into unit labor costs, and it is the movement of unit labor costs (including the cost of fringe benefits) that is relevant to the trend of prices. If a rise in average hourly earnings (adjusted to reflect fringe benefit costs) occurs at the same rate as productivity improves, unit labor cost remains constant, and the opportunity to hold prices constant is enhanced. On the other hand, if this adjusted average rises more rapidly than productivity, unit labor cost rises, and pressure is created for prices to rise. Conversely, if this adjusted average rises less rapidly than the improvement in productivity, unit labor cost falls, and room for price reduction is created.

It is clear, then, that from the standpoint of inflation control the achievement of stable unit labor costs for the economy as a whole is a virtual necessity. This means that, for the economy as a whole, increases in labor compensation, on the average, should equate to productivity improvements, on the average. It does not mean that increases in the rate at which labor is compensated should match productivity improvements in every industry. Productivity gains vary a good bit from one part of the economy to another; and, since wage increases and fringe benefit improvements tend to be more uniform from one employment to another, stability of unit labor cost for the economy as a whole requires that increases that are almost certain to occur in some sectors should be offset by declines elsewhere. Clearly, these declines should come where productivity gains are especially rapid. And it is in these industries that it is most reasonable to expect the price reductions that are essential for the achievement of price stability over the economy generally. We should aim in these industries, not merely to hold prices steady, but to extend part of the benefit of productivity improvement to the general public in the form of price reductions.

When we consider the hardship that individuals suffer from inflation, it is not surprising that the case for a reasonably stable price level is frequently developed primarily on grounds of equity and fairness. But it is equally important to recognize that overall price stability is an essential condition for achieving steady and balanced economic growth. Far from being a goal that is competitive with economic growth, overall price stability provides the best framework for achieving sustainable growth. Could anyone believe that our chances of achieving a high and stable rate of economic growth in the months and years ahead would be improved if prices were expected to rise more or less continuously. Is it not clear that such an expectation, if widespread, would lead to even more rapid increases than were at first assumed? Is it not clear that it would tend to drive savings into speculative uses to the detriment of the more routine, but in the end more productive, uses of thrift? And is it not clear that an expectation of continual price increases would lead to imbalances in our economy which, while they might appear at first as an acceleration of growth, would lead in the end to severe economic reverses?

Fortunately, very considerable progress has been made in the fight against inflationary forces in the last year, and I think we can say that the outlook for price stability over the months ahead is favorable. We can be gratified that consumer prices have been relatively stable for the past year or more. But it would be a grave mistake to think that the threat of inflation has been permanently disposed of. The plain fact of the matter is that the threat has not been dispelled and that our vigilance respecting inflation must not be relaxed. If we are to achieve reasonable price stability we must not expand Federal expenditures without regard to revenues and pile up new budgetary deficits. We must not permit excessive credit expansion. We must avoid public debt financing of a potentially inflationary character. And we must not indulge in a wave of wage and fringe increases that outrun the productivity improvements that we can reasonably expect to be sustained over any significant period of time. Indeed, the formula for effective inflation prevention in our country today is exactly the opposite. The right national formula is to live within our means, to follow a prudent monetary policy, to conduct our public debt financing operations on a noninflationary basis, to hold average wage and fringe increases within the limits of average productivity gains, and to promote still higher levels of efficiency and thrift.

No one can give guarantees as to the effectiveness of particular policies, much less than he can give guarantees that needed policies will in fact be adopted. But I do feel entirely confident in saying that, if we pursue policies such as I have outlined here today, we can be reasonably certain they will keep inflationary pressures in check. And I feel entirely confident in saying that success in this effort will be a powerfully favorable factor in promoting the growth of our economy and the progressive improvement of economic welfare.

I look for success. Public understanding of the inflation problem and of the policies needed to prevent a persistent upward drift of costs and prices has improved enormously of late. It is on this improved public understanding that I base my belief that right policies will prevail, and that through right policies we will go forward to still higher levels of economic welfare.

Critical Counsel for Hébert Inquiry

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. GAVIN. Mr. Speaker, the House Armed Services Subcommittee on Special Investigations has been conducting hearings now for several weeks on the subject of "conflict of interests" as they affect retired officers of the Armed Forces.

One of the most perplexing problems which has confronted our committee is how to differentiate between "sales" and "technical liaison" activities of retired officers employed by defense industries.

Rear Adm. Chester Ward, Judge Advocate General of the Navy, has prepared a most interesting legal opinion on this question in which he concludes that—

Existing legislation expressly prohibiting retired officer participation in supplies and materials sales and sales contracting or negotiating activities, does not by implication prohibit their participation in the technical liaison process.

Admiral Ward's views have been brought to the attention of the Armed Forces and the farflung defense industries of the Nation in the August 29 issue of the Army Navy Air Force Journal.

Whether or not individual Members of the House agree with the Judge Advocate General's conclusions, they will find much food for thought in his comments on this complex matter, and I recom-

mend that they read his statement in the Journal.

I believe Members also will be interested in the Journal editorial on Admiral Ward's testimony. The editorial follows:

CRITICAL COUNSEL FOR HÉBERT INQUIRY

No single presentation, in our estimation, will provide the Hébert subcommittee with more effective assistance than the analysis which has been made by Rear Adm. Chester Ward, Judge Advocate General of the Navy. We are publishing his study at length in this issue and hope it will be read widely on Capitol Hill, at the Pentagon, and by industry.

Admiral Ward illuminates the difference between sales of consumer items—for example, beer—to Armed Forces installations and the development of weapons programs. He documents brilliantly the vital requirement for participation of retired military officers, with tifeir matchless experience, in the technical liaison process to assure U.S. weapons supremacy.

There is no doubt that one of the major issues to be tackled by the Hébert group in its report early next year will be a definition of "sales" activity limitations of retired officers. At present, the regulations vary among the services.

The Navy Judge Advocate General's presentation will provide a solid basis for the Hébert report to provide unified safeguards against any "sales" activities that are deemed improper for retired military people, but at the same time to insure that the national defense effort will be provided with the continued service of retired officers in the technical liaison field, which is where the vast majority of retired officers are making their contributions to industry.

The comprehensive inquiry being conducted by the Hébert subcommittee points to publication of a report which could very well broaden—not restrict—activities of retired officers. Admiral Ward's report is certain to strengthen support for their effective use in defense industries. Beyond this, the Hébert hearings have brought to light the urgent need to repeal of outdated "dual employment" and "dual compensation" laws, which are hindering employment of retired officers by Federal agencies concerned with defense requirements.

Carey's Arrogance

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. MEADER. Mr. Speaker, with reference to the threatening letter written to Members of the House who voted for the Landrum-Griffin labor reform bill, from Mr. James B. Carey, president of the Union of Electrical Radio and Machine Workers, AFL–CIO, I wish to call to the attention of my colleagues a further excellent editorial on this subject appearing in the Adrian (Mich.) Daily Telegram of August 29, 1959:

CAREY'S ARROGANCE

The threat of political vengeance made by James B. Carey, AFL–CIO vice president, to 229 congressional supporters of the Griffin-Landrum labor bill passed by the House is remarkable for its arrogance and also its emptiness.

It is arrogant because it assumes that the House Members will reverse their votes for a measure designed to curb labor racketeering and protect the rights of rank and file union members. It is arrogant because Carey wrote that "we wish to assure you that we shall do all in our power to prove to the working men and women in your district that * * * they should take appropriate action at the ballot box."

Carey was one of the labor bosses who fought so bitterly the adoption of the Taft-Hartley law. He declared that it would destroy the labor movement. He called it a "slave labor" law. But that law has been tested by time without the dire consequences he foresaw. Indeed, the labor union movement has been protected by it.

Carey's threat of vengeance against those who voted for the pending Griffin-Landrum bill is empty. It is empty because it is yet to be shown that Carey and his colleagues are able at will to deliver the votes of labor union members. Certainly they were not able to in their effort to unseat the late Senator Taft in Ohio. Instead Taft was reelected. And in that strong labor State his election had to come from the votes of hundreds of thousands of union members.

Carey calls the Griffin-Landrum bill a "vindictive assault on the labor movement." Is the requirement that unions must hold periodic elections with secret ballots such an assault? Does Carey think union members are incensed by the provision making it a crime to steal union funds? Or does he think union members should not like the provision to prevent their being intimidated by union bosses? The facts are that the bill is designed for the protection of members from overbearing union brass.

Also included in the measure are protections for the public against some of the unsavory things which the McClellan investigation has revealed. And the public is deeply interested. That was shown by the response to the President's address calling for a strong labor control bill. The House knew that response. It voted for the bill. It voted for it because the public wants such a bill. And it is the people who elect the Congress.

Our New Diplomatic Policy: Desperation

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. PUCINSKI. Mr. Speaker, following is an editorial which appeared in the August 28 issue of the New World, official newspaper of the Archdiocese of Chicago. I believe the author of this editorial raises an interesting question about our new foreign policy.

The editorial follows:

OUR NEW DIPLOMATIC POLICY: DESPERATION

(By W. F. Graney)

The reciprocal visits of Premier Khrushchev and President Eisenhower have drawn a great deal of crossfire criticism. The man who naturally must stand in its midst is the President for he was the one who extended the invitation. He must withstand criticism of his visit to Russia and of Khrushchev's visit here, even though the critics might think one side or the other of the reciprocation to be profitable.

But even his critics are caught in the crossfire for some others have blasted the criticism of the President as negative and not in the best interests of the commonweal.

President Eisenhower made an executive decision which took him off the narrow path between right and wrong. The critics of the criticism seem to have an unrealistic appreciation of a democracy if they think all Americans are going to back all executive decisions, even those made by a popular President.

The question of Khrushchev's visit to our country touches upon our national honor. We can reasonably expect then that a great deal of emotion will be mixed into the criticism or defense of the President's invitation.

The President himself has responded with emotion to the criticism by stating that he was giving the last atom of his strength in the cause of world peace. Surely there should be no critic of the President who questions the nobility of his motives or his patriotism. His record is a living proof of these.

What is questioned is the prudence of his decision. Perhaps the President could clarify his views for the Nation and tell us what he hopes the exchange of visits will gain for our Nation and the cause of world peace.

Until then we are reduced to exploration of what others tell us are possible advantages. We hear that Khrushchev will come to know better our military and economic strength and so appreciate the power of our bargaining position in world affairs. We are told his visit will impress upon him the high standard of living which we enjoy in America; so he will better understand our willingness to defend our country.

These and similar hopes seem to be based on efforts to talk to the Communist in materialistic terms with which he should be familiar and willing to accept. Perhaps this is the only approach, but haven't we abandoned too easily our insistence on spiritual values, especially the one great political spiritual value of freedom?

Shouldn't we keep on insisting that we would fight for freedom even though it didn't bring so many of our material advantages? Shouldn't we be constantly bringing up the captive nations of the Communist empire who are deprived of freedom?

Even though our gullible Nation has been conditioned to publicity buildups, we can be fairly sure Khrushchev will not sell himself to Americans in 2 weeks. He has received too much adverse publicity to wipe it all out with 2 weeks of smiles and handshakes over vodka cocktails.

While our Nation may be able to withstand the propaganda, the other nations of the world are not in the same situation. The archbishop of Bologna, Italy, Giacomo Cardinal Lercaro, who has been a successful battler of the Communists in his See city and who is accustomed to the infighting, said here this past Sunday that the people of Italy, for instance, were left "sad and bewildered" by the invitation extended to Khrushchev to visit the United States.

Those people who are looking for a convenient peg upon which to hang the compromise of their conscience if they accept communism find it now in this invitation. They say, "Look, communism cannot be too bad if the President of the United States invites Khrushchev for a visit."

And who is able to measure the effect of this invitation on the morale of the people subjugated throughout the world to the Communist domination? Is this the last straw that will break their spirit? At least we can suspect many will be as confused as the Americans who do not understand the invitation.

If the Communists had ever given evidence of good faith, we could have hope that such an invitation could be of some help in preventing war. All the evidence, however, points to the fact that the Communists are not relinquishing their aim of world dom-

ination. If war serves their purpose, there will be war.

The invitation indicates a shift in our diplomatic policy that is confusing. For no apparent reason we seem to have stumbled back from the brink into a diplomacy of desperation.

No Logic in Politics, as TVA and Now Trinity Project Show

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. UTT. Mr. Speaker, to quote a sentence from an editorial of August 5, 1959, which appeared in the Grass Valley (Calif.) Union, is to point up an unfortunate and tragic truth, which we have seen proved again in recent weeks:

That logic has no place in politics is made glaringly clear in a couple of matters that currently figure in national politics, one of which is of special interest and particular importance to the California economy, namely the development of the Trinity River's natural potentialities.

I feel that the expansion of this thought merits the consideration of each of us, and I ask that the editorial be printed in its entirety, as follows:

[From the Grass Valley (Calif.) Union, Aug. 5, 1959]

NO LOGIC IN POLITICS, AS TVA AND NOW TRINITY PROJECT SHOW

In most political conflicts it is usually futile to look for logic or even disinterested consideration of opposites.

That just isn't the way of politics, which is not a long-studied and hard-won science but more a game of skilled maneuvering when it doesn't descend to outright horse trading or temperamental fight of unyielding fanatic ideologists.

This is proven daily in different ways in the widely varied matters pertaining to contemporary life that came before the great legislative institution in Washington.

That logic has no place in politics is made glaringly clear in a couple of matters that currently figure in national politics, one of which is of special intrest and particular importance to the California economy, namely the development of the Trinity River's natural potentialities. The other is whether the Tennessee Valley Authority should be allowed further uncontrolled expansion and be allowed to create its own debt outside the Federal budget by issuance of $750 million of its own bonds.

To take this matter first. TVA was created in 1933 as a Government corporation to administer a navigation and flood control project. In the 26 years since then the Government has invested in this project $2,047 million. But most of this has not been for the original purpose, flood control.

It was understood that TVA should generate some hydroelectric power as an "incidental byproduct." By skillful political maneuverings this incidental byproduct has been made the main purpose, and TVA is now primarily a power producer.

The "incidental byproduct," hydroelectric power, amounts in reality to about 10 percent of the activities of TVA. That is all the water will permit. But in spite of that another 70 percent of TVA activities is power production—by steamplants.

All this—$2 billion worth—has been done by interest-free money taken from all the taxpayers of the United States and without giving back any taxes to the Treasury. And it has been done in direct competition with private power companies in the region who have to pay not only interest on working capital but also 52 percent taxes annually.

There is certainly not much logic in that.

As to Trinity River:

In 1937 Congress authorized the Central Valley project. Trinity River was included in this to prevent its water from going to waste by diverting it through a tunnel system (now being constructed) into Sacramento River.

In the course of development of these plans, the Pacific Gas & Electric Co. offered to finance construction and operation of the Trinity power facilities and pay the Federal Government for use of the project's falling water: $60 million for construction and $4½ million a year for the falling water. Besides that, Pacific Gas & Electric would over the usual 50-year period pay $145 million in Federal, State, and local taxes.

The Department of the Interior, on direction from Congress, studied this proposal, and 2 years ago Secretary Seaton, with reference to President Eisenhower's then recently published partnership idea, urged Congress to accept the Pacific Gas & Electric offer as not only financially sound in relieving the Federal resources to the tune of $300 million but also advisable because it would speed up the completion of the entire Central Valley project.

This plan appears perfectly logical and full of plain commonsense. But, naturally, it meets political opposition from legislators that, come hell or high water, adhere to the tenet that public ownership and operation of productive facilities should be continued and expanded regardless.

What could be more sensible than a genuine get-together of governmental agencies and investor-owned business in a partnership to put the country in a sound and safe condition to go full speed ahead.

The President's Veto of the Public Works Appropriation Bill

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mrs. KEE. Mr. Speaker, I was more than deeply distressed over the action of the President of the United States in vetoing the public works appropriation bill for fiscal 1960. In view of the fact that the House of Representatives and the U.S. Senate appropriated funds for these flood control projects after full and complete study, and the fact that each project was found to be fully and completely justified, it is my earnest hope that the Congress of the United States will override the President's veto. Unless we are successful in our efforts, our American taxpaying citizens residing in these affected areas will continue to suffer unnecessary flood damages. Therefore, Mr. Speaker, I will continue to do all within my power to see that this measure is passed over the President's veto by the necessary two-thirds majority.

Little City, Dream Community for the Mentally Retarded

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. PUCINSKI. Mr. Speaker, it gives me extreme pleasure today to include in the CONGRESSIONAL RECORD a speech recently made by my colleague, the Honorable JAMES ROOSEVELT, at the dedication ceremonies of Little City, a dream community for mentally retarded youngsters, which is being built on the outskirts of Chicago's great Northwest Side.

I should like to associate myself with the penetrating remarks of Congressman ROOSEVELT and congratulate those wonderful people of Little City, Inc., who have undertaken this great project of mercy for the mentally retarded children of America. To these fine sponsors of this project go the heartfelt thanks of parents throughout this country who so frequently recognize the problems of a retarded youngster but tragically are unable to find adequate facilities for relief.

I am proud that Little City lies practically in the shadow of my district, and I am sure that in due time, from its humble beginning will rise an institution of mercy for the mentally retarded youngsters of America who need help so urgently.

Mr. Speaker, Congressman ROOSEVELT's remarks follow:

LITTLE CITY, DREAM COMMUNITY FOR THE MENTALLY RETARDED

Ladies and gentlemen, Little City is a magic word for all of us here today. For some it represents weeks and months and years of planning and hard work. For many this community is a single avenue of hope in an otherwise gloomy landscape. For still others like myself, Little City represents a monumental achievement, a soul-lifting experiment.

Today we humbly dedicate this new community. I stress the word community for this is not merely a home, a hospital, a school, or a center, but a little city for mentally retarded children. This city will not limit its assistance to the 50 or 60 children who will enter this fall. Plans have already been made to expand the facilities to care for 500 children. The opportunities for research in this environment will extend the benefits of this community to countless numbers of mentally retarded children and their families in this and other countries.

These 60 acres of land on Algonquin Road will be a paradise for mentally retarded youngsters. Here they will be able to develop to the fullest extent their abilities in a sheltered and peaceful atmosphere. This community as part of the larger community will be a testimony to the shared responsibility of individuals in our society for this problem. Three out of every one hundred children in this country are born retarded, and the parents of these children will know that they now have the assistance and support of others. They have already accomplished so much through their own volunteer organizations, and I think it is high time that such a project be undertaken by the whole community.

I was very much interested in learning about a study conducted by the Public Institutions Committee of the National Association for Retarded Children. May I quote a passage from the foreword of this 1958 study. It states:

"It is bitter irony to tax parents for the unavoidable misfortune of having a retarded child. We must wonder if it is consistent with American social philosophy to require that parents of mentally retarded children pay taxes to support public education facilities which exclude their children, when there is a price tag on their attempts to obtain equal benefits for their children in public institutions."

This study revealed that only 3 States make no financial charge for the care, training and treatment of persons in State institutions; that 2 States allow for voluntary charges; and that the other 42 States having such institutions levy charges. The study further showed that most parents of handicapped children expect to assume financial responsibility for the basic support of their child. However, they need assistance in meeting some of the extraordinary demands created by the handicapped condition. Often the financial strain of meeting costs of needed services before placement in a State institution leaves the family resources well drained. Many feel that the care and training of a person in an institution should be regarded in lieu of public school education.

These facts are not new to those of you here today. I am sure you have struggled with these realities and attempted to put across your points of view to public and private groups. May I say that I am encouraged each year to find that the public awareness of these problems is constantly increasing. The very achievement of this dream community is an indication of greater understanding by the community as a whole of the needs of the mentally retarded.

One of the most inspiring aspects of Little City from my point of view is that here at last the total needs of the mentally retarded will be met. So many of the existing programs are what we have been accustomed to term "half a loaf" programs. That is they go part of the way in meeting a special problem, but then they stop. For instance, a family may be able to provide their mentally retarded child with a little education. But this is not enough if proper medical care and vocational guidance cannot be obtained. To turn to another example, much excellent research is currently being carried on in mental retardation. If this research is conducted in an ivory tower or does not reach the people who can use it, the efforts will have been largely wasted.

In Little City these problems will not be present. Here mentally retarded people of all races and creeds will have a home as long as they need or desire it. There will be no fear of expulsion upon reaching a certain chronological age which may bear no relation to individual development.

Every individual will learn at his own rate, will set his own pattern, will live in a community where his behavior is the norm. No longer the outsider, he will participate as a member of his own little city. Fields, orchards, and gardens for some to cultivate; schools for those who can benefit or a home tutoring service when this is more profitable; community church, movies, square dancing, playground—all these will make up a rich and full life for these youngsters.

Of course, these plans require financial support, and many of you have already been asked to contribute or have solicited others for funds. It is my belief that this is one project which sells itself. The ingenuity and intelligent planning of such persons as Mrs. Deliah White, Ben Sears, and the many others who have so carefully thought through every detail of this program, will be rewarded, I feel certain, by the wholehearted support of the entire community.

Your Federal Government has also shown its special concern for the mentally retarded in a number of ways. Today I would like to discuss with you some of these programs. It seems to me that constant awareness and recognition of these activities are essential to their continued successful operation. Only through the enlightened experience of citizens and parents such as you who are present will we be able to judge whether the programs on a national scale are meeting the real needs of the mentally retarded, are being efficiently administered, and are generally available to those who need them.

The very existence of governmental programs to aid the mentally retarded is open acknowledgment by the national community of their responsibilities in this area. These programs are prompted by the same kind of civic spirit which has moved you to build Little City. There are nearly 5 million mentally retarded individuals in this country and they cannot and must not be ignored. To use the words of the Department of Health, Education, and Welfare in describing its various programs:

"From a number of standpoints progress is being made in the field of the mentally rearded as outgrowths of an increased public awareness and understanding of the problems both in Government and in private life with individuals and voluntary organizations and the increasing advances being achieved in medicine, welfare, education, rehabilitation and related fields. The cross-fertilization and collaboration of many disciplines are also bringing to pass the more effective knowledge concerning the prevention of the handicaps together with improved understanding, treatment, care, and prognosis of those who manifest the several difficulties in the functional sphere."

Responsibility for the Government programs aiding retarded individuals is lodged in the several agencies of the Department of Health, Education, and Welfare. You here in Little City are blessed with the opportunity of meeting nearly all the demands of the children who will come under your care. Unfortunately the Department can in no way approach this goal for all the mentally retarded children throughout the country. They have attempted to utilize their existing programs in the best possible way to assist these handicapped children. Legislation over the years has continued to increase the responsibilities of the Department in various areas.

The Department is most conscious of the need to have a balanced approach to mental retardation. They have formed a departmental committee composed of representatives from various operating agencies to cooperate in and coordinate their programs.

I, and a large number of my colleagues, have found these governmental programs most encouraging and we have continual reports of their fine accomplishments. Many of you have had direct contact with some of these programs and for you I hope that what I have to say will not be too repetitious. It is my hope that a description of the national impact of these programs may be of interest and that perhaps there will be some aspect of these activities with which you are not familiar and about which you would like to be informed.

The Federal Government has been especially active in five areas: education, vocational rehabilitation, medical research, Children's Bureau assistance to the States, and direct benefits under social security. These programs correspond to certain of the needs of the mentally retarded. Needless to say, it is difficult to categorise them, and it is perhaps more meaningful to talk about some examples of their activities.

The Office of Education of the Department of Health, Education, and Welfare has performed a vital task in preparing, collecting, and distributing information on all exceptional children as well as mentally retarded and has prepared exceedingly valuable reports on curriculum and classroom methods as well as numerous other aspects of education of the mentally retarded. This is an attempt to aid the State and local school programs by making available to all the very latest developments in this rapidly growing field.

The second major responsibility of this department and one which is important in all phases of work with the mentally retarded is the securing of qualified personnel. No amount of knowledge on modern teaching methods, no increase in the number of facilities will compensate for the lack of qualified personnel. The closing days of the 85th Congress were exciting days for those interested in this problem, for with the passage of Public Law 85-926 came the authorization for a program to train personnel to teach the mentally retarded. One million dollars for this program was included in the President's budget for fiscal 1960 and this sum has been appropriated by Congress. The Office of Education has been actively engaged in preparing to administer this project and three conferences with interested parties have already been held. This program will go a long way in narrowing the glaring inadequacies in the provision of education for mentally retarded children in this country.

In another area, that of vocational rehabilitation, mentally retarded individuals have been eligible for Government services since 1943. It is estimated that in the next 2 years alone, over 2,600 persons will be rehabilitated into gainful employment. This is difficult task but the Office of Vocational Rehabilitation is constantly striving to meet the challenge of rehabilitating the mentally handicapped. Cooperative programs with State vocational rehabilitation agencies and public school systems have been important. In two States "halfway houses" or "rehabilitation houses" have combined rehabilitation with living arrangements. Of course the mentally retarded children who come to Little City will have all this and a lot more. Perhaps some of the results of your experience will be an inspiration to the Federal programs.

In the field of rehabilitation too, there has been a shortage of qualified personnel. To meet this problem, the Office of Vocational Rehabilitation is granting funds to educational institutions all over the country for the training of personnel in this field.

Among the most encouraging activities in this field are those being carried on in Bethesda, Md., at two of the National Institutes of Health—the Institute of Neurological Diseases and Blindness and the Mental Health Institute. Here research scientists are struggling with the perplexing problem of what causes mental retardation. I feel certain that all of you in the audience today await a more complete answer to this question with bated breath.

Surgeon General Burney has recently announced a 5-year survey of 40,000 women to find the causes of mental retardation and kindred defects. Already investigators in Puerto Rico have recorded brain damages in monkeys cut off from a supply of oxygen at birth. This has prompted intensive study of the relationship between asphyxia and mental retardation. Scientists are also studying the effects of encephalitis and German measles in the causation of mental retardation. Geneticists are studying family records to determine the influence of congenital malformations.

The National Institute of Mental Health is conducting a valuable research program through the awarding of research grants to

qualified applicants. Approximately 50 different projects are now being supported. The Institute is also a central point for the collection of data on patients in resident institutions for the mentally retarded throughout the country. This information has been tremendously useful, and, as a matter of fact, formed the foundation of the study of the National Association of Retarded Children which I mentioned earlier. The Institute also carries on training programs and provides assistance to the States and communities through its Community Services Branch.

The Children's Bureau also aims to help the States and communities. Activities include public information, consultation, and the provision of grant-in-aid programs to encourage the extension of existing State and local service. Demonstration projects have been especially useful in showing the kinds of services needed for the preschool child. These have included casefinding, evaluation and diagnosis, followup care and home training.

Finally, I turn to a Federal program which has filled a desperate need for financial assistance for so many families. This is the protection available under social security for the mentally retarded. According to the provisions of various States, the mentally retarded receive assistance under the program of aid to the permanently and totally disabled under the public assistance program. Coverage under old-age and survivors and disability insurance is also an important source of assistance. The 1956 and the 1958 amendments to the Social Security Act broadened coverage to make childhood disability benefits available for seriously disabled persons whose disability began before age 18 and has continued without interruption since that time, and whose parents died insured or are receiving retirement benefits. Mentally retarded persons are heavily represented among those who qualify for these benefits. The importance of making the public aware of these provisions cannot, of course, be overestimated.

So at the national level, as in Little City itself, a variety of professional disciplines and resources are being used to meet the tremendously complex problem of mental retardation. For much of this century retardation was a wholly neglected field. Mental retardation was assumed to be a single disease entity largely determined by heredity and unresponsive to treatment. Today we know these precepts to be false. At last we are building up our community services, our institutions, our educational facilities. Little City is a bright star in this development. You are in the vanguard of progress, and let us hope that you will soon be followed by many others.

You have understood the message of Mrs. Pearl Hurwitz, a leader in the field of mental retardation, who, writing in the Radcliffe College Quarterly for February 1957, attempted to explain the great upsurge of popular interest in mental retardation. She said: "It is because the world is very much with us today. We know (many of us subconsciously) that if our way of life is to survive, every individual, be he handicapped or whole, be he white or black, be he a privileged American or an underprivileged peasant in India, every individual must be counted an individual and accorded his place in the sun.

"For every person who is discounted, by so much do we allow for the spread of discontent; for every person whom we help to attain his life stature, by so much do we prevent the spread of strife.

"We are becoming aware that preventive hygiene must expand beyond total inoculation from communicable disease to total service for every disabling condition, or we are liable to be afflicted by the consequence. The social loss or the social gain is shared by all."

Today we dedicate Little City, a living example of the shared responsibility of many for the needs of the mentally retarded.

Address by Vice President Richard M. Nixon at American Legion Convention

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. FULTON. Mr. Speaker, a current topic of interest, and of great debate throughout our good country, is the approaching visit of Nikita Khrushchev.

Under leave to extend my remarks in the RECORD, I am including an excellent speech by Vice President RICHARD M. NIXON at the convention of the American Legion in Minneapolis, Minn., last week:

EXCERPTS OF REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE 41ST NATIONAL CONVENTION OF THE AMERICAN LEGION, MINNEAPOLIS, MINN., AUGUST 25, 1959

I recognize that there are a substantial number of Americans in this audience and throughout the Nation who are deeply concerned about the visit of Mr. Khrushchev to the United States. There are many who believe that no good and much harm can come from such a visit.

There is no question but that there are minus as well as plus factors in appraising the possible results of the Eisenhower-Khrushchev exchange of visits. On balance, I believe the decision to invite Mr. Khrushchev to come to the United States was correct.

In indicating my reasons for reaching this conclusion, may I first remind you of the background from which I speak. I have made a comprehensive study of the philosophy, tactics and strategy of communism as set forth by Marx, Lenin, Stalin and other Communist leaders. On the basis of those studies, I know that Communists throughout the world are united in working for one objective—Communist rule over all the people of the world.

I know from experience that the Communist Party in the United States, like all Communist parties throughout the world, is directed and controlled from Moscow and has in the past and will in the future engage in espionage and subversion in order to serve the interests of Communist governments wherever they are opposed to those of the United States or other free nations. And I can vividly recall that it was just a little over a year ago Communist-led mobs made an unsuccessful attempt on my life in Venezuela.

I have just returned from the Soviet Union where I have had the opportunity to speak at length with Mr. Khrushchev and to appraise the present tactics and strategy of the world Communist movement. On the basis of that visit, I can say unequivocally that the only significant change in Communist tactics since the death of Stalin is that Mr. Khrushchev and other Communist leaders now say they will accomplish their objective of world domination without resort to war.

Subversion and espionage in the United States and other non-Communist countries continue to be directed and supported by the Communist Party of the U.S.S.R. The rigid positions of the Soviet Government on such issues as Berlin, disarmament, setting up an inspection system for prevention of surprise attack, and ending atomic tests, are the same now as they were before these visits were announced.

It would be naive and wishful thinking to assume that the visit of Mr. Khrushchev to the United States will result in any basic change in the Communist objective of world domination or their adherence to policies designed to achieve that goal.

We should be under no illusions that Mr. Khrushchev's belief in the superiority of the Communist system will be changed in any significant respect by his seeing the great productivity of the American economy. Everything he sees in the United States will be seen through Communist eyes and the picture will be distorted or magnified so that it fits into the rigid description of free societies which the Communist doctrine has painted for over 100 years.

Nor should we be under any illusions that better understanding between the Soviet leaders and ourselves is all that is needed to resolve our differences and to assure peace. There are some deep and basic conflicts of interest and ideology which all the good will and mutual understanding in the world will not settle. Charm, words of friendship, gracious toasts, are not going to have the slightest effect in deterrring Mr. Khrushchev from his basic objectives.

What useful purpose then will this visit serve? Putting it in its simplest terms, while understanding alone will not bring peace, misunderstanding could provoke war. And it is because his visit can serve to reduce the possibilities of such misunderstanding that it could contribute to the chance that we can settle our differences without war and, therefore, deserves the approval of the American people.

What does Mr. Khrushchev really believe about the United States and the free world?

Based on my conversations with him and my analysis of the statements he has made, publicly and privately, through the years, here is a thumbnail sketch of a man who holds in his hands the greatest power any one man has ever held in the history of civilization—who by his decision alone could press the button which could start a chain reaction which would destroy civilization as we know it.

First, here are some things he believes which are true. He is aware of the fact that the United States has great military strength. While he constantly boasts of his superiority in the missile field, he has publicly stated in his speech at Dnepropetrovsk on July 28 that no nation today can initiate a war without suffering terrible destruction in return.

He knows the United States is a rich country economically with a high standard of living. He has paid us the compliment of setting as the Soviet goal, catching up with and passing the United States in the production of consumer goods.

I believe he is convinced that President Eisenhower is a man who wants peace and who insists that the United States remain strong only because he believes this is the way to keep peace.

But he also has some dangerous misconceptions about the United States and the free world which, in the mind of a man with such awesome power in his hands, constitute a terrible risk to the peace of the world.

Here are some of the things he presently believes about us and our policies:

"Freedom in the United States exists only for those who have money and power and not for the working people.

"Capitalists in the United States have turned the society in which they rule into a paradise for the rich and a hell for the poor—

a kingdom of the dollar, of harsh exploitation of millions of people to enrich a handful of monopolists.

"In the United States and other free countries the working people are given the right to vote for various representatives of the ruling class but have no right to participate in the work of the legislative bodies.

"However, beautifully the ideologists of imperialism may dress up the capitalist system, it still remains a system by which millions of people are enslaved by a comparatively small handful of exploiters, a system in which poverty and mass unemployment reign."

The words I have just quoted are not mine but his, taken directly from his public statements. And these ideas he reiterated to me in my conversations with him. Because he believes these things he has reached other conclusions which he has stated to me and to others who have talked with him; that millions of people in the United States do not support the President in his firm stand against Communist aggression; that both of our major political parties are controlled by a few rich monopolists and are not responsive to the will of the people; that our economy has reached its peak and is on the way down; that the nations of the free world alliance are divided and when the chips are down will not unite in resisting aggression.

Put yourself in his place. If you possessed great military strength with uncontrolled and absolute power to use that strength to accomplish your purposes; if also you were fanatically dedicated to the philosophy that your economic and political system should and would rule the world; and if in addition you believed you were confronted by opponents who were divided and who lacked the will to resist aggression, would you not be tempted to be far more aggressive in your policies than if you had other ideas as to the strength and will to resist of those who might oppose your aims?

Mr. Khrushchev will be here for only a relatively brief time, but, in his conversations with President Eisenhower and in his trip across the country, there is no doubt in my mind but that he will see and hear some things which will change his preconceived notions about the United States and which in turn will give him pause before he embarks on a course of action in the future which might be contrary to our vital interests.

He will find that not only are we strong militarily and economically, but that the American people have the will to use their strength to defend our freedom or the freedom of others any place in the world. He will find that the overwhelming majority of the American people are as dedicated to our system as he is to his. He will find that we will no more tolerate being pushed around than will he.

In a nutshell, if we are to have a Soviet leader with such power in his hands, it is better to have one who knows the world than one who is isolated in the Kremlin.

But what about the danagers of such a visit? There are some who fear that the American people will be lulled into a false sense of security and trust by this exchange. I think that those who believe this to be the case underestimate the intelligence of both our people and our leaders.

It is true that throughout American history we have a record of being a trusting and forgiving people in our relations with other people, but it is also true that we are a people who do not like our trust betrayed and when it is we react accordingly.

When President Eisenhower meets Mr. Khrushchev, you can be sure he will have in mind: The record of major treaties and agreements broken by the Soviet Government—50 out of 52 since 1933; the fact that subversive activities against the United States and the governments of other free nations continue despite Soviet protestations to the contrary. There will be fresh in his memory the fact that Mr. Khrushchev failed to carry out the commitments made at the last Geneva Conference and instead encouraged and stimulated Communist probing actions against the free world in the Middle East and the Far East. And if there was any doubt that we would go into this conference with our eyes open, the Soviet Government's support of the Communist forces in Laos provides a grim and timely warning of what we should expect.

I have had the rare opportunity of seeing both Mr. Khrushchev and President Eisenhower in action both publicly and privately, and I can assure you that the fears of those who believe that President Eisenhower may be taken in or bluffed by Mr. Khrushchev are completely without foundation. There is no doubt whatever but that the interest of the United States and the free world will be vigorously, firmly, and aggressively represented by the President in this meeting.

Another objection to the visit is the possible effect on our allies. The President's trip to Bonn, Paris, and London, provides a complete answer to this objection. As the President has made abundantly clear, it is not the American way to negotiate, in the absence of our allies, problems that vitally concern their future. We reject the concept that two great powers—the United States and the U.S.S.R.—should decide the fate of other peoples without consultation with them.

A major objection to the visit is the effect it may have on the captive peoples of Eastern Europe. You can be sure, however, that under no circumstances will this exchange of visits result in statements or actions on the part of the United States indicating our approval or acquiescence in the status of the peoples of Eastern Europe.

We do not question the right of the people of these countries, or any other for that matter, to have a Socialist or Communist government if they so desire. But we believe that all people should have a right to choose the kind of government they want. The people of the satellite nations of Eastern Europe have never had an opportunity to exercise that right since World War II. We recognize that their right of choice cannot be obtained by armed intervention on our part. A so-called war of liberation would liberate only dead bodies and ruined cities. But we will continue to support through peaceful means realization of the objective that the peoples of these satellite countries be given the opportunity to choose the kind of government they want.

I believe that the American people should give Mr. Khrushchev a courteous reception when he visits the United States. I do not suggest this because I believe a courteous reception is going to affect, one way or the other, his ideas about our system, but because this is the American way of doing things. Visitors in our country, regardless of how much we disagree with them, should not be subjected to the rowdyism and riots for which the Communists were responsible when I was in South America.

The discussions President Eisenhower will have with Mr. Khrushchev, involving as they do such basic differences and conflict of interest, will be difficult at best. In the cause of the peace with justice that we all want, let us by our conduct see that those discussions are conducted in the best possible climate.

Economic Statesmanship in the Philippines

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. HOLTZMAN. Mr. Speaker, a significant statement bearing on the fundamental foreign policy of this country, recently caught my attention. I refer, in this instance, to a brief summary of a speech delivered by Mr. Herbert L. Barnet, president, Pesi-Cola Co., New York, whose international operations extends to 81 countries. This company has opened 30 new plants in 21 countries in 1959, and plans additional expansion in nine countries in 1960.

As summarized and as highlighted, Mr. Barnet called upon and exhorted the business and industrial leaders of our country to exercise a higher degree of "economic statesmanship" in support of the foreign policy commitments of the United States to underdeveloped countries in Asia, such as our close friend and ally, the Republic of the Philippines.

While Mr. Barnet in his speech directly asked the business and industry leaders of our country to support the current efforts of our sister republic in Asia in her march toward national progress and economic prosperity, yet, the valid concepts that he developed, particularly on those relating to an active participation by our leaders toward the development of the so-called underdeveloped areas on a private-initiative basis, indicate his broad grasp of the fundamental bases of our foreign policy and marks him for that stature of an economic statesman. It is an enlightening statement, and the press release issued at that time follows:

PRESS RELEASE BY CONSULATE GENERAL OF THE PHILIPPINES

AUGUST 27, 1959.

Herbert L. Barnet, president, Pepsi Cola Co., yesterday (Wednesday, August 26), called on American firms having business interests in the Philippines to take a more firm and positive approach toward contributing to the economy of that nation which is the bastion of democracy and freedom for the free world in Asia.

Mr. Barnet spoke yesterday at a reception at the Overseas Press Club of America where he received a Lions International Public Service Award "for his contributions toward fostering valuable Philippine-American relations" from Minister Raul T. Leuterio, Philippine Consul General in New York, on behalf of the Manila Lions Club.

Mr. Barnet proposed the formation of a committee of American business and civic leaders to assess the current Philippine economic situation and to provide the necessary cooperation in assisting the Philippines to bolster its economy.

Offering his own services and those of his company for such a committee, Mr. Barnet said:

"This form of economic statesmanship, the assistance of government by private enterprise certainly is no issue of politics or partisanship. It is a manifestation of the

democratic ideals that bind together the United States and the Philippines. The success that we seek is common and commonly beneficial. It will immensely bolster the position of the free world in Asia.

"Our organization has a big investment in the Philippines which started immediately after the end of World War II. We made that investment based on our faith in the Philippine people, its Government, and the Philippine economy. We are happy that we made it and plan not only to maintain what we now have but to add to it, through a planned program of expansion.

"Under this program we are anxious for Philippine nationals to continue to take an active part in the management of Pepsi Cola plants and distribution operations in the archipelago. We are in the Philippines for good because we feel that we belong there and are part of its growth and development as a young democratic nation."

Mr. Barnet further said that since the beginning of operations in 1946 in the Philippines there are now Pepsi Cola bottling plants in Manila, Bacolod, Cebu, Iloilo, and Tarlac with distribution points set up in strategic locations in the archipelago.

The Pepsi-Cola executive concluded his brief remarks by "reaffirming his faith in the Philippines." He exhorted "Americans to remember that the Philippines, who stood by the United States in our darkest hour in the Pacific, continue to be our best friend and ally in Asia." Barnet revealed that "his company was embarking upon a continuing international program of information and cultural exchange between the two countries designed to bring the American and Filipino peoples closer together." He expressed the hope that other American business firms should adopt similar programs along the line of public service. Such activities would not only contribute to better international understanding but is, from the practical point of view, good business.

Other recipients of the Lions International award included Public Relations Consultant Louis Weintraub of Louis Weintraub Associates; Newsmen Robert B. Considine of Hearst Headline Service; Ralph Teatsorth of United Press International; Robert I. Queen of Columbia Broadcasting System; Eddie Martelino, Philippine press attaché in New York; and Maj. Jose Ma. Guerrero of the Philippine Embassy in Washington.

Funny Money

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Daily News of August 28, 1959:

FUNNY MONEY WINS

Stubborn refusal by Congress to consider the bond interest bill requested by the Treasury is a triumph for funny money and inflation.

Funny money because the Treasury will be forced to write up increasing billions on the books of the commercial banks, a process which manufactures credit and is little different from running the printing presses.

Inflation because this process waters down the dollar and raises living costs.

The people who say that, in refusing the Treasury request, they are holding down interest rates, know better.

Actually the Treasury must pay market rates, law or no law, and these rates now are above the 4¼ percent limit placed by law on long-term bonds. The most recent Treasury issue of bonds went at 4¾ percent. Even 90-day paper is up to 3 $\frac{8}{10}$ percent, an increase from 3 $\frac{4}{10}$ percent in the last 10 days.

Reason for the rapid rise is the big demand for this kind of credit and the Treasury must borrow $85 billion in the next year, mainly to refund older issues falling due.

If the Treasury can't bid for savings in form of long-term loans from such sources as pension funds, charitable foundations, etc., it must go to the banks with short-term paper upon which there is no interest ceiling.

Congress, under shadow of the veto, has done a fair job of holding down expenditures and thus counteracting inflation. Its failure to act on interest rates can neutralize all of the good effects of this saving, and more. There certainly must be, in the congressional leadership, enough understanding of simple arithmetic to get something done about this bill.

A Report on Russia

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a portion of a letter received from one of my constituents as I feel that others should know of the conditions in Russia, other than those shown to the ordinary tourist, as reported by Mr. and Mrs. George Wheat, or Santa Ana, and Mr. and Mrs. Albert Launer, of Fullerton, Calif.:

I saw Mr. and Mrs. George Wheat, of Santa Ana, last evening. They had just returned from a trip to Russia in a party of 36 that traveled in a bus almost the total distance while in Russia and for a good many days. Several other from Orange County were in the party including Mr. and Mrs. Albert Launer, of Fullerton, whom I am sure you know because he is a fellow lawyer.

They recommend this type of travel for anyone wanting to find out what Russia looks like, instead of flying directly to the big cities and being shown the nicer spots. Of special interest was their observations:

That, outside of buses, trucks, and autos owned by the government, there is practically no motor vehicle travel outside the large cities and very little of it there.

In the Minsk area, for instance, the farmers had piled their grain on the roads, the only dry place, covering about half of the road; and nobody thought it unusual.

Sanitary conditions were very bad, except of course in the big hotels they stayed in. They were afraid to drink or eat along the road and sanitary facilities were very sparse.

The farmers on the collective farms lived in grass covered huts of very poor construction, with dirt floors and the only house that had a painted roof was that the party man in charge.

All goods were costly, but some of the services were cheap. George got a haircut for 20 cents and Mrs. Wheat a hairwash and set for 75 cents. But a pair of shoes was a month's wages, etc.

George said that some of the refrigerators in the American exhibit were not plugged in and that he thought the people just didn't know what they were. He was an executive with the Edison Co. for years. He looked at refrigerators in stores and found they were ancient models with a sort of open recess in the top for the machinery. Their electric ranges in the stores were the type that one turns a burner on or off with a hand-switch * * * like we had around 35 years ago. He also had a low opinion of the craftsmanship of Russian construction workers, especially on such things as tile work, stone work, plastering, etc. He told of a fine parquet floor in a fine hotel, newly built, where they apparently didn't treat the fine wood with anything, the dirt penetrated the floor, the workers scrubbed the floor and the finished faded and buckled.

This was really a very short conversation with the Wheats, but I thought it would add a mite to your knowledge of Russia. It did to mine.

I believe you know the Wheats; they retired some year ago; are wealthy enough to do extensive traveling and have been over a large portion of the world. But they are also very practical and observant people.

Sincerely,

C. J. MARKS.

Highway Carnage

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an excellent editorial on the subject of highway safety, written by Sgt. J. R. Williams, and published in the Astorian-Budget of August 15, 1959:

HIGHWAY CARNAGE

(Guest editorial by Sgt. J. R. Williams, Oregon State Police)

During the past weekend the carnage on our Oregon highways approached the number killed in the recent explosion and fire at Roseburg that shocked the Nation. Little stir was caused by the traffic deaths. As of midnight August 12, there have been 39 deaths in Oregon as compared to 19 for the same part of August last year. For the year 1959 to date 277 deaths, 1958 to date 243. It's easy to see the death toll is running well ahead of last year and threatens to make this a record year. This alarming increase concerns all law enforcement personnel and every means is being used to stop this killing of our friends and neighbors.

A review of the primary causes of most fatal accidents reveals that there are three primary causes that result in this tragic toll. These causes are: (1) Speed too great for conditions; (2) initial behavior; (3) delayed perception and faulty evasive action.

In explaining the three causes, the following might be noted:

Speed may cause an accident in three primary ways, such as making it impossible to follow the desired curve, making it impossible to take effective evasive action, and presenting an unusual element of surprise to other drivers or pedestrians by not allowing them their normal reaction time and stopping distance.

Initial behavior is that unusual or illegal action by an unthinking or careless person that creates a hazardous situation, such as

passing on the crest of a hill or suddenly stopping on the highway.

Delayed perception is failure to see the danger of the situation in time to avoid it even though it is obvious. This results from inattention or distraction.

Faulty evasive action or dodging technique usually results from a lack of driving skill or understanding of those defensive driving principles that permits a driver to avoid an accident.

Four objectives of the enforcement officer are to slow down the fast driver, correct the initial behavior of the nonconformist, attempt to alert the inattentive, and educate the unskilled. This can be done by vigorous, objective enforcement, with the cooperation of our courts and the public.

Travel on our highways will continue to increase until after Labor Day; therefore, our Salem headquarters has requested a continued review of the accidents and to keep every available patrolman alertly patrolling our highways during periods of high accident frequency.

Laos, Some Critical Comment

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert an article in the Appendix of the RECORD by Paul Harvey. The article, entitled "Looking Into Our Guns," suggests that we had better reevaluate our policy in southeast Asia before it is too late. Our policy of "little thought and too little too late" is one which had better be replaced with a mature, responsible, and realistic foreign policy.

The article is as follows:

LOOKING INTO OUR OWN GUNS

(By Paul Harvey)

Most Americans don't know where Laos is, don't care. Khrushchev knows and cares.

Laos is a country in southeast Asia. It was the "Berlin" of 5 years ago, caught in the vise between two worlds. The Communists demanded that the French get out of Laos, make it an independent state. As they now demand we get out of Berlin, make it a free city.

WE RUSH IN AID

So the French got out. And the United States rushed in with foreign aid. Forty million dollars a year. Your dollars. What happened?

The money we spent to "keep Laos' economy strong" and to "keep the Lao Army armed" had just the opposite effect.

The flood of money into Laos hiked prices (doubled the cost of living between 1954 and 1959), and led to profiteering by Lao Government leaders. This knavery, thievery; discouraged loyalty, encouraged communism.

LOSING ALL AROUND

Today, the Lao army which we armed and equipped is getting whipped on all fronts.

Our Joint Chiefs of Staff told the White House 5 years ago that no amount of money would make an adequate fighting force out of these lethargic Lao, but the Joint Chiefs were voted down by our State Department.

Our aid to Laos, economic and military (according to the House Subcommittee on Foreign Operations and Monetary Affairs), has been destructive of any stability, political, or economic.

Today, as elsewhere where U.S. dollars have been dumped on the inflation fire, Laos, desperate, is preparing to further devalue its currency.

COMMUNISTS ADVANCE

As I write this, Communist forces are active in 8 of Laos 12 provinces, are pressing to within 50 miles of its capital city. Strategic communications and supply routes are threatened. Laos will be split at least, doomed at worst.

And the $40 million a year which Americans unwillingly paid because our State Department demanded it will end up in Communist hands. Our guns will end up in Communist hands, too.

We can write off Laos. Now what about Berlin. Similarly, the Communists are trying to talk us out of Berlin, to leave that city defenseless.

In 1954, Russia was using the identical arguments for getting us out of Laos. Accused us of "foreign interference in internal affairs," insisted that Laos "must become a free and independent nation."

And so Britain and the Soviet Union signed the infamous Geneva Agreement of 1954 and all our guns and all our gold have been unable to erase that tragic mistake.

Again the State Department has us looking down the muzzles of our own cannon.

Helping Reduce Waste—Watchdog To Eye Foreign Aid

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Glendale News-Press dated Monday, August 24, 1959:

HELPING REDUCE WASTE—WATCHDOG TO EYE FOREIGN AID

There is bound to be some monkey business when thousands of individuals in dozens of countries start dealing in billions of dollars of U.S. foreign aid.

This has been true ever since the United States got into foreign aid operations on a big scale with the Marshall plan in 1948.

Since then we have spent about $50 billion on farflung and complex programs of military assistance and economic aid.

But this year Congress has made a foreign aid program by creating the new effort to tighten up the multi-billion-dollar job of inspector general and comptroller. The official in this job will be authorized to make audits on all operations of the International Cooperation Administration.

There is merit in placing a watchdog over the spending of such a large share of the American taxpayers' money.

Not only is colossal waste abhorrent to the thrifty, but there is a moral side to this business, to. In numerous cases, our outpourings of large sums of money into immature economies have had a corrupting influence on native leaders.

But however good on paper the idea of a general overseer appears, only time and practice will show whether it is a workable idea.

One area of our foreign aid operations, in which waste and bungling are just as likely to happen as in any other, will be off limits to the inspector general. This is the arms aid program, where mistakes can be swept under the rug of military security secrecy.

There is another loophole through which waste and corruption could continue. In cases of wrongdoing, the United States can only take action against U.S. firms and citizens caught in the cookie jar. Many transactions are made by the governments to whom the aid is given.

In many instances, the native governments take a more lighthearted view of foreign aid shenanigans than we do.

Steel's Pyramid

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. VANIK. Mr. Speaker, as the steel strike proceeds beyond the 48th day, the great debate continues over the relationship between steel profits and wages in the steel industry. Proponents on each side of the issue have endeavored to rationalize the circumstances surrounding the dispute.

Mr. Edward S. Byers, a Cleveland attorney, who has taken time and patience to express himself on public issues, submitted a splendid statement in the Cleveland Plain Dealer on August 27, 1959 entitled "Steel's Pyramid," in which he analyzes the annual reports of the United States Steel Corp., to show the true profit picture:

STEEL'S PYRAMID

EDITOR, PLAIN DEALER:

SIR: In your issue of August 14 you published a letter to the editor over the signature of Lewis E. Zender, district director of public relations, United States Steel Corp. Time and space will not permit detailed analysis of this letter but, as I read it, it was the kind of thing which has come to be known as Madison Avenue propaganda to mislead the public.

It discussed dividends and profits of the United States Steel Corp. and was undoubtedly calculated to convince that both have been very reasonable indeed. As matter of fact, the profits of the steel industry, as they have grown under the system of administered prices which made its open appearance under the Eisenhower administration, have been fantastically exorbitant.

The following facts and figures, the latter all from the steel corporation's annual reports, may be of some interest:

In 1949, just 10 years ago, United States Steel Corp. had 8,703,000 shares of issued common stock. In that year a so-called split of this stock was effected by corporate action, with result that certificates for three new shares were issued to the holders for each old share they had held.

When this legerdemain was completed the corporation had 26,110,000 issued shares of common stock, representing precisely the same equity in the assets and business of the corporation which had previously been represented by the 8,703,000 share original issue.

The highest price for which any of these new shares were sold in the market in 1949 was $26.75. So we find that the highest value placed by the market upon the total number of the issued common shares of

United States Steel just 10 years ago was under $700 million ($698,442,000).

In 1955 there was another split of the common shares, and this time the shareholders received two new shares for each of the 26,110,000 shares outstanding after the first split in 1949. The corporation then had 52,220,000 shares representing the common stock equity in place of 8,703,000 shares as issued before the first split in 1949, and to holders of the original shares had 6 shares for 1. Again, all of this had not added $1 to the assets of the corporation nor had anything whatever been added to the several interests of the holders of the original shares in the corporation's assets and business.

United States Steel presently has 53,909,000 shares of issued common stock. It has issued a considerable number of shares at favorable prices to executives and favored employees, this practice enabling them to avoid a considerable part of the income tax on their actual earnings.

Recently United States Steel common stock sold on the New York Stock Exchange for a fraction above $105 per share. At this price, $105, the total evaluation which this market price has placed upon the common shareholders' equity or interest in the business and assets of United Stats Steel Corp. is $5,660,445,000 or more than 8 times the value placed upon this equity by the highest market price of the shares in 1949.

To have added nearly $5 billion to the value of this equity in 10 years the corporation would have had to have earned an average of about $57 per share per year, net after taxes, and have paid nothing out of such earnings in dividends.

Of course, it didn't have such earnings. But the corporation did earn in 1957 about $44 net after taxes for each of the original shares, and for the first 6 months of 1959 it reports earnings which, if applied to the number of shares before either of these splits, would mean earnings at an annual rate of $54 on the common shares outstanding originally in 1949 and for many years prior to 1949.

All of this should convince the reader, as Mr. Zender attempts to do, that our steel industry is just a patriotic, unselfish, public-spirited business, concerned only with the welfare of the country in its time of peril and that union labor, which knows all about all this and has participated in and profited by acquiescence in it, is unreasonable to ask for a bigger share of the take.

But be sure of this: No matter what the division is to be, for so long as Mr. Eisenhower is in office the consumer is going to pay administered prices, this being a polite term for illegal restraint of trade.

EDGAR S. BYERS.

CLEVELAND.

Unionist Carey Threw a Boomerang

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. McINTIRE. Mr. Speaker, it is utterly unfortunate that before Mr. James Carey wrote his threatening letter to all Congressmen who voted for the Landrum-Griffin labor reform bill, someone did not commend to his attention this tune that was popular just a few short years ago: "I'm Going To Sit Right Down and Write Myself a Letter."

An editorial in the Bangor Daily News, an outstanding daily published in Bangor, Maine, under date of August 24, 1959, is most appropriate:

UNIONIST CAREY THREW A BOOMERANG

So AFL–CIO Vice President James B. Carey is out to get 225 Republican and Democratic Congressmen who voted for the Landrum-Griffin labor reform bill.

Since President Eisenhower supports the measure, we suppose Carey would also undertake to get him, too, except that Ike is not in line for reelection.

Carey's angry arrogance ends all remaining doubt that certain leaders of organized labor in this country have become too big for their britches. By threatening in individual letters to do all in our power—meaning the well-heeled political machine of the AFL–CIO—to defeat the legislators at the polls in 1960, Carey has shown his true colors and those of his ilk. He is demanding that the Congress of the United States be a servant of a few high-handed union bosses instead of a servant of the American people, whose numbers are some 175 million.

Carey's boldness will boomerang. His intimidations will only strengthen the determination of the 225 Congressmen to see that the Nation gets a strong labor reform law. It should also open the eyes of legislators who have until now favored a mild labor measure. It should make them wonder whether they want to remain allied to a cause that includes such a whip-snapping person as Carey.

Most of all, Carey's action will arouse the American people. Americans don't like to be pushed around. They don't like bullies. And they are already impatient for Congress to correct the union abuses exposed by Senate investigations. Events will show that Carey has put organized labor in a bad light.

Mrs. Alexander Harbert Gray, National President of the American Legion Auxiliary

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. EVERETT. Mr. Speaker, last week I had the honor and privilege of attending the national American Legion convention in Minneapolis where Mrs. Alexander Harbert Gray of Brownsville, Tenn., was installed as national president of the American Legion Auxiliary.

Mrs. Gray is a resident of the Eighth Congressional District of Tennessee which I have the honor of representing in the House of Representatives. Her selection as president of the American Legion Auxiliary was largely because she had proven her ability and her understanding of all programs of this organization. Her qualities of leadership, her deep religious and patriotic convictions, her sincere desire to serve, and her pleasing personality qualify her for the office of national president.

Mrs. Gray has been a unit member of the American Legion Auxiliary of Tennessee since 1926 and has served as president of her unit four times. She has been president and vice president of the department and chairman of various committees as well as serving as executive committeewoman, national vice president, and on national committees.

We are certainly proud of Mrs. Gray and her achievements throughout the years, and as I attended her reception on Tuesday night and saw over 2,000 members of the auxiliary pass through the receiving line from every State in the Union I could not help but be impressed with the wonderful work and devotion to the veterans and to the people of this Nation that this organization has given.

I insert here the speech that Mrs. Gray made on Thursday, August 27, after being elected as national president:

Madam Installing Officer Hope, my National President Ce; national officers, past national president, delegates, and guests to this convention; I come before you now breathless with humility and beaming with pride. Humility because of my imperfections—pride in being chosen to further the splendid work of those dedicated women who have preceded me. Thank you—all of you—for giving me this opportunity to serve as your national president.

To my Department of Tennessee, to my American Legion, and to my American Legion Auxiliary, let me express my abiding love. Through the years, they have been my strength and inspiration.

To my family, to my husband who is here with me this morning, I pay tribute for their loyalty and understanding. They have made many sacrifices, but have always believed in this great organization and in me.

To the members of Nashville Post 5 band, my heartfelt thanks for their beautiful music and for the hours of practice spent in preparation for this occasion.

As we begin a new auxiliary year, America faces a grave crisis. Atheistic communism stands on our doorstep, precipitating grave problems, international in scope, but yet of very real, very personal importance to each of us and to the future of the great Nation which we are pledged to uphold.

Today the problem is survival, and so I give you the theme of my administration, "Serving and strengthening America."

World tensions now demand ever-increasing allegiance and personal sacrifice on the part of each of us if we are to preserve our present way of life. We must convince our Federal Government to place national security ahead of tax dollars. We must lead the way to establishing and maintaining an effective nationwide civil defense program. We must strengthen our ties of friendship with our Pan American neighbors. We must shore up the religious faith of our fathers. Our very existence now depends on the strong moral fiber of this Nation.

As we forge an invincible defense to protect our freedoms, so must we simultaneously make our history and heritage of freedoms a part of the lives and character of today's youth—tomorrow's citizens.

We must continue to rehabilitate our disabled veterans and restore them to a normal and productive life. We must preserve the integrity of the family home. We must meet the needs of the whole child.

All of our auxiliary programs are aimed at strengthening our organization and our country through dedicated service.

As you return to your homes, I urge you to strive to make the people of your community increasingly aware of the work you are doing day after day, year in, year out—of the work still to be done for the veteran and his family—for the security of our beloved America. There is no better way than inviting them to join you in your work.

In the year ahead, I see a million dedicated, patriotic women serving and strengthening America.

Better Understanding Between the Peoples of the Far East and the Citizens of the United States

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. INOUYE. Mr. Speaker, pursuant, to permission granted I insert in the Appendix of the CONGRESSIONAL RECORD a letter sent by Messrs. Thomas W. N. Chun and Herbert N. Fukata of Honolulu, Hawaii, to Dr. L. Edward Shuck, U.S. State Department representative in Hawaii.

This letter demonstrates the eagerness of the people of Hawaii to assist in the bringing about of good will and better understanding between the peoples of the Far East and the citizens of the United States:

HONOLULU, HAWAII,
August 21, 1959.

Dr. L. EDWARD SHUCK,
State Department, Honolulu, Hawaii.

DEAR DR. SHUCK: Today, Hawaii was admitted into the Union as the 50th State. It is the culmination of a long and persistent struggle for admission into a great family of States. We in Hawaii are proud of our wonderful achievement and humble of our newly acquired stature.

The time for wild spontaneous acts of jubilation to celebrate Hawaii's gain has passed. We feel that now is the time to tell the world what the United States has done by the act of granting statehood to Hawaii.

The great bulk of the people in the mainland know of our cosmopolitan population living in peace and harmony. We in Hawaii are proud of our spirit of aloha. We in Hawaii take pride that we have found the solution to the problems of living in peace and friendship among the peoples of all races of the world. We in Hawaii would be happy to participate in a venture to offer visual proof to the people of the Far and Middle East, the fact of our diversified group.

The specific project that we have in mind is a Far East good will tour. This tour would be composed of the Royal Hawaiian Band, a hula troup, and others. The tour group would visit and entertain the people of the East and Americans stationed throughout the countries in the itinerary. The purposes for the tour are as follows:

1. To educate and acquaint the people of the East of the different racial groups living in the 50th State of the United States and thus point out their probable origin of ancestry.

2. To publicize and induce the students of the Orient to matriculate at the East-West Cultural Center envisioned and established by the Johnson-Burns Act.

3. To entertain the U.S. troops stationed in these areas.

4. To ease world tension by continuing the exchange of visits between East and West. Russia sent a tour group to the United States to boast of her artistic accomplishments, we can send a tour group to boast of our ability to assemble diverse racial groups and live together in peace and harmony, and

5. To celebrate the granting of statehood to Hawaii.

The tentative list of places to visit and entertain would include: Guam, Philippines, Vietnam, Indochina, Thailand, Indonesia, Hong Kong, Formosa, Okinawa, Japan, Korea, and Russia.

A tentative list of members to be included in the tour group comes to a total of approximately 75 persons made up of the following: Members of the Royal Hawaiian Band, hula troupe, project coordinators, State Department representative, State officials from Hawaii, doctor, historian, photographers, billeting manager, equipment managers, transportation managers, and others.

We believe that this good will tour will strengthen the prestige of the United States in the eyes of the free world and would greatly soften the attitude of the people of the East toward the people of America.

Very truly yours,

THOMAS W. N. CHUN,
HERBERT N. FUKATA,
Project Coordinators.

Anatomy of a Lobby

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. PUCINSKI. Mr. Speaker, during the last two weeks there has been a great deal of discussion both in and out of Congress about lobbying activities in behalf of or against labor-management reform legislation.

It is significant to me at least that the loudest protests about lobbying activities have been voiced against the representatives of America's labor movement. I am sure that if those who have been so loud in their denunciation of labor's part in this complicated legislation would take the time to study the mail of an average Congressman, they would find that most of the hysteria regarding reform legislation has come from, or has been generated by, the various lobby groups for business and industry. I have been told by veterans in this legislative body that they have never experienced the kind of pressure that has been put on them by big business and industry in support of harsh labor reform legislation.

I should like to call to your attention a bulletin which I received recently from the Illinois Retail Merchants Association. This bulletin is prepared by one of the most highly respected spokesmen for the retail industry in America, Mr. Joe Meek, director of this association.

I am submitting this bulletin today because I think it so succinctly describes the anatomy of a lobby group, and while I have no quarrel with the valiant efforts of the Illinois Retail Merchants Association to protect their rights, I think anyone who will take the trouble to read Mr. Meek's graphic description of how his organization functions will probably better understand why this Congress was stampeded into passing labor legislation which goes beyond the scope of getting the crooks and, in effect, if finally adopted in its present form, will impede seriously legitimate efforts of honest unions.

I think that Mr. Meek deserves the highest commendation for his frank analysis of how his organization functions, and I think there can be no question in anyone's mind after reading his bulletin that the merchants of Illinois who belong to his association are certainly getting more than their money's worth.

The "Retail News Briefs," as published by the Illinois Retail Merchants Association and prepared by Mr. Joe Meek, follows:

RETAIL NEWS BRIEFS
(By Illinois Retail Merchants Association)

Your ripple makes a big splash. What does your Illinois Retail Merchants Association dollar do for you; what chain reaction starts?

First, that dollar helps unite thousands of Illinois retailers into a common cause—a common voice. In the fields of merchandising advice, consumer relations, new markets, rules, regulations, vital statistics, legislation, contacts with governmental departments, employee sources, prestige, the Illinois Retail Merchants Association swings into action with over 100 years of combined experience from all of us—Chuck Barker, Fred Goerlitz, Hugh Muncy, Jack Leland, Herb Thompson, Margaret Dowd, Frances Palanca, Barbara Parks. Nearly 200 fine local retail divisions (chambers of commerce) are happily put to work, contacted, alerted.

Thirty solid trade associations are pulled into the team with their abilities intact and not the slightest check on their own effectual programs of work. Illinois retailing gets together.

It talks up as 40,000; not as 1 or 10 or even 1,000.

Second, your dollar helps unite tens of thousands of U.S. retailers into that common cause. The American Retail Federation, as strong as its 38 State "fingers," moves into action, the national counterpart of what we attempt at the Illinois level. Here, your dollar puts to work such veterans as Rowland Jones, ARF president; Jim Michaux; Joe Lovett; Bill McCamman; Art Sturges, and others. IRMA's counterpart in 38 States gets lifeblood, unity of purpose, action—New York, Arkansas, North Carolina, Pennsylvania, Ohio, Michigan, Minnesota, Utah, California—on and on your dollar rolls.

Third, your dollar commands not alone the ARF and its State strength. It nudges and moves the might of national retail trade associations: National Retail Merchants Association, furniture, hardware, food, implements, shoes, jewelry, and more. Veterans such as John Hazen, Derek Brooks, Henry Bison, Phil Shindel, Bill Noble, Bill Cheyney, Lou Rothschild, Eddie Atkins, trade association leaders always in and round Washington, strike out for action—for you. These are the members of the other ARF hand, the national trade groups.

Fourth, your dollar reaches out, builds the finest prestige, commands the finest brains smart store retailing can buy. Across Illinois, in a hundred towns, top merchants go to work for IRMA——for you. Across America, in a thousand cities, top merchants duplicate that effort. Across State and Nation nationally known executives contribute their solutions to your problems—labor, climate, taxes, tax laws, legislation, planning, controls, promotions, distributive education, farm and community relations, press and radio contacts, etc.

This is a part of the commodity your dollar buys in retailing's own across the Nation. It is the biggest money's worth any

association, including organized labor, offers today. With the help of others, now free-loading on you, this combined strength of retailing could be the greatest thing ever for the consumer public—a country in balance, paying its bills, enjoying free markets, utilizing price in its right role, playing the people's politics. Swing on—now. If ever retailing is to get near the summit of its potentialities for the good of the Nation which gives it life, that time is now.

Passports to Trouble

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by John W. Hanes, Jr., Administrator, Bureau of Security and Consular Affairs, U.S. Department of State, which appeared in the American Legion magazine of September 1959:

PASSPORTS TO TROUBLE

(By John W. Hanes, Jr.)

I don't know exactly how many members the Communist Party of the United States now has. The estimates run from 10,000 to 20,000. But whatever the number, each and every party member as of today can obtain a passport from the Department of State. The exceptions are those rare instances in which the applicant happens to be ineligible for some other reason, such as being a fugitive from justice.

Since this dangerous loophole in our laws was shown to be open last year, many notorious American supporters of the Communist movement have traveled abroad to campaign against us on the world battlefield. Their names and their activities are matters of public record.

What do they do when they get abroad, these "Americans" now happily traveling on their U.S. passports? Let James Jackson, secretary of the National Committee of the Communist Party, U.S.A., give part of the answer in his own words. He went to Moscow this past February and there addressed the Communist Party of the Soviet Union. According to Radio Moscow, Jackson said:

"Communists the world over will welcome the ideological contributions and profound insight in Comrade Khrushchev's report for the solution of a number of problems of the struggle for peace, democracy, national freedom, and socialism. * * * We are building our party in the firm principles of Marxism and Leninism. * * * On the occasion of the 21st Congress, the Communist Party of the United States extends its warmest fraternal greetings to the great CPSU which, boldly applying and developing the principles of Marxism-Leninism, is leading the Soviet people to ever new Socialist accomplishments and onward to communism."

At present we are forced to issue passports to people such as these—passports which not only permit, but greatly aid, their travel to and in foreign countries. Their passport clothes them abroad with all the dignity and protection that our Government affords U.S. citizens. And yet the dedicated purpose in life of every Communist is to destroy our Government and our freedom.

Surely this situation is a perversion of the liberty which our Constitution and our laws are meant to guarantee us.

Our own Government has long recognized how important American passports are to the Communist conspiracy. The Communist underground has for years maintained workshops devoted to the wholesale forgery and falsification of passports and other documents. However, genuine American passports were particularly prized at intelligence headquarters in Moscow, according to a former chief of Soviet intelligence in Europe.

During the Spanish civil war, Communist leaders assiduously collected the passports of the several thousand Americans in the International Brigade, and the bulk of these passports eventually found their way to Moscow for alteration and possible use by Soviet agents. In fact, so many American passports were collected from this source that, as a countermeasure, the United States had to replace every outstanding passport in the world with a new document.

In 1949, 11 members of the national board of the Communist Party, U.S.A., were convicted of conspiring to advocate the overthrow of the U.S. Government by force or violence. In 1950 American Communists were actively supporting the enemy position in the Korean war. Congress, recognizing these dangers, passed the Internal Security Act and found that: "* * * travel of Communist members, representatives, and agents from country to country facilitates communication and is a prerequisite for the carrying on of activities to further the purposes of the Communist movement."

Congress also said that Americans who participate knowingly in the world Communist movement "* * * in effect transfer their allegiance to the foreign country in which is vested the direction and control of the world Communist movement."

Yet allegiance is the touchstone of the right to a passport.

The Secretary of State, charged by law with the issuing of passports, could hardly have ignored these congressional findings. In 1952 Secretary Acheson issued regulations establishing the criteria for refusing passports to Communists and Communist supporters.

The publication of these regulations triggered a violent attack by the Communists through their press and through the courts, utilizing every device of law and procedure. Their clever campaign gained respectability because many sincere persons who have no sympathy whatever with communism became disturbed by the argument that the regulations permitted the Secretary of State arbitrarily to restrict a citizen's rights. These were the regulations which in 1958 the Supreme Court struck down by finding that they had not been specifically authorized by Congress.

I think it might be well to put into perspective exactly how these regulations operated and what their practical effects were. To do so, I should like to present some statistics on the numbers of Communist supporters who were refused passports under them and the number of Americans who received passports. For the 2 calendar years preceding the Supreme Court's decision (1956 and 1957) 1,145,000 passports were issued or renewed. During that same period the Passport Office limited the passport privilege of 51 persons because of Communist grounds. Every one of those persons had access to an elaborate and impartial appeal mechanism, and many of them utilized it. From the time this mechanism was set up in 1952 until the Supreme Court's decision in June 1958, the Secretary of State—and it must be the Secretary personally—refused passports to only 15 persons on Communist grounds after full hearings. A number were granted passports after hearings; some others, of course, did not contest the Passport Office's denial, and undoubtedly many active Communists never bothered to apply at all, knowing they would be scrutinized and required to make a sworn statement about Communist Party membership.

I believe it is important to remember these figures when statements are made about the "arbitrary" action of the Department in passport matters.

Much of the meaning of even the very few but very important refusals became academic, of course, in June 1958, when the Supreme Court's ruling was handed down. Since then, as we anticipated, there has been a flood of applications from persons with records of Communist affiliations or activities. Some of them had previously been denied passports, but many had never previously applied. Many we know a great deal about, but the Department of State is no longer in a position even to inquire, much less investigate, whether any such applicant is a Communist Party member or how dangerous he may be. There is quite a difference, for example, between a known courier and a relatively harmless fellow traveler.

This flood of applications continues today. The Communists are getting passports while they can. Naturally, in all these cases the Department's previous policy has had to give way and passports have been issued to all these people.

Immediately following the Supreme Court decision, Secretary Dulles sent Congress a draft bill to provide the specific legislative authority which the Court held was lacking. He wrote to the Congress:

"I think there can be no doubt in anyone's mind that we are today engaged for survival in a bitter struggle against the international Communist movement. * * * This movement seeks everywhere to thwart U.S. foreign policy. It seeks on every front to influence foreign governments and peoples against the United States and eventually by every means, including violence, to encircle the United States and subordinate us to its will. The issuance of U.S. passports to supporters of that movement facilitates their travel to and in foreign countries. It clothes them when abroad with all the dignity and protection that our Government affords. Surely, our Government should be in a position to deny passports to such persons."

President Eisenhower urgently endorsed the legislation, saying, "Each day and week that passes without it exposes us to great danger."

What must such legislation do?

Again, the President has expressed it well. He said:

"In exercising these necessary limitations on the issuance of passports, the executive branch is greatly concerned with seeing to it that the inherent rights of American citizens are preserved. Any limitations on the right to travel can only be tolerated in terms of overriding requirements of our national security, and must be subject to substantive and procedural guarantees."

Simply stated, what we need is legislative authority which will allow the Secretary of State to deny passports to hardcore supporters of the international Communist movement. We believe such denial should occur under due process of law, including judicial review.

We do not seek statutory passport authority to stifle criticism of this Government or its policies. We do not believe that the passport should or can be used to restrict the movement of people who hold political, social, or economic opinions which are not to the orthodox American variety.

We do not seek or want authority to deny passports to any whose travel or activity abroad is merely an embarrassment to our country. I believe that the United States is strong enough to survive embarrassment if we must.

Neither do we wish to penalize loyal Americans who at one time, before the nature of the Communist conspiracy became

as crystal clear as it is today, may have sympathized with Communist theories or even belonged to Communist organizations in this country.

All we seek, and what I feel we must have, is the capacity to protect ourselves by denying passports to those relatively few hard-core, active Communist supporters who are not ordinary American citizens and whose travel abroad constitutes a danger to the United States.

In the case of passports "due process" means that the Secretary of State cannot be arbitrary or capricious but must have sound reasons for restricting an individual's right to exit. It means that he must tell the individual the reasons for his action in sufficient detail and under such circumstances that the individual may have an opportunity to show the reasons untrue. Such circumstances should include a full hearing and review within the Department of State and ultimately, of course, the right which now exists to appeal to the courts.

There is one other essential of passport legislation which is much misunderstood; and that is the necessity for the Government to be able to utilize confidential information as part of the basis of its decision.

I can say bluntly that any legislation concerning denial of passports to Communist supporters would be meaningless and would not achieve any purpose if it prohibited the Government from utilizing confidential information. Almost without exception, dangerous cases involving communism also involve confidential information and investigative sources. Indeed, the more recent and meaningful our information is, the more likely it is that it has come from current confidential investigative sources within the Communist movement.

The Government has a legitimate and overriding interest in maintaining the security of these investigative sources and methods. If faced with the unpalatable choice of exposing and thereby destroying a valuable and continuing source of information about the activities of the Communist conspiracy or issuing a passport to an individual member of that conspiracy, the Government has no alternative but reluctantly to issue the passport as the lesser evil.

Some people feel that the use of confidential information in such cases means using vague and unsubstantial gossip or allegation that will not stand the light of day. This is nonsense. In the first place, if one is prepared to believe that the Secretary of State, who must personally decide passport appeals cases, would actually base a considered decision upon anything less than substantial and corroborated evidence, then one must believe that our country's security is in far greater danger than from the capricious denial of passports. In the second place, confidential information is almost always a small part of any total case, although usually essential because of the clear proof it provides. Most of every case can be fully and publicly disclosed.

Beyond this, however, we believe, based on a careful review of the Communist cases we have had in the past, that in every case the Government can provide a fair summary of even the confidential information, both to the applicant and to the courts. Such a fair summary would include all the pertinent reasons for which the passport is denied and would exclude only those details required to protect confidential sources of information.

I would have no objection to any legislation requiring the Government in all cases to provide such a fair summary of the content of any confidential information relied upon.

One other thing should be clear. What we are talking about is not a criminal proceeding in which someone is being tried or punished for past actions. Instead, it is an administrative process which attempts to predict someone's future course of action, if he travels abroad, and to balance its potential danger to the United States against the desirability of facilitating the travel and giving him protection while he is performing it. These are services which the Government should extend to its citizens, but they are not inviolable rights which the individual can demand no matter what the menace to society may be.

Even having said this, however, much about this subject remains repugnant to Americans. The use of "confidential information" in any kind of proceeding, judicial or not, and indeed any sort of governmental restriction, whether on travel or passports or any other activity of the individual—these are things which we will never like and which, I hope, we never accept apathetically.

Here, however, I believe we must face squarely one fact which is inherent in every aspect of the subject of passports and travel restrictions: That is, that our Nation, although not technically at war, assuredly is not at peace. We face, almost on a daily basis, actual threats to our national security and to our very existence which very clearly are the equal of any threats we have ever faced in peace or war. One need only think of the implications of Berlin today or the countless crises of the past decade to realize how perilous our situation is.

This uneasy condition of "not peace, not war" is something entirely new to our experience. It places a tremendous strain upon our governmental and constitutional institutions, for it blurs lines which had previously been considered sharp and clear.

It used to be that when our Nation was not at war it was truly at peace. Certain rules obtained and governed our lives in peacetime. These rules were evolved over a century and a half by and for a free people who since the earliest days of their history had been faced by no serious external threat to their freedom or their national existence. Occasionally war came, and there was a clear line of demarcation. War was declared and waged with certain formalities. During wartime certain special rules obtained because the Nation temporarily required the subordination of individual desires to the overall national effort. These special rules, while repugnant, were considered tolerable for the limited duration of the war. When the war was over, other prescribed formalities occurred; the Nation was at peace again, and the special wartime rules, which were usually incompatible with complete constitutional freedom, were dropped.

This sharp demarcation between peace and war does not exist today. International communism has thrown away the rule book. It does not consider itself ever at peace. It is always totally mobilized to advance its aim of world domination. It does not recognize any of the accepted rules of international or legal or human conduct except when, and only for as long as, those rules may suit its purpose.

This situation creates an unprecedented threat both to our liberty and to our very existence. Our response must include a recognition of these changed circumstances, or we risk the loss of existence and liberty together.

The threat, moreover, will continue to exist, perhaps for many years in the future. This makes it imperative that whatever response we do adopt must be one that we can indefinitely sustain and without endangering the strength or the integrity of our basic and cherished institutions which we are seeking to protect.

I believe that such a response is possible to a free people. I believe that our institutions—our Constitution, our laws, and our form of government—are strong enough and flexible enough to adjust to these changed circumstances, just as they have adjusted to changes in the past.

I have tried to illustrate what I mean by suggesting, in the liimted but important field of passport policy, a procedure which meets these criteria. It meets, I believe, the most pressing requirements of national security. It does so by law and under the Constitution. I think, for the reasons I have given, that adequate passport legislation is essential to our security. But let me be very clear. I do not believe that such legislation will eliminate all the dangers which we face from the Communist conspiracy or even all those which it is intended to counter.

I do believe that adequate passport legislation is a necessary and integral part of the screen of weapons we have raised against the conspiracy and that it will seriously cripple the effectiveness of that conspiracy.

I do believe, finally, that all our weapons together, wisely and effectively used, will contain the internal menace of the Communist conspiracy within tolerable limits while our military strength deters its worldwide menace and our foreign policy seeks to replace its threat with a just and durable peace.

Significant Comments by Lawrence, Truman, McCormack, and Walter on Khrushchev Visit

---

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. EVINS. Mr. Speaker, there has been considerable comment about the exchange of visits by Premier Khrushchev to this country and President Eisenhower to Soviet Russia. Among these the following by David Lawrence, former President Harry Truman, and our distinguished colleages, the majority leader, Hon. JOHN MCCORMACK, and the Honorable FRANCIS E. WALTER, as reported in U.S. News & World Report, are especially significant; and under unanimous consent I include them in the Appendix of the RECORD:

THE ONE BIG DANGER

(By David Lawrence)

Missiles and nuclear bombs are in themselves no menace to mankind—nor are the conventional weapons which can inflict widespread destruction. The menace is the man who, in disregard of the wishes of his people, can order the trigger pulled.

The one big danger in the world, therefore, is one-man rule—autocratic government.

The basic cause of World War I and World War II was the power of an autocratic one-man government to make war on other nations.

Despite public appeals in 1912 for a naval holiday, one man—the Kaiser—started the war in 1914.

Despite the peace talk and appeasement at Munich in 1938, one man—Hitler—started the war in 1939.

What, then, are we doing to remove the menace of one-man government? Will we remove it merely by showing Khrushchev our might—a sort of veiled threat—or even by President Eisenhower's politeness in making a return visit to the Soviet Union?

We shall not make progress by enhancing the prestige of the dictatorship government in Moscow.

We shall not make progress by abandoning our position in West Berlin in favor of a "deal" that satifies the material carvings of some of our allies for more trade with the Soviets but robs us of our self-respect and, indeed, reveals us as irresolute and faltering.

We shall not make progress by oversimplifying our dilemma with the Soviet Union as we give an impression that, by temporarily restraining the hand of the mad man, we have accomplished peace for the world.

There has been too much emphasis on the "one man" idea as the answer to the current crisis. Personal diplomacy cannot be of avail against an autocratic system that rules only through intimidation and terror.

Nikita Khrushchev is accustomed to brutishness, to murder—"purges"—and to the exercise of whatever force seems necessary to him to gain his ends.

We must use the occasion of the Khrushchev visit to talk over his head to the peoples behind the Iron Curtain. The protests from groups of citizens in our midst will be made, but there must be forthcoming also from the Government of the United States a restatement of the case for democracy.

Warning must be given that democratic governments cannot "peacefully coexist" alongside an autocratic government that keeps on threatening to destroy us.

This is not just an internal question—it is external in its global effects. The lives of free men evrywhere are at stake. As long as an autocratic government is in power in Moscow, there can be no disarmament agreement, no treaty to bar aggression, no written pledge that will be worth the paper on which it is written.

Only when peoples are able, in free elections, to choose their leaders and to remove them at will can there be an assurance of peace in the world. Peoples don't make war—only dictators do.

Until the people of the Soviet Union and the peoples of the neighboring countries of Eastern Europe are free, there can be no relief from the burdens of armament. Tension cannot be relaxed anywhere while the murderous regime in Moscow keeps its conspiratorial agents in every part of the world and its troops quartered in supposedly independent countries.

The menace is one man rule. We should be courageous enough to tell Nikita Khrushchev that we cannot feel safe as long as his people are enslaved and that we will feel secure only when the peoples of the many nationalities that make up the Soviet Union have successfully asserted their right to individual freedom. This may not happen soon, but we must not lose sight of the longrange goal—the removal of autocratic governments from a position that enables them to endanger the peace of the world.

TRUMAN: "I QUESTION WISDOM OF IKE'S VISIT"

(One of the criticisms of the Eisenhower-Khrushchev program was written by ex-President Harry S. Truman, and appeared in newspapers a few hours before the President's news conference. Full text of Mr. Truman's article is given here:)

(By Harry S. Truman)

I seriously question the wisdom of President Eisenhower's going to Moscow. If this journey leads the world to expect that peace can be advanced by the mere exchange of visits between heads of government, then we all face certain disappointment.

The President already has declared that he has no intention of conducting separate negotiations with Khrushchev. If that is the case, why could not the amenities be confined to Khrushchev's visit to the United States, where he will be received with the consideration due him?

When a President of the United States leaves the country it should be a momentous occasion in the exercise of the unique authority of his office. The power and leadership of the Presidency should not be dissipated in ceremonial visits so reminiscent of those days when diplomats and rulers traveled back and forth on their balance of power visits, which marked this, the bloodiest century of history.

President Eisenhower is leaving shortly for Europe to dispel from the minds of our allies any anxiety they may have that the United States and the Soviet Union would engage in separate negotiations. I am sure that President Eisenhower would be quick to resent, and rightly so, any suggestion that he is embarking on a course of the United States going it alone with Russia.

The critical problems we continue to have with the Kremlin are how to get it to keep the commitments and to stop it from interfering and plotting in the internal affairs of other nations.

There can be no durable peace until we make some progress in those two areas.

From Yalta to Potsdam to Geneva we have had many meetings, all of which have resulted in failure—not because of any acts of ours—but solely because the Communists have not lived up to their promises.

An exchange of visitors holds no more promise of success than we have had in conferences and diplomatic negotiations. The President probably will meet the same Khrushchev in Moscow that he met in Geneva and will meet again in Washington—a man with an unyielding ambition and fixed purpose.

Khrushchev is not coming to Washington to learn anything about us or our strength that he does not know already. The real purpose of his visit is to appraise our determination and will to stand up and resist Communist aggression and mischievous probings around the world.

Khrushchev's main objective, I believe, is to see whether he can divide us as a people and lure us into compromising our rights. He would also seek by every means to divide us from our allies and then go about picking them off one by one. Since Khrushchev has the initiative to make war, he also has the advantage of beguiling us with offers of peace. This is where Khrushchev is most dangerous and why we have to be exceedingly careful about maintaining our strength and never letting down our guard.

It would be most unfortunate if, by the exchange of visits, we allow the Russians or the world to gain the impression that we are being lulled into complacency.

I hope that Khrushchev, when he leaves here, will have a clearer understanding of what he and the Kremlin are up against in American determination to stand with our allies. Let us be sure that it is a more accurate and realistic evaluation than either Mikoyan or Kozlov (Anastas I. Mikoyan and Frol Kozlov, Soviet Deputy Premiers) seemed to have got out of their visits.

Disregarding all the ceremonies that will be connected with Khrushchev's visit—a visit that I have favored—it is in Washington that Khrushchev must learn conclusively where and how we stand.

The reception accorded the President in Moscow will have little bearing on Khrushchev's decisions and acts, and that is why I feel that little purpose will be served and a great deal of misunderstanding might arise from the President's return of Khrushchev's visit.

There are all sorts of interpretations that can be given to a visit by a President of the United States, and such a journey to Russia could be distorted for propaganda purposes beyond the announced intent. The claim that the tensions of the "cold war" between the East and the West could be lessened by such visits is to ignore the basic reasons for the cold war.

I do not think the Communists are impressed by anything except force. They do not respond to tough talk unless that talk is backed by force. The only way to insure peace is to make certain that they who threaten understand that we will fight if given no other choice.

Up to now I see no evidence that the Communists have changed their goal, which is to impose their rule on the world. This we have to prevent.

One place where we must make that clear to Khrushchev is at the White House. Equally important is that our Allies and friends should never have reason to entertain any misgivings as to the firmness of this resolve. I think it would have been more in keeping with our responsibilities and our leadership to have invited the heads of allied governments and the Secretary General of NATO [North Atlantic Treaty Organization] to come to Washington before Khrushchev's visit to this country. This would have been an opportunity to remind the world, and ourselves as well, that our security and peace are mutually interdependent.

But, in his decision to visit Bonn, Paris, and London in preparation for his meeting with Khrushchev in Washington, the President has the complete support of a nation united.

I cannot say it too often that the proper place to conduct any negotiations affecting the peace of the world is in the United Nations. The world has had all it ought to stand from the maneuvering and bickerings of nations seeking to exploit others. The United Nations has played an increasingly important role in focusing the light of world opinion on transgressors.

In this period of transition from old, exploitive colonialism to independence and nationalism, let us not overlook the growing menace of a new brand of colonialism—the Red exploitive colonialism.

If Russia is sincere in her professed desire for peace, Khrushchev ought to come before the United Nations to try to work out a constructive plan for disarmament and control of nuclear weapons and to cease interfering in the internal affairs of other nations. But from experience we ought to know that plans, resolutions, and agreements made by the Communists up to now are meaningless.

What the world needs is a show of good faith by peaceful acts and deeds by Khrushchev and not through visits, fanfare and gala performances.

While we are striving to achieve some common working ground for peace with the Communists, we are compelled to maintain and build our military might, no matter what the cost.

REMARKS BY HOUSE MAJORITY LEADER JOHN W. MCCORMACK, DEMOCRAT, OF MASSACHUSETTS

The invitation by President Eisenhower of the Soviet dictator, the head of the world-wide Communist conspiracy and also Prime Minister of the Soviet Union, Mr. Khrushchev, to visit the United States, has been received with sharp discussion and much concern by our people, and properly so. It is my opinion that time will show that President Eisenhower made a serious mistake. It will be interesting to note "the law of natural and probable consequences" operating as a result of the President's invitation and the coming visit of Mr. Khrushchev.

REMARKS BY REPRESENTATIVE FRANCIS E. WALTER, DEMOCRAT, OF PENNSYLVANIA, CHAIRMAN OF HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

(In a Letter to President Eisenhower)

Your attention is respectfully directed to two phases of the total war which the international Communist conspiracy is waging against the free world with the United States the principal target.

The first phase is the extensive current Communist espionage operations in this country.

The second phase is the flood of Communist propaganda which is being sent into the United States at an ever-increasing rate.

May I conclude, Mr. President, by quoting the words of Dimitry Z. Manuilsky given in the Lenin School of Political Warfare in Moscow in 1931: "So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice and cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

Political Football

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. PELLY. Mr. Speaker, the Washington Star says the issue of interest rates has been made a political football.

In that regard, I will refrain from expressing an opinion, but I will say I agree with the Star in that it is time for the responsible leadership of Congress to demonstrate its understanding as a matter of major importance to the national welfare.

The editorial in question from the August 28, 1959, issue of the Star follows:

CONGRESS SHIRKS ITS DUTY

The Congress will be guilty of dangerous imprudence and irresponsibility if it fails to take action on President Eisenhower's recommendation, repeated in a special message this week, that authority be given for removing the statutory ceiling on Treasury bond interest rates and for raising the rate payable on savings bonds. The House Ways and Means Committee, after an earlier decision to approve the necessary legislation, reversed itself last week and voted to table it for this year.

Although U.S. Government securities generally are considered the safest in the world, the current situation is this: The Treasury Department is unable to sell its bonds—obligations maturing in more than 5 years—at the maximum 4.25 percent rate of return which was fixed by law many years ago. As a consequence, it has been forced to meet its tremendous financing needs through the marketing of short-term securities—bills and certificates—on which there is no interest ceiling. Only recently a 1-year issue of bills was marketed at a near-record rate of 4.728 percent—the lowest the Government could find by competitive bidding in a free market. Short-term securities are held mostly by commercial banks and are employed in the banking system for an expansion of credit which, in effect, increases the supply of money and is directly inflationary as a result.

As both the President and Secretary of Treasury Anderson have emphasized, the picture of this seemingly deliberate policy of contributing to inflationary pressures raises grave questions both at home and abroad about "our sense of responsibility in our fiscal management." It is quite possible, from that point, to question whether our money—the U.S. dollar—should continue to be "practically the standard for the whole world," as it has been for so long. If and when it ceases to be, our entire economy is in jeopardy.

As for the savings bonds, even the most politically motivated individual should be responsive to the implications of the present problem. Approximately 40 million persons hold these small-denomination securities to a total value of $42 billion. They have been urged by their Government to buy them, but the current maximum rate of interest of 3.26 percent neither gives a fair return on today's savings nor offers a cash-in value that is commensurate in purchasing power with their original price. For this reason, cash-ins have exceeded new purchases for months past.

This issue of interest rates has been made a political football on Capitol Hill. It is time for the responsible leadership of Congress to demonstrate its understanding and its interest in a matter of major importance to the national welfare.

Congress: Please Do Not Increase Federal Gas Tax

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ABBITT. Mr. Speaker, throughout the country, there is widespread opposition to the idea of increasing the Federal tax on gasoline as a means of helping to finance the highway program.

Among the many newspapers which have taken a stand on this matter is the Hopewell News, of Hopewell, Va., which is in my congressional district. The editor of this newspaper, Mr. A. Robbins, Jr., has engaged in considerable research on the subject and is contributing a great deal to the proper understanding of the issue involved.

On August 26, he wrote a fine editorial entitled "Congress: Please Do Not Increase Federal Gas Tax," which contains some enlightening facts and positive thinking on the subject. I would like to commend Mr. Robbins for his editorial and to commend it to the reading of the Members of the House.

The editorial follows:

CONGRESS: PLEASE DO NOT INCREASE FEDERAL GAS TAX

This newspaper has been opposed to any increase in the Federal gasoline tax to keep the interstate highway program going at the present rate.

The Federal gasoline tax is already 3 cents a gallon and here in Virginia the State tax is 6 cents a gallon, making a total of 9 cents on every gallon of gas we use.

We have said repeatedly that if there had to be any increase in the gasoline tax we would much rather see an increase in the State tax than in the Federal tax. These Federal interstate highways are fine, but they do not benefit us very much. We would rather see more money spent on the primary and secondary roads in Virginia.

When the Federal interstate highway program was set up by the Congress we commended the efforts of Senator BYRD, who led the fight to set up a separate highway fund for it. The Congress upped various taxes on motorists and directed that this money go into the highway fund.

RUNNING SHORT

Now it seems that this special highway fund is running short of money and that the interstate highway program will have to be sharply curtailed next year unless something is done.

This is mostly the fault of the Congress. Last year Congress stepped up the program and passed a law setting aside the trust fund agreement for one year. Thus the highway fund got extra money from the Treasury and helped to pile up the $13 billion deficit for the past fiscal year.

Then when the Congress set up the special highway fund it did not set aside all the Federal taxes on automobiles, trucks, tires, gasoline, and accessories for that fund. Far from it. Billions of dollars of Federal taxes paid by motor vehicles still go into the Treasury general fund.

We call your attention to the article on this page today by George J. Marder, UPI Washington correspondent. This explains the compromise that is being hammered out. However, Mr. Marder said that about 90 percent of the program is paid by the Federal Government. Actually only 85 percent is paid by the U.S. Bureau of Public Roads. The Congress said that the Federal Government should pay 90 percent, but there are certain expenses that the Bureau of Public Roads refuses to pay, so the State share is about 15 percent instead of 10 percent. This has been a serious burden on the Virginia Highway Department.

NEVER TAKEN ON

It might not be so bad to up the Federal gasoline tax for 1 year if we could feel certain that the extra penny would come off at that time. But we have seen too many taxes imposed for limited periods, which never did come off. Congress just keeps extending them. So we are dead set against any increase in the Federal gasoline tax.

The compromise proposal was to place a larger share of the Federal excise tax on automobiles, parts and accessories into the special highway fund at the end of a year. Why not go ahead and do that right now? As far as we can see, it would not run the budget into the red, and if it would, then the thing for Congress to do is trim some more unnecessary spending from the budget.

One of the most interesting proposals was made by Senator GORE, of Tennessee. He said to return all the motor vehicle taxes to the special highway fund, then to balance the budget cut one percent from all Federal spending, except fixed charges, such as interest, veterans pensions, etc. This would be more than enough to fill the cofers of the highway fund and balance the budget. In fact it would leave something next July to pay on our huge Federal debt.

But, please Congress, whatever you do, don't increase the Federal gas tax.

International Association of Personnel Women To Celebrate 10th Anniversary Year

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. LINDSAY. Mr. Speaker, in 1951, in Cincinnati, Ohio, a group of personnel executives met and founded the International Association of Personnel Women. During these past years, this

organization has grown and it now has local affiliates in most major cities in this country as well as members throughout the free world. These women have dedicated themselves to furthering better labor-management principles and to the advancement of modern personnel practices.

Next year, the International Association of Personnel Women will hold its 10th annual conference in New York City at the Statler-Hilton Hotel commencing on April 27 and continuing through April 30. I am very pleased that this event will be held at a site in my district and take this opportunity to welcome the officers and members of the International Association of Personnel Women and wish them success on the occasion of their 10th anniversary year.

One World: A Step Closer

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. PORTER. Mr. Speaker, on the 7th of August, this year, the city of Roseburg suffered tremendous damages when an explosion in the downtown business district gutted several blocks. The toll of lives may never be known exactly. The city manager of Roseburg, Mr. John Warburton, tells me that some 20 percent of the city's assessed valuation was destroyed.

I am glad to report that the citizens of Roseburg are making valiant efforts to overcome this terrible disaster. They are being helped by many people and groups. Today, I want to call to the attention of the House and others who read the CONGRESSIONAL RECORD, a letter sent to the city fathers of Roseburg.

This letter came from Horst Mahncke, of Hamburg, Germany. Horst describes his reactions when he read of the disaster at Roseburg. He says, in part:

> Dinner didn't tast[e] so good any more after we heard this news.

His next step was to send some money to the city to help. He writes:

> I have opened by piggybank. Although not much was in it, I am sending it to the city of Roseburg and hope that many other people will do likewise. Many, many small coins add up to a lot.

I will insert the full text of his letter a bit later. Right now I want to say "thank you" to Horst Mahncke for extending this helping hand across the Atlantic Ocean and nearly across the North American Continent.

Radio station KRNR out in Roseburg has come up with a good idea. One coin sent by Horst is being auctioned to help boost the Roseburg Disaster Fund. I know bids would be welcomed.

The letter follows:

HAMBURG, *August 8, 1959.*

To the City Fathers of Roseburg.

GENTLEMEN: I have just returned from the beach where my friends and I have been swimming. While eating dinner, father and mother read from the paper the report of the disaster at Roseburg where the dynamite-loaded truck exploded. Dinner didn't taste so good any more after we heard this news. We had to think about those poor people who suffered so much. It seems so terrible when something so unforeseen and unpredictable happens in people's lives. Have children been involved? Have children lost their parents? How sad it all is. America has always been the land of my dreams, especially the beautiful State of California with the good and beautiful fruit. I sure hope to see it sometime during my life. I sure hope the city will help those poor people who suffered in the disaster.

I have opened my piggy bank. Although not much was in it, I am sending it to the city of Roseburg and hope that many other people will do likewise. Many, many small coins add up to a lot.

Hoping that you will realize that this small amount has been given from my heart, I remain with best greetings from Hamburg, the city of the Old World at the other side of the ocean.

HORST MAHNCKE.

The picture is showing my mother, my sister Silvia, and myself. Please return the picture.

Enclosed: 2 deutsche marks (2 German marks—equal to about 50 cents).

A Time for Anger

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include an address by Mr. Albert Whitehouse, director, industrial relations department, AFL–CIO. It was delivered on April 16, 1959, at the public relations seminar, Harvard Graduate School of Business Administration. The text follows:

A TIME FOR ANGER

(By Albert Whitehouse)

Not long ago, a prominent New Jersey racketeer committed suicide. He was blessed with a society wife and was known as the No. 1 man in lucrative rackets. Why he chose to hang himself may someday make an interesting research paper for some aspiring Ph. D.

Although he was a known racketeer, this man was reported to have connections with the high and the mighty of our world and to command their respect.

Among other things, the Jersey racketeer was reported to be the head of a $100 million steel company. He still retained his control in the underworld but had graduated to the heights of American enterprise.

In years to come, some novelist intent on movie and TV rights will probably romanticize this man as "Scarface" has already been romaticized. In the national scheme of things, it appears to be success alone that counts, no matter how attained.

While the business community wasn't much putout about the suicide of our New Jersey racketeer neither was it at all squeamish about dealing with him while he was alive. After all, business is business and the so-called neutral market is said to have no ethical values.

The Wall Street Journal reported some time ago that the Justice Department is planning a drive against the blue-chip bosses of the underworld. These are big financiers who operate out of fancy New York office suites and who, among other things, are middlemen bringing together the nether world and respected enterprise.

These are well-known facts in American life, but they hardly appear to get anybody excited, least of all the NAM, the chamber of commerce, or the heads of our big corporations.

In truth, respectable America seems to be unable to get mad at anything, even the Soviet leadership. There is, of course, one exception. Big business, the press, and our more reactionary Congressmen have whipped up a storm over organized labor. Our unions—clean or corrupt—have become the very convenient target for the ire of middlebrow and middle-class America.

When a racketeer operates within the framework of a business, he is simply a crook—not a business racketeer. Let the same man change his operations to a union and he becomes a labor racketeer while his activities are used to smear even the average union member.

Nobody has proposed to close up the banks because some midwestern banker recently swindled the depositors out of $450,000 through an embezzlement scheme. Nor has anybody proposed to shut down industry because the New Jersey racketeer was also chairman of a big company.

The underworld's connections to legitimate enterprise are well known. Nobody has proposed to do anything about it and few seem even disturbed at the extent of organized crime in America. Revelations of organized crime seem to lead only to feeble efforts at law enforcement.

Crime in America is a cancer eating at the vitals of our society. Attorney General William Rogers has placed the cost of crime in 1958 at a staggering $20 billion—more than we spend on schools, roads, or wage increases.

Bank president and bank clerks are equally involved in crime. Embezzlers in the high places are proportionately as common as petty thieves in the low. The excuses of the petty crook and the big time operator are about the same.

MADE IN THE MARKETPLACE

The social values of today's world are made in the marketplace. When the State of New York last year established a division of consumer frauds and protection, it was swamped with complaints.

Sales Management, a trade magazine, reported last year that the payoff is customary in American business and that, in one form or another, it has become an expected part of sales practices.

Last fall the Harvard Business Review carried an article by Dr. Theodore Levitt, prominent marketing and economic consultant who, among other things, is adviser to Standard Oil of Indiana.

Dr. Levitt's article was entitled "The Dangers of Social Responsibility." He declared that the worst thing that can happen is for the businessman to develop a sense of social responsibility for his product and his marketplace conduct.

The businessman, according to this industry spokesman, has no responsibility for his product nor is he answerable for consequences, just so long as he remains within the letter of the law. If he manufactures gimcracks that won't last, it's up to the buyer to beware. So far as Mr. Levitt is concerned, the businessman's sole responsibility is to see that the price is right and that the product sells.

"If what is offered can be sold at a profit (not necessarily a longrun profit), then it's legitimate. The cultural, spiritual, social, etc., consequences of his actions are none of the businessmen's business," this oracle of the marketplace proclaimed.

Dr. Levitt's views are not the exception in American enterprise. They are justified by what is described as the "neutral" market—a bazaar with laws of its own making.

Far too often, the businessman addresses himself to the marketplace as if it were motivated by some force akin to the nether gods of Viking folklore. And like the Vikings of yesteryear, today's businessman seeks to propitiate his marketplace gods with incantation and sacrifice.

The myth of the neutral market is as hollow as the outlook of those who proclaim it. The very same persons who proclaim the neutrality of the market are first to seek to corrupt society with hidden persuaders intended to make fools of all of us.

The February 1959 issue of Dun's Review carries another indictment of today's business morality. Here, business is damned unknowingly by one of its more ardent wooers, Mr. Martin Mayer of "Madison Avenue, U.S.A."

Mr. Mayer places a stamp of approval upon style obsolescence in durable consumer goods—urging substitution of empty style change for true improvement in the product.

Mr. Mayer has also declared that planned obsolescence of goods through premeditated materials failure is good business practice. In plain language, the market is to be loaded down with junk if that's the best way to assure sales at prices that industry seeks to exact.

This author asks that subjective judgments be set aside in considering the issue.

"It is clear," he pontificated, "that a pattern of successful style obsolescence must eventually be reinforced by a decrease in the durability of the product."

America's resources aren't endless and trouble lies ahead if they are expended on such swindles as planned obsolescence. Quite apart from even this consideration, planned obsolescence imposes enormous hidden costs upon the consumer and robs him of higher living standards.

I have heard charges of featherbedding against organized labor until I'm weary. To listen to the righteous fathers of the NAM, our workers are loafers and our union members want triple pay for standing around.

* * * * *

By comparison, industry featherbeading is monstrous. What's worse, society justifies and accepts it. The cost of phony style obsolescence and planned materials obsolescence adds billions to the bills of our consuming public. Honest investigation will show that this has more to do with rising price levels than any wage increases.

We have accepted the morality and success standards of the marketplace and they color our every action. Recently on TV, Groucho Marx facetiously asked a young co-ed of obviously good home about the kind of man she wanted to marry. Her choice was a stereotype—good looking, good clothes, and good income. Integrity and decency apparently had little or nothing to do with the case. Youth's sole rebellion in these days of prosperity appears to be in the direction of juvenile delinquency. In view of our elders' values, who can blame the juveniles?

How can industry expect its employees to bleed for it, if it treats the public like so many suckers? The corporation board that winks at stock deals, yachts, hunting lodges, expense account living, and highjinks for its executives shouldn't be horrified at pilferage among the rank and file.

In the twenties, Texas Guinan, the showgirl, had a word for it, "Hi, Sucker." Today, the idea that only suckers really work is imbedded in our society. Why should the average employee overexert himself, after all, if he's to be considered a square?

AMERICA'S DOUBLE STANDARD

There's a double standard in America—one for the boss and one for the worker; one for labor and one for everybody else. Organized labor has become a whipping boy for our every ill. No longer does there seem to be hard thinking about ourselves or our institutions—even within our universities.

Such is the state of affairs that when organized labor erects a modern structure to house its staffs, there is a lifting of eyebrows. But nobody even blinked when the National Geographic Society announced recently that it was junking its impressive marble halls in favor of a multimillion dollar structure of modern design.

Some time ago, I was at a gathering of polite people in an upper middle income suburb. The locale could have been outside of any large city in the United States of America. The group was all professional, of middle age and upward—doctors, lawyers, government careerists, and their wives.

To hear these good people, organized labor is to blame for virtually everything from the Berlin crisis to nationalist outbursts in Nyasaland. What bothered me most was that all the disagreement was virtually as polite as the agreement. Nobody got angry; nobody had a point of view truly worth fighting about.

These professionals seem to have forgotten the past, although some suffered in the depression and others had been caught up in yesteryear's war tides.

A strange myopia afflicted the crowd, or so it seemed to me. The doctors were remarkably unconcerned over the kind of closed shop enforced by the American Medical Association. The rising costs of medical care, the pushing up by doctors of their fees, or other unsavory aspects of organized medicine. The lawyers were equally unconcerned about the activities of the American Bar Association, even the recent ABA attack upon the Supreme Court because it had upheld traditional civil liberties.

Organized labor is not holy or beyond reproach. In some cases, unions have been entrapped by the same corruptions that have afflicted other organizations and groups. Of course, action must be taken to root out this corruption. Labor itself recognizes the dangers better than any other group within our society and it is doing something about it.

I think I can say in all honesty that labor is almost alone in its lack of smugness toward this and other major problems of our day. I don't mean either that our halo's on too tight. Nor do I mean that some among us haven't grown smug and self-satisfied.

But organized labor is one of the last places where a nonconformist can still hold a job. It is one of the few groups which has refused to stand by while freedom is traded away in the name of some imagined security. Had it not been for labor's protests, the Defense Department's security program might have degenerated into a nightmare, especially in the day of McCarthy.

Where else in America, other than in the labor movement, are the ethics of the marketplace subjected even to critical appraisal?

Who, in America, other than labor, now speaks up for the underdog?

Who else in America dares even remind big enterprise that the primary purpose of production is a better life, not better profits?

Like every other organization subjected to the erosions of time, organized labor has been affected by institutionalism. The fighting idealism of yesterday has been lost in some cases. But the institutional drives remain and these are drives that are good for America because they compel the union to represent the interests of the average man. Despite the press, these are not just mouthings. Our fight for a better minimum wage is real, so is our fight for better housing and so is our struggle for racial equality.

Much of organized labor's idealism remains. If you don't think so, go to a local union meeting where unpaid officers administer the affairs of struggling organizations far removed from the power politics of Washington. Or go on the job where stewards—average Joes and Janes—take up the cudgels for their fellows as an accepted part of their unpaid assignments.

Come south along with me. Here, the struggle for organization goes on in the face of terrible odds. Here, organizers are still beaten up and run out of town, as happened only recently to a Texile Workers Union organizer and one from the Hosiery Workers.

Despite the odds, men still go back into the Southland with the union message. These men who work for struggling unions could get jobs elsewhere. They return after defeat because they know that only the union can answer the problems of the exploited worker. Call this misplaced idealism in an age of cynicism, if you will. But thank God, as well, that there still is some small share of it in the land.

If, by big labor, you mean big unions, then there is big labor in America. But just remember that when a strike takes place, it is individual working people who rally to their organizations. The biggest union in the world couldn't make its strike instructions stick if workers weren't convinced that without the union they would be nothing.

Contrary to the popular view, most of our unions are anything but big. Many are still struggling for bargaining rights in unequal battles with employers. And while strikes are won, they also are lost. Yet the battle goes on, and it will continue as long as labor must fight the morality and the values of the marketplace.

SOMETHING IS MISSING

Something seems to have gone out of American life. It's a sense of sympathy for one's fellow man, a sense of integrity, an understanding of the other fellow's right to human dignity.

There was a day when the picket line of underpaid textile workers commanded sympathy. There was a time when the plight of the farm worker was of national concern. There was a day even when the Nation cared about its poor, and that wasn't so long ago.

The latest figures show that millions of workers remain unemployed, and the projections show that joblessness will remain high. Congress doesn't seem to care, and the President appears perfectly willing to sacrifice the welfare of the jobless to budget balancing and economy.

Like the weather, a measure of unemployment now seems to be taken for granted. A few years ago the rate was 4 percent. Now 6 percent of our manpower willing and able to work is jobless, and only labor really seems to give a tinker's dam.

A few years back labor was informed that the key to jobs and prosperity is high productivity. In the abstract, that's absolutely correct. Labor responded with a will and produced more than ever.

When automation came along, we raised no objection. Some of us wondered what the social consequences might be, but the experts pooh-poohed our fears and told us that automation would create more jobs than it would destroy. What's more, we were promised that these would be highly skilled jobs that would pay better.

We are also told that service and white-collar employment opportunities would expand and that there would be plenty of new jobs in these areas. Every man, it seemed, would be free of drudgery and, what's more, the new technology would automatically bring about shorter hours.

A few who doubted cited the case of the farmer who then, as now, was being overwhelmed by his own productivity. We agreed that there ought to be more production and higher productivity. All we asked

was assurance that this be transformed into prosperity for everybody.

Automation, we were told, would bring about a brave new world in which all our social and economic problems would be solved with the precision of an electronic computer. All we had to do, the experts said, was leave it to the corporations and to nature.

Nature's way, it appears, hasn't been good enough. Today, fewer manufacturing workers are turning out about 50 percent more goods than a decade ago.

Where are those jobs in the service trades? Where are the white collar jobs? And where, for that matter, are all those skilled jobs?

The same process that has cut down jobs in manufacturing is cutting down job opportunity in the service trades and in white collar. If this is the age of the atom and of automation, it is also the age of the computer. The same computer that has made possible the robot factory is also making possible office, warehouse and store automation.

In the steel industry, some 100,000 jobs are gone forever. In autos, the situation is even worse. Year after year, more and more farmers are tractored off the land. Year by year, the workforce grows as the war babies of the forties enter the job market.

By 1965, over 1,250,000 new workers will enter the job market annually. At this time, the Nation will have a workforce of 78 million. Even if gross output expands at a rate higher than today, the mid-sixties will be a time of high joblessness.

THOSE ROSY PROMISES

What happened to the rosy promises of yesterday?

What kind of future can we offer today's unemployed and tomorrow's eager youth?

Who cares? Certainly not our corporate employers. And, this administration appears to care even less. I wish I could say that the leadership of the Democratic Party truly cares but even they don't seem much concerned. Certainly, Congress has yet to come forward with a program that will put the Nation back to work.

This is the great immorality of today—an immorality worse by far than the hand in the till. Nobody seems to care very much any more—nobody but organized labor and the jobless.

Today, in Clearfield County, Pa., in Hightop, W. Va., in Washington, D.C., and in other cities and counties in most of our industrial States, children and their elders are eating mollygrub.

"What's mollygrub?" you may ask.

It's a diet of Federal surplus foods. Millions in this country are dependent in some measure on this diet.

In Washington, D.C., a family of one to five persons dependent on public assistance or living in abject poverty is eligible for one unit of mollygrub. That unit consisted, some time ago, of a monthly allotment of 10 pounds of flour, 5 pounds of cornmeal, 5 pounds of cheddar cheese, 5 pounds of rice, and 4½ pounds of powdered milk. The total value of this package has been estimated at $6.

Some 7,000 children in the Washington, D.C., public schools are hungry each day and so far there has been only talk of feeding them, since our National Congress hasn't seen fit to appropriate extra funds for their lunches. A Washington, D.C., newspaper recently ran a series on poverty in our Nation's Capital. It found that 31,000 families—over 100,000 men, women, and children—live in dire want.

Side by side with hunger at home and with even worse hunger abroad are whole are whole warehouses full of surplus food. Year by year we stockpile this food as a monument to the folly of our marketplace morality.

As the idle miners of Hightop, W. Va., eat their sparse surplus food diet of dried milk and rice, the Government warehouses are bursting with wheat, corn, butter, eggs, dried fruits, peanut butter, dried meats, and almost every other variety of food.

By next July the United States will have invested $9 billion in surplus foods. Under the flexible farm support program of Ezra Taft Benson the surplus grows year by year. Flexible supports meant more intensive cultivation of the land last year and another 300 million bushels of wheat were surplus. This year there will be a bumper corn crop, which should mean meat in plenty even for the jobless.

The peoples of the entire world know about our farm glut. If they become anti-American, this food surplus that they cannot touch may have something to do with it. The reasons will have much more to do with hunger than procommunism.

* * * * *

Because we are fools, we have geared our food surplus program to the market. Today, the food cannot be passed out to those in need even at home unless this will stabilize prices. The chase for higher farm prices, like the chase for the hard dollar, is the excuse for denying food to the hungry.

That's the law, and the law, after all, must be respected even though it makes jackasses of us. The thought that the law might be changed so that the hungry might be fed seems to send shivers down the spines of respectable businessmen who look upon this as the backdoor to socialism.

This year, $4 billion are being spent for price supports to carry out "Uncle" Ezra Benson's flexible farm price policy. Another billion will be required simply to pay storage costs for our mountain of surplus foods.

If just the amount of money now going to pay for storage were spent to feed the hungry of America, a big dent would be made in food surpluses. This would do more to stabilize prices than any support program since the expenditure would permanently remove millions of pounds of food from the market. This could be done without entering into competition with our usual food distribution outlets.

Senator WAYNE MORSE recently charged that "we do a better job of feeding our livestock" than we do in feeding our hungry children. The Oregon lawmaker pointed out that "when cattle starve, half the U.S. Air Force flies hay to them."

The surplus food program is financed by 30 percent of the receipts of all customs received by the United States under terms of a law enacted in 1935. Last year, the Department of Agriculture could have spent $220 million for this purpose and could also have dipped into $300 million of unobligated balances carried forward from previous years.

Such was the state of morality in the recession year of 1958 that Secretary Benson turned back unspent to the Federal Treasury $83.5 million which will be forever lost for this purpose.

This money was deliberately withheld from the poorest and weakest of our society. When Benson turned it back to the Treasury, he virtually took food from the mouths of hungry babies.

This is the same man who, in the name of economic good sense and marketplace morality, ran up the agricultural budget to $7 billion.

The crime of Benson is far more serious than that of the New Jersey racketeer I mentioned at the start of this talk. Benson, however, acted within the framework of law and in the name of morality.

Even as Benson turned back his surplus funds, a local union president from the Textile Workers Union had this to say in testimony before the Congress:

"We have read in the papers that the (Agriculture) Department does have funds to buy more surplus commodities. If this is the case, it is a national scandal that hungry children, to say nothing of their parents, in communities like ours are not receiving sufficient nourishing and palatable foods to meet their urgent needs."

Here is an indictment that speaks for itself. Ask yourselves who are the guilty in our society and answers the question honestly. The answer is hardly pleasant.

OUR ADVANCED CIVILIZATION

Yes, ours is an age of advanced civilization and one of advanced technology. We cower in the shadow of the H-bomb and despite big talk, we refuse even to meet our responsibilities in harnessing the energy of the atom for peaceful purposes.

A major problem for the industrial workers of the new age will be protection from the killing effects of radiation. Great new problems are appearing in this area—problems both of adequate safety and of compensation to those injured on the job.

Recently, industry spokesmen appeared before a joint Congress committee to state their views. The head of a big insurance company urged no Federal action to set safety standards until the States prove that they will not or cannot do the job. How many must die or suffer the pangs of radiation sickness before industry is convinced of the need for uniform safety and compensation standards?

Here, too, the same old arguments of statism and cost were raised by industry on the same old basis as in yesterday's world. So callous were industry spokesmen that Representative CHET HOLIFIELD finally declared: "You are talking about a material that throws rays through 5 feet of concrete and kills people."

This is the morality of our day. It is a morality that permits the $150,000-a-year executive to cut himself into a stock melon while condemning a 20-cents-an-hour, union-won wage increase as inflationary. A recent report of the State of New York showed that there are now 45 persons in that State alone with incomes of over a million a year. The wealthy are very much still with us and they probably get a big bang out of seeing labor blamed for so many of today's ills.

Labor is blamed today for the results of the administered prices of big business—for an inflation that has its roots in a business policy geared to maximum unit profits instead of maximum production. Labor has become the whipping boy for the outlandish profits of our monopolistic corporations. To blame the factory worker with his average wage of $87 weekly for inflation is nonsense. This worker is the victim of inflation, not its cause.

It is strange that we hear little today about the mad speculation in Wall Street, and its effects upon inflation, but then the profits made there don't go to working people. Today's land speculation is fantastic, but the speculators don't work in auto or steel plants and they aren't unemployed, so their profits must be perfectly kosher.

Nor has anybody even talked about the growth of a technical and middle management bureaucracy that fattens on itself and adds significantly to costs. In these days of upper-middle-income suburbia, it just wouldn't do to talk about these cracks in management's picture window.

Hundreds of thousands of displaced workers stand as a monument to today's productivity and this productivity unemployment is the best answer to those who lay featherbedding, high wages, and inflation at labor's door. The plain fact is that unit labor costs in key industry haven't gone up significantly and that management has recouped wage increases through the rise of output per man-hour. What we need is ever wider markets for goods, not stagnant wage levels.

It is time for a stocktaking in America and for ending senseless stockpiling. It is time to take up the cudgels against the pres-

ent dead level of conformity and for plain old-fashined decency. The American people need once more to understand that righteous wrath is not only permissible but desirable. America needs, above all, fewer pitchmen and more angry men. We need, possibly, fewer whitewashing detergents and more soapboxes.

Small Business Investment Companies

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. EVINS. Mr. Speaker, in a recent issue of Small Business, published by the National Small Business Men's Association, carried an article in which this organization recommended legislation which would, through tax benefits and greater flexibility, enhance and speed up the organization of small business investment companies.

The suggestions incorporated in this article are of interest to those concerned with the welfare of small business. Under unanimous consent to extend my remarks in the Appendix of the RECORD, I submit this article for the benefit of the Members of Congress and others:

NSBMA URGES NEW TAX BENEFITS TO SPEED INVESTMENT COMPANIES

Greater tax benefits * * * and increased fiscal flexibility. This was the gist of NSBMA recommendations to beef up the Small Business Investment Act.

And in presenting his testimony to the House Select Committee on Small Business, President Harry E. Brinkman was hopeful that the act might yet provide a needed flow of private capital for small business starts and expansion.

The Investment Act last year was a key aid measure as Congress tossed out a legislative lifeline to small business. Through it, a nationwide web of private investment companies was to be established. And they were to provide the sorely needed long-term debt and equity capital which is a major problem of most small firms.

But the rush to form investment companies has not been forthcoming. At presstime, less than 20 have been licensed. And the main deterrent seems to be that of the act's tax benefits which some critics have labeled "confusing" and "downright misleading."

With this in mind, NSBMA's testimony recommended:

1. That investment companies be allowed to establish a reserve for losses of up to 20 percent of their assets—and that this be tax deductible;

2. That dividends paid on preferred and common stock of such companies be deductible from earnings before taxes are computed;

3. That dividends paid on preferred and common stock issued by investment companies be tax free to the recipient, up to $5,000;

4. That investment companies be given greater flexibility by allowing them to purchase preferred and common stock, or any other equity interest that may be authorized by the Small Business Administration which supervises and licenses companies formed under the act.

Three main tax benefits were included in the original 1958 law. Through them:

1. Dividends an investment company receives from the stock of a small business are exempt from the corporate income tax;

2. Investors in the stock of an investment company who incur a loss on that stock may take an ordinary loss deduction—rather than a less advantageous capital loss deduction;

3. Investment companies which have a loss on an investment in a small business may take an ordinary loss deduction rather than a capital loss.

One other major "gripe" with the act's requirements is that of requiring a small business to "share" its ownership with the investment company making it a loan.

Most necessary amendments to the act already are incorporated in bills to be considered by both Senate and House this year.

From what we can learn, the consensus on Capitol Hill points toward passage of remedial legislation this session.

A Solution Needed for Food Surplus Problem

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ALGER. Mr. Speaker, as this session of the 86th Congress draws to a close, there are some tough problems that have not been solved. Among the unsolved problems is the farm program. For many years, Federal legislation has only complicated and worsened the situation in relating supply with demand in the farm program. The extent of this imbalance because of Federal tampering might well be assayed by checking reaction to the following article which outlines a discovery of "Way Found To Grow Winter Grains in Tropics in Third of Normal Time." How welcome will be additional grain production when present surpluses bulge our warehouses?

A solution sooner or later to the farm mess must be found. If Congress will not provide the leadership, the people may well force Congress to take action by supporting the administration's request for a new and corrective farm program. After all the people forced a labor reform bill through the House.

The article follows:

NEW SOURCE OF FOOD FOR MILLIONS—WAY FOUND TO GROW WINTER GRAINS IN TROPICS IN THIRD OF NORMAL TIME

PASADENA, CALIF., August 30.—A way of growing winter grains in the winterless Tropics—and thus opening a new source of food for millions—was disclosed today by the California Institute of Technology.

For the first time, the institute said, winter rye plants have been made to produce grains without the benefit of winter and in a third of the normal time.

There is evidence the same thing can be done with barley, wheat, and other winter grains, the school said.

"Generally if you find something that changes the growth habits of one member of a family of plants it will work for the whole family," said Harry R. Highkin, research fellow in biology at the institute.

An announcement by the institute said Highkin and two associates made the rye produce grain in 2½ months. The usual period is 6 months, including a winter cold spell of 6 to 8 weeks.

"The method is simple and practical commercially," Highkin said.

The scientists used a spray of gibberellin, a hormone that plants secrete to induce stem growth, on rye plants grown in a constant hothouse temperature of 62 degrees.

Highkin waited until the plants had 10 leaves and were about a month old. Spraying at this time caused the plants to grow rapidly and produce grain within another month and a half.

Highkin believes two things happen to grains normally during winter, and that spraying them with gibberellin eliminates these phases and speeds up seed production.

One is the secretion or accumulation of some substance so that gibberellin can be formed in the plant's growing tip at the end of the cold period. The other is the formation of additional hormones, called florigens, which scientists believe the plant secretes to produce grain.

Unworkable Price Supports

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial by Mr. Robert Ingalls in the Corvallis (Oreg.) Gazette Times of August 17, 1959, on the farm support program:

UNWORKABLE PRICE SUPPORTS

Unsound, unworkable Government price supports are threatening to put the Nation's farmers in the public opinion "doghouse," says Charlie Shuman, a Sullivan, Ill., grain and livestock farmer. And Shuman is also president of the American Farm Bureau Federation.

At a meeting of women's editors in a Chicage hotel recently, the gentleman farmer from downstate Illinois declared that farmers resent "being made the goat of a series of unworkable Government farm programs." Then he pointed out that farmers have often insisted on these programs being changed but the Congress has not as yet taken effective action.

It's difficult to understand the line of reasoning of our Senators and Representatives in this case. If the price-support program is so distasteful to the majority of our agriculturists why doesn't the lawmaker choose to go along with his constituents back in the hustings?

Pointing to the unsound, unworkable farm programs, Shuman says he does not subscribe to the idea that it is good public relations to apply the whitewash, use high-pressure propaganda or resort to sweeping dirt under the rug. "These programs have been bad and we know it," he exclaimed.

Farm Bureau's objective, as we know it, is to create conditions under which farmers can earn and get a high per family real income in a manner which will preserve freedom and eliminate Government regulation of individual farming operations. The current farm program doesn't further that objective.

We've often wondered whether the individual farmer is sick of the setup that Ezra Taft Benson himself lambasts as occasion presents itself.

Shuman says that today's burdensome farm surpluses are symptoms of a sick farm program which has infected agriculture with the disease of Federal aid and control that is spreading to other American walks of life.

We marvel that the taxpayers, ever on guard against increasing levies for educational purposes, have not awakened to the fact that Federal contribution to our schools is gradually encroaching where it should not to the detriment of local interest in schools. We're so everlastingly beset with Federal aid that we aren't able to stand alone without it, not only in our school system but in many other systems that used to function on their own initiative.

There's a sinisterism we fear in the handouts the Government insists on providing and the condition the farmer finds himself in now as regards the subsidized Federal program. It's something like dad setting son up housekeeping and then telling him to go right ahead on his own. Dad, instead of leaving the son with full responsibility, every so often slips him a check gratis and thereby weakens the son's family headship.

Incident to beliefs in some quarters in and out of farm circles which would defend excessive Government farm expenditures on the grounds that many other groups in our economy are subsidized, Shuman pointed out that the farmers are not out for revenge. Their primary purpose is, rather, to serve the best interests of farmers, and Government subsidies cannot do this.

If the Government insists on slowing farm production, on telling the farmer how much he can and can't grow, on furthering dictatorial subsidizing, we'll soon have an agricultural power potential group on a dole.

Food in the United States is the best buy in the world, Shuman told the women at the Chicago hotel session. He was continuing to sing the praises of the tremendous production strides made by agriculture under the nonsubsidized program they themselves instituted when horse and mule farming was being discarded in favor of power farming and highly sensitized, utilized, and fertilized truck farming.

Today a factory worker can buy a month's supply of food for his family—an average size household—for 40 hours of work in contrast to 51 hours of work necessary 7 years ago to purchase that much.

Given proper Government supervision and encouragement without dictatorial coddling, and American agriculture can produce under an economic program of supply and demand a most satisfactory form of existence on the farm, in the home of the factory worker, or the millions in neither group whom we classify as white-collared workers.

Golden Remembrancer

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a tribute to the founders of California written by Mr. John C. Crowe:

GOLDEN REMEMBRANCER

Let's roll out the golden carpet. On September 9, 1959, California will be 109 years old as a State in the American Union.

This writer is a grandson of California pioneer parents who sailed into the Golden Gate during the gold rush—Mary Ann and Caleb Coakley. Their first child, Mary Ann Coakley (this writer's mother) was born at Stockton, in March 1853. I heard from their lips the glorious story of the sacrifices and hardships that the pioneers endured to reach and establish the State of California. In 1849 our Nation was composed of 30 States—15 of which legalized human slavery, while the other 15 did not. The scales on human slavery was evenly balanced until the 100,000 daring young men who founded the State of California threw their weight into the scales forever against slavery. Because of their bold and forthright stand, California met with fierce opposition in her request for statehood.

But the 100,000 daring young men of 1849 who had actually bet their lives to reach this golden State, had the moral stamina to meet and overcome the opposition and won statehood for California on September 9, 1850—giving star 31 to our Nation's flag—and, forever, setting the American pitch against human slavery.

JOHN C. CROWE.

LOS ANGELES, CALIF.

Conservation and Management of Migratory Marine Fish

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. SAYLOR. Mr. Speaker, a serious problem regarding the conservation and management of migratory marine fish has been brought to my attention. At my request, the Department of the Interior has informed me of the phenomenal growth of recreational salt water fishing in recent years, which growth has created many problems in the field of management and its relationship to commercial fishing.

During the year 1955, 4½ million sportsmen participated in this popular sport for a total of 59 million days and spending $489 million.

I have been advised that the annual sport harvest may now approximate a half-billion pounds of fish and may double in the next decade.

For these reasons, Mr. Speaker, I would like to suggest that future study and consideration be given to authorizing a comprehensive and continuing study of migratory marine fish of interest to recreational fishermen of the United States.

The purpose of such a study would be to develop wise conservation policies and constructive management activities.

It is my belief that a cooperative program of research between the States involved and the Federal Government would be a logical approach to the problem. The Federal Government could supply funds in equal proportion to those supplied by the States for this purpose, limited to 50 percent of the cost of the program. I would recommend that not more than $100,000 be made available, on a 50–50 matching basis, with any one State in any one year.

Federal funds employed on a joint Federal-State level have in the past proven to create greater State financial participation and interest in planning research programs of this nature.

It is my hope, Mr. Speaker, that in the next Congress we may establish a continuing research program for the conservation and improved management of migratory marine fish in the United States and contiguous waters.

For the purpose of studying this problem, I am introducing H.R. 8968. I welcome any and all comments from interested conservation and sportsmen's agencies on this proposed new program.

How Can We Stop the Communist Drive in Laos?

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. STRATTON. Mr. Speaker, last week I brought to the attention of Members of the House the critical situation which has been created in the faraway country of Laos with the initiation there of a new Communist attack designed to take over another key sector of southeast Asia. I expressed my own view that, though it was important that we give assistance in terms of money and weapons to the people of Laos defending themselves against one more act of Communist penetration, I was fearful that this type of assistance might not be enough and I suggested that we must also be prepared to send our own forces, including a detachment of marines and a U.S. Navy carrier, to this troubled part of the world to demonstrate our determination, just as we demonstrated it at Lebanon, not to permit the Communists to upset further the balance of power in any part of the world.

Of course, this suggestion raised some serious questions. But by the same token the fact of Communist aggression, the difficulty of dealing with it effectively, and the natural hesitancy on the part of Americans to commit themselves promptly in this kind of a situation have also raised some serious questions. Yesterday, August 30, there appeared in the New York Times a thoughtful editorial which I would like to bring to the attention of the Members of the House. I thoroughly endorse its statement that, in order to protect ourselves against Communist aggression we must "recognize a grave menace when it appears, and not shrug it off lightly because it happens to be on the other side of the world." The editorial follows:

LESSONS FROM LAOS

The situation in Laos is proving, once more, that the free world has given inadequate attention to its means of defense against the Communist conspiracy. Communist raiding parties have now struck within 16 miles of the capital. At least three areas in the northern part of the country are already under Communist control or in

a state of chaos. The survival of free government in this newly independent kingdom is at stake.

Laos is a member of the United Nations, but the Secretary General admits that he is powerless. He cannot even send in observers unless they are requested by both sides in the controversy and naturally the last thing in the world that the Communists want is observation. The United Nations cannot take any forceful and immediate action without the authority of the Security Council where the Communist veto is expected, automatically.

The United States, acting independently, has announced its intention to airlift some small arms and ammunition to the tiny Laotian Army. It may be possible to bring its effectives up from 25,000 to 29,000 men, to withstand the assault of North Vietnam and Red China, whose manpower and firepower are not under such modest limitations.

Even that little bit of help is joyfully welcomed by the free Laotians as a symbol of the fact that at least someone, somewhere in the world, is concerned over their survival. And naturally it has drawn a prompt and bitter denunciation from the Communists in North Vietnam on the ground that "U.S. imperialists are seeking to expand the civil war in Laos into a real shooting war." This is no time for humor, but one may be forgiven a wry smile at the concern of foreign Communist North Vietnam over a civil war in Laos.

What all this demonstrates is that we have not yet developed any effective techniques for meeting the by now well-known Communist tactics. We don't want a big war and the Communists know it. So they can keep up this unremitting process of hacking away at human liberties, knowing that the United Nations is powerless and that most members wish to keep the peace.

Some changes in the mechanism of keeping the peace and preserving human liberties are obviously needed. Perhaps the first change that is required is in our own thinking so that we can recognize a grave menace when it appears, and not shrug it off lightly because it happens to be on the other side of the world.

Soldier of God

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Presbyterian Life magazine of September 1, 1959:

SOLDIER OF GOD

(By James W. Hoffman)

(On the battlefield, in prison camp, in the corridors of the Pentagon, Chaplain John K. Borneman's job has always been the same—to be a pastor to the men and women of the armed services.)

In Australian in 1942, a U.S. Army chaplain fresh from the States was talking with a young airman who had been through the battles of Pearl Harbor, Bataan, and Corregidor.

"Those chaplains sure did a job," the pilot said. "Know what one of them did? Let me see, what was his name? Borneman—that's it—John Borneman. It was just before Christmas, and we were all wanting to get messages home, and plenty bad. He knows it, so he goes around asking us if we want to send a telegram to the folks at home. Boy oh boy, is he a mind reader—so he collects our messages and makes the trip back to Manila, and it's plenty dangerous, too. But he gets the messages through—and comes back to get more."

"What do you suppose," the chaplain asked, "has happened to him?"

"Probably captured by the Japs."

The pilot was right. Jonathan Wainwright, in his book, "General Wainwright's Story," tells about watching the Death March of Bataan winding by the hotel in which he was being held prisoner by the enemy.

"Among the marchers, with his chin in the air, was Chaplain John K. Borneman, a valiant soldier of God and the United States."

Chaplain Borneman was one of the survivors of that 186-mile tramp in the broiling sun. He has survived many other ordeals as well, including battles on land and in the air, a train wreck, an airplane crash, and 2½ years in a Japanese concentration camp.

Retired from the Army in 1950 because of wounds received in action, Chaplain Borneman is now executive secretary of the Department of Chaplains and Service Personnel of the United Presbyterian Church, which serves 205 Presbyterian chaplains and around 75,000 laymen in the Armed Forces.

He began his military career during World War I, as a fighter pilot with the 72d Pursuit Group. Although those were the days of canvas-covered biplanes, when guns jammed and motors died with no apparent reason, Lieutenant Borneman came through the war without a scratch.

After demobilization John Borneman returned to Franklin and Marshall College, Lancaster, Pa. Here he took all the courses in science he could fit into his schedule, as he planned to become a doctor. Since childhood he had been torn between two vocations, medicine and the ministry. For generations the men in his family had been doctors or dentists; how the notion of entering the ministry first came to him, he doesn't remember.

DISILLUSIONMENT ABOUT MINISTRY

He made his decision to study medicine after knowing several ministers who didn't seem to be doing much of a job. This disillusionment was almost offset, he says, by remembering an Army chaplain he had known in World War I—"a wonderful fellow, a Lutheran named, believe it or not, MacIntosh."

While he was in college, Borneman met other ministers who impressed him favorably, and his resolve to follow medicine wavered. Finally, in his junior year, he attended a student conference on vocations at which several clergymen spoke persuasively of the demands and opportunities of their work. The scales tipped, and John Borneman revised his academic plans to point himself toward the ministry.

He studied at the Theological Seminary of the Reformed Church, and took graduate work at the Universities of Pennsylvania and of Buffalo, N.Y. In 1925 he became pastor of Bacon Memorial Presbyterian Church, Niagara Falls, N.Y. He married the former Elizabeth Goos, of Lancaster, Pa., the following year.

The Niagara Falls church was strategically located for giving young Borneman a nudge toward his destined career. Nearby was the Army's Fort Niagara. "The military," Borneman explains, "either gets in a man's blood or it doesn't. If it does, he can never get away from it for long." Pastor Borneman began hanging around Fort Niagara, and presently found himself, for all practical purposes, as much a chaplain as parish minister.

In 1929 he entered the Army Chaplain Corps, and through the following 10 years served many installations in the United States. The chaplaincy, he felt strongly, offered a chance to minister to men who were all too often neglected by the churches and their people in settled congregations. As he has said many times since, "it is not surprising when servicemen forget their obligations to God, if the church has first forgotten its obligations to them."

When the United States entered World War II, Chaplain Borneman had already been in the Philippines for 2 years. He was the first American chaplain to be wounded in action, receiving a hail of bomb fragments in his legs just 22 days after Pearl Harbor. Less than 3 months later he earned his second Purle Heart when a shell fragment lodged in his head. When a grenade exploded in front of him less than 2 months after that, gashing his chest and abdomen, Chaplain Borneman was hospitalized for the third time in less than 6 months of war.

AMERICANS CAPTURED

Two hours after Borneman was taken to the hospital, the American forces surrendered to the Japanese. Sixteen days later he was taken from the hospital—"The Japs made us well by order"—and forced to join the death march. Fifteen thousand Americans and fifty thousand Filipinos made up that wretched parade, a wholly unnecessary cruelty, for ample motor and rail transportation was available to the conquerors.

John Borneman was then 43 years of age. For the next 2½ years he was a prisoner at infamous Camp No. 1, at Cabanaturan.

In the Japanese military philosophy, an officer is responsible for everything done by anyone in his command; for this reason the officers at Camp No. 1 endured the most frequent and most brutal punishments. Chaplain Borneman was forced to witness the murder, after 24-hour beatings, of 12 line officers. The chaplains—all officers, of course—made themselves special targets of their captors' wrath by their boldness in demanding better conditions for the prisoners and by holding religious services without permission. Malnutrition and disease killed even more of the Americans than did the direct action of their jailers. Of the 33 chaplains imprisoned, only 15 lived to be rescued.

Chaplain (Major) Borneman, second in command among the chaplains at the time of their capture, became supervisor of religious activities after Chaplain (Colonel) Alfred Oliver, a Methodist, had his neck broken during a beating and remained too ill to continue his work. For his unyielding efforts to keep the truths of religion alive in the prisoners' hearts, Chaplain Borneman was beaten many times. On one occasion all the teeth in his upper jaw were kicked out; on another, his arm was broken.

During his 30 months' imprisonment Chaplain Borneman contracted dysentery and beriberi; he is still troubled by periodic returns of these diseases, and will never be completely cured, physicians say. Naturally a rugged stockily built man, he weighed only 95 pounds when rescued.

To the prisoners, the camp authorities' policy on religious work seemed vacillating and inconsistent. After originally forbidding worship services, the Japanese rescinded this ruling, but required that sermons be submitted to headquarters for approval. As paper was scarce and wildly expensive, the chaplains used can labels and other scraps for writing their sermons.

Graveside services for the dead were forbidden; the chaplains circumvented this prohibition by stealing into the morgue and holding services—for as many as 75 men in 1 day—over the bodies before the burial party would arrive. Of the 5,700 prisoners in Camp No. 1, 2,666 died.

Not one of the chaplains in Camp No. 1, Protestant, Roman Catholic, or Jewish, ever shirked an opportunity to serve the prisoners, even though the penalty for doing their

proper work was frequently beating and torture.

Bible classes were forbidden, but were conducted by the chaplains secretly in a drainage ditch where the prisoners were laboring. Guards were posted to give warning of the approach of a Japanese. Usually instruction could go forward only a few minutes at a time, then be interrupted until the coast was clear.

In the second year of imprisonment, chaplains and laymen of eight denominations organized the Protestant Christian Church of Military Prison Camp No. 1 of the Philippine Islands. This congregation was strongly evangelistic; more than 250 men were baptized into the Christian faith. The membership of 1,600 included men from every State in the Union and 17 other nations.

The church held night classes in such subjects as the life of Christ, philosophy of the Christian religion, the life of the apostle Paul, and Christian ethics. Borneman was teacher of the course in Old Testament history. For a period of over a year the classes had no electric light; laymen cut bottles in half, made a wick of cloth, and floated it on coconut oil. This homemade lamp enabled the teacher to see his notes, but the students sat in darkness. In spite of this handicap, classes were well attended; several hundred men in each course was normal enrollment.

Clark Lee, a war correspondent who survived to report his experiences, wrote of Chaplain Borneman that "his parents and teachers must have forgotten to teach him the word 'fear'."

"We had to act as though we weren't afraid," Borneman explains. "The only way to get anywhere at all with the Japs was to talk up—and back—to them. If they sensed that a man feared what they could do to him, he hadn't a chance."

Only his faith in God, Borneman says, enabled him to keep going during those years. He remembers two hymns especially that he kept going over in his mind when he was in sharpest need of strength to withstand his ordeals: "Lead On, O King Eternal," and "O Jesus, I Have Promised To Serve Thee to the End."

SOME DESIRED DEATH

The men who brought no faith with them, and failed to acquire it, didn't last long. "We saw many men die because they had lost the will to live. With so much evil all around us, faith in a righteous, loving God wasn't easy for some men. And as the months dragged into years, it was easy to believe what the Japs kept telling us—that America was finished, that we'd never be rescued. Many men willed themselves into death just to escape."

But so many others the manmade hell of hunger and pain proved to be God's opportunity. "With death at our doorstep all the time—you never knew when a Japanese soldier might get the impulse to raise his rifle and shoot you—men began wondering about the meaning of life." The prisoners were pathetically eager for assurance of some better experience after this life ended. Chaplains were always answering questions about immortality, then working from that to other aspects of religion.

For most of the men, what they learned in prison was not the shallow faith which later came to be called, derisively, foxhole religion. With many, Chaplain Borneman says, it was the decisive turning point of life. "I know six men who are now Presbyterian ministers whose first serious thoughts of religion came while they were prisoners at camp No. 1. And of course a number became clergymen in other churches, and many more became really dedicated laymen."

Chaplain Borneman regards his years in the concentration camp, the lowest in his life from a personal standpoint, as the high point in his ministry. "The men really needed us chaplains, and they knew it. They were desperate to receive what we were trained to give them." In spite of the starvation diet and other obstacles, the chaplains were busy all the time—"most of us had never worked so hard in our lives."

Toward the close of 1944, American airplanes began passing over the camp, with increasing regularity, to bomb Japanese installations. As the prison authorities realized that surrender was not far off, brutalities and killings increased. In a burst of fury the commandant told one of the chaplains, "You all pay. If Americans come, you not be here to see."

Yet, when a large American flotilla was sighted in January 1945, the Japanese simply abandoned the camp, warning the prisoners that if they ventured beyond the barbed wire, they would be shot on sight.

For 3 weeks the prisoners lived on the food left behind by their captors. Then one night they heard gunshots outside the camp. Several chaplains lay on their stomachs in the dirt as the shooting increased. They agreed that the Japanese, as a final gesture of defiance, had returned to kill the prisoners.

Chaplain Borneman made a decision. He was a noncombatant and a minister of God. He had not raised a weapon against another man since World War I. He searched his conscience and found nothing in military law or Christian ethics that forbade him to defend himself against murder.

Borneman raced to the kitchen and picked out a huge meat knife. Then he stood by the door, the knife raised above his head, and waited.

Finally there were footsteps, and the door opened. It was an American Ranger. "Anyone else in here?" he asked calmly. Borneman whispered, "Thank God," and dropped the knife.

The prisoners were free.

HOMECOMING HONORS

Chaplain Borneman's heroism did not go unrecognized at home. Senator James M. Mead of New York, addressing the Senate about the war record of the chaplains, cited two examples: "The Navy's O'Callahan and the Army's Borneman, both of whom survived the war, are among those who will live forever in the hearts of Americans." Borneman received three Silver Stars for Gallantry in Action, two Bronze Stars for heroism, three Purple Hearts, and three Distinguished Unit Citations.

He was returned to the Philippines and sent to Japan as a witness in the war crimes trials. In 1955 he received the rank of brigadier general, retired. Although he has met Japanese people in professional or social situations since then, he admits that it is still hard to forget that the Japanese he knew in the concentration camp behaved in a way that seemed hardly human.

After 5 years in the Philippines, John Borneman saw American church life with new eyes. He couldn't forget the ragged, emaciated members of the Protestant Church of Military Camp No. 1, ready to suffer like the early Christian martyrs for their faith. Somehow the well-dressed, overfed worshipers in stateside churches didn't stand up too well in comparison. Something was missing.

In a magazine article published in 1946 Borneman wrote: "Here we still find, possibly in an increasing measure, selfishness, greed, lust for power, and petty politics. This is true among churchmen as well as in the lay professions. I have seen Washington churches filled each Sunday, and as I worship I wonder how much of an actual impression the service makes on the soul of each one present. How much is carried out into the actual battle of life where the Christian spirit counts?

"I am confident that each chaplain who served among the war prisoners of Cabanatuan and has made the supreme sacrifice could conscientiously face his Master—and did receive the words 'Well done * * * enter thou into the joy of thy Lord.' Are we concerned about serving men through the spirit of Christ, or are we more concerned about rank, knowing meh of influence, exercising the power of petty politics? That I have wondered about since my return."

These observations, Borneman admitted, were not new. But to men who had seen war at its worst, "they stand out to us now as a magnesium flare thrown from an airplane on a dark night."

When Army doctors at Walter Reed discharged Chaplain Borneman in 1950 with the recommendation that he retire from the service, they told him he had only 5 more years to live. Characteristically, Borneman decided to give those 5 years to the church. Fifty-one was too young to go on the shelf.

But that was more than 9 years ago, and Chaplain Borneman is still at work on a job that keeps him constantly on the go. He visits all the seminaries where Presbyterians study, talking with young men interested in the chaplaincy. He works with military bases in all the services anywhere in the world where Presbyterians are serving. In 1958, for example, he spent 271 days on the road—or more accurately, in the air, for he still loves flying and does most of his traveling by plane. He has kept his private pilot's license since youth, and recently "checked out in jets"—one of the few private jet pilots in the country. On three occasions on the job he has hired planes, and flown them himself, when commercial or military transport was not available.

On January 15, 1953, Borneman was traveling by train from his Philadelphia office to his other office in Washington. The train failed to slow down as it approached Union Station. Brakes gone, the engine smashed into the station and plunged through the floor. Forty-one passengers were injured, eight of them critically. Chaplain Borneman was thrown into the aisle; he picked himself up, found no broken bones, and set about seeing what he could do for the injured.

Not long after that the airplane in which Borneman was a passenger departed from Cleveland Airport. But shortly after takeoff a motor dropped out. "The pilot did a marvelous job of crashlanding," Borneman says. But one passenger was killed, several injured. Borneman came through unharmed.

Tropical diseases and his many wounds have taken a heavy toll on Borneman's health. In spite of his full schedule of work, those who know him personally realize that some of his appointments are tentative. Although he begins his working day at 9, there are some mornings when it's just not possible to be on deck that early. "With all the aches and pains I've got," he recently confided to a friend, "it would be easy just to lie down and die."

But although he talks now and then of turning the headship of the chaplains over to a younger man, he has no notion of retiring from the ministry. If he leaves the chaplains' department, he will take some other job in the church. John Borneman has an ironclad conviction that the Lord has kept him alive and able to work only because he wants to keep on working.

World Coffee Production

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. ANFUSO. Mr. Speaker, the results of two recent surveys on world coffee production and U.S. coffee consumption are of great interest to those of us concerned with inter-American trade relations.

These surveys were published by the Pan-American Coffee Bureau, an instrument of 13 Latin American coffee-producing nations. One survey relates to coffee consumption in this country, the largest coffee importing nation in the world, from 1950 to 1959.

The studies are detailed and authoritative. The bureau has published its annual statistical review of world coffee trade for the past 22 years. It has conducted regular surveys of U.S. coffee consumption since 1950. This year, the U.S. survey was made by an independent research agency, Corby Research Service of New Rochelle, N.Y.

The report on coffee consumption by the people of the United States is a study in depth of the current market in this country. It reveals that since 1950 our people have increased their coffee drinking by 100 million cups a day, from 290 to 390 million. It further shows that 75 percent of our population, 10 years of age or over, now drinks coffee on an average of four cups a day.

The report states that the most striking increase in U.S. coffee drinking in the past decade is a spectacular rise of 100 percent in the number of cups being drunk between meals—that is, during coffee breaks. The coffee break has become well established as a national institution and now accounts for 28 percent of our total coffee consumption.

Americans between the ages of 30 and 40 comprise the largest category of coffee drinkers, according to the report, consuming an average of more than four cups daily. On a regional basis, the far West leads the Nation in its coffee consumption, followed by the Midwest, the East, and the South.

For the inveterate coffee drinker, the most interesting aspect of this study relates to what might be termed the "quality gap" between U.S. coffee consumption and U.S. coffee use. While we now consume 35 percent more coffee than we did 10 years ago, we are using only 10 percent more pounds. This means, according to the report, that "Americans are drinking a much weaker brew—than the average cup of coffee being served in U.S. homes today is being brewed at a rate of nearly 65 cups to the pound, whereas the recommended rate for the best flavor and maximum body is 40 cups to the pound."

The report explains that the trend toward weak coffee began a few years ago when coffee prices were high and has not yet reversed itself, even though coffee prices are again at 1950 levels or below. In this connection, the survey also points out that while wholesale and retail coffee prices are back to 1950 levels, 87 percent of all eating places now charge a dime per cup, while in 1950 more than half charged a nickel.

All of this is, of course, interesting sociological data, but it is more. For those concerned with inter-American trade relations and the economic welfare of our hemisphere, these statistics have a special significance. This can best be illustrated by relating the information supplied in the U.S. report to that included in the Bureau's statistical review of world coffee trade.

During 1958, the world review informs us, six Latin American countries relied on coffee for more than half of their foreign currency receipts. For Guatemala, Haiti, and El Salvador, the proportion last year exceeded 70 percent. For Colombia, 85 percent. And for Brazil, which in a recent year obtained almost 70 percent of its foreign trade receipts from coffee exports, the 1958 level fell to 55 percent, due to relatively low shipments.

To further realize the dependence of our Latin American coffee-producing neighbors on U.S. imports and consumption, consider these economic factors:

First. In terms of dollar volume, coffee remains the most valuable agricultural commodity imported into this country, ranking second only to petroleum products in total import value.

Second. Of total world exports of 36½ million bags of coffee in 1958, the United States imported approximately 20 million. Latin American producing nations supplied 72 percent of the world total and 85 percent of the U.S. total.

Third. In turn, Latin American coffee-producing nations comprised nearly 20 percent of the total U.S. export market, purchasing nearly $3½ billion worth of merchandise from this country.

Fourth. Because nearly a million more tons of coffee were grown than were consumed last year, foreign exchange earnings of the Latin American producing nations continued to decline, since coffee accounts for an average of 24 percent of the exchange earnings of the area.

Fifth. Between 1957 and 1958 the decline in dollar earnings from U.S. imports from Pan American Coffee Bureau nations amounted to nearly $205 million. As the report points out, where this reduction occurred in countries depending heavily on dollar earnings, and where it was relatively substantial, the result in hemispheric trade relations was more balance-of-payments and internal fiscal difficulties.

However, the report states, despite overproduction and accumulating surpluses of green coffee, an orderly market was maintained during 1958 through concerted action by all of the Latin American producing countries. Credit is given here to the operation of the Latin American Coffee Agreement, which went into effect October 1, 1958.

These two reports shed light on Latin American coffee's role as the indispensable denominator of inter-American trade and a healthy hemispheric economy. If any conclusion is to be drawn from these studies, it is that the United States, as the world's largest coffee importer and as the good neighbor of Central and South America, has a definite stake in the efforts being made to solve the growing world coffee crisis.

We cannot stand detached while the economies of 15 Western Hemisphere nations struggle for stability and survival, nor can we safely adhere to a wait-and-see attitude. For, as I have said before, events are moving swiftly in Latin America, and our own self interest dictates that we must anticipate rather than react to consequences.

Our Latin American coffee-producing neighbors have taken giant strides with considerable sacrifice toward solving their dilemma. But it is not simply their problem, it is ours as well. Only through an active interest in this problem and through continued cooperation can we of the United States maintain the symbol of coffee as the cup of friendship in the Americas.

Prince Hall Americanism Day Proclamation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. DINGELL. Mr. Speaker, a fine organization, the Prince Hall Grand Lodge of Free and Accepted Masons of Michigan, whose grand master is a dear and close friend of mine, Mr. William O. Greene, recently proclaimed September 13, 1959, Prince Hall Americanism Day as a memorial to the founder of Negro Masons in the United States. The proclamation is of great merit, and for that reason I insert it into the Appendix of the CONGRESSIONAL RECORD:

PRINCE HALL AMERICANISM DAY PROCLAMATION

The history of the American Negro, while inextricably interwoven with the history of the United States, has received far too little mention in documents of the recorded past. This omission has denied the educational values to the masses, of facts pertaining to the American of color, and has inadvertently led to the belief among many people that the Negro has made little or no significant contribution to the founding, growth, security, or well-being of this country.

The one phase of history that does emphasize the Negroes participation, is in that area, which in reality should be underemphasized, slavery. Because this era of our national life, besmirches its vaunted ideals of democracy and exposes the blackest blotch on the escutcheon of the United States rectitude of national conduct.

The psychological effects, resulting from the denial of the acknowledgment of the credits due the Negro, are inescapably bad. He is looked upon by the uninformed of the dominant group as a welfare subject. Primarily because the records give sparse notice to the heroes of his race, their exploits, or

their contributions. Thus, it is commonly assumed that he has not earned a just portion of the fruits of democracy, and is therefore obligated to receive naught, but the dole of tolerance meted out patronizingly to those who are without earned claim to the benefits that the land provides.

Another of the serious effects, emanating from the lack of group information about the true historical facts, are those imposed most strongly upon the Negro himself. He being exposed to the voluminous elaborations of the heroes, exploits, and contributions of other ethnic peoples, and so uninformed by folklore and the absence of accounts of his groups historical background, feels the depressive effects of frustration and inferiority very keenly. And too often to compensate, he commits compulsive acts, that violate social standards, and creates, where understanding does not prevail, a sterotype of a primitive or delinquent personality.

The Negro child, most pathetically victimized by this deficiency in historical inspiration, reacts more pronouncedly to the effects noted, and with his immature mind unable to understand the reasons, he too acts in roles so often repugnant to others, but sufficient and justifiable to him, to prove that "I am somebody."

Fragmentary evidence of the scope and value of the Negro's contribution can be found, only, after diligent exploration and search. However, when the accumulated evidence is put together in readable form and sequence, the amazing results are these in part:

Ever since Christopher Columbus, one of whose pilots was a Negro, discovered the New World, men of color have contributed in ever greater measure to its steady development. Especially so, since the establishment of the United States, from Colonial possession to an international or world entity.

The irrefutable loyalty and courage of the colored citizen has long been traditional. Early tested, during the infamous incident of the Boston massacre, in 1770, when the first American to fall for the then revolutionary cause of freedom was a patriot of color, Chrispus Attucks. He was felled dead on the Commons of Boston by the leadened ball, from the muskets of red-coated British soldiers. Negroes renewed their show of loyalty and courage again during the civil conflict of 1861, when more than 200,000 fought to maintain the Union of the States, and to purchase their freedom from the shackles of slavery.

He has thus shown his loyalty in every national emergency, including the more recent incident, the so-called police action of the Korean affair of 1948–50, where his life's blood flowed more copiously than in any previous military engagement involving his country. His courage, most vividly demonstrated by Doric Miller of naval fame, and Cortney Stanley, of the land forces, whose commanding officer declared him to be "the bravest man I have ever seen." His courage has been unquestionable.

Notable and salutary contributions to the development of this country, and for the advancement of its people, has been made by him in many diversified areas of endeavor.

In the field of medicine and surgery, no name stands out more demonstratively of the Negroes contribution than does that of Dr. Daniel H. Williams, who performed the first successful surgery on the human heart. Or that of George Washington Carver, the miracle scientist of the peanut fame. No name deserves the plaudits of this Nation more emphatically than does that of Benjamin Bannaeker, the inventor of the clock, the surveyor who laid out the cite that now contains the Capitol of our great Nation, Washington, D.C., and whose formula for world peace could, even now, resolve much of the tension that besets our war-jittery world.

What name stands out in bold relief against a background of ignorance more spectacularly than does that of Booker T. Washington, or Mary McCloud Bethune, educators.

Does not the field of diplomacy count among its great, Frederick Douglas, and Ralph Bunche. A list of heroes, by incidence of birth, Negroes, but whose contributions to our national well-being, gives credit to the Negro race, would include Jackie Robinson, the athletic pioneer, Dr. Allen Drew, the creator of the blood bank process and a host of others. A list that would extend to inexhaustible limits.

And finally in presenting such a list, the archives would not produce a more worthy person for historical accolade than that of a man named Prince Hall, for he undisputedly was the forerunner of all of those Negro historical characters, whom history should revere, and to whom memory should pay tribute.

Prince Hall, a Negro, freeborn and of good repute, an American by self-adoption, was a patriot of the early founding days of this Nation, during the Revolutionary period. A man of deep understanding, compassion, and vision. He saw, with his prophetic minds eye, the inevitable need for the preparation of his black brethren, so that they would be ready for the time, when the bonds of slavery would be removed, and they would be spilled into the common stream of American life.

First, the history of Prince Hall tells us, that he became, by self-preparation, one of Americas first religious leaders of color, a minister of the Methodist faith in Massachusetts.

Second, his abiding belief in the inestimable values of brotherly love, relief, and truth, inspired him to seek admission into the most ancient of institutions promoting such tenets in the world, the Masonic fraternity. The records show further, that because of his understanding of the benefits to be derived from association in Masonry, that he interceded in behalf of all Negroes who may qualify for membership. Thus, in 1784 he received permission to organize a masonic lodge in Boston, from the fountainhead of freemasonry, the Grand Lodge of England, to be known as African Lodge No. 459. The first and only legitimate source for free masonry among Negroes in America, even unto this day.

Third, and in subsequent order, Prince Hall did organize the first school for the formal education of the Negro. The political history of the Massachusetts Legislature records Prince Hall did appear before it, and with eloquence of speech with the logic of a humanitarian, did cite the evils of discrimination, protest the un-Christian-like promotion of slavery, and pray by petition for the eradication of these evils in the Commonwealth of his Colony.

When the tyranny of the British reached that intolerable stage, and the people of this new land could no longer bear the inequities in representation and the other enforced restrictions that the English imposed upon them, declared war; Prince Hall, so history relates, did with fervency and zeal petition the Commander in Chief of the Revolutionary American Forces, Gen. George Washington, for the right of men of color, to fight, and if God so willed, to die for this country.

These exemplary acts of Prince Hall, denoting his traits of Americanism, these deeds of positive evidence, conferring historic stature on this illustrious character in American life, should excite the imagination and exalt the pride of people everyhere, but more especially those whose fraternal lineage bind them to him, designated as Prince Hall Masons.

Thus, it is by virtue of these citations that, they who cherish such fraternal kinship, do by annual custom, present to the world at large, and to this Nation specifically, Prince Hall's Americanism record for accreditation to his people; to justify their earned right to claim the full benefits of democracy; to give their young an inspirational figure, a hero of color to emulate; to fill in those blank spaces of history that fail to include the name of this outstanding American. Prince Hall Masons do these and sundry other things, during the birth month of Prince Hall, September. At which time they pay homage and invite public scrutiny to evaluate the continuous efforts of the several thosands of Prince Hall Masons of today, in keeping with their rich American heritage, passed on to them from generation to generation.

Therefore, let it be known, that I, William O. Greene, with high respect and deep adherence to the formentioned practices, do, by the powers vested in the office of Grand Master of Masons, proclaim to all obedient to the Most Worshipful Prince Hall Grand Lodge, of Free and Accepted Masons of Michigan, that—

1. Sunday, September 13, 1959, shall be, and is hereby designated as "Prince Hall Americanism Day," to be celebrated in such manner and form, as shall be hereinafter described.

2. Further, it is decreed that each related body predicating its prerequisites for its membership on the statute of Prince Hall Masons, shall be, and is hereby cordially enjoined to participate in the aforementioned celebration.

3. And lastly, it is by petition of prayer, that we request all members of the Prince Hall family to promote the attendance of their friends, neighbors, and associates of other organizations, to which they may belong, and to the public at large, to share in the festivities of the day.

Given under my hand and the great seal of the M. W. Prince Hall Grand Lodge, F. & A. M. of the State of Michigan, this 1st day of September in the year of light, 1959.

WILLIAM O. GREENE,
Grand Master.

Attest:

DONOVAN A. DOSEY,
Grand Secretary.

Maj. Gen. W. P. Fisher, Director of Legislative Liaison, Department of the Air Force

---

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, in September 1959, a familiar Air Force figure will be missing from Capitol Hill, Maj. Gen. W. P. Fisher is being assigned to the Military Air Transport Service after completing his assignment as Director of Legislative Liaison, Department of the Air Force.

General Fisher has provided outstanding service to both Houses of Congress as Director of Legislative Liaison since March 1958. Members of Congress have great responsibilities pertaining to our national defense in these turbulent times,

and General Fisher has been most helpful with his sincere and clear representation of the U.S. Air Force capabilities and requirements. His insight and experience has especially been of unusual assistance in military personnel matters, such as the officer promotion program, to name but one area out of hundreds.

My colleagues in the House join in wishing General Fisher much success in his assignment. We, in Congress, lose a capable and effective liaison officer, but the Military Air Transport Service gains a leader for its Eastern Transport Air Force.

Poison in Your Water—No. 161

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Salt Lake City (Utah) Desert News and Telegram of May 26, 1958, entitled "Clean Up on Sickness":

CLEAN UP ON SICKNESS

This week, the State is facing an alarming increase in the incidence of infectious hepatitis. This disease, commonly known as yellow jaundice, is a serious, debilitating one that takes months, sometimes years to throw off. It is usually associated with polluted water or inadequate sewage disposal. Utah has seen 96 cases so far, compared with 26 at this time a year ago.

This is a disgrace for a State living in the 20th century when methods of prevention of this and other diseases associated with unclean water are thoroughly understood.

Methods of prevention were, in fact, being discussed by official groups even as the hepatitis report was released. One group of officials called for a new Federal study of water pollution in Big and Little Cottonwood Canyons in relation to growing recreation pressures on the canyons. And another group released a report after extensive studies of four Utah rivers. Three of them are serious health hazards, carrying raw human sewage through populated areas.

The two problems are different, of course. No one knows just how much recreational development can be allowed in the canyons without endangering the Salt Lake Valley water supply. A fine treatment plant is finished at the mouth of Big Cottonwood Canyon and construction will soon begin on a plant for Little Cottonwood. How much additional recreation these plants will make possible, if any, is not known. Of course pure water comes ahead of any other consideration, but we certainly should have a competent study to find out how much recreation we can have in the canyons and still be sure of pure water.

But there's no doubt at all about the other problem, that of the shocking pollution of the Jordan, Price and Weber Rivers, and of other streams in the State. Any raw sewage dumped into a stream is too much.

To this problem, there's just one solution. Money is at the root of it. Utah's growing communities simply cannot continue letting their sewage go untreated.

A number of Utah County communities have shown the way. Sick and tired of the way the recreational possibilities of Utah Lake were being lost by its use as a cesspool, they took action, built sewage treatment plants and are on the way to rehabilitating the lake.

What they can do, others can do—and must do. And now is the time to do it. Building now can create much-needed jobs. The recession means that contractors are sharpening their bids. The bond market is good. Inflation shows no sign of ending. A time may never come when sewage treatment can be obtained as inexpensively as it can right now.

The growing threat of shameful pollution-caused disease should be a most effective warning to hurry up.

The Threat of Communism in Latin America

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert an article in the Appendix of the RECORD by Paul Harvey. This article deals with the problem of communism in Latin America. Mr. Harvey's point is well taken. No doubt we should concern ourselves with communism in Asia, but we should not forget about the threat of communism in Latin America. It behooves the United States to formulate that policy which will channel the revolutions of that area into democratic ends.

The article follows:

A TROJAN HORSE IN CARIBBEAN

(By Paul Harvey)

I'm concerned, frankly anxious, about Latin America. And I get the frightening impression that hardly anybody else is.

U.S. intelligence has irrefutable evidence that Cuba's Communists are getting their orders direct from Moscow.

I mean Moscow sent one of its own Soviet intelligence officers to Cuba to "direct the penetration and control of the Castro government."

UNDER ANOTHER NAME

In Russia other Latin American Communists are being secretly trained to return home and set up Red dictatorships in our hemisphere. And this is important: Gen. C. P. Cabell, Deputy Director of our Central Intelligence Agency, says: "In Cuba the Communists presently call themselves the Popular Socialist Party."

The Castro brothers now vigorously deny that they are Communists. Moscow directs those denials.

The Moscow directive specifically calls for concealing Communist influence in Latin America so that the United States will not be prematurely alerted.

Further, Red China is establishing a newspaper in Havana. The Red China party line is charging that "the Monroe Doctrine of 1823 was a plot by U.S. gangsters to dominate the Americas. U.S. imperialism has a dirty history of over 100 years of infiltration and aggression and plunder of Latin America."

NOT LOCALLY WORRIED

For some strange reason Americans are inclined to become more disturbed about Red moves in the Far East than about similar inroads in our own hemisphere.

I ask associates, "Why are you unconcerned about this penetration of the Caribbean?" They reply, "We can handle it."

Americans who are inclined to tolerate this cancer off the coast of Florida, assuming, "We can take care of it," are basing their assumption on the fact that we always have.

But our previous experience with periodic revolutions in these republics predates the Moscow-directed worldwide conspiracy.

Things are different now. It is not a recurrence of isolated brush fires any more. It's a vast blaze which already has engulfed a third of the earth and is licking at our own shores.

MOVING IN NEXT DOOR

The Organization of American States tried, those six desperate days in Santiago, to organize an effective force of firefighters. Already, however, they have been denied access to Cuba, which is the present Red beachhead—the springboard for creation of Castro's "Congress of Latin American Peoples."

This congress was blueprinted in Moscow and delivered to Castro by Soviet agent Vadim Kotchergin. The arch thieves of modern history have now moved in next door.

Coincident with Khrushchev's visit to the United States, Castro will launch his own peace offensive. And many naive Americans will fall to see behind the beard.

Communism (the government taking care of everybody) has a special fascination for the Latin American who is not traditionally industrious. Somehow we must let him know that Moscow does not promise freedom to loaf. But that communism uses that promise as bait until it puts the loafers to work in chains.

The Farmer Is Still an Important Citizen—Let's Not Count Him Out

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. REES of Kansas. Mr. Speaker, I believe Members of Congress, as well as others will be interested in a well written and informative editorial that appeared in the August 30, 1959, issue of the Kansas City (Mo.) Star. It concerns the general farm situation as it relates to other industries and especially its importance to the human race.

The article points out that although we now have a surplus of food in America, food is more important to humanity than any other product. Attention is also called to the importance of the farmer in this day and age. The editorial follows:

THE FARMER IS STILL AN IMPORTANT CITIZEN

As we near the end of summer, this growing season is producing crops that approach last year's alltime record. Let's take our hats off to the farmer and take a good look at what he is doing for this country. For

the moment let's deemphasize agriculture's price troubles.

The farm problem has dominated the agricultural scene for so long that it has become almost a legend. The public has become accustomed to day-by-day argument over farm programs, surpluses, subsidies, and parity. No wonder many people who are not fully familiar with the situation look upon the farmer as a man who can't run his own business and one who is always looking for a handout from the Government.

He does have his troubles, let's not deny it. But does America have any greater asset than its farmers?

Food is more important to the human race than any other product. In America, we haven't the slightest worry about where it is coming from. A great highway building program, industrial expansion, the production of luxury items, all can be undertaken with confidence in adequate manpower. Each year more and more people can be spared from the farm. This isn't true in many countries.

If our major worry were producing enough food we couldn't spare the manpower to turn out the many things that are a part of the modern American way of everyday living. Even in war, this country has not gone hungry. It has been the breadbasket for its allies.

Our farmers are producing this abundance with fewer and fewer workers. In the earliest years of the Nation, nearly all people were farmers. A man, who had the help of his family, produced enough for that family. Today's farmer produces enough for himself and 23 other persons. This point can't be overemphasized. If we are to be an industrial nation, these other 23 people must have plenty of food and fiber. Economic progress halts whenever a nation fails to produce the necessities of life with less and less labor.

The farm surpluses, troublesome to farmers and the Government, are in effect insurance. We are virtually guaranteed an abundance for months and years ahead. These surpluses bear down upon farm prices. It is ironic that the farmer efficiency which produces the surpluses is so often costly to the farmer. In effect the farmer pays for the insurance against hunger in this country instead of collecting on it at the marketplace. We don't want continued surpluses that are too big to handle.

While the housewife may regard food prices high at the store, farm organization authorities point to the fact that an hour's work will buy more food today than ever before in history. Also, more and more of the cost of food is represented in the expenses of delivery, processing, retailing, and built-in maid service.

No longer do you buy a live chicken and take it home to be killed and cleaned. In fact, more and more foods are fully prepared for cooking or even serving on the table. These services all add to the food bill.

Farmers resent charges that their prices account for the high cost of living. The reverse is true. In the cost of living index food prices have either held stable or dropped. If food had been going up, like everything else, obviously the cost of living today would be much higher than it is.

Last year Americans spent $57.7 billion for food. The farmers who grew it received about 36 percent of that amount.

So much has been said about farm subsidies that the average person may well believe that farmers alone have benefited from Government largess. Here again farm organizations, some of which are clearly unsatisfied with current farm programs, point out that farm subsidies are only a part of the benefits handed out through Government channels to American business. The tariff, they suggest, is the greatest subsidy ever granted business and labor. Its costs are hidden as the public pays through prices at the market rather than in taxes as in the case with farm subsidies.

Subsidies helped build the railroads, ships and airlines. Government payment of postal deficits subsidizes mail costs of magazines and other publications. Government contracts assure profits to manufacturers of war materials. In fact, an extremely impressive list of subsidies can be developed by those who wish to make the point that farmers are not alone in getting financial assistance from Uncle Sam.

Of course, the fact that some one else has or is receiving a subsidy does not automatically indicate that farmers, also, should be put into a Government program. Neither does the amazing job of producing food necessarily suggest that they should have Government aid. The Nation faces a practical problem of finding a workable plan. The farmers are dissatisfied with their present lot, despite 30 years of Government programs. This fact indicates that subsidies do not automatically solve their problems.

Too many people are ready to suggest adoption of any kind of a Government price support program on the theory that "others are getting theirs, too." Conceivably, if farmers were better off without any programs, it would be logical to eliminate the programs. We don't think this is going to be done, but the theory holds just the same.

Agriculture is tremendously important to the economy of the Nation. Kansas City always has realized this fact. It was given a forceful demonstration in the spring of 1958 when improving conditions on the farm sparked a strong pickup in business.

Agriculture is a dynamic industry despite its price troubles. Since 1940 total farm output has increased 40 percent. During the same period the number of farmers or farm workers has dropped faster than at any time in history. Today's farmer produces as much in an hour as he did in 2 hours in 1940. Nonfarm labor and manufacturing productivity, on the other hand, have increased slightly less than 50 percent in the same period.

Recently C. Peairs Wilson, director of the School of Agriculture at Kansas State University, compiled data to show the status of agriculture in the American economy. He found among other things:

"Agriculture is the biggest buyer, seller and borrower in the United States.

"The inventory of farm machinery alone is greater than the assets of the American steel industry and five times that of the automobile industry.

"Agriculture uses 6½ million tons of finished steel a year—more than is used in a year's output of passenger cars. It consumes 17½ billion gallons of crude petroleum—more than is used by any other industry—and 285 million pounds of raw rubber—enough to make tires for 6 million motor cars. Agriculture takes 22 billion kilowatt hours of electrical power—more than enough to serve Chicago, Detroit, Baltimore, and Houston for a year.

"Each year farmers purchase farm supplies worth about $16 billion.

"The agricultural plant each year increases its use of capital, of science and technology, of management and research.

"There are twice as many jobs in industries that serve farmers as in farming."

The U.S. population is increasing rapidly. Right now it is about 177 million. A conservative estimate used by Government authorities is that the population will grow from the present 177 million to 230 million by 1975. This means total farm production must be increased another 35 to 45 percent by that time. No one doubts that it will be done. Presumably there will come a day in the distant future when this country, along with all others, may face food shortages. But this generation in America has no fears.

What does this summation of the farm situation suggest?

First, we should not discount the importance of farming to the Nation just because we have no worries about food or because farmers presumably are always caught in price troubles. Per capita income on farms is about half the income of nonfarm employment. This is disparity. A way to change it must be found.

In its delemma agriculture requires the understanding of the urban population. In fact, it also demands greater understanding from farmers themselves. Agriculture is involved in vast changes—declining farm population, the increase in the size of farms and mechanization. The changes bring problems of adaption of technology, of staggering surpluses and increased costs. The complex situation perplexes the experts.

Because of their strength, industry and labor unions have been able to a large degree to take care of themselves. Farmers, as individuals, have turned to the Government in the hope of getting a better share of national income. Years of dissatisfaction suggest that the Government programs to date have not been successful. More changes are in order.

Let's not count the farmer out. He's a mighty important fellow to have around.

Consequences Can Be Disastrous

EXTENSION OF REMARKS
OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, Dr. Cyril A. Zebot, professor of economics at Georgetown University, recently addressed a letter to the editor of the New York Times. In this letter, Professor Zebot points out the inflationary consequences that will flow from the failure of the Congress to remove the interest rate ceiling on Government bonds.

This letter, published in the New York Times of August 25, 1959, should be "must" reading for every member of the majority party. It should be remembered that the Republican members of the Ways and Means Committee have unanimously supported the request of the President to remove this restriction which hinders the proper management of our huge national debt. The responsibility for failure to act in this matter and the consequence of such failure rests completely on the Democrat majority in the Congress.

The President in his message to you of last Tuesday said:

The administration is willing to assume full responsibility for managing the Federal Government's debt if it is allowed to do so free from artificial restrictions and on a parity with other borrowers.

If the requested legislation is not enacted, those in the Congress who are unwilling to pass it must assume full responsibility for the possibly serious consequences.

I will repeat what I said to the House last July 23:

Mr. Speaker, I am convinced that our Republican membership on this side of the aisle would almost unanimously support the rec-

ommendation of the President and the recommendation of the Treasury in this respect. It is not my desire here and now to make this a political issue, but I would point out that if this is to be a political issue, we on this side of the aisle, the President, and the Secretary of the Treasury, are willing to take responsibility for the consequences of giving the Treasury the authority requested.

But if the Democratic majority ties the bill up in committee and fails to act, it must accept responsibility for the consequences that will flow from such failure to give the Treasury the tools it needs. They must assume responsibility for the consequences which will face the country if they fail to act. And I repeat the consequences can be disastrous.

Mr. Speaker, before this matter is allowed to die, please read this letter of Professor Zebot:

To the EDITOR OF THE NEW YORK TIMES:

The surprise decision of the House Ways and Means Committee to shelve the President's request for removal of the archaic interest rate ceiling on Government bonds should not be dismissed lightly. It is doubly inflationary and it will cause an increase in the servicing cost of the national debt.

The decision is inflationary because it will force the Treasury to refinance over $100 billion of the national debt in short-term securities over the next year. With growing business prosperity the demand for short-term Government securities on the part of nonfinancial corporations will subside, and the Federal Reserve will be compelled to provide extra reserves, beyond the monetary requirements of real economic growth, to enable commercial banks to absorb an ever-larger amount of short-term Government securities.

In addition, the indefinite duration of the statutory interest-rate ceiling will generate further inflationary expectations, with the corresponding increase in the velocity of circulation of currency, and thus still more potential inflation. As an accompanying result there will be added pressures on the yields of outstanding long-term Government securities and on all interest rates.

The decision of the House Ways and Means Committee, if it is not reversed promptly, will accomplish exactly the opposite of its intention.

ADMINISTERED INFLATION

There will be attempts at exonerating the committee's responsibility for the inflationary consequences of its decision. It will be argued that our new inflation is of administered or cost push kind and therefore unrelated to the national debt management and beyond the reach of monetary policy.

The argument does not hold water. The administered or cost push theory of prices deals only with one set of forces that act on the price level. It is not a general theory, and even in its partial relevance it has not yet been fully developed and demonstrated.

But even if one assumed that all inflation stemmed from cost push forces and corresponding price administration, national debt management and monetary policy would still be relevant in relation to the price level. We have no public policy to deal directly with wage and price administration.

RESTRAINT ON PRICES

The steel industry is a telling case in point. When cost push forces press on prices, monetary and fiscal policies are the only available price-level restraints to be used as public policy for general welfare. Faced with anti-inflationary monetary and fiscal policies, the cost push forces in our economy must depend on offsetting increases in the velocity of money or, if velocity is checked, too, they are saddled with the responsibility for the resulting unemployment.

By forcing our national debt management and monetary policy sytematically to overexpand the supply of money, the House Ways and Means Committee's decision has not only caused the resurgence of a potential demand-pull inflation but has also removed the only existing public policy checks on the cost push forces in our economy.

Congress must find a way to correct the dangerous monetary situation before it adjourns. The political leadership that permitted the hasty House committee decision must be made aware of the fact that general economic literacy is not so low that people will fail to detect the source of the grave consequences that will follow if the interest rate ceiling on long-term Government bonds is not removed now.

CYRIL A. ZEBOT.

WASHINGTON, *August 22, 1959.*

Strengthening the Foundations of Freedom

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Douglas Dillon, Under Secretary of State, at 82d annual banquet, American Bar Association, Americana Hotel, Miami Beach, Fla., Thursday, August 27, 1959:

STRENGTHENING THE FOUNDATIONS OF FREEDOM

It is a distinct privilege to address this distinguished gathering and to join with you in honoring Mr. Grenville Clark, who received the American Bar Association Medal tonight in recognition of a lifetime of public service which culminated in his monumental work, "World Peace Through Law."

The achievement of world peace through law is a goal which motivates the conduct of our country's international relations. It was eloquently stated by a lawyer and diplomat of great stature, the late John Foster Dulles, when he called, in his last public address, for the substitution of justice and law for force. The realization of this ideal objective, toward which Mr. Dulles labored throughout his lifetime, has been substantially advanced by the American Bar Association during the past year. Thanks to your initiative, lawyers in many parts of the world are now working to formulate an action program designed to help move mankind nearer to the goal of peace through law. This increasing consciousness of international problems in the legal profession is a significant contribution to efforts of the United States to strengthen the foundations of freedom throughout the world.

Freedom has a value which the American people down through history have cherished above all else. The preamble to the Constitution submitted to the States in 1789 stated as one of its principal purposes "to secure the blessings of liberty to ourselves and to our posterity." But this declared purpose was not enough to satisfy the people. They refused to accept the Constitution until the essentials of freedom had been specifically guaranteed in the first 10 amendments: The Bill of Rights. Thus, we have held freedom—freedom of religion, freedom of speech, and of the press, and all the other individual freedoms—to be a prior condition of government itself.

We conceive of freedom as being within the context of the rule of law. Our Founding Fathers associated natural rights with natural laws. This linkage between freedom and law is explicit in our approach to international problems. We feel that freedom and law are as indivisible as freedom itself is indivisible.

Today, on the world scene, freedom is locked in a fateful contest with the formidable challenge of Communist imperialism. Hundreds of millions of human being in Soviet Russia and Communist China never taste the blessings of freedom. In the satellite countries, ancient freedoms are being ruthlessly suppressed. This new absolutsm is more formidable than any in modern history because it coincides in time with the tremendous and continuing advance of science and technology. It is not only in the military field that Communist leaders are drawing upon science and technology to strengthen their position. They are also utilizing science and technology to strengthen their economic position.

If the economic planning of Soviet leaders was aimed basically at raising the living standards of the Soviet citizen, we would cheer them on. For we sincerely wish the Soviet leaders every success in their efforts to improve the drab lot of their own people. It is not the economic progress of the Sino-Soviet bloc that concerns us. What we are concerned with—and what we firmly oppose—are the efforts of the Communist leaders to dominate other countries by a combination of economic cajolery, subversion, and artful propaganda, backed up, when opportune, by military power.

We and our allies have both the military might and the determination to meet the threat posed by military power in the hands of Communism's leaders. Frustrated by our strength and firmness of purpose the Communists are turning more and more to economic, political, and psychological penetration of the underdeveloped areas in order to achieve their goal of world domination. They are pounding home the doctrine that communism is the best way to produce material progress. Constant repetition of this thesis has emerged as a major weapon in Communist efforts to subvert free societies beyond their borders. We delude ourselves if we do not recognize that in many of the miserably poor and overpopulated lands of the less-developed world, this doctrine can carry a dangerous appeal if their peoples fail to recognize the dreadful cost of communism in terms of human misery and degradation.

But communism can make little headway in even the poorest countries so long as their people have hope of realizing their mounting expectations for a better life under free institutions. For the appeal of freedom is irresistible when it goes hand in hand wth economic and social progress.

We sometimes fail to remember that the political revolution which created the United States has had a greater influence for good on the rest of the non-Communist world than any other single political event in history. That influence is still visibly strong and vital. Since World War II, nations comprising a billion people have found inspiration in our example in establishing the framework of their new, free societies. They now look to us for assistance in realizing the material fruits of freedom.

If we are to help the newly emerging peoples to resist the spurious lure of communism—and, by so doing, safeguard our own liberty—we must continue to uphold the supremacy of freedom as a standard of human value. For we know that in the long run, our freedom depends upon the freedom of others. This awareness goes far back in our history. Even during our so-called pe-

riods of isolation, our sympathies and moral support were with those elsewhere in the world who were upholding freedom.

However, if we are to meet the 20th century challenge to freedom in the newly emerging countries, we must extend more than sympathy and moral support to their peoples. We must continue to extend technical and financial assistance until they can make a real start toward progress. We must devote substantial resources to this effort and we must cast our thinking in terms of perseverance over a long period of time.

We must also, in company with other more advanced nations of the free world, so organize our material and human resources that we continue to outperform communism. We must demonstrate that the economic systems which flourish under freedom can and will, in every country, promote the fullest development of human life—not only in material aspects, but in spiritual terms as well. At the same time, we should stanchly uphold the principle that there is diversity in freedom. Unlike the Communists, we do not seek to impose our system and our institutions upon other peoples. Rather, we seek to help them work out their own destinies, in their own fashion, in freedom, and under law. We do not seek the re-creation of our own image. Our only aim is to help develop sound, independent societies capable of joining us if they so choose in securing peace and progress in the world.

To succeed in this task, we must enlist the combined resources of our Government and of our private citizens and institutions. There is much that we are doing today to meet the challenge of international development. Our response, in which the mutual security program plays a major part, is broad and varied—one in which the American people can take justifiable pride:

Through technical cooperation we are helping to create the human skills so conspicuously lacking in the less developed countries.

Through grant assistance we are providing some of the funds urgently required to maintain stability in the face of the military and economic pressure of the Sino-Soviet bloc.

Through a variety of institutions, we are providing part of the capital needed for the basic facilities essential to growth. The Development Loan Fund is our newest financial instrument. And we are continuing to provide financing through the Export-Import Bank and through our long-term participation in the World Bank and International Monetary Fund, which institutions are now expanding their resources as the result of an American initiative.

We are now actively exploring the possibilities of giving the World Bank a new and more flexible tool for development through the creation of an International Development Association.

We have recently taken a leading part in creating the Inter-American Development Bank, which will soon begin to play an important role in the progress of Latin America.

Our Public Law 480 program provides resources in the form of foods and fibers.

Currently, through tax and other incentives, we are exploring every practicable way to stimulate the flow of private American investment, with its many accompanying technological skills, to the less developed countries.

All of these actions taken together provide a coherent and rounded attack on the greatest problem of our time: the development of the less fortunate areas of the world. They are complemented by our continuing efforts to break down barriers to trade so that the peoples of the less developed lands may find markets for the goods which they must sell if they and we are to prosper.

We also know that in a free society, economic progress can be achieved only under legal standards and in accordance with the principles of justice. There is a recent development in this field which I regard as highly important and in which your association has played, and will continue to play, a leading role:

On November 6, 1958, the American Bar Association accepted a planning grant from the International Cooperation Administration to study the feasibility of a conference of lawyers from many nations "to consider and recommend means of developing and strengthening within and among nations, legal concepts, standards and institutions which will contribute, through facilitating the expansion of the flow of international investment and trade and otherwise, to the economic growth of such nations and which will facilitate peaceful settlement of disputes within and among nations."

This grant was made in accordance with our deep conviction that government help, important as it is and will continue to be, cannot do the whole job in promoting development. Private capital, carrying with it management techniques and abilities, not only contributes directly to economic growth it also provides the picture of our free enterprise system in action. And we must remember that the reservoirs of private capital are far larger than anything that is likely to be available to government.

In short, if the free world is to stay free, if the spark of international economic progress is to be fanned into growing health, there must be greater activity overseas by private investors. Therefore, we were very pleased when this study was entrusted to a special committee on world peace through law, which had a distinguished membership under the chairmanship of your former president, Charles S. Rhyne.

In the committee's report, which was submitted on May 18, 1959, the committee recommended, among other things, the holding of an international conference of lawyers. Two of the agenda topics suggested by the committee deal directly with the problems of development. They are the following:

"Extension and improvement of institutions and procedures for arbitration of disputes between governments and of disputes growing out of concessions contracts and international business transactions between governments and individuals and between private parties.

"Extension and improvement of institutions and procedures for the improvement of legal framework for the economic advancement of all nations and the removal of the legal uncertainties and fears which now block such advancement."

Because of the Government's interest in promoting the security of private investment abroad, we support the objectives in these two agenda items. The International Cooperation Administration is prepared to join with you in discussing plans for an international conference of lawyers and the sharing with private foundations and other organizations in its cost.

I look forward with great anticipation to the results of such a conference of lawyers. There is a pressing need to promote a better respect for the rule of law in international relations. But that is only a beginning. The function that lawyers such as yourselves can best perform in this field is to develop and propose concrete measures which will in actuality bring this about. I hope and trust that the proposed world conference will make real progress toward that goal.

Now I have been speaking of our own American programs to help promote international economic growth. Since we, for better or for worse, are now the largest and most powerful industrialized country in the free world, our example and leadership are indispensable in this effort. But, fortunately, we are not alone. It has become a cooperative venture in which we are being joined with increasing vigor by more and more of the other industrialized nations of the free world which have successfully completed their postwar economic recovery. In addition to their participation in the effective work of the World Bank and the International Monetary Fund, the United Kingdom, Germany, France, Italy, and Japan last year made further governmental contributions to development through either grants or loans. Significant aid is also being provided by Australia, Canada and New Zealand. In the field of private investment, businessmen from these other industrialized countries have been very active—in some areas even more so than our own businessmen.

It is our view that the flourishing economies of the other materially favored Nations of the free world enable them to assume a growing share of the responsibility for assisting the newly emerging countries. We believe that they will accept increased responsibility according to their capabilities. We also feel that the time has come for better coordination of free world development efforts, and we intend shortly to initiate conversations to bring it about. An expanded and truly cooperative effort with our allies can lead to a new era in international development. For nothing is beyond the capacity of the combined economic power of the free world.

This, then, is the central task of our foreign policy: The advancement of peace and freedom by promoting economic and spiritual development throughout the world within a framework of law.

It is not a narrowly conceived policy of fighting communism. It is a broadly conceived policy of strengthening the foundations of freedom by enriching the daily lives of half the human race.

It is not a negative policy of waging economic warfare with the Sino-Soviet bloc. It is a constructive policy of economic growth and development, of continuing progress, of providing hope for the future.

It is a task in which the legal profession has an important part to play. For the process of economic development under free institutions cannot take place in chaos or in disorder. It must have the security provided by law.

The American Oil Consumer Pays for Using American-Flag Ships but He Does Not Get Them

---

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. DINGELL. Mr. Speaker, the United States has become a major importer of raw materials, particularly oil. In 1946 we imported some 20 million tons of oil. Last year we imported over 85 million tons of oil—more than $800 million worth. According to figures published by the Chase Manhattan Bank, our oil imports alone will double in the next 7 years. During the same period of time, our merchant marine has been virtually excluded from participating in

the international oil trade. American ships carried 76 percent of our oil imports in 1946, and today we are carrying less than 2 percent.

As a major oil importer, it is essential both for commerce and defense for the United States to have its own tanker fleet. Without our own ships the real cost of oil is increased, since we also import the value of the transportation. The absence of our own merchant fleet means that we cannot choose the source of our supplies.

I am pleased to find that the American tanker operators and the American maritime unions have formed the Joint Committee for American-Flag Tankers to seek a solution to this very vital and perilous problem—the disappearance of the American flag from the international oil trade on which we depend now for nearly 15 percent of our petroleum and petroleum products. Everyone interested in America's future economic well-being will welcome this affirmative move by management and labor to work together for the national interest, which demands and requires a healthy and secure American-flag fleet.

Under leave to extend my remarks in the RECORD, I include the following announcement of the formation of the Joint Committee for American-Flag Tankers:

THE AMERICAN OIL CONSUMER PAYS FOR USING AMERICAN-FLAG SHIPS BUT HE DOES NOT GET THEM

Mr. Joseph Curran, president of the National Maritime Union of America and Mr. Paul Hall, presidnt of the Seafarers International Union, announce the formation of the Joint Committee for American-Flag Tankers composed of American-flag tanker owners and operators and the American maritime unions. Mr. Curran and Mr. Hall will serve as directors of the committee, representing labor, and two additional directors will subsequently be named representing management.

The objective of this committee is to achieve conditions whereunder American-flag tankers will be assured of profitable long-term employment. It is not merely, the interests of American seamen and American tanker owners that are at stake, however, because the perilous situation now confronting the American-flag tanker industry endangers our vital national interest, national defense, and foreign policy as well as endangering the free world.

Because of the un-American policies of the major international American oil companies, the American-flag tanker has been virtually excluded from participating in the carriage of oil imported into this country. American-flag participation in our oil imports has declined from 76 percent in 1946 to less than 2 percent at the present time. If something is not done, this exclusion will become permanent and the independent American-flag tanker will be destroyed.

The program will bring the facts to the attention of Congress, the administration, and the public. It encompasses a recognition of the following accepted principles:

1. An American-flag tanker fleet is necessary for our national defense and in order to assure that our commercial imports will be carried at fair and reasonable rates.

2. An independent American-flag tanker fleet cannot continue to exist unless these vessels are assured of a reasonable participation in the carriage of our petroleum importations.

3. The exclusion of American-flag tankers from our import trade imperils our foreign policy in the Middle East as well as jeopardizing our national defense and security.

4. The American consumer is actually paying for using American-flag tankers but they are not being used.

Unless these facts are recognized the American-flag tanker industry is bankrupt. The use of American-flag tankers for a reasonable portion of our oil imports will cost the American consumer nothing. He already pays for the use of such vessels to the major oil companies. The major oil companies, however, expropriate this payment for themselves.

Middle East oil, imported by the major oil companies, is approximately one-half as expensive as domestic oil. The posted price of oil in the Persian Gulf (the price at which oil companies sell oil to themselves) is $13.44 a ton, while domestic oil costs $26.46 a ton in Texas. Current tanker rates from the Persian Gulf are not $13.02 a ton but less than $3.25 per ton. The difference of nearly $10, amounts to 72 percent of the posted price of Middle East oil. This is pocketed by the oil companies, who have in addition already made—after all taxes—from $10 to $12 a ton profit in the Middle East in the production of the oil.

The American consumer pays these companies exactly the same price for Middle East oil as for domestic oil. In round figures, he pays $13 a ton to the major oil companies for ocean transportation. This is more than sufficient to employ American-flag tankers and still leave the oil companies a substantial profit, but the oil companies pay only $3 a ton for transportation on cheap foreign-flag vessels and pocket the difference. Of course, this policy is calculated to destroy the American-flag tanker fleet because it cannot compete with tax dodging cheap-labor foreign flag vessels. It is a policy of arrogance and greed that puts profits and tax dodging above patriotism and the American national interest.

High Gas Tax Rate Is Attacked

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. McINTIRE. Mr. Speaker, the gasoline tax has proved an effective device in providing funds for developing our highway system. Considerable caution should, however, be exercised before any upward adjustments are effected in our already high gasoline tax rates, for, as the following article by Leroy Snowdon so effectively points out, such increases in rates might very well result in lower total income as a consequence of reduced consumption:

[From the Portland Sunday Telegram, Aug. 23, 1959]

HIGH GAS TAX RATE IS ATTACKED—LEVY POLICY SHOULD BE REEXAMINED, OIL OFFICIAL DECLARES

(By Leroy Snowdon, executive secretary, Maine Petroleum Association)

This year marks two anniversaries of significance to the petroleum industry and its customers.

One is the birthday of the industry itself—the 100th anniversary of the drilling of the 1st commercial oil well at Titusville, Pa., August 27, 1859.

The other is the 36th anniversary of the levy of the first gasoline tax by Maine, July 7, 1923.

In retrospect it seems certain that neither the founder of the oil industry, Edwin L. Drake, nor the originators of the gasoline tax had any idea of the future magnitude of what they were starting.

In its first year, the American petroleum industry produced a mere 2,000 barrels of crude oil. Some 2,461 million barrels were produced last year.

Coming along 64 years after the industry's founding, the gasoline tax showed the same capacity for growth. In its first year this tax produced only a little more than $500,000 in revenue. Last year this taxation brought in a total of $22,500,000 to the State of Maine.

The people who hit on the idea of taxing gasoline found a way of taking in barrels of money from the oil business without running any of the risks that are entailed in prospecting for oil. The gasoline tax represents almost sheer profit for government, since the oil industry is saddled with the responsibility of collecting this levy from its customers. And over the years this tax has become a tremendously heavy load for the industry's principal product to carry.

Maine's 7-cent rate is exceeded by no State in the Union and equaled by only 10 others, principally in the South.

In 1932, when the Federal Government entered the gasoline tax field with a temporary emergency levy of 1 cent a gallon, it was scheduled to expire within a year. Instead of expiring, however, this levy followed the same course as the State tax, rising to its present 3-cent level—or triple the original rate.

Now Congress is faced with a proposal to increase the Federal tax 1 additional cent, bringing the Federal levy to 4 cents. This, too, is being described as a temporary emergency measure.

As a result of both the State and Federal trends, the combined tax on gasoline now totals 10 cents a gallon. This is equivalent to a sales tax of about 50 percent of the average retail price that a consumer pays for regular grade gasoline.

The rate trend, however, tells only part of the stroy of the tremendous impact that the gasoline tax has had on both the petroleum industry and the consumers of gasoline. Starting out as a relative trickle of revenue, the tax has become a multimillion-dollar revenue source. Over the years since 1923 this one tax has cost Maine's motor vehicle owners over $300 million and the ante has shown a startling rise in recent times.

By 1933, the end of the first decade, this tax had cost Maine motorists $22,547,000. During the next quarter century it had gained enough momentum so that the collections in 1 year, 1958, were $22,562,000, or slightly more than taken in during the first 10 years.

Part of this revenue growth can, of course, be attributed to higher rates, but another very important factor has been the increase in motor vehicle ownership and use. There is a tendency to think that rates must be raised to obtain more money from the gasoline tax. But the record shows that the tax has a built-in growth factor, and that the same rate of tax has produced an enormous increment in revenue over the years because of increased consumption.

This is illustrated in the following tabulation, which shows the amount of revenues generated by each penny of the gasoline tax imposed by the State over the years: 1940, $1,564,000; 1946, $1,821,000; 1950, $2,259,000; 1954, $2,721,000; 1958, $3,323,000.

As this tabulation shows, each cent of the State gasoline tax imposed in 1958 brought in two times as much revenue as the same levy produced in 1940, and almost twice as much as in 1946, the first postwar year.

Expressed another way, it would have taken a State gasoline tax rate of about 14½ cents a gallon in 1940 to produce the same amount of revenue the State now is collecting from a tax of 7 cents.

It is significant, however, that as taxes on gasoline in recent years have been pushed to ever and ever higher levels, the rate of consumption has slowed down considerably. In the first 5 years following the end of World War II, for example, highway use of motor fuel showed an average annual gain of over 5 percent. In the last 5 years, however, this rate of increase was cut in half, and in 1958 highway consumption of gasoline was only about 2 percent greater than in the previous year.

This same trend is evident in automobile travel statistics. Whereas formerly there had been a pronounced upsurge, annual travel per vehicle in recent years has shown a declining tendency, falling from an indicated level of about 10,000 miles in 1946 to around 9,500 miles in 1958.

Coupled with this is the growing popularity of smaller automobiles, particularly the foreign variety, which feature fuel economy as one of their main attractions.

All these developments indicate clearly that the motoring public is becoming extremely conscious of the cost of gasoline. What the public does not seem to realize, however, is the fact that the increase in the price of gasoline itself in recent years has been quite moderate. The average retail price of gasoline in 1958, exclusive of taxes, was only 5.9 percent above the 1949 level, whereas in the same period retail prices for all consumer items, as compiled by the U.S. Bureau of Labor Statistics, had risen 21 percent.

But, while the average price of gasoline moved up less than 6 percent during the decade, the national average tax jumped more than 36 percent. In other words, taxes on gasoline during the period went up at a rate of six times as great as the retail price of the fuel.

It is important to also note the gasoline consumer has been getting a continually improving product. One measure of this quality is the octane number of the fuel. Between 1950 and 1958, U.S. refiners improved the average octane rating of regular grade gasoline by about 9 numbers. As a result of these and other major improvements in the fuel, the motorist today can buy regular grade gasoline that has a higher quality than the premium gasoline of only 5 years ago, at little or no increase in price. Even more remarkable, today's improved gasoline sells at the same price, 21 cents (excluding tax) as it did 36 years ago when the taxation started in Maine.

On this 36th anniversary of Maine's gasoline tax, it would seem timely and appropriate for government to reexamine its policies with respect to this tax, in the light of indications that it would be a grave mistake to continue to regard this levy as a boundless bonanza. For the gasoline tax cannot be exempted from the law of diminishing returns.

Special Report

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. DENT. Mr. Speaker, although I have been very busy with the committee working on the labor legislation, I have tried to pick up a few pertinent facts on the trade issue.

It seems to me that in our desire for investment and trade profits we are completely overlooking the disaster lurking in the shadows of unemployment, lost jobs in production industries, and the apparent unawareness of labor, Main Street, and the smaller manufacturers.

Recently one of our leading metropolitan newspapers, the Pittsburgh Sun-Telegraph, Wednesday, August 19, 1959, published an editorial entitled "Labor Awakening." I present the editorial verbatim:

Organized labor has, in a large measure, in recent years been responsible for supporting the Roosevelt ian policy of reciprocal trade agreements which have worked out so disadvantageously to the United States.

Already one effect of these treaties is that last year as many automobiles were imported as exported, and the United States is importing such a product as steel.

The real sufferer from these treaties, agreements, quotas, exchange arrangements, etc., is the American worker.

For many years conservatives have been cautioning labor that they have embarked on a dangerous course when their supported political measures are disadvantageous to them. But, having adopted labor internationalism, they would not retreat.

However, some unions are beginning to realize their peril. What they call imports from sweatshop countries have always been coming in from these same sweatshop countries.

The only difference was that during the war and the early postwar years businessmen were afraid to go to those countries, invest American capital in them, and then ship the goods back here to compete with the American worker, who generally lost out.

It is interesting to note that the great free trade unions, the International Ladies' Garment Workers' Union; the Amalgamated Clothing Workers; the United Hatters, Cap, and Millinery Workers' International, and the Textile Workers, are leading in this reconsideration of a policy that has always been disadvantageous to the American worker.

A few points need to be made concerning this:

1. Most mass-production work can be done as efficiently by low-wage workers as by high-wage workers. Therefore, unless the high-wage worker is in some manner protected, he will outprice himself.

2. In the semiskilled industries the ability and efficiency of the workers play a small part in the total product; the bigger part is contributed by the machine, which can be operated as well by less-efficient workers, thus making the product cheaper to sell in the American market.

3. Since the Roosevelt regime, everything has been done to make the phrase "Buy American" unpopular, with the result that Americans buy what is made in Hong Kong or Japan or Czechoslovakia as readily as they buy American goods.

It is nonsense for American unions to believe that they can solve this problem by stimulating campaigns in other countries to increase wages there. They will be told to mind their own business.

Not all standards of living are the same, and not all people approve of the American standard of living, which includes many inflationary factors.

The soundest protection against the dumping of cheap goods into the world's greatest market is a protective tariff—and it would be startling, but it is foreseeable, that American labor will come to that.

For the record I want to put this important message before the Congress and if I could, before every worker, employer, banker, and professional individuals in this country.

The warning contained therein is one that none of us can overlook. There is no secret or mysterious formula for national prosperity. The answer is simple—production with wages sufficiently high to meet the costs of living, pay doctors and hospital bills, buy insurance, shop on main street for necessities and a few extra luxuries, keep a savings account, buy and maintain a car, maybe a small boat, send your kids to school, take a 2-week vacation, keep your church and charities obligations, and last, but not least, buy a radio, refrigerator, TV, washer-dryer, freezer, air conditioner, get your wife a modern step-saving kitchen, feed your kids the latest vitamins, and whatever else we are told we must have to maintain our way of life.

If we do not have most of these things within the reach of our working people the rest of the economy will fall flat on its face.

Without wages to carry this market-place load, the professional individual, the banker, and the press, all service industries and businesses will die on the vine.

I will always remember my early youth in a small coalmining and brickmaking community on the banks of the Allegheny River in western Pennsylvania. The history of this town is a case in point.

This was a normal, small American town with its professional services, elected officials, its lawyer, doctor, barbershop, its hotel, stores, railroad station and telegraph office, with its painters, plumbers, and the tradesmen that are usually found in a going community.

Its community of 400 or 500 families prospered because the coal mine and clay mine provided payrolls which fed the whole economy. Then one dark day the mine shut down, the payroll stopped. In a short period of time, all commerce and business stopped. I recently visited this site, and nature has again taken over—there are no houses standing, no business places, and no people. The years have erased all of the things that once marked a thriving community. The town was a ghost town.

This then points up clearly and vividly that tradesmen, professionals, Main Street and Back Street cannot survive on their own. There must be production, because production produces payrolls, and payrolls produce prosperity. This lesson I have never forgotten, without production this town died and I am convinced that without production this Nation will die.

Somewhere, somehow, we have been sold a bill of goods. We are told that trade means peace and therefore even if it means unemployment, hardship, foreclosures, and shutdowns, it is worth it. Up to a point any sane person agrees.

However, will the results be what we are told they will be, or will the greedy, mercenary profiteers of other countries contrive to take advantage of our soft-

ness and further flood this country's domestic market with low-priced goods made by low standard wage earners and in most cases, from American designs and all too often bearing American trade names.

I cannot conceive of anything more damaging than to keep up this idiotic program that allows a nation like Japan to embargo the import of automobiles into the country while at the same time, dump their cars onto the American market, or for England to embargo turbines and generators while selling to our own Government agencies.

Again, we find Mexico putting an embargo on many products such as piston rings, forcing American companies like Perfect Circle to buy into their domestic industries in order to market their products in that country.

I mentioned Perfect Circle, and its Mexican experience; for the record I present the full story as well as a little noted item about the prosperity of the London stock market while the American market continues its erratic but definitely downward slide. The stock markets of Germany, Italy, Japan, and Belgium and other beneficiaries of our national trade suicide policy are reported doing well.

PERFECT CIRCLE TO BUY 45-PERCENT INTEREST IN MEXICAN FIRM

CHICAGO.—Perfect Circle Corp., Hagerstown, Ind., piston ring manufacturer, announced it has entered into an agreement to purchase 45 percent of the stock of Engranes y Productos Industriales, Mexico City, for approximately $800,000. A Perfect Circle spokesman said about two-thirds of the purchase price will be paid in piston ring manufacturing machinery.

The Mexican firm will be licensed to manufacture and distribute Perfect Circle piston rings and other products in Mexico, W. B. Prosser, Perfect Circle president, said in the announcement. A meeting of Engranes y Productos Industriales stockholders has been called for August 28 to ratify the agreement and to change the name to Industrias Perfect Circle S.A. The firm will continue to produce hydraulic automobile jacks, irrigation pump parts, and other replacement parts, according to the announcement.

A spokesman for Perfect Circle said the move was made because the Mexican Government banned piston ring imports. The company had planned to begin production in Mexico at some future time, but had to accelerate its program because of the governmental order cutting off the imports, he said.

He said the company had been forced to make similar moves in Argentina and Brazil when those nations closed their borders to the company's product.

All the way up and down the list of imports we find examples of restrictions, high tariffs, and outright embargoes against American-made goods.

This country prospered so long as it was a Democratic-capitalistic system of operation, but it is fast becoming a purely capitalistic system which cannot survive in free competition with nations that have no governmental mandated costs of production such as social security, unemployment compensation, exorbitant taxation, both personal and business.

In line with the above editorial, it might be good for all of us to take stock before we vote for H.R. 5, which will open the floodgates of American investment in foreign countries, and in a few short years, the domestic market will be lost completely to American-made goods.

What is our interest—American made goods, or American financed goods?

How long will the foreign worker allow himself to be exploited by American absentee investors?

Will we be building goodwill, or will we be sowing the seeds of discontent, distrust and instead of promoting peace will we unwittingly be harvesting a crop of bloodshed, devastation, and catastrophic war?

In a recent survey of the results of our ill-advised 4-year extension of the nonreciprocal Reciprocal Trade Act, we find the following very brief summary of results in just a few of the affected fields of production.

These statements of facts and logic have been given on the floor of the House, on the air and in many of our leading periodicals and newspapers.

Many Members of Congress are becoming aware of the seriousness of the situation and there is unrest and doubt never before so apparent amongst the membership.

Many of us wonder whether Congress was wise when it abdicated its constitutional prerogatives and turned over to the President the tariff and duty making powers which rightfully belong to Congress.

ESCAPE CLAUSE BOX SCORE

"Oh, but industry does have an official remedy," exclaims the liberal-trade enthusiast to import-wounded industries. But let's ask the man who sought one. Here's the January 1954 to May 1959 record:

Industries seeking remedy from Tariff Commission	45
Remedy denied by Commission	19
Remedy recommended by Commission to President	[1]26
But denied by him	17
Remedy granted by President	8
But drastically diluted by him	6
Full recommendation granted (out of 45)	2

[1] 1 in process.

FOREIGN CARS

Japan's Batsun, plastic-body sports car, speed of 86 miles per hour, now in order-taking stage and slated soon for United States market. Also targeted for United States in their tiny Subaru-360 at $1,100.

European-English cars captured 17 percent of Canadian market first 5 months of 1958; now up to 23 percent for same period in 1959. Imports here running about 10 percent of market.

SHIPPING BOTTOMS TAKE BEATING

U.S. shipper's share of American foreign commerce had rough sailing since World War II (military excluded):

Year:	*U.S. share (percent)*
1946	68.0
1951	43.0
1952	35.0
1953	30.0
1954	28.0
1955	22.0
1956	20.0
1957	18.0
1958	13.0
January 1959	[1]8.7

[1] Latest.

BINOCULARS

Jap binocular industry, principally geared to U.S. market, produced over 1.5 million units in 1958; United States purchased two-thirds of total output.

TYPEWRITERS

Nineteen million nine hundred thousand dollars of imported typewriters and parts in 1958 outstrip U.S. exports of $14.7 million first time in history.

CAP IMPORTS

National Cap and Cloth Hat Institute, joint labor-management group, seeks escape clause action to increase duty on Jap caps. Self-imposed Jap annual export quota of 15 million caps too large for U.S. market to absorb without serious damage, reports Institute. Comparative prices: Jap caps, 20 cents; U.S. caps, $1.

CLOTHING WORKERS CONCERNED

Amalgamated Clothing Workers of America, formerly strong trade agreements supporters, adopt resolution attacking destructive imports. Cite "cutthroat" competition in every branch of male apparel threatening thousands of jobs. Knit glove industry well on the road to destruction, as imports now 250 percent of U.S. production.

COPPER AND BRASS

Copper & Brass Research Association's study of causes in decline of domestic brass mill industry reveal: First year after sharp tariff cuts, imports multiplied 42 times preceding year level; imports almost 100 percent of U.S. tubular plumbing goods market; U.S. industry in 1958 operated less than 45 percent of 1943 capacity; United States converted from exporter to importer of brass mill products.

WESTERN EUROPE'S GOLD MOUNTS

Gold and dollar reserve holdings in Western Europe increased from $7 billion in 1950 (December) to $18 billion in 1959 (March).

LUXURY LINER LAMBS

Indicative of price differential in foreign-U.S. competition was arrival at San Diego of 30,000 Australian lambs on converted luxury liner Wesorarlia. Estimated delivery price: $10 a head or half of U.S. price. Importer's yearly goal: 100,000 head.

STEEL: "THE BIG SQUEEZE ON LITTLE STEEL"[1]

"In 1957, the United States exported 5.2 million tons of steel-mill products, and imported 1.1. million tons. But this ratio of almost 5 to 1—in favor of steel-mill exports—dropped to less than 2 to 1 in 1958, when exports fell to 2.7 million tons, and imports reached a high of 1.7 million tons (1959 steel imports running double U.S. exports. NWC).

"Because of these developments, we appear to have lost much of our foreign market, and a portion of our domestic market is in jeopardy. For example, the United States exported 721,000 tons of semi-finished steel in 1957. This dropped to 124,000 tons in 1958—a decrease of 83 percent. Exports of structural shapes decreased from 453,000 tons in 1957 to 292,000 tons in 1958, while exports of plates declined from 604,000 tons to 249,000 over the same period—a drop of 59 percent. Exports of tinplate, an item in which the United States has long had a preeminent position, fell from 538,000 tons to 244,000 tons—a decrease of 54 percent. * * *

"In the domestic market we are at a competitive price disadvantage in such products as rods, barbed wire, nails, reinforcing bars, and other items. * * *

[1] Excerpts, address by A. F. Franz, president, the Colorado Fuel & Iron Corp., to American Iron and Steel Institute, New York, May 28, 1959.

"Within the past year or so, a number of specialty wire products have arrived on the American market in alarming quantities. * * *

"These are facts. * * * The American steel industry in certain areas is no longer competitive with the rest of the world."

U.S. AUTO EXPORTS-IMPORTS

Since 1955, U.S. auto exports dropped 50 percent, from over 200,000 annually to expected 100,000 in 1959 * * * 370,000 foreign car imports sold in United States in 1958; present rate indicates 600,000 this year.

UAW AROUSED

A. J. Mattes, president of local 239, UAW, wrote Baltimore Mayor Grady that over 300 General Motors workers in that city were laid off and remaining 1,500 are working less than 40 hours a week because of increasing number of foreign car imports. Thirty-five thousand autos imported via Baltimore the first 5 months of 1959 could have given employment to 2,500 workers at Chevrolet plant there, working two 8-hour shifts for 13 weeks.

AUTO PRODUCTION ABROAD

Daily output at Fiat's Mirafiore Works over 2,500; Volkswagen heading for 3,000 at Wolfsburg. Plymouth's mammoth Detroit lines turns out 1,100 daily; Rambler at modern Kenosha plant about 1,600 units.

ELECTRICAL EQUIPMENT

Florida Power & Light Co. ask foreign producers of heavy electrical generating equipment to bid on two 200,000-kilowatt steam turbogenerators * * * probably first effort by foreign manufacturers to penetrate private utility market, following successful efforts on Federal-State projects. Domestic firm salvaged contract on basis of delivery date.

TURBINES

English Electric bids 30 percent under nearest American competitor to win Army Engineers' contract for eight hydraulic turbines for Big Bend Dam, S. Dak. *

SEWING MACHINES

Brief filed with Tariff Commission reveals foreign sewing machine manufacturers now control about 75 percent U.S. market; e.g., U.S.-imported Jap machines up from 64,000 in 1950 to about 1 million in 1958.

WATCHES

Ranks of American watchworkers steadily reduced from 16,000 to 6,000 employees as foreign imports take 70 percent of annual domestic market; or 14 million out of 20 million units.

THE GOLD FACTS

United States now has $19.6 billion in gold, smallest reserve in over a decade, but foreign organizations and individuals have dollar claims of $15.1 billion against reserve.

TUNA FLEET

Imports of Jap tuna reduced ranks of San Diego's tuna clippers to 125 ships from 1952 high of 214. Sales sliced from about $40 million in 1954 to expected $19 million this year.

U.S MANUFACTURER LITERALLY LOSING HIS SHIRTS

National Association of Shirt, Pajama, and Sportswear Manufacturers went on record opposing State and Commerce Departments' representations on behalf American business and declared in favor of congressional regulation of foreign trade. Shirt imports from Hong Kong-Japan alone totaled 1.75 million dozen in 1958, equivalent to $15 million in U.S. wages for 6,000 American employees.

TOURISM: DOLLAR SOURCE

Frequently overlooked as dollar source to foreign nations is tourist industry; Americans spent $2.1 billion on foreign travel last year * * * 10 percent jump from 1957.

STEEL: "WHAT'S BEHIND THE RISE IN FOREIGN COMPETITION?" [2]

"Let me cite the predicament of one American industry. * * * The industry is that which makes table flatware * * * and recently stainless steel ware. * * * This is a new industry in Japan; flatware such as we use is not used generally in Japan.

"By 1955, imports had reached 3,134,000 dozen against U.S. production of 14,654,000 dozen; * * * in 1958, Japanese imports amounted to 8,444,000 dozen, with U.S. production of 14,740,000 dozen. * * *

"While this rise in imports was going on, the gentlemen of GATT progressively reduced tariffs.

"The big reduction was made in 1950 but further reductions were made in 1956, 1957, and 1958, after this industry had really been hurt.

"Japan, fearing action by the United States, voluntarily announced a quota limit to the United States of 5,500,000 dozen for 1958. * * * Up to this time, this industry has been given no relief and employment is off 25 percent. In spite of the announced quota of 5,500,000 dozen, 1958 imports were 8,444,000.

"The time will soon be here when we have completely lost our entire export business in steel, except for a few specialty items which are not made elsewhere."

You will note the seriousness of the situation by taking time to read further on the new and mystifying attitude of American business, bankers and leading administration leaders in Washington.

One wonders if they understand the philosophy behind reciprocal trade, foreign aid, and mutual security aid that seems to have perverted by profit-seeking individuals and corporations that have found Government sponsorship for running away from national taxes, high wages and national responsibility.

Now let us look at another serious threat to American economic well-being and the wide-open deception being practiced upon the American consumer by well established American producers.

Lately the following announcement appeared in the magazine Business Week August 22, 1959, page 56:

TRANSISTOR-RADIO MAKERS WILL MARKET JAPANESE MODELS UNDER U.S. LABELS

In the past year, the U.S. electronics industry has watched Japanese manufacturers grab more than half the market here for transistor radios—largely by sales under Japanese labels. Now, some companies have decided to meet the foreign competition by marketing Japanese-made radios under their own U.S. trade names.

Latest transistor-radio manufacturer to join the importers is big Emerson Radio & Phonograph Corp. Through its international marketing subsidiary, Emerson has concluded an agreement with Tokyo's Standard Radio Corp. to import 100,000 radios in coming months. Emerson officials say it is making the move because Japanese companies are making radios and parts too small to be produced competitively in the United States. Emerson, which will sell the imports under its Jefferson Travis label, follows Motorola, Inc., as the second big radio maker to move into the Japanese import field.

Meanwhile, Toko's Ministry of International Trade & Industry is spurring Japanese efforts to make electronic computers. MITI plans to sponsor a company, 50 percent privately owned—to produce 50 computers next year, and more than that in each succeeding year.

We will soon find ourselves with shelves full of foreign made "American brand" goods that will defy detection by even an expert, let alone an innocent housewife buying in the American marketplace.

She may well be buying a Japanese-made product labeled by the company that has just furloughed her husband.

It will not be long now before the people in this country awaken to what is happening and the repercussions in the political field will shake the foundations of our democracy.

It is one think to talk peace, but it is another to deprive an American workman of his right to earn a living while at the same time profits are not impaired, but in fact, are increased.

The steel strike is a case in point. While our bankers are pressing the crown of gold upon the brow of labor, the foreign producers, in many cases with American money, American machinery, American know-how and American connections for marketing, are running wild.

The following appeared in an August 1959 issue of Business Week:

FOREIGN STEELMAKERS BOOST OUTPUT, ENLARGE THEIR SHARE OF WORLD MARKET

With the steel strike in its 6th week, executives of the struck U.S. mills are closely watching the speedy progress of steelmakers in Western Europe and Japan. Foreign steel companies are boosting their share of world steel markets—including the United States.

Steelmakers in West Germany and Japan are enjoying the liveliest boom. But steel output is also curving upward in France, Britain, and Italy.

In West Germany, steel producers are headed for a new output record of more than 30 million tons. Renewed capital investment and machinery exports have helped boost demand this year.

In Japan, the industry has been setting records all year, thanks to rising exports and a capital spending boom. With production likely to top 15 million tons this year—about 2 million tons over 1958—Japan threatens to displace France as the world's fifth largest steelmaker. Some of Japan's steel companies are getting ready to ask the World Bank for loans for a $300 million expansion program to raise capacity to 25 million tons in 1965.

In Britain, steel output has reached 80 percent of the industry's 26 million ton capacity. While investment still remains low, an upsurge in autos and appliances is adding to steel consumption. Auto production, in fact, has been gobbling up steel so fast that a shortage of sheet is feared.

In France, steel production has climbed almost 5 percent above last year's record level. Aided by devaluation, the French industry has managed to improve its share of Europe's growing steel market by being able to offer lower prices.

In Italy, steelmakers also enjoy expanding sales because of the Common Market. One sign of expansion is the government's proposal to establish a new 1-million-ton steel plant in southern Italy.

This picture of steel production is not, as proponents of the Reciprocal Trades Extension Act say, an isolated case. Rather than being the exception, it is

[2] Excerpts, address by W. H. Diewel, senior vice president, Crucible Steel, to the American Management Association, New York, May 20, 1959.

becoming the rule. Let us look at another portion of the record contributed by many members, including WILLIAM JENNINGS BRYAN DORN, from South Carolina:

Steel imports are increasing at a fantastic rate. So are imports of glassware, pottery, chemicals, machine tools, textiles. In fact, every job in America today is threatened by unfair imports from foreign countries.

The farmer is likewise a victim of our unfair trade policies. Some years ago we exported a large portion of our wheat crop. American wheat was in demand beyond the seven seas of the world. We exported 60 percent of our cotton crop. At one time we exported a vast portion of our tobacco crop.

We were once the only nation in the world that grew tobacco. But under this trade program in Washington today the American farmer grows less and less, surpluses pile up while foreign countries grow more and more. For instance, in Canada the average tobacco farmer can plant 30 acres of tobacco, in Rhodesia 65 acres. But in the United States our farmers can plant an average of only 2.9 acres. They are not permitted to expand and grow in the American tradition.

Many cotton farmers in the United States can plant only 4 acres of cotton. No farmer can possibly clothe, feed, and educate his children on such an unbelievable income. There is distress in our land today by reason of our unfair foreign trade policy.

In foreign countries, farmers are often exempted from land taxes if they will grow more farm products, such as in Rhodesia. Turkey has exempted certain of her farmers from income taxes if they will grow more. Yet we have billions of dollars' worth of farm surpluses piled up in warehouses costing the taxpayers millions of dollars.

We need to free our farmers so they can plant more and have an equal opportunity with farmers in foreign nations. We need more foreign markets, not less. We should sell more cotton and wheat abroad, not less and less.

It is the duty of the State Department, the Congress, and the President to give to the American farmer and the American worker the same advantages and protection as offered by foreign countries to their farmers and workers.

There is nothing reciprocal about our present so-called reciprocal trade policies. There is no "sip" in it for the American work nor the American farmer.

No one would ever dream of asking Brazil to import coffee, nor India to import tea, nor Honduras bananas, nor the Mayala States rubber. Yet the one-worlders, the dreamers, and idealists running our present trade program are demanding that we import textiles, steel, and automobiles. How ridiculous can we get?

UNFAIR IMPORTS LAYING AMERICA WASTE

The original idea of reciprocal trade was to sell automobiles, textiles, steel, wheat, and cotton to the other countries of the world and buy tea, coffee, rubber, cocoa, and products we need. Never before in the history of the world has a nation been required to import things it already has in surplus. Unfair imports have created disaster areas, ghost towns, unemployment, and distress.

Many foreign nations do not permit American automobiles to be sold in their countries. But, they sell theirs here. They put on import quotas which eliminate the sale of American products, but, at the same time, they demand that our State Department and the U.S. Government lower its tariffs and permit their goods to flood this country.

Those products we produce in surplus and those traditionally American should be protected by import quotas. These jobs should be saved for American workers and farmers.

This trade policy of the State Department is a foreign aid program. It is not designed to help the American farmer and the American worker. It is designed to help the foreign worker and the foreign farmer.

Along with the taking of the American worker's job and the farmer's acreage, we are being forced to pay the highest taxes in the history of the world to support a stupendous foreign aid program.

Yes, my friends, 43,000 employees to show the world how to make automobiles, how to make steel, how to grow cotton, how to grow wheat, how to grow tobacco. Technicians to show them how to pack it and ships to haul it to America in competition with the products of the American worker.

Incidentally, it takes 37½ percent of our foreign aid appropriations to pay our employees' salaries and expenses to give away our money.

They talk in Washington about $70 billion foreign aid. It is nearer $200 billion, starting before World War II in the form of lend-lease and other such programs.

The free traders and one-world State Department striped pants boys are saying that foreign aid must continue for 50 to a 100 years. They go further than that and take your money, ladies and gentlemen, to build steel mills, automobile plants overseas, and then turn around and give these people free water and free electricity and guarantee them a profit.

During the debate last year in Congress on foreign aid, it was brought out that the American foreign aid representatives went to the leaders of the textile industry and asked them to go to Indonesia and other countries of the world and build textile plants—telling them that no risk was involved, profits could be guaranteed with cheap labor, Government water and electricity, all of this furnished by the American taxpayer indirectly.

In other words, just close your American plants, fire your employees and we'll help you set up overseas where you can get cheap labor. Our textile people are loyal, patriotic Americans who believe in their workers. They want to keep their factories and jobs at home, so, in the main, they have refused these attractive offers.

I understand that some of the great manufacturers who came to Washington last year and participated in the President's conference favoring these unfair imports are now expanding their plants overseas and are bringing these goods made with cheap labor back to the United States. But, this does not help the American worker, nor the small businessman. They cannot move overseas and compete with this cheap labor. The only alternative for our laboring people is unemployment and breadlines.

Exports of machine tools have fallen off from 30 percent of U.S. production to 10 percent. In 1954, the United States imported 656,000 barrels of oil every day. In February of 1959, daily imports totaled 1,626,000 barrels daily. Yes, our great oil industry is being threatened.

Foreign nations pay their workers such a low wage that our lead, zinc, mercury, coal, copper, tungsten, iron ore industries are being threatened by floods of imports from abroad. The same applies to the glassware, sewing machine, camera, and typewriter industries.

IMPORTS PILE UP—EXPORTS DROP

The plywood industry is in serious trouble. Hardwood plywood imports from Japan, for instance, have increased from 1½ million square feet in 1951 to 659 million square feet in 1958. This is an increase of 12,950 percent. During the same period, domestic production declined even though domestic consumption more than doubled.

In 1956, the United States imported 107,000 foreign cars, and 400,000 in 1958. Present indications are that imports will run between 500,000 and a million this year. For the first time in history, we are importing more automobiles than we are exporting. This is shocking when we stop to think that the automobile industry first started in the United States.

The textile industry of foreign nations is expanding with American aid, while we have 345,000 unemployed textile workers and 300 closed textile mills. The Japanese can buy American cotton 7½ cents per pound cheaper than the American manufacturers can buy the same cotton. Then, the Japanese are permitted to send that same cotton after it is made into cloth back into the United States in competition with that of the domestic manufacturers.

In 1947, the United States exported $748 million worth of textiles and imported only $24 million worth. In 1955, under this fallacious trade program, textile exports fell to $242 million; while imports increased to $125 million.

Under the proper trade program our people should be employed. We should be selling these products abroad and we should be helping foreign nations by buying coffee, tea, cocoa, rubber, and those products we need. This is true reciprocal trade. Our present trade policy is a trade program for the benefit of foreign workers and foreign farmers. Foreign aid takes money from American farmers and workers. Our trade policy takes his job, too.

The idealists in the State Department tell us that we must buy from foreign countries in order to stop communism. America is the heart and core of the free world and has been the arsenal of democracy. If our industries are liquidated and our workers unemployed, I fail to see how this can stop communism.

If industry is built up with American money around the borders of Russia where it can be grabbed by the Red army or bombed by the Red air force, I do not see how this can stop communism.

On the other hand, it will help communism by weakening America and by building up those areas which the Communists can take over. One American worker and one American plant in the United States is worth more than a dozen within a day's march of the Red army.

What can we do about all of this? I am thankful that we live in America where we can vote for our President and our Representatives in Congress. Next year is election year.

The foreign aid program just passed the Congress. The so-called reciprocal trade program passed last year, for 4 years. The only hope we have to save our jobs, to save our industries, to save our farm acreage and domestic markets is to participate in the political elections of 1960.

We must start now at the precinct levels in both political parties to organize so that our program can be properly considered. A strong plank must be adopted at both national political conventions that will save the American worker, save the American farmer, save the American businessman from unfair foreign imports.

To accomplish this, a better trade and foreign aid program will have to be brought up at the precinct level, at the county and State conventions, and at the national conventions.

The time has come to put back into Congress the power to set tariffs and quotas.

An interesting observation that further peels away the false cover of the "trade for peace" slogan is contained in this excerpt from a Life editorial of recent date:

The public might better play along with Blough, who at least offers a way to keep prices level. His terms for this promise—no

White House intervention—are a good idea anyway this year. Previous steel strikes, especially that of 1946, occurred in a chaos of price movements when nobody knew where the value of the dollar ought to settle. In all that yak, the White House had a right to the last word (Life, Feb. 4, 1946). Not so now. There is a well established world market for steel in which the U.S. industry is being pushed competitively not only by foreign steel but by other metals. Hitherto a prime source of inflation, the steel industry has discovered it can no longer afford inflation, and its battle is therefore more nearly the public's battle than hitherto. If it takes a long, tough strike to put Roger Blough and Co. in a position to keep steel prices down and meet their market, then a long, tough strike it should be.

One wonders if Life has bothered to look at the income angle, as well as the wage angle.

I will give you three figures from the Secretary of Labor Mitchell's report on Steel Facts and let you draw your own clusions:

Wages of production workers:

1950	$32
1959	44

Per ton figures, wages, and executive salaries:

1950	$40
1959	58

Price of steel:

1950	$129
1959	173

You be the judge as to whether labor is driving steel business away or rather that profit is the culprit. Profit earned here and abroad.

One cannot in one breath talk American and in the other buy foreign.

Trade is a two-way street, but we are only traveling one way, into international oblivion.

A record of trade that leaves out the reciprocity. The following detailed account gives a rather dismal picture of the increasing problems Americans are facing every day in the field of foreign trade:

In March of this year our imports reached a record high level above any previous month in our history. In June the March record was surpassed. Also in June our imports exceeded our commercial exports. The first half of 1959 saw our imports run 18 percent ahead of the first half of last year.

Our exports on the other hand have declined. In 1958 they dropped 16 percent from the preceding year and during the present year they have declined roughly another 5 percent.

These trends are being explained by liberal trade proponents as being temporary and abnormal. They say that the high imports this year are swollen by heavy steel imports attributable to the steel strike, the popularity of the small foreign automobile, and several other extraordinary factors. When the steel strike is settled and when the domestic automobile industry brings out its so-called compact car, imports will presumably level off. Last week Assistant Secretary of Commerce Henry Kearns in a press conference expressed the opinion that our exports would rise; and he doubted that we have priced ourselves out of foreign markets.

As for exports, the freer-trade apologists expect cotton exports to spurt and jet plane shipments to zoom, and thus to raise the export level.

If we examine these explanations and hopes we find that even though steel and automobile imports have risen, coffee and petroleum imports, which are among the highest of all, have suffered a decline in dollar value. If coffee prices rise this year imports will again loom larger. Also, it may be questioned whether steel imports will fall substantially after the strike. They began rising over a year before the strike was called and price comparisons with the foreign product would indicate a continuation of imports at a level considerably higher than in the past. If a judgment can be based on the experience with other products, imports that have a distinct price advantage will continue to increase; and steel should be no exception.

The same reservation applies to the small foreign car. It may be found that imported cars have established a market for themselves that will not readily yield to the smaller American car. Of course, even if the automobile industry, with its mass production techniques, should succeed in stemming the import tide without resort to import restrictions, this would offer little comfort to other industries that do not possess the vast resources of this giant among American industrial wonders. The test even with automobiles, however, is still to be met.

It should also be pointed out that the petroleum imports that helped swell the total import volume for the first half of 1959 began to decline after March when mandatory import quotas were established. This again would indicate that total June imports of all products were not abnormally high. Petroleum and coffee imports, both of which were down from previous levels, have been the No. 1 and No. 2 imports in dollar value for several years. Therefore the increased steel and automobile imports that are used as explanations to account for the surge in our total imports do not of themselves succeed in making the high import levels of recent times abnormal. They are offset by declines elsewhere that may be of a temporary nature. Morever, high steel and automobile imports may continue.

That exports of cotton may increase seems assured with the increase in the export subsidy that went into effect August 1. Such an increase in exports will, however, be an artificial rather than a normal and healthy expansion, since the subsidy amounts to about 30 percent of the price. An increase of this kind should not be counted as a sound commercial development nor should the upward surge be listed as reflecting the capacity of the American economy to compete in the world market—quite the contrary in fact.

The anticipated increase in plane exports may also help to boost exports. This is expected to be in the magnitude of $400 or $500 million per year and will represent commercial exports. However, a sharp decline has been registered in coal exports within the past year, and this does not appear to be headed toward a reversal. An increase in exports in some other field, such as the expected rise in sales of planes abroad will indeed be needed to offset this loss.

Steel exports have recently been exceeded by imports at a ratio of 2 to 1 or more This is a startling development. In 1958 imports of typewriters for the first time also exceeded our exports. In many other fields, such as electronics, sporting goods, fishing tackle, cameras, sewing machines, farm tractors, etc., imports have increased sharply. Machine tools have also had the experience of increasing imports and falling exports; and this is very significant because machine tools are of themselves sources of technological development. Greater self-sufficiency abroad, as indicated by the decline in our exports, combined with the ability of other countries to export machine tools to us, are more than straws in the wind to be blown out of the way by the words of Assistant Secretary Kearns.

In the textile field exports have been declining for several years while imports have risen greatly. The trend to higher imports was halted, temporarily at least, by inducing Japan, the principal source of imports, to impose export restrictions on her shipments to us. That such restriction was necessary in order to save the domestic industry demonstrates once more the weak competitive position in which we find ourselves in the foreign field.

It should be clear enough all around that the increasing imports since 1957 plus the decline in exports since that time reflect, not an abnormal and passing condition, but bespeak yet greater competitive trouble for many of our domestic industries in the future.

There is yet further evidence of the uncomfortable position in which the United States finds herself in the foreign trade field. In 1958 we experienced a deficit of $3.4 billion in our total foreign account even though our merchandise exports exceeded our imports by more than $3 billion. Actual gold shipments abroad covered some $2.3 billion of this deficit. This drain on our gold has continued through the first half of 1959 during which period we lost another $955 million in gold. Our gold stock in Fort Knox has fallen below the $20 billion mark, the lowest level since 1940. The National Foreign Trade Council recently estimated a deficit of nearly $5 billion in our total foreign account for 1959.

The foregoing facts will not be vaporized by glib assurances of the freer trade elements. The latter seemingly have lost their contact with reality.

There is much else beside the statistics of imports and exports and figures on gold drain and falling U.S. gold reserves that should indicate even to the blindest that the United States has come into a highly vulnerable competitive position in the world. Even our great mass production industries, these giants that have been in the technological forefront and in the vanguard of automation are now finding themselves beset by a competition that is beyond their reach.

There should be no element of surprise in this at all. Other countries have imported or otherwise obtained from us through foreign aid approximately $30 billion of modern machinery in the past 11 years, $21 billion of it in the past 6 years. Installation of this machinery abroad has brought with it a great boost in foreign productivity. During these same years in the neighborhood of 10,000 foreign productivity teams have been given access to our factories.

The increase in foreign productivity, while uneven, has obviously been startling in many instances. Modern machinery superimposed on a low level of technology or primitive machinery, as has happened in many foreign production centers, has meant a boost in productivity not experienced in this country. We have saved a number of countries a generation of research and development by making available to them our latest technology.

This is not said by way of complaint; but we should at least have sufficient insight to comprehend the probable consequences of our policies. The echoes are now coming in from many directions.

Not least among our difficulties is the fact that foreign labor unions have yet far to go to equal ours in bargaining capacity. They are hobbled psychologically no less than ideologically. Therefore increasing productivity shows up in lower costs abroad more readily than in this country.

Not only is the trend in our trade in the past 18 months not abnormal; the competitive situation on which it is based is not a

superficial one. The cause is deep seated and was long in the making. The higher costs of production in many of our industries compared with foreign costs are the result of developments that will not be undone overnight. In seeking to adjust to them an increasing number of our industries have been arranging for foreign production. Some of them have established branch plants in other countries; others are in the process of doing so and still others are studying the possibilities. In other instances licensing arrangements are made with foreign producers whereby our patents are made available on a royalty basis. Then again some of our companies have bought foreign concerns outright or purchased a substantial interest in them. Others are still shopping for production facilities in a number of countries.

The purpose is to gain the advantage of lower wages and thus to become competitive in foreign markets. In some instances as in the case of automobiles, tractors and typewriters, the foreign branches or subsidiaries ship the foreign-made product into this country itself. Principally, however, the purpose has been to hold the export position or rather to make up for the loss of exports by supplying foreign markets from foreign sources.

This trend toward partial emigration represents an adjustment by our industries to the competitive facts of life. As imports encroach on the market in this country and deprive our own industries of ever increasing shares of their accustomed market, industry is driven abroad as a matter of self-defense. Since capital has mobility this is not only a possible move but in many instances an unavoidable and sometimes a profitable one.

What is wrong with it?

There is nothing wrong with the self-defensive movement of itself; but there is something disturbingly wrong with the conditions that have brought forward this type of economic defense as a competitive necessity.

It is often said that we have priced ourselves out of foreign markets. This may be admitted without placing the blame on any particular factor of the domestic economy. Many will say that it is our high wages; but it would be just as easy to say that foreign wages are too low. Certainly heavy contributing factors of our high costs are the war expenditures and postwar defense outlays, the heavy national debt, price supports for agriculture, social security, etc. Our wages are admittedly high but we should not overlook the fact that they provide the tremendous purchasing power that has kept our economy at a high level. If foreign wages were higher than they are in relation to foreign productivity our higher wages would not creat a competitive disadvantage, such as is now the case.

If foreign wages could be increased our competitive troubles would disappear; but there is no present method that can be employed by us to accomplish this objective immediately or very soon.

The question then arises what can be done.

There are those who, though recognizing the difficulty, say that tariffs are not the answer; and, of course, tariffs are not the complete answer. They say that we must invent and modernize and sell more vigorously; we must mechanize all possible production and in general become more efficient.

All these years we had been told by the liberal trade advocates that we were in the forefront in technology, productivity, know-how and efficiency. Now, it appears, this is no longer true and we need to buckle down to hard work, take in our belts and reinvigorate our economy. Very well, but other countries are mechanizing too, and since they have a lower starting base they can easily outstrip us in raising their productivity. They too are buckling down and inventing and selling. Moreover, we are still assisting some of them technologically and financially and putting our techniques at their disposal.

The prospects are not bright for a pull-away by this country. Not at all. The other countries now have all that it takes to catch up with us, including the creation of mass markets. The question is how their catching up is to be accomplished. Must we be torn down in the process, or can we hold our own while the other countries come up?

We need a holding defense. This can best be contrived through a combination of tariffs and quotas, by the use of which suitable shares of our market can be opened to imports while reserving the remainder for ourselves. We can thus recognize the need for a high volume of trade without placing our industries on the sacrificial block as pawns in the shifting currents of international politics.

American industry is exposed competitively to imports to a degree not previously experienced. Our defenses are down, with an average tariff protection about 80 percent below the level of 25 years ago; and there is virtually no remedy today against injury from low-cost imports.

For these and other reasons it would be high folly to consider the present foreign trade situation as a passing phase of an abnormal development. Most of the pointers indicate otherwise. Therefore, we should prepare for what appears to be ahead.

Chuck Percy and the Committee on Programs and Progress

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. MICHEL. Mr. Speaker, it was my good fortune to attend the last bull elephant meeting of this session on Thursday, August 20, and to have the added pleasure of hearing Chuck Percy speak to the group on the subject of the Committee on Programs and Progress which he chairs as an appointee of the President.

Drafting of the committee's final report is now underway and there are many of us anxiously looking forward to its publication date. In talking with Chuck Percy, and after hearing him expound at the bull elephant session I believe there is reason for real optimism as indicated in a recent column by Rosco Drummond which I include at this point:

[From the Peoria (Ill.) Journal Star, Aug. 27, 1959]

MR. PERCY'S TIME BOMB

(By Roscoe Drummond)

At first it looked impossible—the idea that the 43-member Republican Committee on Program and Progress could ever agree on anything but a collection of refurbished and resounding cliches.

Most Washington correspondents yawned when this committee sat down at the piano. They figured that either no tune would be forthcoming or that each hand would be playing different music.

Don't spread this about, but my information is that under the persuasive, do-things chairmanship of Charles H. Percy of Kenilworth, Ill., president of Bell & Howell Co., the report is going to break exciting new ground for the Republican Party. Far from being "reactionary, negative, and against," it will be progressive, positive, and for a wide range of urgent actions.

There's no doubt about it, the report isn't going to please everybody. In fact, that is the secret of the committee's success. It soon saw that if all it could do was produce the lowest common denominator of controversy between, say, Senator BARRY GOLDWATER, of Arizona, and Senator JACOB JAVITS, of New York, it might as well submit the dictionary (all the words are there) and close up shop.

Instead Chairman Percy, who is himself something like a quite atomic reactor, persuaded his colleagues to accept these premises.

That the committee was not drawing up a national platform designed to unite dissident elements of the party.

That its purpose was to look forward, not backward, that it should define the major problems the Nation must solve in the next 15 years and offer practical solutions.

That if these tasks require the committee, in Lincoln's words, "to think and act anew," well and good, let it be done but let's not avoid the hard problems and the hard answers by pulling the covers up over our heads.

That while this undertaking involves political risks, the only way the Republican Party can become the majority party is by taking risks; the way things now stand, the only direction it can go is up.

The committee, therefore, began asking itself these questions: "What kind of country do Americans really want? What kind of people do Americans want to be? What kind of life do they want for themselves?"

"We need to think in terms of the future," Mr. Percy put it to his fellow Republicans, "and we need to develop a program that will clearly demonstrate that the Republican Party is thinking in terms of the future. * * * We must ask questions we don't ordinarily ask and we must not shrink from answers that are novel and upsetting. This is only to acknowledge that we live in novel and challenging times. The Republican Party must show that it is sensitive and alert to the problems of our time as they relate to the individual—that we are a party with a heart as well as a mind."

While the Percy Committee report is still in its final drafting stage—it will be ready about October 1—there is no doubt that most other Republicans and many others will find it a novel and upsetting document. That's good. It would expect that in mood and direction:

It will avoid political labels like "liberal," "conservative," "radical," "right" and "left," and center on what needs to be done and how best to do it.

It will deal with the Soviet Communist challenge but will stress that doing what needs to be done anyway in defense, education, science, and economic expansion is the best way to meet the Communist challenge.

It will contend that we can't afford not to assume we can afford whatever is needed to spend for defense.

It will favor freer trade and will support expanded trade in consumer goods with the Soviets.

It will indulge in no wishful thinking about tax reduction.

Many Republicans are going to say "Hurrah." Some will say "ouch." But one thing is sure; this is no report to file without reading. Already it sounds like a time bomb.

Daily Digest

HIGHLIGHTS

Both Houses cleared for White House bill continuing appropriations.

Senate cleared for White House bill on Spokane Valley project and continued on Lake Michigan water bill.

House passed 45 miscellaneous bills and received public works veto message.

Senate

Chamber Action

Routine Proceedings, pages 15917–15946

Bills Introduced: 8 bills and 3 resolutions were introduced, as follows: S. 2619–2626; and S. Res. 182–184.

Page 15919

Bills Reported: Reports were made as follows:

S. 1502, providing a 10-percent increase in annuities of retired Foreign Service officers and their survivors, with amendment (S. Rept. 837);

S. Res. 182, referring S. 2496, a private bill, to Court of Claims (S. Rept. 838);

S. 1696, 1822, 2129, and 2319, private bills (S. Repts. 839–842);

S. 2347, authorization of acquisition of land in the vicinity of Federal prisons for health or safety purposes (S. Rept. 843);

S. 2321, 231, H.R. 1665, and 2946, private bills (S. Repts. 844–847);

H.R. 2978, to permit additional peremptory challenges in civil cases to multiple plaintiffs, with amendment (S. Rept. 848); and

H.R. 3801, 3816, 4134, 5873, 7745, and 8277, private bills (S. Repts. 849–854). **Pages 15918–15919**

Temporary Appropriations: Senate took from desk and passed without amendment (clearing for President) H.J. Res. 510, continuing temporary appropriations until September 20, pending enactment of certain regular appropriation bills. **Page 15918**

Spokane Valley Project: S. 994, authorizing construction of the Spokane Valley project, Washington and Idaho, was cleared for President's signature when Senate adopted conference report thereon. **Page 15967**

Century 21 Exposition: By unanimous consent, the name of Representative Fulton was authorized to be added to the conference report on H.R. 8374, relating to the Century 21 Exposition, to be held in Seattle in 1961 and 1962. **Page 15923**

Lake Michigan Water: Senate continued consideration of H.R. 1, Lake Michigan water diversion, taking the following actions on motions and amendments thereto:

Adopted: Fulbright amendment to Case (South Dakota) motion to refer the bill to the Committee on Foreign Relations with instructions to report it back not later than April 1, 1960 (the Case motion would have required report back by January 15, 1960); and

Rejected: By 38 yeas to 42 nays, Mansfield motion to table Case (South Dakota) motion to refer the bill to the Committee on Foreign Relations with instructions to report it back not later than January 15, 1960 (motion to reconsider tabled); and by 41 yeas to 46 nays (motion to reconsider tabled), amended Case (South Dakota) motion to refer the bill to Committee on Foreign Relations with instructions to report it back not later than January 15, 1960.

Pending at recess was question on adoption of first committee amendment.

Pages 15946–15951, 15955, 15956–15959, 15962–15967

Record Votes and Quorum Call: During Senate proceedings today, two record votes and two quorum calls were taken, which appear on pages 15917, 15946, 15947, and 15948.

Program for Tuesday: Senate met today at noon and recessed at 5:55 p.m. until 11 a.m. Tuesday, September 1, when Senate will continue consideration of H.R. 1, Lake Michigan water diversion. **Pages 15966, 15968**

Committee Meetings

(*Committees not listed did not meet*)

MINERALS POLICY

Committee on Interior and Insular Affairs: Committee concluded hearings on S. 1537, H. Con. Res. 177, S.J. Res. 107, S. Con. Res. 63, measures to establish a national mining and minerals policy, with testimony from Royce A. Hardy, Assistant Secretary of the Interior (Minerals Resources).

COMMITTEE BUSINESS

Committee on the Judiciary: Committee, in executive session, ordered favorably reported the nominations of Walter A. Gordon, of California, to be judge of the U.S. district court for the Virgin Islands; Carl A. Weinman, to be U.S. district judge for the southern district of Ohio; Gordon E. Young, to be U.S. district judge for the eastern district of Arkansas; and J. Smith Henley, to be U.S. district judge for the eastern and western districts of Arkansas; H.R. 2978, to permit the court to allow additional peremptory challenges in civil cases to multiple plaintiffs; H.R. 8461, to extend the life of the Commission and Advisory Committee on International Rules of Judicial Procedure; H.J. Res. 403, granting consent of Congress to an interstate compact creating the New York-New Jersey Transportation Agency; and S. 2347, authorizing acquisition of land in the vicinity of Federal prisons for health or safety purposes; ten private immigration bills (S. 231, 1696, 1822, 2129, 2319, 2321, H.R. 1665, 2946, 3801, and 3816); and six private claims bills (S. 2496, H.R. 4134, 5873, 7225, 7745, and 8277).

Committee indefinitely postponed further action on three private immigration bills (S. 820, 2067, and 2214); and eight private claims bills (S. 1107, 1656, 1726, 2049, H.R. 1517, 2280, 6273, and 7038).

House of Representatives

Chamber Action

Bills Introduced: 40 public bills, H.R. 8946–8985; 7 private bills, H.R. 8986–8992; and 5 resolutions, H.J. Res. 512–514, and H. Res. 367 and 368, were introduced.

Pages 16023–16024

Bills Reported: Reports were filed as follows:

H.R. 8343, acquisition of cropland by eminent domain, filed on August 27 (H. Rept. 1074);

Disposition of executive papers (H. Repts. 1075 and 1076);

S. 1973, to extend the validity of the passport to 3 years (H. Rept. 1077);

H.R. 5054, to amend the Tariff Act of 1930 with respect to the marking of imported articles and containers (H. Rept. 1078);

H.R. 5920, to amend the Social Security Act relative to recomputation of social security coverage (H. Rept. 1079);

H.R. 6132, relating to the rate of tax on the issuance of shares or certificates of stock by regulated investment companies (H. Rept. 1080);

H.R. 6785, to fix a tax of 1 cent per pound on certain laminated tires produced from used tires (H. Rept. 1081);

H.R. 7947, relating to the income-tax treatment of nonrefundable capital contributions to Federal National Mortgage Association (H. Rept. 1082);

H.R. 8578, to permit cutting of hay from soil bank land, amended (H. Rept. 1083);

S.J. Res. 25, to change the name of Roosevelt Dam, Reservoir, and powerplant in Arizona to Theodore Roosevelt Dam, Lake, and powerplant (H. Rept. 1084);

H. Con. Res. 393, to promote peace through the reduction of armaments (H. Rept. 1085);

Report of the Committee on Science and Astronautics entitled "The First Soviet Moon Rocket" (H. Rept. 1086);

Report of the Committee on Science and Astronautics entitled "Space Propulsion" (H. Rept. 1087);

Three private bills, S. 1149, 1891, and 252 (H. Repts. 1088–1090, respectively);

S. 2220, Public Health Service Commissioned Corps Personnel Act of 1959 (H. Rept. 1091); and

Eleven private bills, H.R. 1540, 4546, 4965, 6712, 6885, 7260, 7932, 7935, 8110, 8801, and H. Res. 266 (H. Repts. 1092–1102, respectively). Pages 16022–16023

Temporary Appropriations: By a voice vote the House passed H.J. Res. 510, continuing temporary appropriations through September 30 pending enactment of certain regular appropriation bills. Page 15969

President's Veto Message—Public Works: Received and read a veto message from the President on H.R. 7509, fiscal 1960 appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, and the Tennessee Valley Authority. The message was ordered printed and further action on the veto message was deferred to Wednesday. Pages 15969–15970

Printing: Adopted H. Res. 356, to authorize the printing of additional copies of the joint committee print entitled "Summary-Analysis of Hearings on Biological and Environmental Effects of Nuclear War." Page 15970

Seamen's Wages: Adopted the conference report on S. 1958, to clarify types of arrestment prohibited with respect to wages of U.S. seamen, and sent the legislation to the Senate. Page 15972

Consent Calendar: Passed the following bills on the call of the Consent Calendar:

Cleared for the President:

River basin study commission: S. 300, providing for appointment of a study commission of separate representatives for the Guadalupe and San Antonio River Basins, and of a representative of the Texas Board of Water Engineers;

Indians: S. 417 (in lieu of H.R. 3144), placing in trust status certain lands on the Standing Rock Sioux Reservation in North and South Dakota;

Louisiana streams: S. 551, to declare portions of Bayous Terrebonne and LeCarpe, La., to be nonnavigable streams;

Oregon reclamation: S. 1221 (in lieu of H.R. 4952), to increase the capacity of certain project features for future irrigation of additional lands in Crooked River Federal reclamation project, Oregon;

Lincoln's birthplace: S. 1448 (in lieu of H.R. 5764), relating to Abraham Lincoln Birthplace National Historic Site, Hodgenville, Ky.;

Iowa land conveyance: S. 1453, conveyance of land to Keosauqua;

Tennessee lands: S. 1521, relating to use of Cumberland County, Tenn., lands;

Parole credit: S. 1645, to amend the U.S. Code relative to computation of good-time allowances for prisoners;

Offenses against U.S.: S. 1647, relative to penitentiary imprisonment resulting from offenses against the U.S. or by court martial;

Customs Court: S. 1947, relating to the Customs Court to appoint employees;

Vessel construction: S. 2013, extending the time for commitment of vessel construction reserve funds;

Indians: S. 2029 (in lieu of H.R. 6790), authorizing a per capita distribution of funds arising from a judgment in favor of the Confederated Tribe of Siletz Indians in the State of Oregon;

Sea safety: S. 2118, authorizing the Coast Guard to prescribe regulations covering lifesaving and other safety equipment;

Veterans—World War II: S. 2334, transferral of functions respecting World War II insurance benefits and disability payments for seamen;

Indians: S. 2339 (in lieu of H.R. 8317), amending the law relating to the distribution of the funds of the Creek Tribe;

Indians: S. 2421 (in lieu of H.R. 8501), to amend the Klamath Termination Act relative to acquisition date of Klamath Marsh; and

Indians: S. 2435 (in lieu of H.R. 8344), relating to funds transfer to the Ute Mountain Tribe, Colorado.

Resolution adopted without amendment:

Private claim bill: H. Res. 309, providing for sending the bill (H.R. 4583) for the relief of the county of Cuyahoga, Ohio, with accompanying papers, to the Court of Claims.

Sent to the Senate without amendment:

Veterans—deafness: H.R. 268, providing additional compensation for veterans having service-incurred disability of deafness of both ears;

Wheat acreage: H.R. 4874, relating to wheat acreage history;

Utah land conveyance: H.R. 5270, conveying certain lands located in Salt Lake County, Utah;

Foreign agents registration: H.R. 6817, to amend sections 1 and 3 of the Foreign Agents Registration Act of 1938;

Indians: H.R. 7437, authorizing the use of funds arising from a judgment in favor of the Kiowa, Comanche, and Apache Tribes of Indians of Oklahoma;

Prison land acquisition: H.R. 7571, authorization for the Attorney General to acquire land in vicinity of any Federal penal or correctional institution; and

Indians: H.R. 8514, authorizing the sale of 40 acres of land owned by the Creek Tribe of Indians.

Sent to the Senate amended:

Montana land transfer: S. 53 (in lieu of H.R. 8726), to convey certain lands on the Huntley reclamation project, Montana, to School District No. 24, Huntley project schools, Montana;

Soil bank contracts: S. 2457 (in lieu of H.R. 8043), to amend Agricultural Act of 1956 relative to equity under soil bank contracts;

Mudd memorial: H.J. Res. 80, providing for the erection of a memorial tablet at Garden Key, Fla., in honor of Dr. Samuel Alexander Mudd;

Bi-State Development Agency: H.J. Res. 465, to approve certain additional powers conferred upon Bi-State Development Agency by the States of Missouri and Illinois;

Indians: H.R. 24, relating to lands in trust for members of the Fort McDermitt Indian Reservation, Nev.;

Veterans disability pensions: H.R. 283, relating to increased compensation for certain service-connected disabled veterans;

California land conveyance: H.R. 2247, authorizing the conveyance of certain real property to Sacramento County, Calif. (by a record vote of 203 yeas to 94 nays the bill was ordered engrossed and read the third time);

Alabama land conveyance: H.R. 2386, to convey to the city of Mobile, Ala., all the right, title, and interest of the United States in and to certain land;

Minnesota land lease: H.R. 2449, relating to leasing of a portion of Twin Cities Arsenal, Minn., to Independent School District No. 16, of Minnesota;

Surplus property donations: H.R. 3722, to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus property to volunteer firefighting organizations;

Lighthouse Service: H.R. 5431, to provide a further increase in the retired pay of certain members of the former Lighthouse Service;

Wabash Valley Compact: H.R. 5711, granting the consent and approval of Congress to the Wabash Valley Compact;

Arkansas Post National Memorial: H.R. 6108, establishing the Arkansas Post National Memorial, Ark.;

Indians: H.R. 6128, providing for the division of the tribal assets of the Catawba Indian Tribe of South Carolina among the members of the Tribe;

Louisiana educational lands: H.R. 6669, relating to use of Louisiana State University and Agricultural and Mechanical College lands; and

Missouri property lease: H.R. 8315, directing the Secretary of the Army to lease without consideration certain property in Missouri for school purposes.

Bills not considered:

Passed over without prejudice: H.J. Res. 441, H.R. 57, 766, 2565, 6672, 7045, 7379, 8074, and 8591.

Objected to: S. 107 and H.R. 5571.

Pages 15973–15997

Unanimous-Consent Passages: Pursuant to unanimous-consent requests the following bills were called up, considered, and passed:

Boating safety: H.R. 8728, to amend the Federal Boating Act of 1958 to extend the effective date of certain provisions of the act (amended);

Flood prevention: H.R. 4781, to amend the Watershed Protection and Flood Prevention Act to provide that its loan provisions shall be applicable to certain other projects; and

Vessel sales: H.R. 8042, to authorize the sale of two vessels to the Government of the Republic of China (amended). Pages 15996, 15997–15998

Private Resolutions: H.J. Res. 406, 444, and 445, private resolutions, were cleared for Presidential action by House agreement to Senate amendments thereto.

Pages 15998–15999

Spokane Valley Reclamation: Adopted the conference report on S. 994, to authorize the construction, operation, and maintenance of the Spokane Valley project, Washington and Idaho, under Federal reclamation laws, and sent the legislation to the Senate. Page 15999

Coal Research: H.R. 6596, to encourage and stimulate the production and conservation of coal in the United States through research and development by creating a Coal Research and Development Commission, was cleared for Presidential consideration by House adoption of conference report thereon. Page 15999

Bills Referred: Two Senate-passed bills were referred to the Committee on the Judiciary. Page 16021

Quorum Call and Record Vote: During the proceedings of the House today one quorum call and one record vote developed and they appear on pages 15972–15973 and 15975.

Program for Tuesday: Adjourned at 4:48 p.m. until Tuesday, September 1, at 12 o'clock noon, when the House will call the Private Calendar and consider 14 bills under suspension of the rules (for titles of bills to be considered see page 15986).

Committee Meetings

D.C. LEGISLATION

Committee on the District of Columbia: Subcommittee No. 2 ordered favorably reported to the full committee H.R. 6123 (amended), to amend the law relating to indecent publications and gambling in the District of Columbia. Also held hearing but took no action on H.R. 3855, for the licensing of public adjusters in the District of Columbia.

FOREIGN AFFAIRS MISCELLANY

Committee on Foreign Affairs: Met in executive session and ordered favorably reported to the House the following bills:

H. Con. Res. 393, to promote peace through the reduction of armaments;

H.J. Res. 496, to invite foreign countries to participate in a world's fair, New York, 1964;

S. 252, a private bill;

S. 1973, to extend the validity of the passport to 3 years;

H.R. 8582, to construct and operate a toll bridge across the Rio Grande near Los Indios, Tex.;

H.R. 8694, to construct and operate a toll bridge across the Rio Grande, at or near Rio Grande City, Tex.;

H.R. 8911, to provide for the presentation by the United States of a statue of Gen. George Washington to the people of Uruguay; and

H.J. Res. 511 (amended), to amend the joint resolution providing for membership and participation by the United States in the Inter-American Children's Institute.

COMMODITY CREDIT CORPORATION

Committee on Government Operations: Subcommittee on Intergovernmental Relations heard testimony from Agriculture Department officials with respect to cotton transactions of the Commodity Credit Corporation. Hearings adjourned subject to call of the Chair.

Joint Committee Meetings

APPROPRIATIONS—MILITARY CONSTRUCTION

Conferees met in executive session to resolve the differences between the Senate- and House-passed versions of H.R. 8575, fiscal 1960 appropriations for military construction, but did not reach final agreement, and will meet again tomorrow.

LABOR-MANAGEMENT REFORM LEGISLATION

Conferees continued, in executive session, to resolve the differences between the Senate- and House-passed versions of S. 1555, Labor-Management Reporting and Disclosure Act of 1959, but did not conclude their work, and will meet again tomorrow.

SOCIAL SECURITY

Conferees, in executive session, agreed to file a conference report on the differences between the Senate- and House-passed versions of H.R. 213, relative to providing social security coverage for nonprofessional school district employees. The conferees agreed to accept the Senate-passed version of this bill.

TAXATION

Conferees, in executive session, agreed to file a conference report on the differences between the Senate- and House-passed versions of S. 2524, to prevent, under certain conditions, States from imposing on a person a net income tax on income derived from interstate commerce. The conferees agreed to accept the Senate version of title I of the bill, with minor amendments, and agreed to accept the House language of title II of the bill amended so as to designate the Senate Committee on Finance and the House Committee on the Judiciary as the committees to conduct studies authorized by such title.

TAX REFUNDS

Conferees, in executive session, agreed to file a conference report on the differences between the Senate- and House-passed versions of H.R. 2906, extending period for filing claims for credit for refund of overpayment of income taxes resulting from renegotiation of Government contracts. The conferees agreed to accept the Senate-passed version of this bill.

COMMITTEE MEETINGS FOR TUESDAY, SEPTEMBER 1

(*All meetings are open unless otherwise designated*)

Senate

Committee on the District of Columbia, Public Health Subcommittee, on S. 2438 and S. 2439, D.C. teachers bills, 9 a.m., 6226 New Senate Office Building.

Committee on Foreign Relations, executive, on committee business, 10:30 a.m., room F–53, Capitol.

Committee on Government Operations, special subcommittee, on S. 2095, Passport Reorganization Act of 1959, 10 a.m., 3302 New Senate Office Building.

Committee on Interior and Insular Affairs, executive, on calendar of bills, 10 a.m., 3110 New Senate Office Building.

Committee on Interstate and Foreign Commerce, executive, on committee business, 10 a.m., 5110 New Senate Office Building.

Committee on the Judiciary, Constitutional Amendments Subcommittee, executive, on S.J. Res. 126, antipoll tax, S.J. Res. 11, repeal of 22d amendment, and on other subcommittee business, 10:30 a.m., 404 Senate Office Building;

Subcommittee, on H.R. 5747, relating to certain bankruptcy proceedings, 10:30 a.m., 2300 New Senate Office Building.

House

Committee on Armed Services, Subcommittee for Special Investigations on retired military personnel inquiry, 10 a.m., 313–A Old House Office Building.

Committee on Foreign Affairs, executive markup on H.R. 55, passport bill, 10 a.m., G–3 Capitol Building.

Committee on Government Operations, executive, on pending legislation, 10 a.m., 1501 New House Office Building.

Committee on Public Works, executive, on pending highway legislation, 10 a.m., 1302 New House Office Building.

Committee on Science and Astronautics, on the Pentagon's decision to abandon its program for the development of a high-energy fuel, 10 a.m., 214–B New House Office Building.

Committee on Ways and Means, executive, to conclude consideration of miscellaneous bills, 10 a.m., committee room, New House Office Building.

Joint Meetings

Conferees, executive, on S. 1555, Labor-Management Reporting and Disclosure Act of 1959, 10:30 a.m., room P–63, Capitol.

Conferees, executive, on H.R. 8575, military construction appropriations for fiscal 1960, 9:30 a.m., room F–37, Capitol.

BILLS PROVIDING APPROPRIATIONS AND OTHER NEW OBLIGATIONAL AUTHORITY, 86TH CONGRESS, 1ST SESSION

Bill Introduced: One bill was introduced, as follows: S. 2618. Page 15912

Century 21 Exposition: Senate adopted conference report on H.R. 8374, relating to the Century 21 Exposition, to be held in Seattle in 1961 and 1962. Pages 15911–15912

Lake Michigan Water: H.R. 1, Lake Michigan water diversion, was briefly debated. Pages 15915–15916

Program for Monday: Senate met today at 10 a.m. and adjourned at 10:19 a.m. until noon Monday, August 31, when it will continue consideration of H.R. 1, Lake Michigan water diversion. Page 15916

Committee Meetings

No committee meetings were held.

House of Representatives

Chamber Action

The House was not in session today. Its next meeting will be held on Monday, August 31, at 12 o'clock noon.

Committee Meetings

No committee meetings were held.

Congressional Record The public proceedings of each House of Congress, as reported by the Official Reporters thereof, are printed pursuant to directions of the Joint Committee on Printing as authorized by appropriate provisions of Title 44, United States Code, and published for each day that one or both Houses are in session, excepting very infrequent instances when two or more unusually small consecutive issues are printed at one time. ¶ The Congressional Record will be furnished by mail to subscribers, free of postage, for $1.50 per month, payable in advance. Remit check or money order, made payable to the Superintendent of Documents, directly to the Government Printing Office, Washington 25, D. C. For subscription purposes, 20 daily issues constitute a month. The charge for individual copies varies in proportion to the size of the issue. ¶ Following each session of Congress, the daily Congressional Record is revised, printed, permanently bound and is sold by the Superintendent of Documents in individual parts or by sets. ¶ With the exception of copyrighted articles, there are no restrictions on the republication of material from the Congressional Record.

Appendix

Books and the Cold War

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent that my statement entitled "Books and the Cold War," together with a letter from Mr. Harry Tyson Carter, of the U.S. Information Agency, be printed in the Appendix of the RECORD.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MCCARTHY

I eshould like to recall for the RECORD the discussion about books and Soviet censorship which took place on the floor of the Senate near the end of last month.

At that time we were enlightened by spokesmen of both the conservative and liberal wings of the Republican Party who stood together in advising us that the administration had in response to the Soviet Union's demand removed certain books from the American exhibition at the Moscow Fair.

Of course, the administration was really not blamed. The role of other villains was stressed.

The distinguished Senator from New Hampshire [Mr. BRIDGES], representing the conservative wing of the Grand Old Party, entitled his remarks: "Wanted: A Liberal Crusade," and his open attack was on liberals in the Senate and throughout the Nation who were not riding to battle against the Soviet censors as he thought they should. He asked:

"Now the Soviet Union is openly and bluntly censoring the books in our American exhibit in Moscow. Do we hear the liberal bugles sounding the call to battle: Is the air filled with expressions of indignation and invective?" (p. 13306).

With that provocation the senior Senator from Minnesota and the junior Senator did reply in order to establish, successfully I think, that in reality the removal of books was an administration decision, and if it represented a retreat, that it was an administration retreat.

Also in the course of that debate, I took the position that the primary responsibility of liberals is the defense of civil liberties and the protection of free access to information here in the United States. We are unable to control what is done everywhere in the world. Our first obligation is to set an example at home. Although we can protest censorship abroad and should give support to those who oppose it, it is not our basic responsibility.

I also had some reservations about the administration's responsibility. If the administration officials were guilty of cowardice, then, of course, that action should be protested. But it seemed to me that the critics should have heard the administration's side, so I wrote to the U.S. Information Service for the information on the contract under which the displays were agreed upon. A fair for the mutual exchange of exhibitions of "Science, Technology, and Culture" is not primarily the place for political debate. We are under no obligation to have cultural and scientific exchanges, but if we agree to attend them usually there are conditions attached.

I have received a reply to my letter from Mr. Harry Tyson Carter, General Counsel for USIA, and from his account of the terms of the agreement between the administration and the U.S.S.R., it seems to me that our friends on the other side started clamoring too soon for a liberal crusade. Mr. Carter writes that while there was no specific agreement on the books to be exhibited, "the agreement did specify with respect to souvenior buttons, emblems, mementos, and samples to be distributed (par. 5) and with respect to motion pictures and slides to be shown (par. 13) that each party would be given an opportunity to make, each to the other, recommendations with respect to the items to be distributed or to be shown.

"It was within the spirit of these provisions that Mr. McClellan received the objections of Soviet officials to the display of certain books. The United States has not accepted these objections as prohibitions, but merely as recommendations, reserving the final decision as to whether specific books will, or will not, be displayed.

"In this connection it should be pointed out that more than 8,000 books arrived in Moscow for the book exhibit. Some were immediately considered by Mr. McClellan to be inappropriate to the purposes of the exhibition."

I attach herewith a letter Mr. Carter wrote. The point is clear, I think.

I should now like to quote a few lines from the actual agreement between our Government and the Soviet Union. In the preamble it is stated that:

"As a mutual declaration of the spirit and intention which shall govern the interpretation and execution of the terms and conditions of this agreement, mention is made of the fact that the success of this exchange of exhibitions requires a substantial degree of flexibility and discretion for each party hereto to determine the scope, nature, and content of its exhibition. * * * There is also, on this account, required and proffered, each to the other, a high degree of trust and cooperation to the end that each exhibition will be facilitated and made successful in furtherance of the mutually advantageous purposes of the above mentioned exchange agreements."

Section 13 of the agreement contains this sentence:

"Each party may show at its exhibition site such motion pictures or slides as it deems appropriate which would be cultural and nonpolitical in character, devoted to an objective presentation of various aspects of its science, technology, or culture."

These excerpts make clear, I believe, that the exhibition was to be nonpolitical in character and that there was an implicit obligation for each government to act in conformity with these general terms. Mr. McClellan, general manager of American exhibit, had the duty to exercise his judgment as to whether books selected fitted in with the spirit of the exhibition agreement. Mr. Carter also notes that as of August 7, with the exception of five books which Mr. McClellan had under study, "all books ever placed on the shelves at the exhibition (including those temporarily withheld during the process of final selection) have now been placed on public display."

I do not always find myself able to uphold the administration, but in this case I am happy to do so. I think the report indicates that Mr. McClellan exercised good judgment and acted in a manner consistent with American tradition and good manners. I trust that Mr. Carter's letter will show that this small tempest in a bookcase did not have the makings of a hurricane. The attack of Republicans in Congress should not have been directed at liberals or at the administration.

On the other hand, I believe this incident does highlight the important fact of the great value of books in the cold war. The use of the power of books to convey ideas and reflect and preserve the richness of American intellectual life and political thought is as important as our economic and military tactics.

Mr. Khrushchev has boasted that the Soviet Union will outproduce us. They may. It way well be that the Soviet Union is ahead of us in satellites. It may catch up with us in washing machines and color television. But the Soviet Union can never, without changing its system, catch up with us in the realm of ideas and the free expression of them. In this contest, our greatest strength is our intellectual creativity, including political thought, and books are the principal means of exporting our ideas. The one area in which the Soviet Union cannot compete and cannot even afford to try to compete is in the area of ideas. Books and the free discussion of the ideas they contain are decisive points of distinction and contrast between the democratic and the totalitarian way of life.

So while I do not think we can expect to use an official exhibition at the Moscow fair as the place of distributing books with liberal ideas, we can and should greatly expand our efforts to make books available to people all over the world.

To this end, I am pleased to see that Ambassador Lodge recently signed the Florence agreement for the United States. This agreement, which provides for the reciprocal elimination of trade barriers on the importation of educational, scientific and cultural materials, was approved by the General Conference of UNESCO in Florence, Italy. It has already been ratified by 31 countries. Contracting states to the agreement grant duty-free entry, under prescribed conditions, to a wide range of materials, including books, publications, and documents. The agreement has been in effect since 1952 and we should have been among the first to ratify it. It will greatly facilitate the exportation of books and other scientific and cultural materials from the United States to other countries. It will be also benefit our own citizens, since they will be relieved of the 5 percent ad valorem U.S. tariff on current books in the English language and the 7½-percent tariff on printed music.

The Florence agreement was received by the Senate last week on August 25 and has already been referred to the Committee on Foreign Relations. As one of the Senators appointed by the Secretary of State to the U.S. National Commission for UNESCO, I urge its approval. Against the background of the importance of books in the cold war, the

ratification of the Florence agreement will be a significant step.

U.S. INFORMATION AGENCY,
Washington, August 13, 1959.

The Honorable EUGENE J. MCCARTHY,
U.S. Senate.

DEAR SENATOR MCCARTHY: This is in reply to your letter of August 5, 1959, concerning the book exhibit at the American National Exhibition in Moscow.

As regard your specific inquiries, there was no agreement in advance concerning the books to be exhibited. The exchange of exhibitions with the Soviet Union grew out of the basic agreement on cultural, technical, and educational exchanges signed in Washington on January 27, 1958. A protocol agreement of September 10, 1958, called for an exchange of exhibits in the summer of 1959 devoted to the demonstration of the development of science, technology, and culture. This protocol agreement was implemented by a more detailed agreement between the United States and the All-Union Chamber of Commerce of the U.S.S.R. executed on December 29, 1958. A copy of this agreement, which is the basic document relating to this exhibition, is enclosed.

As you will observe, there is no reference whatsoever to books in this agreement. The basic understanding as to the content of the reciprocal exhibitions (always within the framework of "science, technology, and culture") is expressed only in the preamble to the agreement.

However, the agreement did specify with respect to souvenir buttons, emblems, mementos, and samples to be distributed (par. 5) and with respect to motion pictures and slides to be shown (par. 13) that each party would be given an opportunity to make, each to the other, recommendations with respect to the items to be distributed or to be shown.

It was within the spirit of these provisions that Mr. McClellan received the objections of Soviet officials to the display of certain books. The United States has not accepted these objections as prohibitions, but merely as recommendations, reserving the final decision as to whether specific books will, or will not, be displayed.

In this connection it should be pointed out that more than 8,000 books arrived in Moscow for the book exhibit. Some were immediately considered by Mr. McClellan to be inappropriate to the purposes of the exhibition. Certain others were sent to the exhibition site and placed on the shelves for the purpose of selection and arrangement, but were withdrawn prior to public display. It was principally these books which were involved in the controversies reported in the press. Mr. McClellan could not personally check these books overnight and thus postponed judgment on some selections until after the exhibition officially opened to permit adequate study.

Subsequent to the opening of the exhibition, Soviet officials requested that five books be withdrawn. Mr. McClellan removed these five from the shelves for review in order to consider the Soviet recommendation.

As of August 7 Mr. McClellan reported that, with the exception of the five books referred to above, all books ever placed on the shelves at the exhibition (including those temporarily withheld during the process of final selection) have now been placed on public display.

The titles of the five books under review are as follows: Wallbank's "Man's Story"; Miller's "Archeology in the Soviet Union"; "World Topics Year Book of 1959"; "Britannica Book of the Year 1959"; "85th Congress, 1st Session, Soviet Economic Growth: A Comparison with the United States."

The criteria which Mr. McClellan will apply in deciding whether or not to return any or all of the five books to the shelves is simply a commonsense judgment as to whether or not display of the books is in furtherance of the intent and objectives of the agreement for a reciprocal exchange of exhibitions.

In closing I might note that reports from Moscow consistently rate our book exhibit as one of the most effective of the entire exhibition. No doubt you have noticed this in the press.

If we can be of further assistance, please let me know.

Sincerely,

HARRY TYSON CARTER,
General Counsel and Congressional Liaison.

Health Insurance to Persons 65 Years of Age and Older

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a letter I received from the executive vice president of the Michigan Hospital Service in reply to a query of mine regarding the new Blue Cross-Blue Shield plan which would provide health insurance to persons 65 years of age and older. In view of the great amount of interest in the matter of providing medical care and hospitalization for our elderly citizens, I think that this program offered by the Michigan Hospital Service should be of interest to all Members of this body and, in my opinion, is a fine approach to this problem:

MICHIGAN HOSPITAL SERVICE,
Detroit, Mich., August 10, 1959.

The Honorable ALVIN M. BENTLEY,
House of Representatives,
Washington, D.C.

My DEAR MR. BENTLEY: Thank you for your letter of August 4. I will be glad to tell you about our Blue Cross-Blue Shield senior certificates. I cannot send copies of the contracts because they are not yet printed. We will print them as soon as we get final approval from the department of insurance and I will forward copies then.

The enclosed copy of an article in the Detroit News on August 2, which describes the plans in some detail, is factual and objective. Our own descriptive literature is being printed and will be available shortly.

I wish I could say I thought our new program would fully answer the health care needs of the aged, but, of course, it will not. Our boards of trustees did not feel that we could burden all of our present Blue Cross subscribers with the additional load of the older people who had not joined Blue Cross-Blue Shield during their younger and more active years. The great majority of the people over 65 who will enroll in the new program are expected to be those people who had some form of commercial insurance coverage which was not continued after retirement or which may have been canceled because of age.

Michigan Blue Shield is making its new M-75 contract available to these older people. The Blue Shield board and a special committee of the Michigan State Medical Society deserve great credit for making this possible. Michigan Blue Cross-Blue Shield now have some form of protection available to everyone in the State.

You will be interested to know that we now have approximately 135,000 people over 65 years of age enrolled in Blue Cross-Blue Shield in one of the following ways:

1. As active members of an enrolled group.
2. As retirees of an active group. In this case the retiree gets exactly the same benefits as the active worker and pays the same rate. In most cases, however, the employer does not pay any part of the monthly charge for the retiree. The total amount is deducted from the pension check.
3. As direct pay subscribers. These are people who joined Blue Cross-Blue Shield through a group and who then continued their coverage on a direct-pay basis after leaving the group. These subscribers pay 10 percent more than the group rate for somewhat reduced benefits.
4. As nongroup subscribers who joined at some time during the past 10 years when they were under 65 years of age. They may, of course, continue regardless of age once they have enrolled.

While the new senior plans are not as good as our other programs, I feel safe in saying that they will provide better coverage at a more reasonable rate than is available to these people from any other source. We have planned the program on a break-even basis as a service to this segment of the public whose health care problem has not heretofore been properly recognized.

I will be glad to answer any questions you may have.

Very sincerely yours,

WM. S. MCNARY,
Executive Vice President.

Prayers, Not Cheers, for Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. BRIDGES. Mr. President, one of New Hampshire's most outstanding weekly newspapers, the Hampton Union, which has stanchly opposed inviting Khrushchev to visit this country, last week endorsed the proposal of Americans for Constitutional Action that the forthcoming visit be offset by prayer.

In his fine editorial, Publisher Edward Seavey urges that prayers be raised instead of cheers when the Soviet Premier arrives. I ask unanimous consent, Mr. President, that this excellent editorial be printed in the Appendix of the RECORD and I commend it to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRAYERS, NOT CHEERS

Nikita Khrushchev's 12-day itinerary in the United States appears already to have been worked out in considerable detail—with official Washington taking the brunt of it and the only other cities to be infected

being New York, Pittsburgh, Los Angeles, and San Francisco. The Soviets themselves have turned down more elaborate and extensive inspection of the Nation for the fairly obvious reason that they do not wish to be obligated to show President Eisenhower very much of the people's paradise.

Included among the turndowns, we assume, is the ill-advised invitation by the president of the New Hampshire Weekly Publishers Association for the "Butcher of Budapest" to attend the fall meeting of the New England Weekly Publishers to be held at the Crawford House for which the Granite State editors are serving as hosts.

This newspaper's position on the Khrushchev visit is too well known to bother with disassociating ourselves with any such invitation and misguided concept of the value of a free exchange of ideas.

To speak of freedom and Khrushchev in the same breath is the height of foolishness. The Soviet leader is the living symbol of communism—an ideology that recognizes no personal dignity or freedom and which is dedicated to destroy everything America stands for. And no visit to our free land is going to alter that course one iota.

Senator STYLES BRIDGES ably summed up our feelings on the matter in a statement this week from Washington:

"My position in regard to the visit of Khrushchev to this country is well known. I am opposed to it, and I have been opposed to it. The invitation, however, has been extended and accepted, so we must view the visit in the light of this situation. The courtesy of proper protocol must be observed and the bad manners heckling which Vice President NIXON underwent must not be repeated here.

"On the other hand, we should not let the traditional optimism of a free people, living a life of abundance, become the inadvertent launching pad for a Soviet propaganda missile aimed at our destruction.

"All people of the free world must realize that in inviting Khrushchev here, and in a proposed return visit to Russia on the part of President Eisenhower, a calculated but nonetheless grave risk is being taken. We must not again fall into the error of personal diplomacy, which led us into the tragedies of Teheran, Yalta, and Potsdam. Let any agreements that may be reached in these visits be a matter of public record immediately.

"From the recent Nixon talks with Khrushchev, it is apparent that Russia suffers from a vast inferiority complex and that Khrushchev is the personification of that national feeling. The rationalization of an inferiority complex is a subconscious tendency to overestimate one's ability. Khrushchev's visit to this country can be of value in demonstrating to him our military and economic strength, on the one hand, and on the other, the solidarity of purpose of the American people. Such an education, while it might not halt his tirades against this country, would at least establish the fact that he spoke in terms of falsehood rather than plain ignorance.

"A return visit by President Eisenhower would again demonstrate to the Russian people, as did Vice President NIXON's visit, that we are interested in solving world problems on a peaceable basis and not as the warmongers, their Kremlin masters, picture us.

"The dangers, on the other hand, are many. Already there are those who would relax somewhat in our all-out effort on the basis of the fact that visits have been tentatively scheduled. This is utter folly since no one can foresee the attitudes and issues which may develop. The exchange will be fraught with propaganda pitfalls which the Russian leaders are only too willing to distort to their own advantage.

"The American people must view the exchange of visits as an experiment or a new approach in dealing with the Soviet Union. The invitation to Khrushchev, for which he has angled for some time, should not be hailed as a positive accomplishment in the area of our relations with the Soviet Union. It would be tragic indeed if the lessons of sputnik melted away in the thaw of a Khrushchev smile."

While there are those who hope that a mighty public protest against the visit may still cause its indefinite postponement, most Americans have resigned themselves to the eventuality and all sorts of suggestions have been forthcoming as to how we should receive the Russian demagog.

The best to date, we believe, is the thinking and planning of Adm. Ben Moreell, USN (retired), who, as chairman of Americans for Constitutional Action, is urging that the blight of the Khrushchev visit be offset by prayer.

In a letter to churchmen, Admiral Moreell reported that they had invited members of 19 patriotic organizations representing 10 million Americans to discuss with them an appropriate posture regarding the Khrushchev visit.

"There was general agreement," he wrote, "that since we are a people whose trust is in God * * * the moral implications of the visit far outweight all the others.

"The question arises then whether, by inviting this visitor to our shores, we give implied moral sanction to his past record and whether, by our action, we endorse the extreme cruelties visited by the Soviet Union on enslaved peoples.

"In light of these thoughts, there was general concensus that, while we should refrain from any demonstrations of hostility, it would be right and proper that Mr. Khrushchev's arrival * * * be set aside as a day of prayer in all the churches of the land. * * * In like manner, special church services should be conducted in each city on the day of Mr. Khrushchev's visit."

Swift approval of the Moreell plan came from Evangelist Billy Graham who said: "I heartily endorse Admiral Moreell's proposal that Premier Khrushchev's day of arrival should occasion a day of prayer on the part of the Nation. * * * May this be an occasion that we conform our national life with our usual boast that God is our trust."

And finally, may those who love their country and detest the things Khrushchev stand for, do their very best to see that this ogre is paraded through empty streets.

General Accounting Office Report

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, I have had occasion to examine the recent General Accounting Office report on the Air Force purchase of the Wherry housing projects, and it is my belief that this report is misleading and based on false premises.

The report not only artfully avoids the principle question necessarily arising in cases of this sort—namely, did the Air Force receive full value for the dollars spent—but, in fact, it also chastises the Air Force apparently for following the Department of Defense directive calling for direct negotiation rather than condemnation procedures. At no time does the report consider what the results would have been had the Air Force resorted to condemnation of the property.

Considering these points in reviewing the case of particular interest to us—that of Barksdale Air Force Base—we find that the Wherry housing units there had been completed in 1951 and 1952 at an approximate cost of $9,164 a unit. This project consists of 692 two- and three-bedroom housing units for airmen and officers, 544 of which were completed in December 1951 and 148 in February 1952. The original estimate of replacement cost was $6,331,699, or approximately $9,164 per unit. The Air Force, we find, paid a total of $6,256,199, or $9,039 per unit. But the same project if built in 1958 would have cost $8,231,209, or $11,913 per unit. These prices are based on leading surveys which show that a 30 percent increase in construction costs occurred between January 1952 and January 1958 for similar areas. This would have resulted, therefore, in an increase of about $2,850 more per unit. In addition, the owners had even put an additional $100,000 investment into their houses several years after completion in order to improve the electrical systems.

It appears to me, then, that the Air Force received full value for every dollar spent when it paid for the Barksdale and other projects at 1951–52 prices. The Air Force carefully inspected these projects before acquisition. I don't believe there is any one who could buy real estate today for the price it was worth 7 years ago.

Now, had the Air Force not negotiated for the property or if the owners had not accepted the Air Force offers, the Air Force would have had to resort to condemning the property. It would have been necessary to pay today's full value since a court is concerned with the present value of property and not whether a builder will be making a profit from the sale. The results of a number of condemnation trials in connection with disposal of Wherry projects are shown in the attached chart. From these figures, it appears that the results in the courts have been much in excess of the maximum formula price which in turn is limited to original FHA replacement costs. The Constitution requires that just compensation be paid when a property is appropriated and nowhere does the question of profit over original investment enter into the determination of just compensation for condemned property.

The owners apparently were satisfied with the price paid them, preferring to settle for the lower 1952 in order to obtain their money immediately, thereby avoiding a wait of several years for the conclusion of a condemnation action with all of its subsequent expenses.

By this record of negotiated acquisitions as against acquisition by condemnation, the Air Force carried out the congressional intent of the Wherry leg-

islation as well as that of the recent armed services special subcommittee—that is, to negotiate up to the maximum price, if necessary, before going into condemnation proceedings.

Not to have negotiated where possible, therefore, would have meant ignoring congressional policy and executive responsibility to buy the Wherry projects and improve them where necessary to bring them up to current public quarters standards—a goal having priority with the Air Force at this time. Millions of dollars have been lost in training personnel at great expense only to have them leave the service because of inadequate living conditions. The Cordiner Committee, General LeMay, and other high officials have long recognized the fact that a professional Air Force capable of meeting today's defense needs cannot be established if families are required to live in public quarters not commensurate with their quarters' allowance.

This goal will be helped toward realization, it is hoped, by the Wherry acquisition program as well as by the Capehart housing program now underway.

Memorial to Franklin Delano Roosevelt: A Fitting Tribute

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. NEUBERGER. Mr. President, as a member of the Franklin Delano Roosevelt Memorial Commission, I am highly pleased that Congress has now passed and sent to the White House a joint resolution providing for the design of a memorial to President Franklin Roosevelt, and reserving in the District of Columbia a site upon which to locate it.

Not only did President Franklin Delano Roosevelt serve the people of the United States as their President longer than any other man, but during his four terms in office he guided our Nation through 12 of the most difficult years in our history—out of a great economic calamity and through most of the world's worst war.

Mr. President, the paying of this deserved tribute to President Franklin D. Roosevelt has been overly delayed. Whatever may be one's opinion of our 31st President, it will be readily acknowledged that he left a significant and lasting mark on this land. A very excellent editorial from the Northern Virginia Sun, of Arlington, Va., for August 26, pays tribute to this great man, and concludes that the Nation's Capital is incomplete without a remembrance of Franklin Delano Roosevelt.

I ask unanimous consent that the editorial, "A Fitting Memorial," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FITTING MEMORIAL

Congress has now approved and sent to the White House a measure providing for the design of a memorial to President Franklin Roosevelt.

Whatever one's opinion of President Roosevelt, it may be readily acknowledged that he left as indelible a mark on America as any President in this century, at least, and perhaps in the last 100 years.

That he not only became the first person to break the two-term tradition but went on to win election to a fourth term is a measure of the respect held for him by the American people.

He steered the country through perhaps the worst economic crisis in its history and, under the stimulus of that crisis, instituted more economic reforms and changes than any other modern President.

When he came to office, America was essentially an isolationist country. It was his personal leadership, as he watched dictatorship and brutality flourish in Europe, that wrenched the Nation out of its indifference to the rest of the world and prepared it to meet the obligations of world leadership both during and after World War II.

One need not detract in any way from the abilities of the late Senator Taft by saying that his impact on America cannot be compared to Franklin Roosevelt's. If the bell tower on the Capital grounds that memorialize Senator Taft is fitting, then surely the Nation's Capital is incomplete without a similar rememberance of Franklin Roosevelt.

Federal Aviation Agency's Position on Serving Alcoholic Beverages in Aircraft

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my letter addressed to the Federal Aviation Agency and the reply received from Mr. E. R. Quesada, the administrator:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 22, 1959.

Re proposed amendments sections 40.371, 41.135, and 42.65 of the Civil Air Regulations.

Mr. JAMES T. PYLE,
Acting Administrator, Federal Aviation Agency, Washington, D.C.

DEAR MR. PYLE: Pursuant to the notice set forth in the Federal Register, page 5424, Friday, July 3, 1959, my comments, suggestions, and recommendations relative to the foregoing matter (drinking and serving of alcoholic beverages aboard air carrier aircraft) are set forth below:

It is obvious to all that the common carriage of passengers by air entails certain risks and dangers peculiar to that form of travel. It is therefore incumbent upon everyone and especially your agency, which is concerned with safeguarding the lives and safety of passengers, crews and others, to discover, eliminate and prevent wherever and whenever possible all hazards to safe air travel.

The foregoing duty is required not only as to known hazards but also for the elimination of potential dangers, dangers which are obvious and apparent to people of ordinary and reasonable prudence. Any failure to eliminate such potential dangers is not only inexcusable but also culpable should injury or loss of life or damage to property result therefrom.

An intoxicated person is irresponsible and his behavior is unpredictable. Space on board an airplane is limited and confining and there is no room to avoid him, no policeman to restrain him and opportunities for imperiling the lives and safety of all aboard and on the ground are varied and many.

The mischief he can do and the tragedy that can ensue is irremediable and inexcusable.

The hazards and dangers to which all are exposed by the presence of an intoxicated person on board an airplane is clear and obvious and incidents have been testified to and your Agency is cognizant thereof.

A drunk on board an airplane is a clear and present danger to the lives and safety of everyone, everywhere, whether the inebriety is brought on by liquor carried onto the plane and there consumed or by liquor purchased on the airplane from the carrier by one who does not "appear to be intoxicated."

I feel that in recognizing the dangers that flow from intoxication aboard an airplane your Agency should adopt regulations that eliminate them by eliminating all possibility of intoxication on board the airplane.

The effect of the proposed regulation is not to eliminate the risk but simply to place the responsibility, in the event tragedy flows from it, onto the shoulders of anyone other than this Agency.

As long as you can regulate you can eliminate. There is no actual need for intoxicating beverages during flight nor is there a demand for such. All airlines would gladly discontinue serving such beverages provided the discontinuance would be complete for all airlines.

The Air Lines Pilots Association and the Stewards and Stewardesses Association have brought this subject up at their national conventions. Each has called for regulations forbidding the serving of alcoholic beverages on planes because it is a potential nuisance to passengers and crews alike and a threat to the safety of all.

In the opinion of those who serve and in the opinion of those being served there is no place for liquor in airplanes during flight.

The language of the proposed regulation could easily imply that: only airlines can serve nonintoxicating alcoholic beverages, the airlines derive a sizable revenue from the sale of intoxicants, and you encourage the consumption of intoxicants sold by airlines.

The proposed regulation places an unfair and unjust burden on the airline personnel by requiring them to determine if a person requesting service "is or appears to be intoxicated."

I fail to see how the proposed regulation eliminates the possibility of tragedy that can arise from a drunken act by one made drunk from being served intoxicants by the airline although he did not appear to be intoxicated when served.

To avoid an anomalous situation created by this Agency I recommend that the regulation be amended to read as follows:

"No person shall drink any alcoholic beverage aboard an air carrier aircraft while in flight within the United States."

The actual amount of time in flight is so short that the total prohibition of the use of intoxicants during flight will create no hardship on anyone, even the habitual user.

Sincerely yours,

_____.

FEDERAL AVIATION AGENCY,
Washington, D.C., August 31, 1959.

HON. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. LANE: This is in reply to your letter of July 22, 1959, concerning proposed amendments to sections 40.371, 41.135, and 42.65 of the Civil Air Regulations.

I enclose for your information a copy of a statement presented by the Federal Aviation Agency to the Subcommittee on Aviation and Transportation of the House Interstate and Foreign Commerce Committee on July 28, 1959. It was directed to several bills now pending in the Congress. These bills are designed to prohibit the sale or furnishing of alcoholic beverages on aircraft while in flight between points in the United States. The statement contains the reasons which led to the proposed amendments to the Civil Air Regulations referred to above.

Under the Federal Aviation Act of 1958, this Agency is charged with fostering development and safety in civil aviation. Section 601 of the act vests broad general responsibility for, and control over, safety in flight in civil aviation in the Administrator of the Federal Aviation Agency. Therefore, this Agency's approach to the practice of serving alcoholic beverages aboard air carrier aircraft has been directed to the question of whether there was any safety problem involved. To date, no factual information has been discovered which demonstrates that the practice of serving alcoholic beverages while in flight directly affects safety in the operation of air carrier aircraft.

As indicated in the statement, some incidents have been discovered which could have had an adverse effect upon safety. These were caused by passengers who drank from their own bottle during the course of a flight, or by those who had consumed a considerable quantity of alcohol prior to boarding a flight. The proposed amendments to the Civil Air Regulations are designed to provide the necessary control in these needed areas with a minimal interference to personal freedom. This Agency feels that issuance of amendments to the Civil Air Regulations referred to above will constitute an effective deterrent, and discharge our responsibility with respect to safety.

If future experience demonstrates that safety considerations require further regulation, this Agency can and will issue such regulations.

Thank you for your interest in this important matter.

Sincerely,

JAMES T. PYLE,
Deputy.
FOR E. R. QUESADA,
Administrator.

STATEMENT OF THE HONORABLE JAMES T. PYLE, DEPUTY ADMINISTRATOR OF THE FEDERAL AVIATION AGENCY, PRESENTED TUESDAY, JULY 28, 1959, BEFORE THE SUBCOMMITTEE ON AVIATION AND TRANSPORTATION OF THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, WITH RESPECT TO H.R. 169, 3716, 7135, 7643, 1075, 6824, 7270, AND 8076

Mr. Chairman and members of the committee, my name is James T. Pyle, Deputy Administrator of the Federal Aviation Agency. The Federal Aviation Agency is happy to have the opportunity to appear before this subcommittee for the purpose of commenting with respect to all of these bills which deal with prohibiting the sale or furnishing of alcoholic beverages by air carriers to passengers on aircraft while in flight between points in the United States.

Each of these bills would amend section 610 of the Federal Aviation Act of 1958 by adding a new subsection which would prohibit the practice of selling or furnishing alcoholic beverages to airline passengers and crews while in flight within the United States. There is some variation in the language in the different bills, but the effect and intent of all of them is the same.

The Federal Aviation Agency believes that the question of controlling the serving of alcoholic beverages aboard air carrier aircraft is an important one. It has been given careful consideration and study by this Agency. Our approach was not directed to drinking as a social problem, but rather to determine whether there was a safety problem, since this is the concern of our Agency.

The Civil Aeronautics Administration, one of our predecessor agencies, conducted a survey to determine whether the practice of serving alcoholic beverages while in flight might in any way have an adverse effect upon safety. The results of this survey did not reveal any factual information or specific incidents which were found directly to affect safety in the operation of air carrier aircraft. However, some instances were discovered, with respect to passengers, which were of a type that could have an adverse effect upon safety. A study of such instances indicated that almost uniformly they were caused by passengers who had either consumed a considerable quantity of alcoholic beverages prior to boarding a flight, or by those who drank from their own bottles during the course of a flight. No such problem was found with respect to crews or flight attendants.

As a result of our study, it does not appear necessary to prohibit the consumption of alcoholic beverages by passengers aboard air carrier aircraft in order to meet the safety requirements. This Agency feels that safety needs can be satisfactorily met by permitting consumption of such beverages by those who wish to have them, but providing sufficient control so that no hazard will be created. By so doing, we will interfere as little as possible with the personal freedom of passengers and at the same time prevent abuses that would possibly create a hazardous situation.

Under these circumstances this Agency felt that some regulatory control may be required for safety purposes. This can be done under present law. Section 601 of the Federal Aviation Act of 1958 vests broad general responsibility for, and control over, safety in flight in civil aviation in the Administrator of the Federal Aviation Agency. Under this broad responsibility, safety regulations are promulgated. This Agency recognizes that as larger and faster aircraft come into service with an increase in the number of passengers carried, drinking among passengers might conceivably result in situations where flight attendants and crews would be distracted from their duties. This could create a safety problem.

Accordingly, the Administrator of the Federal Aviation Agency has issued a Notice of Proposed Rulemaking which will result in the promulgation of a safety regulation unless good cause is shown to the contrary. This regulation would prohibit the consumption of alcoholic beverages aboard air carrier aircraft, unless such liquor is served by the air carrier, and would further provide that no air carrier shall serve alcoholic beverages aboard an aircraft to a person who is in a state of intoxication, or appears to be intoxicated. Violations of this regulation by either passengers or an air carrier could result in the infliction of a civil penalty under section 901(a) of the Federal Aviation Act of 1958 which could mean a fine not exceeding $1,000.

The above regulation would constitute an effective deterrent. If in the future it can be demonstrated that safety considerations require further regulation of the use of alcoholic beverages by passengers during the course of a flight, then this Agency can and will issue such regulations.

It thus appears that the purpose for which all of these bills have been drafted can be accomplished by regulation under existing law. Therefore, the Federal Aviation Agency can see no need for the enactment of any of these bills.

The Bureau of the Budget has advised that it interposes no objection to the submission of this statement to your subcommittee.

Letter of Effective Citizens Organization, New York, N.Y.

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. SMATHERS. Mr. President, on behalf of the distinguished Senator from Arizona, Senator GOLDWATER, and myself, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received from the Effective Citizens Organization, which was formed in 1954, as a nonprofit, bipartisan organization, to promote good government on all levels.

The views expressed in this letter and the objectives sought to be achieved are those in which all of us can concur.

It is our view that the contents of the letter deserve the thoughtful consideration of the Members of the Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EFFECTIVE CITIZENS ORGANIZATION,
New York, N.Y.

The Honorable GEORGE A. SMATHERS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR SMATHERS: With the pronounced evidence of interest by businessmen in the political arena it seems appropriate to apprise you of the work of this organization in its role as a pioneer in translating this interest into positive action. Because you are chairman of the Democratic Senatorial Campaign Committee, we are particularly anxious for you to be cognizant of our efforts. This same letter is being sent to Senator GOLDWATER, of this Republican Party.

The Effective Citizens Organization (ECO) was formed in 1954 as a nonprofit, bipartisan organization. Its objective is to create an awareness in our business community that good government at any level must always rest upon a substructre of good politics. Business for too long has taken a "hands off" attitude toward political activity. We are sure you agree that democracy cannot survive when otherwise responsible citizens are indifferent, uninformed or just plain lazy.

ECO's original efforts quickly indicated that to arouse interest was not enough. A wide gap existed between interest and effectiveness, and to bridge this gap our practical politics workshop was designed. The first workshop was conducted at Princeton University in 1956, and to our knowledge was the first such workshop ever held in this country. The growth in interest has stepped up ECO's pace to a point where it is conducting workshops at a rate of better than two a month. Since then one or more workshops have been held on college campuses in 22 States. The workshop faculty includes political leaders from both parties, professional teachers and businessmen.

The purpose of the workshop is threefold: First, to create an awareness of the importance of the contribution the businessman can make in the party of his choice; secondly, to learn and discuss some of the techniques of practical politics to demonstrate how the individual can become active and effective; thirdly and lastly why corporate policies and programs should be established to encourage better citizenship.

In the last 3 years nearly 800 representatives from over 600 firms have participated in these workshops. The results and accomplishments are manifold and encouraging. Some of the men now hold elective office; others have attempted to do so. They are, of course, exceptions. Far more encouraging are the great numbers that have assumed political responsibility and position at the precinct, ward and township level. And even more encouraging are the corporations, large and small, which have in the past frowned on political activity, but are now openly encouraging employees to assume greater citizenship responsibility.

This organization does not presume that it should receive all of the credit for the political awakening of business. It is proud, however, to have been the first group to enter the field, and to have assisted the U.S. Chamber of Commerce, the Manufacturers Association of Syracuse and others in similar efforts. Our position toward other programs is not competitive; we have designed sessions to train leaders on how to use these programs.

It is hardly news to you that 1960 is a big political year. Many important issues will be decided, in the American way, at the ballot box. Both political parties must soon begin to staff-up for this big effort. We hope that you will encourage your colleagues in the Senate, the House, and your party's leaders to take advantage of this new source of manpower. Many have gone to work already, but far more will respond to a little encouragement. Not only may they play an important role in the routine but also so important aspects of winning elections, but many possess talents that should be used to advantage. These talents include leadership, public speaking, selling, training, finance, advertising and public relations know-how. Their help and work will make our parties stronger and more representative. The result should be inevitable and most desirable: better government for all.

Sincerely yours,

W. V. MERRIHUE,
President.
H. BRUCE PALMER,
Chairman of the Board.

What Goes on Here?

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. WHARTON. Mr. Speaker, a year or two ago Columbia County, N.Y., was complaining of unemployment and the local chamber of commerce of Hudson, N.Y., embarked upon a program of industrial development and with some effort raised funds for the purpose of encouraging new industry to come to that locality.

The following article from the front page of the Hudson Register-Star of August 27 indicates some of the difficulties encountered by that worthy organization with appropriate reference to pending labor legislation.

Assuming that this incident does not represent the actions of responsible unionism it would seem to be an excellent argument for good workable labor-management legislation:

UNION ACTIVITY HERE HALTS NEGOTIATION FOR GARMENT FACTORY

Union activity in this city has been blamed for a Catskill firm withdrawing their negotiations for purchasing a building and setting up a garment factory employing approximately 75 residents.

Leo Katz, owner of the Helene Manufacturing Co. of Catskill, told a Register-Star reporter today that, "If anything, union activity has delayed the negotiations. More likely it has stopped them. I was planning to purchase the Pontiac Building opposite the new motel there in town. Union activity there is stopping the plans."

Mr. Katz said he has been carrying on negotiations with the Greater Hudson Chamber of Commerce but has stopped them when he found the union was planning a last minute effort to unionize the garment plants not under union organization. His plant is presently under what he called a secondary picket line.

Secondary picketing is when the factory is not actually on strike, but the union sets up a picket line with people from other areas. U.S. Congress is presently acting on a bill to outlaw secondary picketing. This, according to Mr. Katz, is forcing the unions to make a last minute attempt to unionize all plants.

A half a dozen or more women appeared suddenly in front of the Sim Garment Co. at 515 Columbia Street this morning, carrying signs protesting unfair acts against the union.

The group, led by John Ricardi, union representative from the Kingston office of the International Ladies Garment Workers Union, were gone from in front of the door of the building an hour later.

Harry Sim, owner of the firm stated, "I know this may sound silly buy I don't know what they were doing out there. None of the girls were from the factory down the street."

One factory worker said she had recognized several of the girls and said they were from as far away as Newburgh. Mr. Katz said the two pickets in the line in front of his door this morning were from this city.

When asked why they are there, Mr. Katz said, "The unions are seeking any excuse in their attempt to get us into the union. Hudson has union factories and they are putting pressure on the nonunion plants, trying to get them to join before the law is passed."

Executive Secretary Gus Kramer, from the chamber of commerce, said today, Mr. Katz has not been in contact with him about the purchase of the Pontiac Building.

Attorney Charles Alonge, representing the owner of the building, was unavailable for comment.

Eventful New Book About Dr. John McLoughlin, of the Hudson's Bay Co.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Significant Book on Northwest History," from the Oregon Journal of Portland of August 26, 1959. The editorial heralds one of the most thoughtful and thorough chronicles ever written about the historic figure, Dr. John McLoughlin, chief factor of the Hudson's Bay Co. The author of the book is Dr. Burt Brown Barker, of Portland, a leader in the Oregon Historical Society, and vice president of the University of Oregon. Dr. Barker has long been known as an eminent custodian of the rich pioneering background of the Pacific Northwest. In this centennial year of Oregon's statehood, I believe many of my colleagues will be interested in this editorial from the Oregon Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Aug. 26, 1959]

SIGNIFICANT BOOK ON NORTHWEST HISTORY

Dr. John McLoughlin, chief factor of the Hudson's Bay Co. at Fort Vancouver, Wash., was the outstanding and most influential personality of all the great figures who dominated the stage in the occupation and

early settlement of the Oregon country. We think none will dispute this appraisal of the stalwart physician who became administrator of the widefiung fur buying operations of the Hudson's Bay Co. and who was by his character, integrity and diplomacy wielded a virtual despotic, if kindly and beneficent, rule over the area now substantially encompassed in Oregon, Washington, Idaho, western Montana, and the Province of British Columbia.

The chief factor's decisions were essentially unwritten law for English, Scots, French-Canadians, Indians of a score of tribes and the first Americans who penetrated the great Northwest wilderness. Every biographical recital of Dr. McLoughlin's vigorous regime reveals some new facet of capacity and talent—and some of his flaws. Inside the huge log stockade now laid bare for all to see at the eastern edge of Vancouver, Dr. McLoughlin entertained world travelers and scientists, conducted a sort of medieval realm and made imperishable history.

Consequently, McLoughlin has attracted most of the highly skilled researchers. Chief of these is Dr. Burt Brown Barker of Portland, attorney, educator and historian, who has given devoted years to preservation of our contacts with the days when McLoughlin, Peter Skene Ogden, David Douglas, Dr. and Mrs. Whitman, Jason Lee, and their fellows trod the wilderness of the Oregon country.

Barker, like Herbert Hoover, his warm friend since their early manhood at Salem, also defies age and aging. Barker was a leading figure in establishment of the McLoughlin house at Oregon City. He more recently led in restoration of the home of Dr. Minthorn at Newberg, where Hoover spent his boyhood with aunt and uncle. Dr. Barker is no armchair researcher. After he began his earlier studies on McLoughlin, he studied the Hudson's Bay Co. archives in London. Subsequently, he edited and published, "Letters of Dr. John McLoughlin, Written at Fort Vancouver, 1829–32," and later, "Financial Papers of Dr. McLoughlin," together with many articles in the quarterly of the Oregon Historical Society, of which he was president two terms.

Thoroughly convinced that there must exist letters written to McLoughlin's family, all prominent members of the community near or in Quebec, Dr. Barker delved there until he found a splendid and valuable collection in the hands of an understanding descendant.

And now Dr. Barker has done it again. In this Oregon centennial year, he has just authored the most significant publication on Northwest history to appear in many years, entitled, "The McLoughlin Empire and Its Rulers," which tells the fascinating story of Dr. John, his brother Dr. David and their sister Marie Louise. Dr. David McLoughlin, educated in Scotland, achieved fame as a leader in Paris medical circles and as physician to King Louis Phillipe until his overthrow, when David removed to London to continue to lead his profession. As Sister St. Henry, Marie Louise became mother superior of the influential Ursuline convent and girls' school in Quebec. Thus the Seine, the St. Lawrence and the Columbia were closely linked in letters exchanged between the three grandchildren of Col. Malcolm Fraser, a Scot who had fought under Wolfe at Quebec in 1759 and was granted an estate (seigniory) on the St. Lawrence as reward for his bravery.

This book of 370 pages, handsomely bound, is a great tribute to the enthusiastic scholarship of Dr. Barker. It contains the rich cache of 118 family letters, some shown in excellent photostats. There is also highly valuable additional McLoughlinia. A color plate of the McLoughlin and Fraser coats of arms and clear photographs of family paintings or pictures are included.

The thanks and appreciation of Oregon historians and residents go to Dr. Barker for his magnificent contribution and tremendous historical research. Much disclosed here is new and Oregon and American archives are richer for the acquisition of these McLoughlin family letters.

Warning to Congress on Bonds

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sylvia Porter from the August 26 issue of the Owosso Argus-Press urging that the Congress pass legislation to raise the interest rate scale on U.S. savings bonds. Since this is one of the most vital problems before us, I hope that the Congress will take prompt action in this matter. It is extremely difficult for the Federal Government to have an adequate debt management program when it is continually forced to go into the short-term money market for funds:

WARNING TO CONGRESS ON BONDS
(By Sylvia Porter)

Warning to the 86th Congress of the United States: Before you adjourn, pass a law permitting the Treasury to raise the interest rate scale it pays to the millions of Americans who today hold or are buying U.S. savings bonds or you will:

Invite an avalanche of cash-ins of savings bonds by little investors who have bought these bonds with the idea of keeping them to maturity but who are now aware that the top rate they can earn on the bonds is far below what they can get on a deposit in most savings banks;

Drastically curtail the sale of new bonds to wage and salary earners who would like to buy the bonds for their basic nest eggs but who also know that the pay scale on the bonds has become glaringly out of line with the general level of interest rates;

Risk forcing your own U.S. Treasury to borrow billions of IOU's in order to get the cash via expensive short-term money needed to pay off bonds presented for redemption by disillusioned holders;

Give corporations which never have liked the job of maintaining employee payroll savings programs a perfect excuse to cut off the programs and thereby deprive employees of the greatest medium for regular, disciplined savings ever devised in our land;

Undermine the reputation of the U.S. Treasury among financiers the world over who are fully informed about our debt management problems.

It is inconceivable that our Congress does not appreciate the importance of a thriving savings bond program to the Treasury and realize the place the bonds play in the financial lives of millions of families.

Over 40 million Americans now own more than $42 billion of these riskless, nonmarketable bonds which pay 3 percent interest if held for 5 years, 3¼ percent interest if held to maturity in 8 years, 11 months. Over 8 million are buying them today under payroll savings plans.

The program has been the most successful of all the Treasury's debt management operations since World War II. But it has become increasingly endangered in recent years as interest rates have climbed across-the-board and the pay scale on savings bonds has become progressively less attractive. Last month redemptions of the bonds totaled $507 million against new sales of only $350 million. For 12 months redemptions have been topping sales—meaning the program has been going in reverse.

In recognition of the interest rate realities, the Treasury in early June asked Congress to permit it to boost the pay scale so the bonds would pay 3¾ percent if held to maturity. The request was included in a package also asking that the Treasury be allowed to sell new marketable bonds with coupons above the legal ceiling of 4½ percent.

The opposition to the removal of the 4¼ percent ceiling has been intense—reflecting a combination of honest doubt about the economic effect of rising interest rates and pure politics—and Congress has turned down this request. As a result, the Treasury will have to do all its multibillion dollar borrowing in the coming months through new short-term loans. That will be expensive, fundamentally unsound debt management—but apparently, that's the way it will have to be.

Despite its "No" on removal of the marketable bond ceiling, though, Congress still can pass a separate bill permitting the savings bond rate hike. The Treasury doesn't want to settle for this, but it will to avert a flood of cash-ins and keep the program alive.

If Congress does this? Then, a recommendation of the bonds for basic savings nest eggs again will be justified.

If Congress does not? Then no one can forecast what might happen. A calling of a special session actually might be necessary to rescue the program from slaughter.

Congress dare not shrug off the risks inherent in inaction. A body of responsible lawmakers dare not ignore what is at stake here.

Importance of Oil Industry to Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. WILEY. Mr. President, this year—1959—marks the centennial of the American oil industry.

Since the first commercially successful well, opened at Titusville, Pa., on August 27, 1859, the oil industry has had a tremendous impact upon the economy of our Nation.

Although Wisconsin is one of the 17 States that produces no petroleum or natural gas, the industry has nevertheless been of extreme significance to our economy. Among other things, it is estimated that about 54,000 men and women are employed by the industry in Wisconsjn.

From time to time, I have differed with the industry on our oil, as well as natural gas, policy.

Nevertheless, I well recognize the significance of the fine contribution of the oil industry to progress in the Nation's economy.

Recently, the Milwaukee Journal published an editorial entitled "State Produces No Oil, But—," revealing the significance of the industry to our Badger State; as well as reflecting the importance of the industry to the entire Nation. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 28, 1959]

STATE PRODUCES NO OIL, BUT—

Wisconsin is one of 17 States, not counting Hawaii and Alaska, that produce no petroleum or natural gas. (Though who is to say that valuable supplies are not locked somewhere below the State's rolling surface?)

Still, oil and its derivatives have had so tremendous an impact upon Wisconsin and Milwaukee that Governor Nelson was thoroughly justified in joining in proclaiming the centennial of the American oil industry. The industry was born when Col. Edwin L. Drake brought in the first commercially successful well at Titusville, Pa., August 27, 1859.

Imagine Wisconsin without petroleum. Few automobiles, trucks, buses, or farm tractors—and those clumsily run by steam, alcohol or charcoal. No airplanes. Few of the factories that produce autos, auto parts or internal combustion engines.

An estimated 54,000 men and women are employed by the oil industry in Wisconsin. More thousands hold jobs dependent in one way or another on oil. A million and a quarter automobiles are registered in Wisconsin, plus a quarter of a million trucks and buses. According to the fact book of the Independent Petroleum Association of America, these drivers and all those who heat with oil or natural gas or use petroleum products in other ways consume the equivalent of 2.7 billion gallons of oil a year—better than 700 gallons per man, woman, and child. Fuel and vehicle taxes collected exceed $100 million a year.

For Milwaukee's expanding port, petroleum products represent a major part of the tonnage handled—roughly 2½ million of the port's better than 8 million tons. Oil and gasoline are pumped directly from tankers to storage tanks on Jones Island and from there distributed throughout Milwaukee and parts of Wisconsin.

Progress Toward Tax Rate Reform

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. HERLONG. Mr. Speaker, on January 21, 1959, my friend and distinguished colleague on the Ways and Means Committee, the gentleman from Tennessee, HOWARD H. BAKER, and I, introduced companion bills, H.R. 3000 and H.R. 3001, to reform Federal tax rates and methods to accord with the economics of progress. We were most gratified when identical bills subsequently were introduced by our esteemed colleagues on the Ways and Means Committee, Representative BRUCE ALGER, of Texas (H.R. 3607); and Representative JAMES B. FRAZIER, Jr., of Tennessee (H.R. 4266); and also by the distinguished Members of the House, Representative O. C. FISHER, of Texas (H.R. 4584); Representative J. CARLTON LOSER, of Tennessee (H.R. 6776); and Representative C. ROSS ADAIR, of Indiana (H.R. 8765).

In the intervening months, we have received many expressions of encouragement and support from Members of the Congress, from our constituents and other citizens from all sections of the country, from various organizations including many State and local business groups, and from editorial writers and columnists.

The most constant theme of these expressions has been the practical, commonsense nature of the legislation. As would be expected, greatest interest has been expressed in the reform in the graduated rates of individual income tax, which now climb so steeply through the middle and higher brackets. Over 5 years, these rates would be compressed downward with reductions of over 50 percent in the middle brackets, and the top rate coming down from 91 to 47 percent to coincide with the new top rate of corporate tax under the legislation. The first bracket rate would be reduced from 20 to 15 percent, giving all individual taxpayers a minimum tax reduction of 25 percent. We are attaching to this statement a table by which tax liability in each bracket can be computed as of the end of the reduction period compared with present law.

The climate favoring tax rate reform over increased Government spending has been strongly evidenced by the enthusiasm for the basic concept of the legislation, namely, priority in use of revenue increase from economic growth—which should run from $4 to $5 billion a year—to moderate the tax obstructions to growth. This enthusiasm has extended to the essential procedure of the legislation, namely, the forward scheduling of rate reductions with postponement in event of budget unbalance.

Great interest has also been displayed in the other features of the legislation—the 1 percentage point annual reduction over the 5-year period in the corporate tax, down to a new top rate of 47 percent; the reduction of approximately 25 percent over the 5-year period in the maximum required property lives for depreciation purposes; the deferral of tax on transfer of capital from one investment to another by individuals; and the uniform reductions in the rates of estate and gift taxes, down to a new top rate of 47 percent on estates and 35.25 on gifts.

The response we have received reenforces our conviction as to the soundness and urgent necessity for enactment of this legislation, and that the overwhelming majority of our citizens would welcome such action by the Congress.

Mr. Speaker, in this statement, our purpose is not to repeat the full explanation of the provisions of our bills, and supporting facts, which were included in our introductory statement of January 21, but to state in brief form some of the key points involved in this approach to tax rate reform. In subsequent releases we will elaborate on some of these points.

First, there is the goal of the legislation. It is not primarily to provide tax relief merely for the sake of relief, as important and justifiable as that would be. Instead the fundamental objective is the release of tax brakes on economic progress. More specifically, by permitting the more rapid accumulation of new capital out of current income, and moderating the tax destruction of capital already accumulated, our bills are designed to bring about the achievement of higher economic growth; improvement of old jobs and creation of better jobs; more rapid advance in living standards; starting and development of new businesses; control of inflation through greater production and productivity; strengthening of our economic system and our position of leadership, prestige, and influence in the free world.

From the standpoint of our own citizens, those now in the lower income levels have the most to gain from increase in the flow of capital into the expansion of industry and the resultant improvement of old jobs and creation of better jobs.

Second, despite the benefits which will flow to all citizens from enactment of this legislation, we purposely avoided seeking our goals through the shifting or reshuffling of tax burdens among various segments of our citizens. Our approach reflects only one judgment on the tax law, namely, that rates climb too steeply and are much too high for the good of our economy and the well-being of our citizens.

Third, the goals sought can be attained if the leadership, in the Congress and in the executive branch, makes a very simple decision, namely, that, barring a new military emergency, fundamental reform of tax rates and methods is of much greater importance to the future strength and well-being of our Nation than any and all proposals for increase in spending. In other words, by giving priority to the use of revenue increase from economic growth for the reform of tax rates and methods instead of increased spending, we can achieve a tax rate structure within 5 years which will enable our economy to make much more rapid economic progress than has been the case over recent years. There are three important figures to keep in mind in this respect. A 1-percent increase in gross national product, the commonly accepted measure of economic growth, will produce a revenue increase of approximately a billion dollars a year. For 60 years before the depression of the 1930's, our economic growth averaged out at approximately 4 percent a year, which if achieved hereafter would mean revenue increase of approximately $4 billion a year. The revenue effect of our bills would average about $3.5 billion a year. Thus, if upon enactment of our bills the growth rate should no more than equal the historic average, there still would be a surplus available for debt retirement of approximately one-half a billion dollars a year. Actually, there is no reason why upon enactment of this

legislation our economy should not begin to move upward toward a steady growth rate in the order of 5 percent instead of 4 percent. Such a rate of growth is clearly possible because of the speed of technological advance and the fact that a higher income economy can save more than a lower income economy—if not restrained by punitive tax rates.

Fourth, the procedure of our bills, forward scheduling of rate reduction linked with postponement in the event of budget unbalance would enable the Nation's leadership to make the necessary decision without fear of a return to a period of deficit financing. This point cannot be stressed too strongly. In the current session of Congress, we have witnessed and supported the determined effort exerted by the leadership of both national parties in the Congress and the administration, to reduce and control the spending level. Enactment of the pending legislation would add both strength and greater meaning to this effort, since it would offer on a continuing basis over its life a clear choice for the public between greater spending or a more moderate tax rate structure.

Fifth, over the years ahead enactment of fundamental tax rate reform legislation will not prejudice debt retirement. To the contrary tax rate reform inevitably will pave the way to greater and more consistent reduction in the Federal debt. We are completely sympathetic to the laudable aims of debt retirement, but we want to keep the horse before the cart. The public debt is now in the order of $285 billion and, even if $3.5 billion a year were applied to its reduction over the next 5 years, it would still be in excess of $265 billion—leaving the major job still ahead of us. By contrast, the application of the same amount of revenue dollars to fundamental tax rate reform over this period would mean that a greater part of the tax reform job would be behind us. This not only would mean that the annual revenue gain would be greater and more consistent thereafter, for whatever division between debt retirement and further tax reforms that might be decided—it also would mean greater revenue gain and hence some opportunity for debt retirement during the 5-year period itself. In short, the debt retirement job is, of necessity, a long-range one, whereas the tax rate reform task can be substantially accomplished over a relatively few years. Its accomplishment, therefore, is the first step toward insuring maximum and consistent reduction in the debt over the long run.

Sixth, our bills would contribute to broadening of the Federal tax base, an aim which is of great concern to all Federal tax policymakers and authorities in this era of high public spending. The great interest in this area is the base of the individual income tax, which tax provides roughly 50 percent of Federal revenues. In 1957, the base of this tax, defined as "taxable income," was approximately 43 percent of total personal income, as compared with 34 percent only 10 years earlier. The reason for this growth in the tax base is that without material change in exemptions, credits and deductions, taxable income increases roughly 50 percent faster than the increase in personal income. Thus, achievement of higher rates of growth and of increase in personal income, which would be brought about by enactment of the pending legislation, would accelerate expansion of the tax base.

Seventh, in permitting an increase in the rate of new savings, and by moderating the destruction of capital already saved, our bills would strike at the roots of the inflation problem, and also at the interest rate problem as it has been highlighted in the contemporary controversy over lifting the ceiling on interest rates of Federal bonds. The inflation of this era essentially reflects a greater demand from all sources for the combined product of economic activity than can be provided by capital formation under present tax rates. The constant upward pressure on interest rates is simply a reflection of the inadequacy of new savings to do all of the things which all of our citizens want done to enhance their economic well being. Stated differently, a greater rate of new savings is the only route to greater rates of increase in production and productivity, which in turn are the means to better satisfaction of competing demands on the economy while dampening inflationary pressures.

Eighth, there is the matter of job creation and betterment. We are moving into a period in which there will be significant step-up in the numbers of new workers coming each year into our labor force, reflecting the very rapid increase in population trends starting from World War II. The question is not just one of providing jobs, since people can always be put at doing things which essentially result in sharing the work and hence reducing average living standards, instead of steadily increasing those standards. Better jobs, more good opportunities for old as well as new workers, can come about only by the availability of more capital which is the only means for translating into effective use the benefits of technological progress. Related to this subject alone, the pending legislation might well be called the Job Betterment Act of 1960.

Ninth, we come to a matter which ranks high in the interest and concern of every Member of Congress, namely, the starting and development of new businesses. There can be no doubt as to the forces which hold back the full flowering of the American genius for striking out on one's own and for improvement and expansion of an enterprise once begun—the shortage of capital, essentially of the venture variety, and stifled incentives, both resulting from our present tax rate structure. All the reforms provided in our bills would contribute toward the release of tax obstructions to business development from the starting stage onward, but the most important reform in this respect would be the compression of the individual tax rate scale under the umbrella of a reasonable top rate. Here is the key not only to a substantial increase in the accumulation of new venture capital, but also to making it much more worthwhile from the incentive standpoint both to use capital so accumulated and to transfer other capital into new and more venturesome enterprises. The individual income tax is the special cross of small business. On the one hand, it chokes off the traditional source of venture capital for the starting and development of new businesses, whether or not such businesses are conducted in the incorporated or unincorporated form. On the other hand, some 85 percent of business units in the country are unincorporated, and hence are the particular prey of the ruthless graduation of the personal income tax rates.

Tenth, there are the self-employed professional people, whose incomes also are subject to the ruthless graduation of the individual income tax. The only fundamental solution of the tax problem of these key members of our society is substantial compression of the individual tax rate structure as provided in our bills.

Eleventh, in a time when the American free economic system is held out as a showcase for the free world, our Federal tax system is an exceedingly poor model for export. For many years, we have endured gross contradiction of policies in this respect. On the one hand, we have sent untold billions of dollars of taxpayers money abroad—and encouraged private investment abroad—to aid and spark the development of the economies and to raise the living standards of free world nations. On the other hand, we have continued a tax model at home which both inhibits the formation of new capital and destroys capital once accumulated; a model, which when copied or continued abroad simply tends to perpetuate the need for foreign funds to build up economies, especially in the so-called less-developed countries. Who could doubt that enactment of tax rate reform legislation in this country based on the concept of moderate rates at all points would set a pattern for similar action in other countries, thus significantly reducing the need for foreign aid funds over the years.

Twelfth, there are the challenging twin problems of the Russian bid for world economic leadership and the growing success of Western European and other countries in competing with us everywhere including our own domestic markets. Certainly, if we are to lead effectively, and to compete successfully, in a period of dynamic economic growth throughout the world, we need to rid ourselves as rapidly as possible of the tax shackles which are binding our free economy.

Thirteenth, the key provision of the legislation, the compression over 5 years of the steep climb of the graduated income tax rates down to moderate and reasonable levels considered alone does not present a significant revenue problem. This is so because the graduated part of the rate structure provides only

14 percent of the revenue derived from the individual income tax or about $5 billion a year.

And, finally, the test of fairness of a reformed income tax rate structure must be found in the relative burden of taxes after enactment and not in the relative percentage cuts applied to preexisting rates. In this connection, it is often overlooked that the measure of regressivity, proportionality or progressivity of a tax is the relation of tax to total income, not to the base of the tax, that is, taxable income as regards the individual tax. This relationship is known as the effective rate of tax. The point is that exemptions provide substantial protection from payment of tax to people in the lower income brackets, protection which diminishes rapidly as income increases. Under our bills there would be a range of effective tax rates from only 1 or 2 percent in lower levels of income subject to tax, up toward 47 percent at the top. Certainly such a range of progression would satisfy all but the most extreme advocates of this form of taxation.

Mr. Speaker, it is our hope that this statement will contribute to a more general realization that the fundamental reform of tax rates and methods as provided in our bills is practical and feasible, as well as urgently needed in the national interest; that there will develop before the Congress convenes again in January an insistent demand that there be no further delay in congressional action; and that the Nation's leaders, in the Congress and in the executive branch will give the subject the priority it deserves.

Tax computation tables—individuals

If the taxable income [1] is—	The tax	
	Is (present law)—	Will be (when legislation fully effectuated)—
Not over $2,000	20 percent of the taxable income	15 percent of the taxable income.
Over $2,000 but not over $4,000	$400, plus 22 percent of excess over $2,000	$300, plus 16 percent of excess over $2,000.
Over $4,000 but not over $6,000	$840, plus 26 percent of excess over $4,000	$620, plus 17 percent of excess over $4,000.
Over $6,000 but not over $8,000	$1,360, plus 30 percent of excess over $6,000	$960, plus 18 percent of excess over $6,000.
Over $8,000 but not over $10,000	$1,960, plus 34 percent of excess over $8,000	$1,320, plus 19 percent of excess over $8,000.
Over $10,000 but not over $12,000	$2,640, plus 38 percent of excess over $10,000	$1,700, plus 20 percent of excess over $10,000.
Over $12,000 but not over $14,000	$3,400, plus 43 percent of excess over $12,000	$2,100, plus 21 percent of excess over $12,000.
Over $14,000 but not over $16,000	$4,260, plus 47 percent of excess over $14,000	$2,520, plus 22 percent of excess over $14,000.
Over $16,000 but not over $18,000	$5,200, plus 50 percent of excess over $16,000	$2,960, plus 23 percent of excess over $16,000.
Over $18,000 but not over $20,000	$6,200, plus 53 percent of excess over $18,000	$3,420, plus 24 percent of escess over $18,000.
Over $20,000 but not over $22,000	$7,260, plus 56 percent of excess over $20,000	$3,900, plus 25 percent of excess over $20,000.
Over $22,000 but not over $26,000	$8,380, plus 59 percent of excess over $22,000	$4,400, plus 26 percent of excess over $22,000.
Over $26,000 but not over $32,000	$10,740, plus 62 percent of excess over $26,000	$5,440, plus 27 percent of excess over $26,000.
Over $32,000 but not over $38,000	$14,460, plus 65 percent of excess over $32,000	$7,060, plus 28 percent of excess over $32,000.
Over $38,000 but not over $44,000	$18,360, plus 69 percent of excess over $38,000	$8,740, plus 29 percent of excess over $38,000.
Over $44,000 but not over $50,000	$22,500, plus 72 percent of excess over $44,000	$10,480, plus 30 percent of excess over $44,000.
Over $50,000 but not over $60,000	$26,820, plus 75 percent of excess over $50,000	$12,280, plus 31 percent of excess over $50,000.
Over $60,000 but not over $70,000	$34,320, plus 78 percent of excess over $60,000	$15,380, plus 32 percent of excess over $60,000.
Over $70,000 but not over $80,000	$42,120, plus 81 percent of excess over $70,000	$18,580, plus 34 percent of excess over $70,000.
Over $80,000 but not over $90,000	$50,220, plus 84 percent of excess over $80,000	$21,980, plus 36 percent of excess over $80,000.
Over $90,000 but not over $100,000	$58,620, plus 87 percent of excess over $90,000	$25,580, plus 38 percent of excess over $90,000.
Over $100,000 but not over $150,000	$67,320, plus 89 percent of excess over $100,000	$29,380, plus 41 percent of excess over $100,000.
Over $150,000 but not over $200,000	$111,820, plus 90 percent of excess over $150,000	$49,880, plus 44 percent of excess over $150,000.
Over $200,000	$156,820, plus 91 percent of excess over $200,000	$71,880, plus 47 percent of excess over $200,000.

How To Treat Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. BRIDGES. Mr. President, the problems created by the recent invitation extended to Nikita Khrushchev are not restricted to those of us in public life. Indeed, the forthcoming visit by the Soviet Premier has given birth to a sticky situation for every American.

A recent editorial by Nicholas J. Mahoney, Jr., editor and publisher of the Newport (N.H.) Argus-Champion, comments on the quandary in which the general public finds itself regarding Khrushchev's visit. I believe this is a fine editorial and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW TO TREAT NIKITA

Too many persons have set themselves up as experts in advising Americans how to behave when Nikita Khrushchev arrives next month for his much heralded visit. We are exhorted by some, including Vice President NIXON to be courteous. Others suggest we refrain from lining the streets along which his motorcade will travel. We are told to picket him, to ignore him, to give him the bronx cheer, to be hospitable, to greet him enthusiastically, to regard him with stony faced indignation.

We are reminded that he holds high office in a country that once was our wartime ally, that he is a murderer, a liar, a ruthless dictator.

We are in fact being told to mind our manners by a variety of self-appointed experts.

All the free counseling we are receiving, however, probably will have little or no effect on our conduct.

When Nikita arrives, Americans are apt to act pretty much as their consciences dictate.

There will be those who turn their backs on him with undisguised disgust. There will be fawners who wine and dine him, toast his health and the spirit of communism. There will be hecklers and toadies and pickets pro and anti. Emotions will run the gamut from sheer hatred to near adoration and there undoubtedly will be a monumental display of hypocrisy.

The behavior of Americans during the Khrushchev visit will be most enlightening.

But, to many, one of the prime pleasures of life would be to have a couple of overripe tomatoes and a clear shot at Nikita's mush.

That conduct is easier to understand than that of those who toast his health and shake his hand, dine with him, and show him top secret military installations, information about which is denied even to loyal Americans.

Fight Against Import Tide

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to the fact that the fight against the tide of foreign imports that is threatening our basic economy is still on.

In this connection, I would like to offer for inclusion in the RECORD, an article by Mr. John Herling which appeared in the Washington Daily News on August 4. Mr. Herling presents the problem in a masterful way, and I am sure Members of the House will appreciate the need for taking early action to correct this situation so ably pointed out by Mr. Herling.

The article follows:

FIGHT AGAINST IMPORT TIDE
(By John Herling)

A cloud no bigger than a coat and a pair of pants now threatens the prosperity of the men's clothing industry. The source of the danger comes up like thunder from Japan and Hong Kong. The Amalgamated Clothing Workers Union, the chief U.S. labor organ-

ization of the men's apparel industry, and the employers have decided to make common cause to ward off the danger of imports.

After the war, the Marshall plan and similar systems of aid restored the industrial economies of many countries. Today these countries have not only become self-sustaining, they are now competing with our industries in the American and Canadian markets. For example, auto imports, once a trickle, pour in from Europe so that Detroit knows that this is no longer kiddie-car competition. Steel companies find that steel imports are mounting and the current strike will stimulate the flow of steel from abroad.

More than one hint has been released that it might be well for management and unions to close ranks against an immediate challenge to business and jobs. Even the textile industry, long split by bitter labor-management struggles, has synchronized, if not integrated, its efforts against the rising import tide.

All this is very distressing to many Government, industry, and union leaders because organized labor for a long time espoused the long-range position that what's good for the world's economy is good for the United States. Among the most articulate advocates of this principle has been the Amalgamated Clothing Workers. Now its president, Jacob Potofsky and its executive board charges that the United States and Canadian clothing industry is being "threatened by unfair competition from sweated labor abroad."

Here is the roster of amalgamated grievances:

"The volume of apparel imports, particularly from Japan and Hong Kong has increased enormously. From 1954 to 1958 shirt imports, for example, have expanded over 800 percent. The U.S. knit-glove industry is well on the way to destruction. Imports of pajama robes, underwear, pants, raincoats, outerwear, sporting apparel and equipment are rapidly increasing.

"Tailored clothing is arriving from abroad in ever larger quantities. Hong Kong's mail-order business is tailored clothing with customers in the United States and Canada expands. For the first time in Japan's history a ready-to-wear tailored clothing industry is being developed to export to the United States and Canada.

"We now find that the hard-won labor standards of our members, and ultimately their jobs, are threatened by the evils of starvation wages and sweatshop conditions imported from abroad. The competitive advantage of imported apparel is rooted in substandard wages, the equivalent of 10 cents an hour and degrading working conditions. It is based on long hours of work—60 hours a week for women and children—homework, shameful exploitation of the labor of the young, the aged, and infirm. No apparel manufacturer in the United States or Canada can hope to meet this kind of competition, and one one should be expected to meet it from Japan, Hong Kong, or anywhere else."

Where does this leave the international trade policy of this—and perhaps other—unions? Answer: "This union has long favored improved trade relations among the nations of the world. It has been a stanch suporter of the reciprocal-trade programs ever since the early days of the New Deal. But reciprocal trade was conceived as a middle-of-the-road approach to liberalizing international trade without injurying the domestic industries of any nation. It was never intended to be an instrument for destroying an important American industry by unfair competition from sweated labor abroad."

Additional Commendation for Captive Nations Week

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. KEATING. Mr. President, it may well be that the passage of the Captive Nations Week resolution will turn out to be one of the most important actions of this session of Congress. The yelps of anguish emanating from the Kremlin as a result of the proclamation of this week, and the tremendous repercussions it has had among friends of those behind the Iron Curtain, testify eloquently to the effectiveness of the resolution.

This reaffirmation of America's traditional bonds with the peoples now enslaved by the Communists and our renewed pledge to work for their freedom and right to self-determination mark an important milestone in the free world's efforts to promote justice and fairplay throughout the world.

I am proud of my cosponsorship of the Captive Nations Week resolution and proud of my part in speeding it through Congress. I am convinced we cannot pound too hard or too often on the perfidy of the Communists in subjugating the noble peoples behind the Iron Curtain and denying them the right to choose their own form of government. We cannot too often call the attention of the world to the systematic opposition to religion of the Soviets and their atheistic way of doing things.

It is my hope that Captive Nations Week will serve to spur men of good will everywhere to redouble their efforts to work and pray for the day when the captive peoples, including the various groups within the Soviet Union, will once more take their rightful place among the free. Until that day, none of us should rest.

I recently received an interesting letter and resolution adopted by the Paris Bloc of the League for the Liberation of the Peoples of the U.S.S.R., commenting on Captive Nations Week. The league feels that the week was an "event of historical importance" and applauds it heartily. They emphasize particularly its importance to the enslaved nations of the U.S.S.R.

Mr. President, I ask unanimous consent to have the letter and resolution printed in the Appendix of the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

LEAGUE FOR THE LIBERATION OF THE PEOPLES OF THE U.S.S.R. (THE PARIS BLOC),
Paris, August 9, 1959.

DEAR MR. KEATING: The League for the Liberation of the Peoples of the U.S.S.R., which comprise representatives of the peoples enslaved by Soviet Russia, has the honor of sending you a copy of the declaration adopted at the league's annual conference held in Munich on July 29-30, 1959. From the text of this declaration, you will see that the league warmly welcomed the decision of the U.S. Congress to request the President to proclaim a Captive Nations Week and the action of the President in doing so on July 17, 1959. The league regards the proclamation of Captive Nations Week as an event of historical importance, for by this act the representatives of the great transatlantic democracy have not only expressed once more their traditional sympathy with the nations oppressed by Soviet imperialism, but also drawn attention to one of the most critical elements in the policy of the Kremlin—the oppression by Moscow of the non-Russian peoples of the Soviet empire, who constitute more than half its total population.

On behalf of the League for the Liberation of the Peoples of the U.S.S.R. we should like to take this opportunity of expressing our gratitude for your initiative in championing the cause of our peoples.

Very truly yours,

MIKOLA ABRAMTCHIK,
Chairman.
SAHAK TER-TOVMASSIAN,
Secretary.

DECLARATION OF THE LEAGUE FOR THE LIBERATION OF THE PEOPLES OF THE U.S.S.R. (PARIS BLOC)

In the course of the last 40 years, an enormous colonial state has come into existence in the East. This is the U.S.S.R., which threatens the whole of Western civilization and aims at reducing the entire world to submission. The duel now proceeding between the Communist dictatorship in Moscow and the free world on the Berlin issue is one of the episodes on the path leading to the sovietization of the world. Yesterday, it was the Near East; before that, it was the Far East. In both cases, Moscow succeeded in seizing positions suitable for her further advance. Whether she will succeed this time or not, one thing is certain: Moscow cannot stop, but will continue to advance resolutely. At the present time, the curve representing the entire foreign policy and strategy of the Soviet Government continues to rise. This rise must be halted: only the inflexible will and firm determination of the West to resist by all the means in its power the extension and consolidation of the Soviet empire can prevent this catastrophe. As every day passes, it becomes clearer that the free world is faced with a dilemma: either to be forcibly drawn into the orbit of the Soviet empire, which would mean the end and the ruin of Western civilization or, by displaying a resolute will and a determination to put up a heroic resistance, to save the civilized world from the mortal danger which hangs over it. Living moral points for the application of this crusading will of the West may be found in the captive peoples of the U.S.S.R. The West has hesitated and still is hesitating openly to acknowledge and proclaim the right of these peoples to dispose of their own fate, to assert their sovereignty and to recover the freedom and independence which were wrested from them by force.

On the historical and legal plane, the situation of our peoples is as follows. The Tsarist Empire, like all empires in the past, was created by means of conquest. The nations doomed to form part of this empire, the peoples that were mentioned in the now celebrated proclamation of President Eisenhower of July 17, 1959, were conquered by a force from outside, i.e., Tsarist Russia. Having seceded from the empire after the revolution of 1917, these peoples formed their own democratic states. From the point of view of international law, the in-

ternational identity of these peoples was revived. Their states were recognized de facto and de jure by other states already in existence. In some cases, recognition also came from Soviet Russia. Soon afterward, these countries under the pressure of Soviet Russia's superior forces, were individually reconquered after a prolonged and desperate resistance. The disintegrated empire was restored by fire and the sword.

Thus, from the point of view of international law, the general situation now reigning in the East is as follows. The so-called national union and autonomous republics, which were formely independent states and which now form part of the Soviet Union, are occupied by a forcing power—the Soviet Russia. The problem of these peoples is thus an international one, since these states were once given diplomatic recognition. We are therefore faced with the question of removing the occupying forces and securing liberation from foreign domination. Even now, these states, in accordance with articles 13–18 of the Soviet Constitution, are regarded, formally speaking, as sovereign. The democratic principles regulating life in the civilized world demand the unqualified recognition of the right of these peoples to sovereignty, the right to restore their independence and freedom.

If the free world continues to ignore the facts of history and the standards of international law, thus sacrificing the very foundation of its civilization to the unreal and essentially false idea of peaceful coexistence, which presupposes the permanent and separate existence of two worlds—if the free world harbors the illusion, harmful for the future of all mankind, that by sacrificing over 200 million captive persons to the Moloch of Communist tyranny it will secure the freedom and welfare of the rest of mankind, then it will condemn itself irrevocably to destruction.

We repeat now, and are prepared to repeat again, that the idea conceived in Moscow of a high-level conference and Khrushchev's determined attempts, especially recently, to go to Washington, to set foot on soil which has never been trodden by an oppressor of the freedom of nations, to transform his meeting with the President of the United States into a conference of the Big Two, can cause worldwide embarrassment, and among our peoples in the Soviet empire will provoke silent protest and deep disillusionment.

President Eisenhower's declaration, mentioned above, is an event of great importance. We express the profund hope that it will prove a turning point in the entire policy of the democratic West, and that the latter will realize that Moscow's imperialist policy of expansion must be opposed by a policy based on the principle of liberating the peoples at present under the yoke of Communist tyranny.

The violent reaction which this declaration provoked from Khrushchev, who denounced it as interference in the internal affairs of the Soviet Union, shows what a powerful weapon this sacred idea, the idea of our time, can be. Through it, we can finally unmask the jailers of the world's last colonial empire, who hypocritically present themselves as liberators of the enslaved and colonial peoples.

At this, its annual conference, held in Munich on July 29–30, 1959, the League for the Liberation of the Peoples of the U.S.S.R. which champions the cause of more than half the population of the Soviet Union, warmly welcomes the proclamation of the President of the United States, and addresses the following appeal to all freemen: at a time when so much is being said about colonialism, may the free world not forget that the peoples on the other side of the Iron Curtain are groaning beneath the yoke of a most wily and cruel colonialism, which is persistently knocking at the door of Europe and the West. Having rejected the harmful idea of the evolution of dictatorship, may humanity remember that its own freedom and welfare may in the final analysis be guaranteed only by the liberation of these peoples. World freedom is one and indivisible. May the free world bear in mind the torments and sufferings of our peoples.

The cult of the elder brother, created by Stalin, is now increasing under Khrushchev. The economic exploitation of the oppressed peoples is being intensified. Vis-a-vis the younger brothers, Russification is gaining momentum. The systematic transfer of population within the U.S.S.R. continues, and threatens some of the smaller peoples with complete extinction and absorption in the Soviet nation. In these circumstances, the growing tension in international relations and the deliberate fanning of national dissension by the Kremlin are a heavy burden for the liberation movement. Addressing our peoples, the League for the Liberation of the Peoples of the U.S.S.R. expresses its profound conviction that President Eisenhower's proclamation establishing Captive Nations Week by confirming the right of these peoples to freedom and independence, will be received by our compatriots at home as an expression of support for their burning hope and faith in a free future and as a call for calm and unshakeable confidence in the final triumph of national justice.

We hope that this struggle will also prove a struggle for the liberation of the Russian people. The Russian people are also exposed to the political and social oppression of Bolshevik tyranny. They, too, are experiencing the burden of the Soviet regime, and paying with the loss of their freedom and with their toil for the senseless imperialist policy of a clique in the Kremlin. We therefore express the hope that at the decisive moment, the Russian nation, following the noble example of its most worthy sons, will choose the only path that is compatible with its national dignity and join with the captive peoples of the U.S.S.R. in a united struggle for liberation, in creating a world front for liberty.

Our peoples have already won an honorable place in this struggle, having repeatedly declared their inflexible will for freedom, democracy and independence.

The moral support and sympathy of the entire free world for the captive nations of the U.S.S.R., an eloquent manifestation of which is the noble voice of the President of the great Transatlantic democracy—this charter of hope for the whole world—may in the end become a guarantee that the sacred national aspiration of our peoples will be realized.

Manion: Constitutionality of Foreign Aid

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. DEVINE. Mr. Speaker, on Thursday, August 20, 1959, Clarence Manion appeared before the Senate Committee on Appropriations, and made a statement concerning his views on the constitutional aspects of the foreign aid program. I am inserting Dean Manion's statement in the RECORD so my colleagues may have an opportunity to study his views:

My name is Clarence Manion. I am a practicing lawyer with offices in South Bend, Ind. For more than 25 years I was professor of constitutional law at the University of Notre Dame, and from 1941 to 1952, I was dean of the College of Law at Notre Dame. Presently, I am a member of, and counsel for the Citizens Foreign Aid Committee. I am grateful for this opportunity to appear before you in opposition to the pending appropriation for foreign aid.

This committee, like other committees of the Congress, has heard a great volume of criticism concerning the wastefulness, maladministration and basic misdirection of the foreign aid program. I have followed this criticism in the previous, as well as the current reports and records of the Congress, and I would subscribe to much, if not to all of it.

However, to avoid redundancy and to conserve the valuable time of this honorable body, I shall attempt to restrict my remarks to three aspects of the foreign aid program, which have been largely ignored by previous witnesses, and concerning which, by training, experience and recent observation, I may claim some special competence to testify. As concisely and as briefly as the gravity of the allegations will permit, I will try to support the three following conclusions concerning our foreign aid program:

1. Foreign aid, as it is presently constituted and executed, is not authorized by the Constitution of the United States.

2. The foreign aid program is being maintained by the Congress in defiance of the wishes of the great majority of the people of the United States.

3. The Government of the United States does not have sufficient tax income to support the foreign aid program, consequently our Government has been, and is now, forced to borrow the money that it gives away to foreign governments.

I will proceed to support these three propositions in the order in which they have been stated.

SECTION I. FOREIGN AID IS UNCONSTITUTIONAL

It is basic and elementary law that the Government of the United States has no inherent power to do anything. The existence, and authority of the Federal Government are derived from the Constitution of the United States.

The Constitution is the creature of the people of each of the several States of the Union. In turn, the Congress, the Federal executive and the Federal courts are the creatures of the Constitution. There is no valid power in any branch, division, or officer of the Federal Government that does not rest in some provision of the Constitution of the United States. As Chief Justice Marshall remarked at the dawn of our constitutional history: "We must never forget it is a Constitution we are expounding" (4 Wheat. 316, 407. 1819).

By its own terms, the Constitution of the United States is the supreme law of the land. All U.S. Senators and Representatives have taken a solemn oath to support the Constitution as such. The President's single sworn duty is to "preserve, project and defend the Constitution." (U.S. Constitution art. II, sec. 1.)

The Constitution begins with the declaration that "all legislative powers herein granted, shall be vested in a Congress of the United States." (U.S. Constitution, art. I, sec. 1.) Thus Congress has no powers other than those enumerated in the Constitution.

This raises the basic question: Where in the Constitution does Congress find its power to appropriate the American taxpayers' money for the aid of foreign governments? On the floor of the U.S. Senate last July 2, one of your distinguished colleagues, the Honorable SAM ERVIN JR., who for many years was an associate justice of

the North Carolina Supreme Court, addressed himself to that very question.

Said Senator ERVIN: "I believe that under the Constitution of the United States we have no right to take tax money and spend it for any purpose except that which is calculated to promote the general welfare of the United States. I do not think we are empowered to take tax money and give it to neutrals, merely to advance their economic welfare. I do not believe we should use tax money to pay neutrals to remain neutral, because that does not advance the welfare of the United States as a government. If the United States were an eleemosynary institution, operating charities instead of operating a government which depends upon tax sources for its finances, then I would say it would be all right for the United States to act as a universal Santa Clause. * * * Our Government is not an eleemosynary institution and the Constitution does not authorize it to act as such."

How far can the Congress go in confiscating the income of the American people and encumbering their remaining capital assets with ever-increasing, high interest-bearing debt in the name of the general welfare of the United States? Where is the constitutional authorization for debt reduction for the governments of Austria, Greece, Denmark, France, Netherlands, Norway and the United Kingdom of Great Britain at the expense of the American taxpayer? (See testimony of Secretary Dillon, hearings on mutual security appropriation for 1960, subcommittee of the House of Representatives Committee on Appropriations, pp. 352, 353.)

As Chief Justice Marshall said, "We must never forget it is a Constitution we are expounding." Congress has no plenary power to tax and spend at its political pleasure. The Constitution says that "the Congress shall have the power to lay and collect taxes, duties, imposts, and excises to pay the debts, and provide for the common defense and general welfare of the United States (art. I, sec. 8). It is the debts of the United States that are to be paid with the American taxpayers' money, not the debts of foreign governments. It is for the common defense and the general welfare of the United States, that the Congressional power to tax and spend is to be exercised by the Congress. Thomas Jefferson said that "They [Congress] are not to lay taxes ad libitum for any purpose they please; but only to pay the debts or to provide for the welfare of the Union" (vol. III, "Writings of Thomas Jefferson," pp. 147–149, library edition, 1904).

What is the general welfare of the Union, as distinguished from some special welfare for some particular part of the country, or for one parcel of its population, has been debated by constitutional lawyers ever since the Constitution was adopted. That question has not yet been determined by any court. The Supreme Court of the United States has held that neither a State nor an individual taxpayer is entitled to a remedy in the courts against an unconstitutional appropriation of the Federal funds by the Congress. (*Massachusetts and Frothingham v. Mellon*, 262 U.S. 447, 1923.) The purpose of the congressional appropriation that was challenged in these cases was the reduction of infant mortality in the United States—not the reduction of Government debts for Netherlands or Norway.

The Court bypassed the contention that infant mortality was unrelated to the general welfare of the Union by declining to take jurisdiction of the case. The decision of those cases left the taxpayers powerless to invoke the protection of the general welfare clause in the courts of the country, but the protecting language of the Constitution is still there nevertheless, and every Congressman and Senator takes a solemn oath to respect it. The obligation of that oath is all the more serious in view of the fact that there is now no legal appeal from the decision of the Congress on the question of expenditures for special rather than general welfare, or from congressional determination to spend the taxpayers' money for world welfare rather than the prescribed welfare of the United States itself.

At his press conference on Wednesday, July 29, the President challenged the so-called informational force-out provision of the pending foreign aid appropriation bill as an unconstitutional invasion of his executive powers by the Congress. I am glad that the question of constitutionality has at last been raised by the President concerning the expensive matter of foreign aid. I would like to point out, however, that the Constitution was not created for the purpose, merely, of protecting the authority of one branch of the Government against invasion by other branches.

The Constitution was designed to prevent every branch and all branches of the Government from invading and violating the God-given liberty and hard earned property of the people of the United States. Whether Congress has impinged upon the authority of the Executive is a matter of secondary importance, constitutionally speaking, in a bill that misappropriates the property of American citizens for foreign aid, and in some instances, for palpably un-American purposes and projects. Once more, I urge you to remember that it is a Constitution we are expounding.

SECTION II. FOREIGN AID IS OPPOSED BY A GREAT MAJORITY OF THE PEOPLE OF THE UNITED STATES

The fact that foreign aid is unpopular has been admitted time and again by the distinguished chairman of the Senate Foreign Relations Committee, Senator FULBRIGHT, who apparently believes that the wishes of the American people should be ignored when they clash with the professional opinions of State Department experts. On the floor of the Senate last July 8, Senator FULBRIGHT said: "Mr. President, I do not wish to be misunderstood. The members of the Appropriations Committee are honorable men and fine citizens. The point I have in mind, which dominates this situation, is that given the kind of country we have, with 435 constituencies, many of which are remote from world affairs, it is natural—even inevitable—that the representatives of these constituencies should give priority to the immediate local interests of those who have shown their appreciation of their services by voting for them. This is especially true of those who find political life agreeable and wish to remain in it." At that point in the debate, the Senator was contending for single-shot long-range foreign aid spending. He was afraid of exposing this global grand-design periodically to such people as "the voters of the Fifth District of Nebraska or the Third District of North Dakota." (CONGRESSIONAL RECORD, July 8, Senate, p. 11811.) On another occasion, Senator FULBRIGHT said: "I realize that the foreign aid program is an unpopular program; it does not have local appeal * * * many persons have misunderstood it. They consider that it is not in the interest of the United States. * * * I recognize it is unpopular; it does not represent votes in Arkansas or anywhere else." (CONGRESSIONAL RECORD, Senate, July 1, p. 11338.) And finally said Senator FULBRIGHT: "Of all the bills which come before the Congress, this one is the most difficult to explain in such a way that the results may be understood by the people whose taxes support it." For this taxpayer's money, the Senator can say that again. The July 6 Chicago Tribune reported it this way (editorial): "During the Senate debate, Senator FULBRIGHT was driven to confess that the taxpayers are sick and tired of the whole foreign aid racket. He admitted that the giveaway is unpopular but took the position that the Senate knows best. Members of the Foreign Relations Committee over which he presides, said FULBRIGHT, were discounting or ignoring the risk of offending that formidable body of opinion which opposes spending, particularly abroad.

There is not the slightest doubt in my mind about the fact that the formidable body of opinion which opposes foreign aid spending is the overwhelming majority opinion of the people of the United States. For the past 5 years, I have conducted a weekly radio forum over a nationwide network that reaches into every corner of the country. As a result of these broadcasts, I have received tens of thousands of letters from listeners dealing with all important matters that come before the Congress of the United States. Many of these correspondents disagree sharply with the views expressed by some of our speakers. I have discovered that there are two large, articulate sides to practically every important public question—except foreign aid. Out of all the thousands of letters that I have received, less than a dozen speak favorably of foreign aid and two or three of these were written by officials of the State Department. This 5-year experience has convinced me that if either of the political parties took a forthright antiforeign aid stand in the 1960 election and nominated a candidate who would stress that point of view, that party and that candidate would sweep the country. I am likewise convinced that the devotees of foreign aid know this as well as I do and that is precisely why they will never give the American people an opportunity to express themselves on this issue at the ballot box. Since Senator FULLBRIGHT has sensed this widespread unpopularity of foreign aid and dared to admit it on the floor of the Senate, I am at a loss to explain the continuing support given to this measure by scores of Senators and Congressmen who obviously do not share the bright-eyed internationalist idealism that propels Senator FULBRIGHT in this and other matters.

SECTION III. WE CANNOT AFFORD FOREIGN AID

Every dollar of the pending foreign aid appropriation will have to be borrowed at the highest rates of interest ever paid by the U.S. Government. The House of Representatives deliberately rejected a proposal to amend the bill by making it illegal to use borrowed money for foreign aid. The realistic Congressmen apparently decided that borrowed money is all we now have left to spend for foreign aid. This bill is a proposal to borrow money in order to give it away for an unconstitutional purpose that is opposed by a great majority of the people of the United States. This time-honored travesty is about to be repeated in the midst of a nationwide antispending, antiinflation campaign that has literally flooded Congress with protests against Federal extravagance. Responding to this campaign, Congress has cut domestic appropriations and the President has vetoed some of them because they were not cut deeply enough. Our national highway program is stymied for lack of money. If the Government is too poor to build highways in the United States without levying additional taxes, then why is the Congress about to authorize the construction of highways in the four corners of the earth for other people?

Last June 21, the distinguished chairman of the Senate Finance Committee, the Honorable HARRY F. BYRD, told the "Manion Forum" nationwide radio audience that in the past 18 months "our fiscal situation has deteriorated faster than in any comparable peacetime period. The Federal Government is now paying its bills by increasing debt

and inflation." For the purpose of the Soviet Russians, Senator BYRD said: "The fiscal and economic suicide of this country is far more desirable than a military attack upon us. This, the fiscal and economic suicide of the United States is consequently the prime objective of our Communist enemies." ("Manion Forum" broadcast No. 247.)

May I ask this distinguished committee how our Federal Government—that cannot afford to wipe out so-called temporary excise taxes on telephone bills, passenger transportation, and other essentials—taxes that were put on years ago to pay for the Korean war—how can a Government as poor as that afford to subsidize foreign industries to compete in the American market for American products and American jobs? Why must you raise our Federal debt limit to the highest point in history—a debt on which the American taxpayer now pays the highest interest in history, when we can afford to give foreign governments millions of American dollars to reduce their government indebtedness? Financial service publications now declare that big bond buyers are no longer interested in U.S. Government securities that are more than 1 year away from maturity? Does this mean that we are just 1 year away from the repudiation of our Federal debt by inflation or otherwise? If these portents are reliable, then it might be advisable to turn our foreign aid pipeline around and use the unexpended billions for the reduction of our own debt and for the stiffening of our own rapidly softening currency.

I wish to thank you again for this opportunity to express these opinions on behalf of our Citizens Foreign Aid Committee.

Nineteen Hundred and Fifty-nine and Nineteen Hundred and Thirty-nine: The Contrast and the Hope

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "1959 and 1939: The Contrast and the Hope," which is an excellent review of the national situation.

There being no objection, the article was ordered to be printed in the RECORD as follows:

[From The New York Times Magazine, Aug. 30, 1959]

NINETEEN HUNDRED AND FIFTY-NINE AND NINETEEN HUNDRED AND THIRTY-NINE: THE CONTRAST AND THE HOPE

(By Barbara Ward)

Twenty years have passed since Hitler sent his troops across the frontiers of Poland and plunged the world into war. And his aggression, in turn, came 20 years after the peace treaties which had put an end to the first worldwide struggle.

Today, however hopefully men may pray for a constructive outcome to the Eisenhower-Khrushchev exchanges, the very eagerness with which the talks are awaited betrays an underlying fear of renewed conflict, an anguished question whether by some fundamental failure of political wisdom or rational grasp, mankind has involved itself in a fatal coil of violence, each conflict leaving unremedied the conditions which created it and thus leading with blind fatality to the next.

In short, are we, 20 years after Hitler's war, already advancing inevitably to a new holocaust—with more terrible weapons and against a more formidable enemy? Or is there any sign that there has been some break in the baleful chain of causality binding the end of one conflict to the beginning of the next?

One thing seems clear. In 1934—20 years after the outbreak of World War I—the drift to war was already irreversible and for the simple reason that every factor that had led to war in 1914 was present in an exaggerated degree. Nothing had been basically cured or changed by the appalling carnage of 1914 to 1918. Virtually the same conditions existed, only they were worse.

In shorthand, one can say that among all the interrelated causes of the First World War four were decisive. First was the neurotic nationalism of the Germans, last of Europe's "tribes" to achieve nation-statehood. This nationalism was exaggerated by relatively late industrialization and by Germany's entry after 1870 into a general struggle for markets accentuated by the ups and downs of the business cycle. The struggle spread to the outside world with Germany's determination to seize colonies and jostle the older imperial powers. Finally, when all these overlapping causes of friction had exploded into one international incident after another, the Germans were not checked in the decisive summer months of 1914 by the knowledge that a worldwide coalition would oppose them. Britain's entry into the war was uncertain to the last. America was as distant as the moon and as neutral.

By 1934 these four root causes of the 1914 struggle had all reappeared. The nationalism of the Nazis—a hateful, racist, lunatic nightmare of blood and soil—made Germany's national ferment of 1914 look sane by comparison.

The background of economic uncertainty was far greater than it had been in 1914. Hitler himself was in some measure a product of the devastating depression of 1929, when 11 unemployed had helped to swell the ranks of unreason in Germany. In Europe, generally, each nation was seeking to protect its small, separate, national economy behind higher barriers of tariffs and quotas and each contributed to the contraction of the rest. Once again, Germany's probing for markets in Central and Eastern Europe was accompanied by complaints that German business was stifled and that the people must have lebensraum—including "the open lands and granaries of the Ukraine."

The same pressure was transferred to the imperial scene outside Europe. In 1934 the Germans were beginning to claim the return of their colonies. In that year, too, the Italians precipitated the dispute with Ethiopia which led a year later to full-scale colonial war. In the East Japan, under the impact of the depression, had abandoned liberal policies and completed the conquest of Manchuria. The rivalry between the so-called haves and have-nots grew yearly in intensity and the three have-nots—Germany, Italy, and Japan—precipitated the series of incidents in East and West which finally made war only a matter of time.

Even so, their adversaries could not combine. The first formal attempt at collective security in the League of Nations collapsed once Japan and Italy had successfully flouted it. Britain practiced appeasement to the very brink of the struggle. America was as remote as ever. Russia finally precipitated the fight by joining the aggressors.

It may be that no coalition, however strong, could have checked the lunatic Hitler. But the coalition did not come into being until the war had already ravaged a continent and enslaved or massacred millions of its people. It is thus clear that on virtually every count the war of 1939 was simply the repetition in aggravated form of the struggle of 1914. It was in a sense the same war with a lull in between. Twenty years after 1914, the lull was coming to an end and the combatants were once again mustering their armies and men. Only the date of the new outbreak was still unsure.

It is equally clear that, whatever dangers threaten the human race today, it is not still involved in a precise repetition of the old aggressions. The world of 1959 is almost wholly discontinuous with that of 1939. Twenty years after, the landscape of politics has changed as by a seismic convulsion. The risks are new, the opportunities are new, there is no sense of automata involved in some dreadful process of repetition, of sleepwalkers following an old road to an old doom.

Take each of the root causes of war in 1914 and 1939. All have lost strength, some have almost withered away. In Western Europe, the first home of the nation-state, nationalism is at last on the decline. Even the arch-enemies, France and Germany, are reconciled and seek to fuse their sovereignty.

Nor are economic pressure and uncertainty reviving old disputes. It is still perhaps too soon to say whether the extremes of the business cycle are banished forever; the last American recession, though short, had uncomfortable repercussions, at least among the primary producers—the jute growers of India, the coffee growers of Brazil, the copper miners of Rhodesia. But methods of regulating the severity of the cycle are being learned and no nation has resorted to the total protectionism which so enforced national separateness and hostility in the 1930's. On the contrary, the whole direction of Western policy since 1945 has been toward lower tariffs, wider markets, and freer trade.

As for the old imperialist background to Europe's struggles, it has virtually disappeared. Asia is free, most of Africa is moving toward freedom. And this movement has been accompanied by an entirely new phenomenon in the history of mankind—the first tentative acceptance of international economic responsibility wholly unlinked to political control.

In the past, colonies have often been developed by their imperial masters. But today there are signs that the new policy of economic development is seen not as a by-product of imperialism but as a responsibility to be borne by the wealthy industrialized nations. It will be their new task to help the peoples who have not yet achieved modernization and to do so without demanding any political *quid pro quo*. This is, in a real sense, an extension of the idea of "the general welfare" to all mankind.

Above all, the issue of collective security, of defense against possible aggression, has changed decisively since 1939. The United Nations has at least not foundered. It has checked a small war in the Middle East and acted as organizing principle in the bitter war defending South Korea. America, the most powerful Nation in the world, is no longer aloof. And it has joined with its European allies in NATO to insure that no thought ever tempts Mr. Khrushchev or any other potential aggressor into suicidal war.

At this point, the critics may well protest that the analogy with 1939 misses the point. The trouble about 1959, they will argue, is not that we are still in the aggressive cycle of 1914 and 1939. It is that we face something much more formidable. Communism is worse than nationalism, even than national socialism. Communist economic policies may well become more disruptive than the old business cycle. Communism is a more subtle and hence a far more dangerous form of imperialism. Above all, as Russia—and China—outpace the West in mis-

siles, atomic weapons and vast land armies, the risk of total destruction becomes much greater than in 1939. How can one say that the old fatalities have vanished when new and worse ones have taken their place?

The argument, in short, is that although the protagonists in the drama may have changed, Russia eclipsing Germany and China taking Japan's place as aggressors and instigators, the same conditions of international rivalry, competitiveness, imperial pressure and naked force exist today as they did in 1914 or 1939 and it is only a matter of time before they erupt once more into universal war.

These risks cannot be minimized. There are obvious ways in which communism is more truly formidable than Hitler's Germany could ever be. In Russia it is based upon a solid established state power that has carried its people through a vast expansive revolution, not upon a power-drunk lunatic Nazi party able only to plunge the nation into total war within 7 years of seizing the apparatus of government.

The Soviet Union commands vast space and resources equal to America's and has determined to mobilize a larger percentage of them for the instruments of force. All around the world, communism has a policy and an appeal—based on its own rapid industrialization—that can catch the imagination of peoples struggling to modernize their States. Such an appeal was utterly closed to Hitler with his racial nonsense of Aryan superiority.

China, too, by the vastness of its population and the prestige of its traditional Asian predominance, must act as an influence of incalculable power, provided it can demonstrate communism as a quick path to growth in overpopulated territories. The Communist powers are thus much more truly formidable than the Nazi explosion, just as, to give but one analogy, the imperial Confucian state of China—for all its bureaucratic despotism— had a lasting power denied to the marauding Mongol conquerors of the Asian steppes.

Yet it can be argued that the very formidableness and rootedness of communism put its threat and pressure in a very different category from the plunging aggressions of 1914 and 1939. As the revolutions become consolidated, their leaders are in some measure acquiring a mood of conservatism or at least of conservation. There can be no doubt, for instance, that Mr. Khrushchev is serious in his determination to catch up with American living standards—although, after his American visit, he may find the road longer than he thought—and the Chinese Communists no less serious in their aim of surpassing Western European production within a decade.

Russia certainly and China possibly have the resources and the elbow room for such a heroic transformation, provided they also have peace. Whatever their theoretical Marxist beliefs about the ultimate victory of world communism, there is no doubt about the immediate goal and that is internal development and consolidation. No wild talk of conquest, no open boasts of taking over the Ruhr—as Hitler once boasted of appropriating the Ukraine—spur the Russians on to believe in easy wealth at others' expense. The great theme is the work, ingenuity and sustained effort needed at home to show the superiority of communism to an admiring world.

For the same reason, there seems no immediate likelihood of direct Communist aggression in the world at large. Communist agents may be active, local leaders wooed, arms, aid, and trade dispatched, Communist technicians ordered to remote capitals. But Soviet troops do not march into Kirkuk when General Kassim shows signs of checking local Communist activity. There is no Soviet airdrop on Ghana if Dr. Nkrumah excludes Communists from all positions of trust. Most paradoxical of all, Soviet aid to the Aswan Dam continues while President Nasser keeps his local Communists in jail.

In other words, the Russans and the Chinese will exploit all the possible openings for Communist influence—but exploit them short of open conflict. This is tiresome, difficult, and dangerous for the West. But it is not fatal.

Today there is only one tactic from which the world cannot recover—the tactic of direct aggression. The Communists tried this once—in Korea. The instant answer of force with force has discouraged them from repeating the hideous experiment. In fact, one can argue that the most profound reason for believing that 1959 is not 1939—or 1914—is that today the democracies have avoided the appeasement of the 1930's which led Hitler on from violence to violence; and the Communists on their side have enough rational grasp to see what the Nazis never saw, that violence leads to only one conclusion—in the words of Marx, "to the common ruin of the contending parties."

But if these are reasons for hope, they are none for complacency. Every reason for believing that the fatality of 1914 and 1939 can be avoided depends upon vigorous and sustained Western policies—upon a united Atlantic front, upon expansive international economic policies in the free world which permit Soviet aid and trade to be absorbed without creating any dangerous absorption into the Communist economic web, upon an undeviating determination to maintain equality of strength and to let the Communists understand that determination.

Yet can one maintain today that these conditions of safety and survival are all realized in practice or that they are even fully understood? We have to recognize that our policies are still marked by improvisation, impermanence, and inadequacy. We may no longer be involved in cutthroat national competition in the West. But neither are we engaged on a systematic attempt to work out what are the appropriate forms of permanent, supranational association in the atomic age.

The initiative that has brought France and Germany closer together has so far driven France and Britain further apart. Western Europe is in danger of new economic divisions and the common purposes of a possible Atlantic community are hardly spelled out. There is little sign that the Western nations regard themselves as the nucleus of a lasting and cooperative international order coherent and purposeful enough to challenge the Soviet aim of a Communist world.

Because of this central uncertainty, the economic policies of an expanding world society are neither widely understood nor even partially practiced. The extreme severities of the prewar business cycle may have been overcome, but the kind of steady upward thrust in the mature economies—which alone can secure world growth under other than Communist auspices—has not been secured or even formally sought. Twice in the last 7 years sharp falls in Western activity have canceled—by way of lower export incomes—all the benefit derived from Western aid to the less developed areas. Aid itself has been viewed as a stopgap measure for containing the Communists rather than as a long-term strategy for insuring stability in the troubled post-colonial world where bounding populations, pressing on unmobilized resources, threaten economic decline.

And the periods of stagnation, which greatly increased pressure to reduce budgets and cut public expenditure, have helped to whittle away the effectiveness of Western defense. We may not be the flabby, irresolute weaklings of the 1930's. But there is no secret about Russia's growing preponderance in both missiles and conventional arms and equally there is no genuine urgency in the West to redress the balance.

In short, every policy which hopefully distinguishes the present from the despairs of the past has about it some note of weakness—inadequacy of scale, uncertainty of purpose, a quality of impermanence and indecision, a sense of reacting to others' pressure, not of boldly seeking the initiative ourselves. We may have done very much better. But are we doing well enough?

There should be no discouragement in this question for we have it in our power to give the proper answer. The postwar world has already shown—with the Marshall plan, with colonial independence, with foreign aid, with the Korean struggle, with the movement toward European unity, with the American involvement in world affairs—that the Western Powers have recovered a capacity to think and act freshly which seemed totally absent between the wars.

Anyone who grew up in the thirties could be conscious only of doors closing, of lights failing, of the forces of violence and unreason steadily gaining the upper hand. Today there need be no such sense of fatality. The field of action open to the Western Powers over most of the world is limited only by their vision, their resolution, and their generosity. No nagging economic limitations stand in their way provided they maintain their growth. New nations, no longer hampered by political dependence, are ready to cooperate with them in new ways to satisfy their hopes and needs. It is a world of change and movement and aspiration from which the rigidity and the claustrophobia of the prewar system have been blasted away.

For all the terrors and horrors of the last 20 years, their outcome is not a repetition of disaster but a new world of opportunity. We may still lose it. We may shirk its risks, we may miss its possibilities. But this is not a matter of fatality or iron destiny. It is at last a matter of free choice.

Good Lobbying Should Be Encouraged

SPEECH

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am putting in the RECORD a copy of the letter that Sidney Zagri sent to Life magazine in answer to the charge that he had used improper lobbying techniques in presenting the Teamsters Union position on labor reform legislation.

I observed Mr. Zagri's lobbying techniques and discussed them with many of my colleagues. Mr. Zagri is a constituent of mine and I was interested for that and other reasons. To date I have heard only vague charges such as the one in Life's editorial and a recent article in Time magazine that his techniques were other than proper. These rumors have been unsubstantiated.

I am quite disturbed at this constant attack on lobbying by all sides. The attack on lobbying and lobbyists is an improper technique in itself to pass or defeat legislation. These attacks have

contributed greatly to the disinclination of the public to participate in their government, in politics, if you please. After all if we are to have representative government the people must participate in it through their representatives and in choosing and electing their representatives. Lobbying in essence is nothing more than the people participating in their government. It should be encouraged not discouraged.

There are improper lobbying techniques. Falsely accusing another of improper lobbying techniques is itself an improper technique. These improper techniques should be attacked but when they are attacked one should be careful to make it clear that it is the improper technique not lobbying itself that is the basis of the adverse criticism. Good lobbying should be encouraged.

Frankly, I have been shocked by both Time and Life magazines. Nor is it just Time and Life. They merely reflect an approach to public debate that is all too common today in our country. But Time and Life seek the image of promoters of the best in public morals and to a great degree they deserve this image.

I want to say something else. I think a great deal of the criticism of the letter of James Carey is just as off base as some of the things Carey said in his letter. The fact that his letter said his group was going to try to beat those who had voted for the Landrum-Griffin bill I thought was perfectly proper. If we want our people active in Government they certainly should try to beat representatives they think are not good and elect those they think are good. My quarrel with Carey is that he does not think people can disagree with him unless they are tools, bigots, or uninterested in the welfare of the common man. I answered his letter by accepting his challenge at the polls, but appealing to him to keep the public debate on the facts and logic of the issue and off the attacks on the integrity of those with whom he disagreed.

Lest there be any misunderstanding I should mention that I basically disagree with Mr. Zagri on the Landrum-Griffin bill. I voted for it after thorough study and with conviction that this was in the best interests of the general public and of the unions themselves. Furthermore, the powerful Teamsters union headed by Harold Gibbons, another one of my constituents, has provided the basis of my opposition each time I run for election in a district which has powerful labor organization. There is little question in my mind that they will continue to provide this opposition.

Here is Mr. Zagri's letter. I think it is up to his accusers to prove their case. I will be happy to place in the RECORD the reply the editors of Life make to Mr. Zagri:

AUGUST 4, 1959.

EDITOR, LIFE MAGAZINE,
New York City, N.Y.

DEAR SIR: The editorial in Life's issue of July 27, titled "Danger: Hoffa Man at Work," is so grossly inaccurate and so brazenly unfair to the Teamsters and to myself that I cannot let it pass without a protest.

First of all, I most emphatically deny that I have ever threatened any Member of Congress with political reprisals of any kind, no matter how they choose to vote. I have far too much respect for our Nation's lawmakers to approach any of them with anything but the most complete courtesy. I hereby challenge any of the three Representatives you mention, Mr. UDALL, Mr. THOMPSON, or Mrs. GREEN to cite one example of unethical conduct on my part.

I might add that you are completely wrong regarding the lady from Oregon's unladylike departure from character. She most certainly never used the phrase you quote to me and I'm sure she never would.

Never at any time have I used the name of Speaker RAYBURN and again I challenge you to cite a single occasion on which I have.

We of labor are well aware that the right kind of labor reform legislation would benefit the Nation, just as business reform legislation would also, but we are convinced that none of the bills now under consideration could possibly do anything but great harm to all organized labor.

In this connection, informed labor relations experts are well aware of the ironic fact that the Teamsters Union, admittedly the prime target of all the proposed new measures, would survive under even the toughest bill, whereas most other unions could not.

Nevertheless, we of the Temasters Union, as members of organized labor, undertook a drive to defeat pending laws which we feel to be punitive rather than corrective, and which we fear would eventually eradicate all the great gains made by labor since the Wagner Act emancipated the working man. In every case when we have opposed a measure which we considered harmful to labor we have suggested an alternative which we felt would be of actual benefit.

Since our campaign began we have followed the classic patterns adhered to by groups seeking to enlighten and influence their congressional representatives:

1. We met with Congressmen, most of whom were unaware of the key punitive sections of the proposed bills, and explained to them just why we objected to these sections.

2. We urged our members to contact their Congressmen and voice their feelings on such antilabor measures.

3. We sought wherever possible to bring about personal metings between Congressmen and their constituents for discussions of the merits and demerits of the pending bills.

Our methods resemble nothing so much as your own when you urge, as you have repeatedly, that your readers contact their Congressmen and demand severe new labor reform laws, and they are no more sinister and no more "dirty" to quote from your editorial.

We are using the most fundamental of the democratic processes: Let your Congressman know how you feel about something he is going to vote on. If informing our own members of the activities and voting records of their Congressmen is unfair pressure then there is not an important segment of American business that is not equally unfair, because this is standard procedure. If, as Life magazine wrote, Speaker RAYBURN himself offered to campaign personally on behalf of any one in Congress who feels that his chances of reelection have been endangered by my activities, then we are certainly justified in campaigning for what we believe to be right.

In closing, to attribute to me so much power—as our editorial does— is absurd and unrealistic. The opposition arrayed against the other labor spokesmen and myself consists of an almost limitless army of lobbyists, lawyers, and public relations experts, backed by inexhaustible money and resources of every kind, all of them under direct orders from the enemies of labor to stop at nothing until organized labor as we know it today is destroyed forever.

Yours truly,

SIDNEY ZAGRI,
Legislative Representative.

Hon. Richard L. Neuberger, of Oregon, Reports Ovrwhelming Passage by House of Representatives of Federal Employees Health Bill and States Views for a Strong Advisory Council

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. NEUBERGER. Mr. President, it is indeed a pleasure for me to report that the House of Representatives this afternoon passed S. 2162, to provide a health benefits program for Government employees, by an overwhelming margin of 381 to 4. Our bill earlier had passed the Senate on July 16 by a similar overwhelming vote of 81 to 4.

As chairman of the Insurance and Health Subcommittee of the Senate Post Office and Civil Service Committee, I must confess that there are important differences between our Senate passed bill and the bill that passed the House of Representatives this afternoon.

One of the important differences between the two versions of the bill is with respect to the Advisory Council which has the duty of advising the Civil Service Commission regarding the administration of the Federal employees health benefits program. In this connection, it is worth emphasizing that Government employees are paying at least 50 percent of the cost of the program.

Mr. President, so that the Senate may be fully aware of the importance of the Advisory Council and the issue involved, I ask unanimous consent to have printed in the Appendix of the RECORD, correspondence I have received from the American Hospital Association.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

AMERICAN HOSPITAL ASSOCIATION,
Washington, D.C., August 20, 1959.

The Honorable RICHARD L. NEUBERGER,
Senate Post Office and Civil Service Committee, Senate Office Building, Washington, D.C.

DEAR SENATOR NEUBERGER: The attached copy of our letter to Senator JOHNSTON expresses our particular concern with respect to the House version of the bill providing health insurance to Federal employees.

We urge that the Senate insist upon the inclusion of the Advisory Council to insure that the program is administered in a fully effective manner.

Sincerely yours,

KENNETH WILLIAMSON,
Associate Director,
American Hospital Association.

[Enclosure.]

AMERICAN HOSPITAL ASSOCIATION,
Washington, D.C., August 19, 1959.
The Honorable OLIN D. JOHNSTON,
Chairman, Senate Post Office and Civil Service Committee, Senate Office Building, Washington, D.C.

DEAR SENATOR JOHNSTON: We have followed with great interest the development of legislation to provide health insurance for Federal employees and their families. In our testimony before the House committee, we endorsed and urged the committee to adopt S. 2162 substantially as passed by the Senate because we felt it was a very desirable bill and in the best interest of the people for whom you were striving to provide protection.

We are greatly concerned with certain aspects of the bill which has now been reported out by the House committee. One of these, we believe, is of such significance to the effectiveness of the legislation in actually meeting health needs that we feel impelled to call it to your attention in the hope that action may be taken to remedy the situation.

The House version of the bill provides for an Advisory Committee which does not fulfill the purpose of the Advisory Council as it was provided for in the Senate bill. The proposal in the House is for a committee limited to employees and their representatives, with no participation by individuals experienced and knowledgeable in health matters. This omission, we believe, is the more serious because the agency responsible for the administration of the program is itself not a health agency and is not experienced in the development of health programs and services.

It is our belief that a major point to be kept in mind is that the legislation deals with the health of Federal workers and their families. The proposal has serious health implications quite apart from the financial and administrative aspects, as important as these are. These health implications, of course, will be seriously affected by the manner in which the bill is administered. Because of the number of people involved and the prestige of the Federal Government, moreover, the manner in which this program is administered is likely to have an important effect on the provision of health services and the development of the health prepayment movement throughout the country.

There are within the Federal Government several agencies and individuals widely experienced and highly skilled in health matters. We believe the best interest of Federal employees would be served by providing assurance in the legislation that the advice of such persons will be considered by the administrators of the program. Further, inasmuch as the health services to be provided will be rendered in civilian facilities and by civilian health personnel, it would be well to utilize also the advice and consultation of knowledgeable individuals from the civilian health field. We believe the purposes can best be served by requiring in the legislation that an Advisory Council be established with representatives selected from among the agencies of the Federal Government operating health programs, such as the Army, Navy, Air Force, Public Health Service, and the Veterans' Administration; and further, that at least one physician active in the private practice of medicine and at least one civilian hospital administrator be included on the Council. In addition to these above representatives, it is, of course, essential that there be adequate representation of Federal employees themselves as the consumers of the services.

We would recommend further that a provision be made for at least quarterly meetings of the Advisory Council and for publication of all recommendations.

It will be noted that we do not recommend that the carrier organizations be represented on the Council. It is assumed that the administrators will have day-to-day contact with the carrier representatives. Such persons, however, will not be in a position to function in the same manner as would the members of an Advisory Council.

We cannot state too strongly the need for the administrators of this program to be required to meet with and to consider the advice and recommendations of individuals active in the provision of health services as provided for in the Advisory Council outlined above.

We urge, Mr. Chairman, that the Senate insist upon the inclusion of an Advisory Council which will make an effective contribution to the administration of the program.

Sincerely yours,
KENNETH WILLIAMSON,
Associate Director,
American Hospital Association.

Benson-Eisenhower Corn Program Produces New Headaches

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. SMITH of Iowa. Mr. Speaker, the following article appeared in the August issue of the Iowa Farm and Home Register published by the Des Moines Sunday Register. This article shows clearly that Iowa farmers do understand agricultural economics a lot better than the Department of Agriculture officials who have claimed that lower supports and no controls would adjust supplies in line with demand, and it shows what is happening under the Benson-Eisenhower corn program. You will also notice the great contrast between the interviews in this article and those widely publicized interviews recently conducted by Sam Lubbell. While I am sure Mr. Lubbell's intentions were good, he obviously did not know enough about farming to conduct an intelligent interview of farmers. The reporter, Mr. GLENN CUNNINGHAM, knows how to interview farmers, and this article shows that Iowa farmers do know what kind of a program will work better. It contributes to an understanding of what Iowans are doing and saying about the corn situation, and it is timely in view of our increasingly serious farm problem:

WHAT IOWANS ARE DOING AND SAYING ABOUT THE BIG CORN CROP

(By GLENN CUNNINGHAM)

The prospect of a bumper corn crop in Iowa from the largest acreage in history poses an acute storage problem for farmers. Bins and cribs on many farms are already filled with corn from previous years.

Linked closely to the storage situation are several other serious and perplexing problems, among them the probable price of corn at harvesttime, the question of future livestock programs, and what to do with the corn once it is in storage.

The price of corn at harvesttime is anybody's guess now, but with an alltime record crop in prospect, some of the folks in the big producing areas expect to see new crop corn sell for as little as 65 cents a bushel.

However, with Government controls abolished and all corn grown this year eligible for price support, many farmers are already moving to buy or build additional storage to avail themselves of Government price protection.

With hog and beef cattle numbers at record levels and the prospect of lower prices for meat animals in the months ahead, farmers are in a quandary as to future feeding programs.

Although a few of the in-and-outers are now getting back into hog production, most farmers seem to feel that this is no time to expand any feeding operations.

The tendency seems to be toward a general policy of "holding the line"—continuing feeding programs at about the same level as in the past, with some shifting to cheaper, plainer feeder cattle to lessen the risk.

Those who have been out of hog producton and who are now getting back in are finding it advantageous from the standpoint of low-priced brood sows. And they're guessing that low hog prices won't last too long.

The demand for storage facilities of all types—and for driers and drying equipment from farmers who harvest their corn early to prevent field losses—is at an all-time high for this early in the season.

The government is encouraging farmers to build additional storage, the county agricultural stabilization and conservation (ASC) offices making 5-year loans to help farmers purchase or put up the facilities they need.

Walter Bradley, implement dealer at Algona, says many farmers are just now starting to take care of their corn and other grain on their own farms, that in the past they have relied too much on elevators in town.

"Many farmers just now are realizing that government-financed storage of their grain has built tremendous elevators," he says. "They've decided to capitalize on the situation and put up their own storage and get the government storage fees themselves on grain they reseal."

A landowner in the Cylinder area bought 14 steel storage structures from Bradley's firm. Each structure will store 1,700 bushels—a total of 23,800 bushels of corn.

Managers of ASC offices in northwestern Iowa say they are getting many inquiries about Government loans for acquiring additional storage. There has been a big increase in corn acreage in this area.

The trend seems to be to permanent-type storage, and a big boom in construction of silos on farms where they are feeding cattle. More and more farmers are picking corn early and storing high-moisture shelled corn.

George Damman of Sanborn and his unmarried sons, Bob, 27, and Glenn, 25, who have 700 acres of corn this year, are buying 40,000 to 50,000 bushels of new storage and a second drier this year. They use a picker-sheller, pick early and dry the corn.

W. H. Holiday, ASC manager in Clay County (Spencer) said in late July that his office already had made several storage facility loans and that he expected a lot of temporary storage—such as snow fence cribs—to be built to help handle this year's crop.

"I haven't yet seen a poor field of corn," Holiday said. "A lot of the corn was shooting tassels by July 10, which is quite early. The crop looks as good as in 1948 but, of course, it isn't in the crib yet."

Art Rohwer, ASC manager in O'Brien County (Primghar) estimates that there is a 30-percent increase in corn acreage in O'Brien County this year and that yield prospects are the best since 1948.

"When you throw the gates open (abolishment of corn acreage controls) and offer a

support price of $1.04 a bushel and say to the farmers, 'Raise all you want to,' that's what they did," says Rohwer.

Jake Peelen, ASC chairman in O'Brien County, says he doesn't know what is going to be done with all of the corn, but that the best thing would be to feed it to livestock and convert it into meat.

"It takes about 7 pounds of corn to make 1 pound of meat," he points out, "but to raise meat a farmer needs a profit. And hogs right now are losing money for farmers who raise them."

Olaf Twedt, Estherville, has purchased 200 brood sows and is buying 1,000 feeder pigs—his first venture in swine in the last 10 years. He and a son-in-law farm 900 acres.

Twedt, who owns additional land which is rented out, says the Government made a mistake in dropping corn acreage controls and making price supports available on all corn grown, regardless of the acreage planted.

"You had less corn raised under acreage controls when supports were restricted to those who complied with planting allotments," he says, and advises:

"Restore controls and increase the support price for those complying."

Some farmers blame Secretary of Agriculture Ezra Taft Benson for the avalanche of corn which is coming.

"What will we do with corn?" comments George Bentley, 53, a farmer near Onawa in the Missouri river bottom. "That's Benson's problem. And it looks like he will have plenty of it to look after."

Joe Dewaele, 46, a neighbor, agrees with Bentley that there is little likelihood of greatly increased livestock feeding because of the price situation and uncertainties of feeding profits.

Near Goldfield, another farmer, Stanley Sampson, 36, says, "Hog prices are getting down to where there's no profit in raising them." Sampson's father, Steve, 70 and retired, says hogs should bring $18 to provide a fair profit.

Earl Gollhefer, of the Charter Oak Grain Co. at Charter Oak, says a lot of corn is fed in his area, where the trend is to earlier harvesting and storing of chopped or ground high-moisture corn in silos for feed.

He says most of the crop looks good now but that some late-planted corn may need extra time—2 more weeks—before frost to mature.

Everett Halstead, Ida County extension director, says farmers are buying steel bins—for shelled corn—and other types of permanent storage for ear corn, all equipped with air ducts and fans for artificial drying or for keeping corn in good condition.

Halstead says it is difficult to understand why some farmers are going into the hog business with prices moving slowly downward and the prospect of heavy hog marketing for many months ahead.

Virgil Rohlf, ASC manager at Algona (Kossuth County), says the big increase in corn acreage there this year is on the 38 percent of the county's farms which complied with allotments when they were in effect.

"The 1959 crop looks wonderful," he says. "It looks like 100 bushels per acre." He predicts that new corn will sell for as low as 75 cents a bushel during harvest.

Rholf and members of the county ASC committee—Richard Anderson of Ledyard, George Wolf of Algona, and Andrew Fangman of Bancroft—agree that the trend in that county is toward raising more beef cattle and fewer hogs.

Concern over the big volume of old corn reserves and the big crop in prospect is expressed by Kenneth Reed, a young farmer who lives in Kossuth county near the Minnesota border.

"It's quite a worry," he said, "and it isn't right the way it's being done now. The price is down on hogs and there are an awful lot of cattle and hogs being fed. Nobody knows what's likely to happen."

George Eden, Reed's brother-in-law living southeast of Swea City, says, "We're set for a tremendous amount of corn, and I'm afraid it simply means more surplus for the Government. I'd like to see a lot of it made into alcohol to be mixed with gasoline.

"I hope the fellows feeding cattle don't get discouraged."

The Kossuth County ASC already has arranged 20 Government loans for financing more grain storage for farmers. And in late July there were three or four farmers a day in the office inquiring about storage facility loans.

Alvin Rasmussen, near Burt, and Johnie Tobin, near Swea City, express concern over the uncertainty of livestock prices. Rasmussen quit cattle feeding when feeders got high, is fearful of starting feeding again.

Tobin, a swine producer, says he sold brood sows recently for $36 a head, compared with $80 a head last year. He abandoned plans for raising fall pigs because of lower prices.

"I was planning on four farrowings a year," Tobin says, "but after prices kept slipping, I sold my sows. As it is, I'm not going to quit raising hogs, but I'm not going to hit it too heavy."

Another Kossuth County farmer, who asks that his name not be used, has this to say:

"Ninety percent of the farmers feel like I do. It's not the time to jump in or expand. And there'll be some cutback on hogs."

This farmer, who feeds cattle and raises around 150 pigs a year, predicts that the Government will eventually get a lot of the corn being produced this year, but that more and more corn will be stored a long time on the farm.

Max Soeth, former State ASC chairman and now vice president of the Emmet County State Bank at Estherville, says the present Government plan of price support for all corn raised won't work.

He proposes a back-to-grass plan similar to one used during the early years of Government crop-control programs. Under this plan, there would be a higher support price on corn and a farmer would be required to reduce corn acreage a certain percentage. He would receive a Government payment for seeding such land to grass.

AFL–CIO Interview with Hon. Alexander Wiley, of Wisconsin, on Khrushchev Visit to United States

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. WILEY. Mr. President, we recognize that the upcoming visit of Premier Khrushchev is creating a wide variety of reactions among our citizens throughout the country.

These include strong views both for and against the visit. The predominant feeling, however, appears to be that—now that the invitation has been extended and accepted—the American people should back up the President and create the climate that will enable the best results to be obtained from the exchange visit between President Eisenhower and Premier Khrushchev.

Recently, I was privileged to discuss various aspects of the Khrushchev visit on the AFL–CIO broadcast "Washington Reports to the People." I ask unanimous consent to have the interview printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS PREPARED FOR DELIVERY BY SENATOR ALEXANDER WILEY, REPUBLICAN OF WISCONSIN, RADIO AND NEWSPAPER NETWORKS OF THE AFL–CIO

Question. Senator WILEY, do you feel the invitation to Mr. Khrushchev to visit this country is a good idea?

Senator WILEY. Overall, I feel the upcoming visit has possibilities for positive accomplishments; at the same time, there are dangers. On the positive side, the visit can (1) correct a few of Mr. Khrushchev's misconceptions about this country; (2) confirm our peaceful intentions; (3) emphasize the unity of the country behind its leadership; (4) give the Soviet leader a real knowledge of the high standard of living of Mr. and Mrs. Average America; and (5) again emphasize that, although our policies are peaceful, we will not be pushed around.

Globally, I would hope that the Khrushchev visit would not be interpreted as a sign that we are "going soft" on communism.

President Eisenhower—the standard bearer of our policy—has made a decision that, in his judgment, will best serve the interests of our security and world peace. The American people—in a united, bipartisan manner—I believe should now give full support to that decision.

Question. Do you have any real fears of Mr. Khrushchev's personal safety while he is in this country?

Senator WILEY. Naturally, I believe that all necessary security precautions should be taken. There are a great many people—particularly from Poland, Hungary, and other captive nations—who deeply resent, and understandably so, the Premier's being invited to this country.

For the public—and our allies—it should be made abundantly clear that the invitation does not demonstrate approval of communism, or of Communist tactics, that have resulted in international tensions and dangers to peace.

As a whole, however, I am confident that the Nation will act in a mature and responsible manner.

Question. Senator WILEY, do you feel that the American people might expect too much from such a visit?

Senator WILEY. No. The years of the cold war, I believe, have conditioned our people to the Soviets' hard policies. As a result, we don't expect any magical, overnight change in Soviet programs.

Question. Do you think the exchange of visits might lead to a summit meeting later on?

Senator WILEY. The decision for a summit meeting—as I have stressed before— rests squarely on President Eisenhower. As the President has stated, such a decision would—and should—be based upon whether it would make a constructive contribution toward easing tensions and resolving East-West differences.

The Eisenhower-Khrushchev exchange visits may or may not make a contribution toward justifying a summit conference.

Question. Do you think that the Khrushchev trip might succeed in altering some of his misconceptions of conditions in the United States?

Senator WILEY. Yes. As a matter of fact, I believe it would be worthwhile—to the degree possible—to plan his trips and contacts to achieve this objective.

As I understand it, however, the planning of the trip is a matter to be agreed upon between the State Department and the Russian Embassy—which, of course, gets its directions from Moscow.

Question. Senator, even if his mistaken ideas are corrected, do you think there is any real likelihood of altering his ultimate aims of world domination by communism?

Senator WILEY. Frankly, I doubt that we can expect to see any far-reaching changes in Communist policy in the near future. To the contrary, the Soviet leaders continue to reiterate their prediction—erroneous, I am confident—that socialism—in the Soviet Union, a false front for totalitarian communism—will eventually rule the world.

Policywise, the communist strategy is changing from "aims of military conquest" to efforts at economic, political and ideological penetration of the Western World. However, there has not as yet—nor can we expect it in the near future—any swaying from the ultimate goal of world domination. Consequently, we must gear our policies and programs to a long-range struggle against communism.

Overall, however, I believe the Khrushchev visit may further "break the ice" for top level—and possibly more fruitful lower level—exchanges to attempt to iron out East-West differences.

In the light of these factors, real "proof" of willingness to effectively promote peace still demands of Khrushchev not words of peace, but deeds.

Veterans of Foreign Wars 60th Anniversary

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. OSTERTAG. Mr. Speaker, I wish to join in saluting the diamond jubilee anniversary of the Veterans of Foreign Wars of the United States. This makes 60 years of patriotic service by one of the finest veterans' organizations of our time. They are a proud organization, proud of their beginning and proud of their continued zeal in the welfare of the Nation, the State, and the community. Their type of achievements and leadership makes me truly proud and honored that I have been a member of this great organization for over 40 years.

Since 1899, the national membership has grown to 1,200,000. In the Empire State of New York alone the membership now totals 67,842.

The members of the VFW, who cherish wearing the Cross of Malta, the emblem of the VFW, are veterans of an organization unique in its eligibility requirements. To join its ranks, a man must be able to produce an honorable discharge from the Army, Navy, Marine Corps, Air Force, or Coast Guard, showing "service honest and faithful" in time of war in a theater of operation.

It matters not whether that service was on the frozen plains of the Arctic, in the battles of Chateau-Thierry, or St. Lo, in the steaming jungles of the Philippines, Guadalcanal, or Burma; at Iwo Jima or the Chosin Reservoir, Bunker Hill, the Inchon landing, the liberation of Seoul; or in the mountains of Korea—the members of the VFW walk with their heads high.

From the beginning, under the leadership of Gen. Irving Hale, to the present commander in chief, John W. Mahan, the VFW has pledged to defend the principles of human rights in times of peace and war.

The greatest legislative assembly in the world, the Congress of the United States, granted the VFW a charter. In this charter the purpose of the organization is clearly defined. To preserve and strengthen comradeship among its members; to assist worthy comrades; to perpetuate the memory of our dead and to assist their widows and orphans; to maintain true allegiance to the Government of the United States of America and fidelity to its Constitution and laws; to foster true patriotism; to maintain and extend the institutions of American freedom; and to preserve and defend the United States from all her enemies whomsoever.

The VFW, with its rich heritage, has always been in the forefront to provide aid and assistance to its members and families. The record of legislation with its analysis, submitted monthly by our able director of national legislative service, Omar B. Ketchum and his staff, keep the VFW members well infrmed as to action on bills in Congress.

Throughout the Nation, in large and small communities, the VFW has sponsored and successfully carried out various projects beneficial to civic welfare, schools and churches, and to our youth. One outstanding project, and one which is very successful, is the national home at Eaton Rapids, Mich. This is the refuge for children whose fathers were totally disabled or are deceased. It is a splendid example of what any group of determined and public-spirited citizens can do.

As members of the VFW, we assume without reservation our responsibilities to maintain, strengthen, and defend the institutions of American liberty.

As the name implies, Veterans of Foreign Wars of the United States is an organization of men who have fought behind Old Glory in many foreign lands. These are the men who crushed foreign tyrants; these are the men who have proved their patriotism by offering their bodies and souls so that liberty should not perish from the earth, and American ideals and institutions might be preserved for posterity.

Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial written by one of Florida's up-and-coming young newspapermen, Ted Enns, Jr., entitled "Congress Should Stop Ducking—It's Time for Labor Reform Bill," which appeared in the News Tribune of Fort Pierce on August 9.

It is a powerful and fair editorial, which I believe merits the attention of the Members of the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD STOP DUCKING—IT'S TIME FOR LABOR REFORM BILL

President Eisenhower, last Thursday night, went direct to the American people with an appeal for support in his demand for an effective labor reform bill. He did a good job. He was not partisan—he was not tough. He advanced no new labor-management formulas nor philosophies. He simply laid the facts on the line—and minced no words in doing so.

Actually, the President added little to what has been known for months. He simply pointed out the leading areas of graft, racketeering and corruption in labor-management relations, as disclosed by the Senate Rackets Committee headed by Senator MCCLELLAN. These conditions he described, in a definite understatement, as a national disgrace. He pinpointed the basic issue as this: Shall the people, through sound labor reform legislation, govern; or shall crooks and racketeers prevail? It is as simple as that.

With all these facts public property, why was it necessary for the President to go directly to the people? After all, isn't it the responsibility of Congress to pass necessary and adequate laws for the public protection? The answer, unfortunately, is entirely too obvious—the Congress has, up to now, completely shirked its responsibility in this field. It has chickened out and run for cover every time the issue of labor reform has come up.

The Congress is, of course, willing to stand up and be counted as "for" love and motherhood and "against" sin. But it has no liking for such issues as labor reform, where the principles involved might conflict with personal interests and support. It would like to pass labor legislation which pleases everybody, but there is no such thing. Failing that, many Members would like to sweep the issue under the rug again, as has been done in the past.

But the time for ducking labor reform legislation is past. The welfare of the Nation demands sound and positive action in this session of Congress. The Kennedy labor bill which passed the Senate is woefully inadequate. This no surprise. As a presidential candidate, Senator KENNEDY would hardly author a bill which would alienate powerful labor leaders.

But the Kennedy bill is a powerhouse compared to the monstrosity which the House Labor Committee reported out. A baby chick wouldn't trade it, tooth for tooth. Supposedly Jimmy Hoffa dictated its provisions—they sound like it. On the basis of either of these bills, the American people would have every right to feel that the McClellan committee had completely whitewashed all current labor-management practices instead of showing, as it did, innumerable instances of crookedness, racketeering, corruption, and a long assortment of associated evils.

There is one bright ray of hope. If Congress has the guts to take it. That is the bipartisan Landrum-Griffin labor reform bill introduced in the House by a Georgia Democrat and a Michigan Republican. This bill gets to the meat of needed labor reforms and deals concretely with such issues as blackmail picketing, secondary boycotts, "no man's land" labor problems, adequate reporting of union affairs, bill of rights for

rank-and-file union members—factors the other bills gloss over or neglect entirely.

George Meany, president of the AFL–CIO, is against the Landrum-Griffith bill. So are practically all other labor leaders. For that matter, they will be against any measure which provides adequate provisions for dealing with the corrupt and disgraceful labor-management practices disclosed by the McClellan committee. The American people might as well face facts—labor leaders have vast powers. They are not subject to the laws which govern the rest of us—they are, in fact, pretty much a law unto themselves; the untouchables. They want to keep, and add to, those powers. They will fight in every way, and to the bitter end, any legislation which puts any curb on those powers.

Mr. Meany says it would be virtually impossible for a decent union to operate effectively under the Landrum-Griffith bill. That is utter nonsense. A decent union not only could operate under it, but we imagine the rank and file members of all such unions would welcome the opportunity to do just that. It would be a welcome change to see members, instead of so-called labor leaders, running their unions.

Mr. Meany contends that most unions and union members are good. We agree. But Mr. Meany also should know that, in our society, laws are passed to control the bad, not the good. Mr. Meany might as well argue against laws passed to punish murderers and other criminals. The way he argues, since most people are good, we don't need such laws. What Mr. Meany is really saying is that unions are different, and should not be subject to the same laws as the rest of us. That, Mr. Meany, is just the point: neither labor leaders nor unions are different—nor do they deserve or warrant special considerations. The fact that our current laws make them a privileged class is just why we need an adequate labor reform bill.

We think Members of Congress from the Southern States generally want to, and will, support the Landrum-Griffith bill. But it always helps, in a controversial issue like this, for them to know they have the wholehearted support of the people they represent. Tell them so—write and let them know that you are a part of the overwhelming national demand to put an end to lax laws which permit labor-management graft and corruption, and which threaten our basic concepts of justice and equal rights.

Vice President Richard M. Nixon Addresses the 60th National Convention of the Veterans of Foreign Wars of the United States at Los Angeles, Calif., August 31, 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. VAN ZANDT. Mr. Speaker, one of the highlights of the 60th National Convention of the Veterans of Foreign Wars of the United States now in session at Los Angeles was an address delivered by RICHARD M. NIXON, Vice President of the United States.

Introduced by Commander in Chief John Mahan, Vice President NIXON spoke to a capacity audience that included a cross section of America's overseas fighting men and their wives, together with leaders in the business and military life of the Nation.

The address follows:

EXCERPTS OF REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE 60TH NATIONAL CONVENTION OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, LOS ANGELES, CALIF., AUGUST 31, 1959

This is the fourth time in 6 years that I have had the honor of addressing the national convention of the Veterans of Foreign Wars.

In looking over the speeches I have made in previous years, I find that I have in each one spoken of the threat of international communism to peace and the security of the United States. I chose that subject on previous occasions because I believed that was the greatest issue before the United States and the world.

Today I shall speak to you on the same subject because, despite the developments in recent weeks which have resulted in the announcement of an exchange of visits between President Eisenhower and Mr. Khrushchev, the magnitude and seriousness of the challenge presented to the free world by the leaders of the Communist world is just as great as it was before these visits were announced.

I particularly want to direct my remarks today to those who have expressed concern over the wisdom of inviting Mr. Khrushchev to the United States. The motives which cause this concern are laudable ones. They are motives that all of us in this room share—patriotism, love of country, opposition to Communism and a well-justified suspicion of Communist tactics. I understand and respect the right of distinguished Americans like your speaker at tonight's dinner, Mr. George Meany, to express doubts as to the President's decision on this invitation.

And, while I disagree with Mr. Meany on some issues, may I say to you what I have said on previous occasions, that there is no more vigorous, articulate and effective opponent of communism in the United States than he is. The American trade union movement which he heads deserves the thanks of all the American people for the effective work it has done throughout the world in helping free trade unions to resist Communist infiltration and domination. I can testify from firsthand experience that in many of the countries that I have visited in Asia, Africa and South America I found that one of the strongest bulwarks against communism was a strong, free trade union movement.

Recognizing that there are plus and minus factors involved, I would like to state for you today the case for Mr. Khrushchev's visit to the United States. First, let's look at some hard facts.

The United States and the U.S.S.R. are the two strongest nations on the face of the earth, each possessing almost unbelievable destructive power. The fact that one intercontinental ballistic missile can travel the 5,000 miles between the United States and the U.S.S.R. in less than thirty minutes, carrying a warhead which has more destructive power than all the bombs dropped by both sides in World War II, is just one small indication of that strength.

There are differences between the United States and the U.S.S.R.—basic, deep differences of which the Berlin crisis is only one of many. If we fail to settle those differences at the conference table, the only other way to settle them is by a war which would destroy civilization as we know it. If our differences are to be settled at the conference table, we must talk with our opponents.

In the case of the Communist dictatorship of the U.S.S.R., only one man—Mr. Khrushchev—is the man to talk to. He has absolutely unlimited power to make decisions on these great issues. We can continue to talk to him by firing messages across the 5,000 miles which separate us and we may end up firing missiles at each other. I believe that if we are to talk it is better to do so across the table face to face so that the chance for misunderstanding will be reduced to a minimum.

But why bring him here, some may ask? Why not go someplace else to talk to him? Because this man who has greater uncontrolled power in his hands than any man in the history of the world, the power by his decision alone to set off a chain reaction which could start a world war, has some very dangerous delusions and misconceptions about the United States and its people.

He knows that we are militarily strong and that we are economically rich. But because he believes so fanatically in the Communist philosophy, despite everything he has heard to the contrary, he has convinced himself that the United States is a country seething with discontent, that millions of Americans live in poverty oppressed by the wealthy few, that a substantial number of our people do not support the President in his firm stand against Communist aggression. In a nutshell, consequently, these misconceptions lead him to conclude America has the strength but may lack the will to defend her vital interests.

I have seen and talked to Mr. Khrushchev. I am convinced that if he continues to believe what he presently believes about us we can only expect him to continue on his present course of reckless unilateral action like his precipitation of the Berlin crisis. And the risk we would be taking would be a war no one wants which would destroy civilization itself.

I am not suggesting that we should be so naive as to think that his visit to the United States will change his ideas about the relative merits of communism and our system of government.

But he will find that the overwhelming majority of the American people believe in their system just as deeply as he believes in his. That regardless of party we are united behind the President in our determination to defend our independence and that of other free nations with whom we are allied in the event of aggression. And that while the American people want peace, he should never mistake our dedication to peace for weakness, fear, or lack of determination to defend ourselves where our vital interests are attacked.

The peace we want is not the peace of surrender or appeasement but peace with justice. If Mr. Khrushchev has this lesson brought home to him by what he sees and hears in the United States, this visit will have been justified apart from the results of any conversations he may have with the President, because it will have reduced the possibility that he may miscalculate by underestimating our will to resist and thereby precipitate a crisis which could only result in war.

Now put yourself in the place of the President of the United States. It would be tempting for him to view this evil philosophy with scorn and detachment, to refuse to talk to and to meet its representatives except through the usual formal diplomatic channels. But I say that it would be the height of irresponsibility on the part of the President of the United States to take this posture, popular as it might be at the moment, and allow the world to continue to drift into two hostile camps and an inevitable, suicidal war.

In judging the merits of this visit, let me list some of the things that will not result from it.

There will be no acquiescence or approval by us of the status of the captive nations of eastern Europe. There will not be any change in the opposition of the government and people of the United States to communism at home or abroad. There will not be any reduction of U.S. military strength in the absence of self-enforcing disarmament agreements which we know will be kept by them as well as by us. There will be no negotiating on issues affecting our allies without their being present. And there will be no abandonment of our position that the 2,500,000 people of West Berlin must continue to be guaranteed the right to retain the free government which they have chosen by overwhelming vote.

In addition to providing Mr. Khrushchev a chance to see the United States and to know the truth about not only our military and economic strength but also the will and determination of the American people, it will provide an opportunity for him to discuss issues directly with President Eisenhower which affect the peace of the world.

Now I realize that there are those who object to such talks on the ground that they fear they may result in appeasement, surrender of some of our basic interests; some even suggest that Mr. Khrushchev may outwit, outsmart or trap the President and his associates.

To answer these charges bluntly, I think it is time for us to recognize that the Communists are not so smart and we are not so dumb as this kind of talk would imply.

The difficulty in the past has not been so much with what was agreed at the conference table but the fact that the Communists broke the agreements. This has occurred in the case of 50 out of 52 major treaties and agreements since 1933. But we can be sure this time that the President will have in mind the last Geneva Conference where Mr. Khrushchev failed to carry out the agreements on unification of Germany and other issues which they reached at that time.

The President is well aware of the fact that Communist subversion in the United States is still being financed and supported by the Communist Party of the Soviet Union.

And if there were ever any doubts that the President would not enter these talks with his guard up, the news from Laos has certainly laid them to rest. The support and the encouragement which the governments of the U.S.S.R. and Communist China have been giving to the rebels in that country have served to alert the whole free world to the fact that communism's drive for world domination continues without letup.

In other words, those who believe that this conference is going to result in appeasement, surrender, defensiveness and softness toward communism simply do not know the President of the United States.

We have learned a lot in our dealings with the Communists over the past few years. While we will always treat a guest in our country with courtesy, we know that charm, flattery, and gracious toasts have no effect whatever in changing the rigid positions of the Communists leaders. We have learned that in our meetings with them we have to be just as hard-headed, tough-minded and realistic as they are. This is an approach Mr. Khrushchev respects and understands and this is the kind of a man he will face in President Eisenhower.

There are some who say it was undignified for me to reply to Mr. Khrushchev in public when he attacked the United States and our policies when I was escorting him through the U.S. exhibition in Moscow.

My answer is that I, too, would prefer that important issues be discussed in a dignified private conference. But what we have to recognize is that we are engaged in a great battle of ideas with the Communist world. Mr. Khrushchev knows this well. He never misses an opportunity to make propaganda for the Communist way of life. And I say that it is time for us in the free world to quit being defensive, apologetic, and mealy-mouthed when our system comes under attack, publicly or privately.

We in the free world must stand up and fight for our ideas just as the Communists do for theirs. We have allowed too much to go unchallenged, the kind of talk that: the free nations are decadent, divided and weak. The only and best way to progress in the newly-developing countries is through communism. Communism rather than freedom is the wave of the future. The Communist leaders are too crafty and shrewd for us at the conference table. Their education system is superior to ours.

We have been on the defensive long enough. It is time for us to take the offensive and help make the whole world realize that the Communist idea is not a super idea; that the Communist leaders are not supermen; and that the Soviet Union is not a supernation.

We should not underestimate the deadly seriousness of the challenge which is presented to us because of the disciplined dedication of the Communist leaders. But let us not make the mistake of meeting that challenge with a negative, defeatist, static posture.

As the international spotlight shifts from long-distance threats to man-to-man conferences, we should be cautious. But caution is not the same as a paralyzing suspicion that prevents any move toward peace. Let us give the President our united and wholehearted support as he takes the leadership in the cause of peace with justice.

When Mr. Khrushchev challenges us to peaceful competition, let us go him one better and urge expansion of that competition to include the spiritual as well as the material aspects of our society. Let there be competition between ideas not only in the free world but in the Communist world as well.

We should welcome and encourage a greater exchange of persons and ideas between the free world and the Communist world. A free society thrives on free discussion, criticism, and interplay of ideas. On the other hand, dictators use fear, suspicion, and secrecy to maintain their power and control over the people.

When Mr. Khrushchev says that our grandchildren will live under communism, our answer should be—we do not fear the outcome provided they have the freedom to choose the system they want. We do not say in reply that his grandchildren will live under capitalism. The very essence of our belief is that we will not impose it on anyone else, and that every people should have a right to choose the kind of economic and political system which best fits its particular problems.

But this we do believe—that all the people on this earth, including those of the Soviet Union—will inevitably demand and obtain more and more freedom. Because history teaches us that man was made to be free and that freedom, not communism or any other form of dictatorship, is the wave of the future.

The Veterans of Foreign Wars can render invaluable service to the cause of peace and freedom to which we are all dedicated.

Let our answer to the aggressive tactics of world communism not be simply defensive, negative, and fearful. The best answer to the Communist revolution is the kind of life produced by the American Revolution. The most effective antidote to communism is a program of intelligent, articulate, positive Americanism.

Should Business Go in for Politics?

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid article which appeared in the New York Times magazine of August 30, 1959, entitled "Should Business Go in for Politics?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD BUSINESS GO IN FOR POLITICS?

(By Charles P. Taft)

CINCINNATI.—Americans read almost daily now that businessmen should go into politics. This has been said before, but not so often or so broadly. A few years ago, business leaders were being urged to work at the local political level. Now, every salaried employee in some companies is being called upon to select the party that best represents his point of view and work for that party in his neighborhood.

This sounds good, especially to one who has watched local groups seek businessman candidates for, say, the city council in such a well-governed and progressive city as Cincinnati. The task of finding candidates is harder every year, it seems. Perhaps, one thinks, this movement can help. But how civic is it?

Business has been in politics a long time. I have been told that at the end of the 17th century the sons of Robert Taft, a wheelwright, of Mendon, Mass., became selectmen of the town and worked hard to get a bridge built to the west over the Blackstone River—where, coincidentally no doubt, they owned some land.

Certainly the "robber barons" were in politics up to their ears, from Jim Fisk and Commodore Vanderbilt to the copper kings of Montana. Railroaders, liquor dealers, insurance men, shipping magnates, fair traders, and price discounters are only a few of the businessmen who have found it necessary to go to State legislatures and Congress. Makers of fire-department equipment, concrete and blacktop purveyors, clay-pipe manufacturers, road and building contractors all are concerned with who is mayor, city manager, councilman, or Governor.

Companies of any size have a troubleshooter, part or full time, who knows his way around in politics. He may also be the one who decides what campaign contribution is made to what politician by what officer—from his personal salary, of course.

Government regulation in the State or National Capital makes a common front essential to an industry. Government contracts may be the lifeblood of the business, as with most airframe companies. So trade associations grow and prosper, and larger companies have branch offices in Washington.

Then what is new about the business-into-politics movement? One thing is its scale. One nationally known corporation has trained a battalion of 500 executives to spread the gospel of company views on public issues. Another new element is that the present movement, upon examination, begins to assume some of the aspects of a public relations operation. There is even a New York advertising firm organized last year specifically to advise companies in this limited field.

Is all this good or bad? How far will it get?

There is a lot of sound thinking behind a program for a better business climate. A big local plant is usually a sitting duck for a rabble rouser on a city council. It shouldn't be; its intelligent leaders—and its employees on lower levels—ought to fight back.

But there is something wrong with the broad drive to get employees into politics. Even the political P.R. firm warns businessmen to look out. Democratic National Chairman Paul Butler, in a joint interview last May with THRUSTON B. MORTON, his Republican counterpart, said: "With * * * narrow purposes in mind they are going to end up alienating the general public, creating suspicion of the business community and doing a clumsy job of obtaining even their narrow objectives." And Mr. MORTON warned: "If businessmen are to achieve a maximum effectiveness in politics, they must work toward this goal as citizens rather than as spokesmen for, or representatives of, just one segment of our total economy."

Henry Kaiser and George Romney, both pretty good judges of sound business public relations, have stood against the whole idea of business telling its employees to go into politics—apparently for just the reasons Butler and MORTON gave.

That warning is sound. What is really self-interest, however justifiable, ought not to be blown up into civic spirit, and it ought to be advanced with some degree of attractive modesty and humility. What is good for General Motors is not necessarily good for the country, or the city.

A second thing wrong with the campaign is that it is, in fact, aimed at labor. This central motivation—to rival big labor and beat down labor organizations—is openly stated in many cases. An executive of a large corporation, in a speech to the Business Advisory Council last October, urged more vigorous political action by businessmen because of his personal appraisal of the AFL–CIO as the "most aggressive and successful force in politics." This power, he said, is "principally in the hands of other [than racketeer] union officials, who nevertheless put forth ideologies and proposals which result in inflation, concentration of power in central government, damage to progress, and withering of freedom." I cannot remember any endorsement of political participation by business not closely related to emotion about the labor problem.

You may ask why this campaign should not be aimed at labor. There are two good reasons.

One is that labor is not as effective at the polls or in Congress or the State legislatures as is assumed in this emotional reaction. The Taft-Hartley Act was passed by more than a two-thirds margin over President Truman's veto and the labor reform bill that recently passed the House was certainly not the one labor wanted. At the local level labor seldom really works for a candidate—only once since 1925 in Cincinnati, for example.

Labor can vote against when the issue is something like the right to work, and when people in general feel it is simply punitive, not constructive. And if labor comes out to vote on such an issue, it may knock off a candidate incidentally, as it did Senator John Bricker in Ohio last November. But although workers may get herded out to register, they do not vote as "labor." In fact, they do not vote much at all. Their local leaders have their hands too full with union politics to spend much time on local, State or national party politics.

The other reason against just opposing labor is that a wholly negative campaign, for all that it may be temporarily effective, does not work in the long pull. As Arthur Motley, the publisher of Parade magazine and a leader in the successful fight to elect Representative John V. Lindsay against the opposition of the Republican organization in New York's 17th district last November, has put it: "I can see no future for business and our kind of economy if we're merely going to have big business opposing big labor in the political arena."

This leads us to my third general objection to the business into politics campaign—the fact that it looks, and sometimes acts, as if it were against all progress. For example, an official of one of our largest corporations, active in the movement, has talked about "successful Republican candidates who were pulled far to the left in their campaign obligations and promises." The head of another company, located in New Jersey, which conducts one of these programs, has been reported organizing to prevent the renomination of CLIFFORD CASE as Senator from that State because his record is "indistinguishable from the Americans for Democratic Action." Yet CASE in 4 years is recorded as supporting President Eisenhower 85 percent of the time, compared with 83 percent for former Senator H. Alexander Smith.

There is an interesting schizophrenia here. The National Association of Manufacturers and the U.S. Chamber of Commerce are officially opposed to any program like public housing, and want urban renewal stopped or reduced rapidly. Yet many of their distinguished members belong to organizations in Pittsburgh, Cleveland, Cincinnati, Boston, or San Francisco which are the civic spark plugs for urban renewal as the only cure for the blight at the heart of practically every large city in America. In that connection they support public housing. They go to State capitals and to Washington and say so, while the NAM and chamber of commerce present resolutions to the contrary in the same places.

It may be argued that if businessmen want to go into politics to oppose labor, urban renewal, or Senator Case, that is their privilege. To this I answer that we are talking about politics, and that politics, as the art of the possible, is no place for anti-intellectual absolutism about economics and social sciences, or about individuals, either. I do not advocate compromise with principles, but I do mean that in these areas nobody knows all, that humility learns more than arrogance, and that an intelligent and honest opponent may have a little—just a little—in which he may be right.

My final objection to the "go into politics" movement is that it generally neglects local government where public servants provide us with streets, sewers, hospitals, police protection, water, and garbage disposal. Rather, the movement's sponsors back the local organization for supposedly doing the job for the Republican candidates for President, Senator, Congressman, or Governor. (Let us face it: These sponsors work with Democrats because they have to in most large cities, but they are all Republicans.)

The truth is that a local Republican organization does very little for the four named officials on the Republican ticket, especially if there is a real fight on. It is much more interested in the probate judge (surrogate in New York), the auditor (tax assessor), the sheriff, and the county commissioners.

My late brother, Senator Robert A. Taft, now highly revered by the organization in Cincinnati, always ran well behind those local officials, and it was not the Cincinnati or any other local organization that pulled him through for reelection in 1944 by just 17,000 out of well over 2 million votes in the State of Ohio.

Local government—good, efficient local government—is where any political movement ought to begin, especially when, as today, most national domestic issues, including labor corruption, have their roots there. And from local government, too, come those good candidates for national office whom this movement is looking for.

But few spokesmen for the movement even think of local government when they make their speeches. I heard a top corporation man describe the whole program to a president's round table of the American Management Association. When he had finished I asked if what he said applied (1) to local government, and (2) to a city with an independent local movement like our Cincinnati Charter Committee and (3) to places like Detroit or Dayton where the national parties take no part in local elections. (A poll taken last April showed that 60 percent of American cities with more than 50,000 population have no Republican or Democratic activities.) The answer was that, of course, the program applied there, too. I can only say there is very, very little in his company's literature to show it.

Yet there is much that business men could do in politics. They are urgently needed. Clearly, since I have been so critical, it is up to me to lay out some guide lines.

(1) One thing that business men are doing, and that they should do more of, is exemplified by the Cleveland Foundation, the Citizens Development Committee in Cincinnati and the Allegheny County group in Pittsburgh. These organizations back master plans for their areas, and help and encourage local officials of either party to carry these plans through. Their businessman members go to state capitals and Washington to help cut through red tape or get new legislation.

(2) Businessmen should take adult courses in economics, as members of the Committee for Economic Development do. Too many of the vocal ones rely on self-constituted research organizations that tell them what they want to hear instead of on professionally recognized groups like the National Bureau for Economic Research, the Brookings Institution or the National Industrial Conference Board.

(3) Businessmen ought to write their own speeches and do a lot of their own homework. They should practice persuasive speaking, seek critical comments on their technical proficiency. Few businessmen can stand up to comparable labor leaders, mostly for want of practice and training in both sound economics and public speaking.

(4) Businessmen who go into politics should learn first that the "pros" have no interest in their participation except as moneybags or fat cats, and perhaps as rubber stamps for the ticket.

To put it affirmatively, the place to begin is usually with a fight—against the organization—to get good candidates nominated and elected in both the party primary and the election. Talking about starting in the precincts of your own party organization is eyewash, because intelligent young businessmen are the last thing the local machine wants. It wants order takers who will produce votes for the slate at the primary. After that, of course, the voters probably have little choice.

This is not a sorehead's gripe. I can get myself elected in my home town against the organization. I have done it in 11 primary or general elections, and I have lost in only 3.

But my point is shown by the White Plains Republican primary fight of a couple of years ago, in which a group of insurgent beginners lost by only 1,000 votes in 20,000, and by last fall's victory for an antiorganization Republican congressional candidate in New York's 17th District. A group of young Republican businessmen has even analyzed the marginal districts around the country and set out to show, with some success, what a good plan can do, with good local leadership.

Every good American ought to be in politics, because through politics his Government

is run in a way that provides justice for his rights, and the services that make it possible to live as pleasantly as few in history have lived before. Businessmen can help make the word "politician" an honorable tag, even an intellectual tag, and have all kinds of fascinating fun doing it. But no one should fall for the canned slogan: "Join the party of your choice and start working in it at the precinct level (and, boy, let's sock these damned unions)."

Dedication of Stamps Commemorating the 100th Anniversary of the Petroleum Industry

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk made by Postmaster General Arthur E. Summerfield at the dedication ceremonies of the 4-cent petroleum industry centennial commemorative stamp at Titusville, Pa., August 27, 1959:

In my service as Postmaster General, no official act could give me greater pleasure than to dedicate this stamp commemorating the 100th anniversary of the petroleum industry.

The American people have great reason to be indebted to this industry. It has supplied most of the power that has made the American standard of living possible.

Certainly we in the Post Office Department can see most vividly the contribution this great industry has made to the progress of America.

The improvement of the postal service has depended upon the constant advance of this industry. The development of diesel oil for the railroads greatly speeded our transcontinental service. The development of better gasolines for trucks and airplanes was vital to the Post Office's ability to keep pace with the needs of our people.

Recently the fuel this industry has made possible for jet aircraft has enabled us to give the better and faster service we should render in these times.

But the industry does not stop with this, nor do we. The industry has developed fuels to power mighty missiles—and we have carried out our first experiment in missile mail. We shall look to the petroleum industry in the future to provide power that will enable mail-carrying missiles to speed communications from this continent to all parts of the earth.

In the light of today's progress, it is difficult to believe that it was only 100 years ago that Col. Edwin L. Drake completed the first oil well here in this historic city of Titusville.

It is not difficult, however, to understand the dedication, the sacrifice, the courage, and the tenacity with which Colonel Drake met his challenge. It was a fitting beginning for a great enterprise that has been marked throughout this century by courage, dedication, and success.

The American people, I am sure, applaud the words of a testimonial to Colonel Drake by his contemporaries:

"Edwin L. Drake was the man who first bored for oil, and by his genius and indomitable perseverance, produced the cheapest illuminator of the age, multiplying the wealth of the world, adding to the list of human industries and contributing to the comfort and happiness of mankind."

How very apt, as well, are the words of the centennial slogan of the petroleum industry—"Born in Freedom, Working for Progress."

The oil industry not only was born in freedom, but has been a vital guardian of American freedom through all the years that have ensued. It has been a basic strength in war, a propellant of economic progress—a builder of higher standards of living—in peace.

We look to this stamp as more than a commemorative symbol. With more than 120 million stamps to be issued, it will go throughout the world as a reminder of what can be achieved by the combination of free enterprise and the vision and courage and effort of dedicated men.

It will serve as a worldwide tribute to all who have brought the oil industry to its present greatness—and to its leaders who are moving with confidence to meet the challenge of the future.

It is a great privilege to inaugurate this commemorative stamp, here on the site of the oil industry's birth. This stamp, above all, bears the best wishes of the American people for the second century of oil and the contribution it will make to better life for all the peoples of the earth.

Civil Air Patrol Members Perform Valuable Services

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. YARBOROUGH. Mr. Prsident, the members of the Civil Air Patrol furnish good examples of good citizenship in action.

These people spend a great deal of their personal time and funds to prepare themselves to help others. They keep themselves ready for emergency work. Many people owe their lives to fast rescue work by the CAP. During the war, in unarmed light aircraft, they helped maintain a vigil around our country's coasts.

In addition, the CAP cadet program is one which helps our young people become more self-reliant, more responsible and better citizens.

A group of Texas CAP members recently conducted a simulated air search to keep in practice for the real thing. I ask unanimous consent to have printed in the Appendix of the RECORD, as a salute to these public-spirited citizens, an article from the Lubbock (Tex.) Avalanche-Journal for Saturday, August 29, 1959, entitled "All-Day Problem—Simulated Air Search in Area Slated by CAP."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALL-DAY PROBLEM—SIMULATED AIR SEARCH IN AREA SLATED BY CAP

Simulated search and rescue activities are planned in an annual SARCAP gathering here today of several squadrons of group 5 of the Civil Air Patrol.

Under direction of Air Force officers and making full use of both VHF and UHF radio communication with mobile units on the ground, fliers and their observers will accept a problem at 8 a.m. from an Air Force officer and will fly designated courses in various sectors of the area in an all-day exhibition.

DINNER PLANNED

A dinner program will be presented for group members at 8 p.m. today in Caprock Hotel. Col. Ben F. Lowell, commanding officer of the Texas wing, which has headquarters in Grand Prairie, will be here with perhaps five members of his staff.

Area embraced by the group is bounded by Lamesa to the south, the Oklahoma line on the north, the New Mexico line on the west, and the Wichita Falls area to the east.

Plainview is group 5 headquarters. Maj. Clayton Campbell is commanding officer. The group consists of Plainview, Amarillo, Borger, Dalhart, Muleshoe, Childress, and Lubbock squadrons.

Planes from each of those cities are expected to land before 8 a.m. on the landing strip at Abernathy. Air Force officers who present the problem to fliers and observers will grade them on flight, location of target, radio communication, landings and takeoffs, and the like.

MOBILE RADIO UNITS

The program, it is expected, will use 10 mobile radio units in the air and on the ground. Those in charge hope some planes will be here from other groups.

Out-of-Lubbock cadets and some senior members will be housed Saturday night at the RAFB bachelor officers' quarters, and Reese will provide transportation to and from Reese.

Expected to participate are about 50 cadets.

Lubbock squadron commander is 2d Lt. Noel Bryant. Operations officer is "Red" Branscum; executive officer, "Chuck" Hamilton; flight safety officer, Herb Pijan; communications officer, Ed Nettleton; flight plan officer, Clyde Myres; cadet commander, Lee Dex Vessels; and J. O. Woods is chairman of a committee planning the banquet.

Tenth Inter-American Conference: Appraisal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FLOOD. Mr. Speaker, an informative appraisal of the 10th Inter-American Conference recently held at Santiago, Chile, by Thayer Waldo, of Mexico, D. F., was recently published in various papers of the United States.

Mr. Waldo is a well-known correspondent and magazine writer on Latin America where he has spent all but 4 of the past 20 years.

The indicated appraisal, known as Continental Closeup No. 45, follows:

CONTINENTAL CLOSEUPS No. 45

(By Thayer Waldo)

(NOTE TO EDITORS.—Part of the following story is based on official and confidential reports shown to me.)

MEXICO CITY.—Put bluntly, what happened during the 6-day Conference of Foreign Ministers at Santiago, Chile, was that the

United States lost the initiative in dealing with pan-American affairs.

For the first time in the 70-year history of the inter-American system, our Government's representatives were outmaneuvered and outvoted on matters relating strictly to the Western Hemisphere.

As a symptom and byproduct of the new attitude, another significant precedent was set in Santiago. Never before has any U.S. Secretary of State heard from his Latin American colleagues such sharp criticism of this country's practices as Christian Herter sat through there.

Realistic appraisal of all action taken at the meeting shows, beyond question, a net victory for Cuba's Fidel Castro—the man who publicly branded conference deliberations "a farce."

That triumph—which included blocking any direct reference to Communist influence in the Caribbean turmoil, or to Cuba's part in recent invasions of other nearby countries—was personally engineered by Raul Roa, Castro's astute, demagogic Foreign Minister.

Roa operated from the start on the classic theory that a good offense is the best defense. The first man with whom he talked privately, after reaching Santiago, was Foreign Minister Miguel Moreno of Panama. The second was Victor Andrade, who holds the same post in Bolivia.

To Moreno, Roa offered an official but off-the-record apology for the fact that some Cubans participated in an attempt to overthrow Panamanian President Ernesto de la Guardia, last May.

Then he adroitly brought up the subject of Panama's longstanding complaint that U.S. authorities and contractors in the Canal Zone pay lower wages to native labor than to Americans performing the same type of work.

Roa said that Cuba fully supported Panama's position on this issue and pointed out that it should be taken up by the conference, which had a broad question of respect for human rights on its agenda.

No preambles or excuses were needed in conversing with Andrade. The Bolivian foreign minister is strongly anticapitalist and suspicious of many U.S. policies. The mere suggestion by Roa that Herter must be prevented from taking over the meeting was enough in that case.

As a result of these moves by the Cuban, Moreno and Andrade devoted a good part of their opening addresses to attacking Washington's broken promises and Wall Street imperialism, respectively.

Coupled with Roa's own flamboyant denunciations of Dominican Dictator Trujillo, these aggressive speeches set the mood of the conference. Even such relatively sober types as Brazil's Horacio Lafer and Diogenes Taboada of Argentina were caught up in the urge to let Uncle Sam have it.

The total effect can be seen clearly by comparing final resolutions approved at the assemblage with the main points made in Secretary Herter's major speech there.

Herter stressed the need for the Organization of American States to adopt more effective measures against intervention and to keep a closer eye on Red infiltration throughout the hemisphere.

In passing, he gave a warm verbal salute to representative democracy and cautiously acknowledged the relationship of economic problems to political instability.

But when the working committees got down to hammering out formal declarations on these issues, the emphasis was dramatically reversed. They gave solemn lipservice to the nonintervention principle by authorizing the Inter-American Peace Commission to look into all charges of aggression. They also went through the motions of rejecting communism and all other totalitarianisms.

Most of the serious labor, though, was devoted to drafting the Declaration of Santiago, which condemns dictatorships for their suppression of civic and human rights; and to calling for a study of economic underdevelopment as a threat to peace in the Americas.

Commissions set up to investigate these matters will report back to the big 11th Inter-American Conference scheduled for next February in Quito, Ecuador.

A few weeks before that gathering, the U.S. Senate Foreign Relations Subcommittee on Pan American Affairs, chairmaned by WAYNE MORSE of Oregon, is due to release its preliminary report.

Advance information indicates that this analysis is likely to provide new ammunition for critics of U.S. policy in Latin America since World War II, especially as regards our expenditures on military aid versus those for economic and technical assistance to the area.

And if the Eisenhower-Khrushchev exchange visits between now and then bring a real lessening of cold war tensions, we are apt to find ourselves facing something very like a full-scale revolt by our southern neighbors against what nearly all of them consider U.S. domination.

Only time will tell what, if anything, the Santiago conference accomplished toward restoring peace in the Caribbean. The one sure thing about it at this time is that a brand new era in the Americas was inaugurated there.

Program Sponsored by the Institute of Advanced Studies in the Theater Arts

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD articles from the New York Times of May 17 and July 12, regarding a program sponsored by the Institute of Advanced Studies in the Theater Arts. I think this is a splendid undertaking of the institute, and I congratulate the sponsors upon their foresight. I am sure the institute will make an important contribution for better relations with these respective countries.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, May 17, 1959]

ADVANCED STUDIES—WORLD-FAMOUS THEATER EXPERTS WILL TEACH HERE AT NEW INSTITUTE

(By Donald Lazere)

Next fall when plans are due to be completed, acting, staging, and designing techniques of such companies as the Old Vic, the Comédie Française, the Moscow Art Theater, and the Kabuki Theater will be directly accessible for study to theater professionals and students in New York.

Practicing experts from these and other famous world theaters will be brought to the United States especially to conduct workshops, seminars, and lectures at the newly chartered Institute for Advanced Studies in the Theater Arts.

Recently approved by the New York board of regents as a nonprofit, privately endowed school, the institute will be devoted to specialized studies in international theater and will be open to top American professionals and highly qualified students.

Those in charge of the project picture it as a theatrical equivalent to the Institute for Advanced Studies at Princeton—"a highly specialized institution where the finest minds in the world can be brought together with what we hope will be catalytic effects on our theater and those abroad."

THE TRUSTEES

Dr. John D. Mitchell and Miriam Pitcairn Mitchell are the founders of IASTA, as the school will be known. Dr. Mitchell, a former professor of theater arts at Manhattan College and Northwestern University was U.S. delegate to the 1953 and 1956 United Nations Economic, Scientific, and Cultural Organization's Congresses of the International Theater Institute. Mrs. Mitchell was one of the founders of the American Shakespeare Festival Theater at Stratford, Conn. Trustees of IASTA, in addition to Dr. and Mrs. Mitchell, are playwright Willian Ingre, John Wharton, a director and counsel for the Playwrights Co., and Rosamond Gilder, vice president of the International Theater Institute and board member of the American National Theater and Academy. Gala Ebin, previously affiliated with ANTA and the Theater Guild, has been appointed executive secretary.

Dr. and Mrs. Mitchell developed the idea of a school for high-level study of international theater during several years of travel throughout Europe and Asia.

"After talking theater with people in 50 countries," Dr. Mitchell says, "my wife and I have found that there is a great deal Americans can learn from the foreign stage. And theater people in other countries always want to find out more about contemporary American drama."

By providing foreign experts as teachers, he explains, IASTA will enable Americans to study worldwide theater theories, techniques and tools firsthand without having to go abroad. At the same time, foreign theater people who want to visit the United States but have been discouraged by currency blocks and other obstacles will have an opportunity to come here as guests of IASTA.

PUBLIC LECTURES

During IASTA's first year, an expert from each foreign theater represented will conduct a 6-week series of workshops and seminars for a small group of American professionals and advanced students, and in addition will deliver 4 to 6 lectures open to the public.

"In the workshops," Dr. Mitchell says, "each man gives the cream of his specialty. For example, a director from the Comédie Française might plunge right in directing a selected group of American actors in a Molière play exactly as it is done at the Comédie Française, except in the best American translations. Meanwhile, directors, playwrights, and designers sit in on rehearsals and, afterward, join the actors in presenting their questions and comments to the director in a seminar. His 6 weeks' course will be climaxed by a public presentation of the play.

"This will be the pattern for the first year's program, with variations of course, depending on each man's specialty. After the first year we hope to fan out and offer a choice of courses and approaches.

Dr. and Mrs. Mitchell currently are on the last leg of a 4½-month trip around the world and are due back early next month. The trip was devoted to completing arrangements to bring over at least four representatives from foreign theaters and acadamies for IASTA's first-year program.

[From the New York Times, July 12, 1959]

PROGRESS

Either November or January should see the start of the recently chartered Institute

for Advanced Studies in the Theater Arts. That is the word from founders Dr. John D. Mitchell and his wife, Miriam Pitcairn Mitchell, just returned from their 4½-month round-the-world tour in behalf of their project. The institute is designed to help American professionals enjoy the benefits of study with outstanding representatives of the world's leading theater cultures.

In addition to the Mitchells, William Inge, John F. Wharton and Roesamond Gilder are trustees. Foreign directors who have been invited to participate in the institute's initial year are Willie Schmidt (Germany), Yuri Zavadski (Soviet Union) and Jean Meyer (France). Representatives from Japan, Italy and Greece also are expected. In the case of Mr. Zavadski, a disciple of Stanislavsky and Meyerhold and for 16 years an actor with the Moscow Art Theater, the State Department would like to make an exchange. It would like to work out arrangements for one of our leading directors to go to Moscow.

Position of Congress on Public Works Appropriations Should Be Sustained

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. EVINS. Mr. Speaker, once again an effort of the Congress to meet the executive branch halfway on an important issue has been nullified by a Presidential veto—this time, the public works appropriations bill of 1960. In considering a vote on this veto we are faced once again with the question of how far the Congress should go in knuckling under to the Budget Bureau and the executive branch in the matter of determing the policies of this government.

The question at issue here between the Congress and the President is purely on a matter of policy. As we know, the bill as it was sent to the President's desk called for only a very slightly larger expenditure than the recommendations in the budget—an increase of approximately 3 percent. The President's objections to this bill appear to be based largely on the fact that the Congress has refused to accept the Budget Bureau's policy against new starts or even any new planning studies. The basic issue therefore is largely whether the Congress or the President shall determine the policy underlying the development of our water resources of the Nation.

The President, as we know, has guarded the prerogative of the Presidency. He has stated that he would not leave the White House with the powers of the President diminished. But, Mr. Speaker, Congress must guard its prerogatives also and no Congress would be living up to its constitutional responsibilities if it permitted its own powers to be diminished.

There are other good reasons why this veto should be overridden:

First. In rejecting the administration's "no new start" policy, the Congress did not act capriciously or hastily. Let me recall that the Public Works Appropriations Subcommittee spent many months taking testimony on this matter. It heard from some 1,200 witnesses, including the representatives of the Federal agencies and 243 Members of the Congress. The testimony filled four volumes and 4,222 pages of printed hearings. In the other body, the comparable committee also held extensive hearings and heard many witnesses.

The Appropriations Committees and the Congress has considered carefully and well this whole matter.

Second. The "no new starts" policy with which your appropriations Committee was faced when the budget was submitted to the Congress by the President is both unwise and unrealistic. If it were continued it would lead to a drying up of the water resources program of the Nation.

Third. Even more unrealistic is the policy restricting surveys and planning of new projects. It takes many years to make and complete intelligent and prudent surveys, and additional years for making plans for efficient projects. Stopping surveys and planning might very well lead us into a position where in a sudden emergency we would be forced into hurried surveys and planning where the possibilities for costly mistakes and errors would be greatly multiplied. Both the Corps of Engineers and the Bureau of Reclamation feel that this Nation should have new starts and an orderly, progressive, and efficient program of water resource development. The amounts budgeted for new surveys and planning in this bill this year are modest indeed and insure a continuation of construction on an orderly basis.

Fourth. We must look at our water resources program as a positive program to develop the resources of our country and to lay a foundation for the continued growth of every region of our country.

Fifth. This Nation cannot run a water resource development program on a "stop and go" basis. We must have an orderly and well-planned continuing program of surveys, of planning and construction. On this basis our country can go forward on a more economical and sound basis.

Sixth. With respect to the questioned construction projects added to this bill by the Congress there are five which resume construction of already started but not yet completed projects; there are four which are actually reimbursements to local interests for expenditures made by these local communities; and there are six which are small loan projects. So that there are actually only 50 completely new projects involving construction by the Federal Government. This is just one for each State. Surely, in view of the billions we are expending for projects abroad, these investments in the development of our own country cannot be considered extravagant.

Seventh. The bill is a good bill, a realistic bill, and a measure that faces up, not only to the present needs of our Nation for the development of our water resources, but also looks to and prepares for the future.

Eighth. It is a bill that insures that this great program of water-resources development which we have had under way for the past 25 years will continue in an orderly and uninterrupted program.

Ninth. It is a bill with a truly national point of view which recognizes the needs of every area of our country and the different types of programs needed in the different regions, and continues a well-balanced program that is truly in the interest of the entire Nation.

Tenth. In short, Mr. Speaker, the Congress in writing and passing this bill did a good job and responsible service. It should stand behind this bill now and see that the months of work which went into the writing of this bill will not have been in vain.

A vote to override the veto will sustain the prerogative of the Congress to establish the policy of our Nation.

Air Force Capt. Allan J. Lavelle, of Bonham, Tex., a Good Ambassador for America Abroad

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, September 1, 1959

Mr. YARBOROUGH. Mr. President, we have recently heard a lot of talk concerning the bad impression which some Americans give to people overseas.

It is, therefore, refreshing to learn of Americans like Air Force Capt. Allan J. Lavelle, of Bonham, Tex., Speaker SAM RAYBURN's hometown, who are doing a great deal to correct these unfortunate ideas of the United States and our people, created by some uninformed Americans abroad.

Captain Lavelle, assigned to the 6921st Radio Group in Japan has originated and put into operation a number of programs which have helped both the Air Force and the citizens of the area around his base. Men such as Captain Lavelle are a credit to their country and to the uniform they wear. And they help overcome the Communist propaganda tirade against us.

Mr. President, I would like to join with the 180,000 people of the Japanese prefecture, Saitama, and with the citizens of this country, near the airbase, in saluting Captain Lavelle. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Bonham (Tex.) Daily Favorite for Friday, August 28, 1959, entitled "Good Will Ambassador—Bonhamite Winning Japs as U.S. Friends."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD WILL AMBASSADOR—BONHAMITE WINNING JAPS AS U.S. FRIENDS

MISAWA AIRBASE, JAPAN.—The 6921st Radio Group Mobile at Misawa Airbase, Japan, can boast of a fabulous personality—Capt. Allan J. Lavelle from Bonham, Tex.

Violin maker, woodworker, artist, farmer, animal carver, tractor and airplane builder, information services officer, pilot, skywriter, interpreter, salvage diver, enlisted man and officer in both the Navy and Air Force and people-to-people ambassador of good will to thousands of Japanese citizens highlight his varied career.

He is best known in Saitama Prefecture when in 1953, upon end of his tour, a telegram in the names of 180,000 people of that prefecture asked President Eisenhower to please keep Captain Lavelle in Japan, for he is the strongest link in the United States-Japan cooperation in this section of Japan. Everyone is praying he stays.

Captain Lavelle personally received 20,000 letters from Japanese people asking him to stay in Japan.

What did he do to warrant this? He simply embarked upon his own program of helping and making friends with all Japanese he came into contact with.

His ability to speak fluent Japanese enabled him to get close to the people. He listened to the little man's problems, established the American-Japanese Cooperative Councils and acted as interpreter.

A nearby farmer's tea crop was being ruined by dust from American military vehicles so Captain Levelle made arrangements to have waste oil poured frequently on the road to eliminate that problem.

He got permission for local farmers to pick up the Air Base's garbage to use for hog feed and thereby created jobs. He helped the Japanese Red Cross and other charitable drives by allowing them to solicit on base which gained thousands of dollars for them to mention a few of his unselfish acts.

As he later said, "The Japanese people can really determine the way the Far East eventually will go in this struggle with communism. I want them to be on our side."

Why Khrushchev Wants To Come to the United States

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. LANE. Mr. Speaker, Americans are baffled and irritated by the strange spectacle of our "split personality" foreign policy.

With one voice it warns: "Don't expect the Communists to let up in their campaign to conquer the world." With the other voice it tranquilizes: "Be nice to 'killer' Khrushchev. Treat him as our honored guest."

This deliberate blurring of the distinction between right and wrong, brought about by the strange melange of failure, fear, and aggressive good will, emphasizes the need for a constant restatement of those truths that must be above expediency. They constitute our only sure guide through the present confusions.

Lest we forget, under unanimous consent, I include for reprint in the RECORD, the clear, courageous, and determined opposition to the invitation to Khrushchev expressed by His Eminence Richard Cardinal Cushing, of Boston, in the August 30 issue of the Boston Sunday Globe.

CARDINAL CUSHING EXPLAINS WHY KHRUSHCHEV WANTS SO BADLY TO COME TO THE UNITED STATES—"THROWS MANTLE OF RESPECTABILITY AROUND SHOULDERS"

(By Richard Cardinal Cushing, of Boston)

If there were any doubt of the need for the average American to engage in the intelligent and vigorous battle against Soviet, atheistic communism, that doubt is permanently removed by the coming visit of Dictator Khrushchev to this country.

Already we have witnessed the evil fruits of that coming, before this bloody dictator has set foot on our shores.

Once more history records that the United States has been outwitted by the Kremlin—or rather, outrageously deceived.

This is recorded in the continued cutting down of the free world, the new betrayal of free peoples into Soviet hands, and the continued expansion of Soviet power—all centered around the Khrushchev visit.

While the American Nation is warmly welcoming the Butcher of Budapest, although his hands are red with the blood of the Hungarian and Tibetan peoples, the Kremlin is attacking the United States and the free world through southeast Asia.

While we will be hailing this enemy of freedom in our cities and streets, he has engineered the invasion of the little country of Laos as the prelude to taking over all that part of the world.

The Khrushchev visit is a device which is bringing about the contraction of the free world and with it the cutting down of the number of men and women who dare openly to express their belief in God. It is speeding up the enslavement of the little man throughout the world.

If we are to permit this process to go forward, as we have done for the past 25 years, it will lead to complete defeat.

Why does Khrushchev want so badly to come to the United States?

There are a number of reasons for this desire.

We can immediately single out three:

First, by this invitation, the U.S. Government officially throws the mantle of political respectability around the shoulders of the man who so outrageously double-crossed the Hungarian people in the streets of Budapest.

The natural deduction from our embrace of Khrushchev among the peoples of the world, especially among the captive people who hear only the Soviet side of the story, will be that we have finally turned our backs on all the enslaved behind the Iron Curtain. This conception will be intensified by the flood of Red propaganda going to the comrades of the world, including those of the captive nations, designed to make it appear that Hungary and these other enslaved countries are permanent parts of the Soviet empire.

We must remember that this form of poisonous propaganda—intended to make the inhabitants of the captive nations despair, goes on in regard to Poland, China, and all the other countries behind the Iron Curtain. It is driven home by the Kremlin in every one of the 83 countries in which it operates today.

A considerable section of the population of those countries will be under the impression that the United States has indorsed all the savage acts of the Kremlin by its cordial reception of Khrushchev.

Second, along with the political respectability which Khrushchev thus attains, he is at the same time able by his visit to give new life to the already virulent forces of appeasement and sedition within the free world, and specifically within the United States.

Already the Worker of August 9, in hailing the coming of its master as a great Red victory over the United States, pointed out that it was necessary to go on to the overthrow of our "present system" here if real peace were to be attained.

We can see even now that among some distinguished men who are noted for their appeasement tendencies that they have tried to rush to Khrushchev's defense on the Laos crisis. They have lamely sought to make out that the attack on Laos is the act of Red China and North Vietnam only. But this cannot obscure the strong and official endorsement of this attack by the Soviet Government, accompanied by the usual charge that the U.S. Government (so hospitable to Khrushchev) is behind the whole difficulty there.

This strengthening of the appeasement forces within this country and all the free world is supplemented by the inevitable new attempt to split the nations of the Western world. By permitting bilateral contacts between our Government and Khrushchev, we have opened the Pandora box to Soviet bids to every free nation, large and small, to deal with Moscow on a separate basis from the rest of the West.

This is well illustrated by the present overture made to France, where Khrushchev would receive a wild and tumultuous greeting from the millions of Communists who follow the Kremlin's directions.

And thus it is that inviting Khrushchev to come to this country we are digging our own graves and honoring our prospective gravedigger. For we are enacting the amazing historical scene of acclaiming the man who frankly says that he intends to bury us.

And that fate will eventually be ours out of this visit unless we take immediate steps, each and every American, to halt this process of disintegration in our policies which is leading to our doom.

Third, a chief result from the visit hoped for by the Soviet dictator is the trapping of our big business circles into the expansion of trade with all Soviet-controlled countries which are more and more acting as one big economic unit.

This was one of the main objectives stressed by the 21st Congress of the Communist Party of the Soviet Union held this last January, and is therefore an outstanding feature of the current Communist line.

By this act, if we agree to this procedure, we will once again commit ourselves to the building up of Soviet power so that it may destroy us.

We will also open the doors fully to the free functioning of Soviet espionage agents in this country. With the Soviet dictatorship, trade and good relations are always accompanied by political, military, and industrial espionage.

It is astounding that the Kremlin and its agents think that they can put over this proposal on American business and the American Nation when it entails an endorsement of trade in slave labor products. We have laws in all our States, built up after terrific effort, to prevent the sale of convict labor products on the open market. These acts were passed for the protection of our own highly paid and able, free workers. By one blow, in consenting to widespread trade with nations that engage in extensive

slave labor, we would in effect destroy all of this legislation.

It is encouraging to learn that the national organization of the AFL–CIO has shown itself alert to the danger which would follow from any relationship (including trade) with Soviet Russia and Khrushchev.

We can all be pleased to note that the executive council of that great labor federation on August 20 declared by overwhelming vote that it is "out of the question for the AFL–CIO to give recognition to the head of a government which does not permit its own workers to have any free trade unions."

We hope that American big business circles, which were wooed so openly by Khrushchev's agents, A. Mikoyan and F. Kozlov, will demonstrate the same fortitude and foresight by rejecting all trade with the Soviet slave empire.

Such alleged trade will prove largely to be synthetic so far as America is concerned. This was shown clearly in the 1930's, when such trade was attempted on a considerable scale; then it proved, as it will again, to be illusory in the sense that it merely consisted in Soviet purchase of samples of our machines and precision tools, for duplication in Soviet Russia.

Confronted with all the difficulties and dangers that Dictator Khrushchev's visit to our country raises up for us, the average American can here and now rededicate himself to zealous work for the salvation of his country.

There is no one, absolutely no one, who cannot take part in this crusade in one way or another.

Above all, of course, all our efforts on behalf of the United States and our own freedom should be sanctified and strengthened by prayer.

That is why I have recommended novenas to begin on September 15, including prayers for the silent church behind the Iron and Bamboo Curtains, and to Our Lady of Fatima. That is the beginning of wisdom in the battle against atheistic communism. If we are to live in freedom and walk without fear of the coming catacombs, we must begin to practice that great right which still remains ours: The right to express publicly and in group worship our faith and belief in God.

Everyone, every man and woman, can within the environment in which he lives and labors let all his neighbors know that appeasement in any form leads step by step to the shrinking of the free world and the constant closing in of Soviet power upon the United States.

That was Stalin's pledge in 1939, now renewed in effect by Khrushchev: To encircle the United States and at the proper hour thus to destroy it.

Look at the map of the world just before World War II and look at it today, and we will be made aware that country after country has fallen under Soviet power. All of this has been done in the name of "peace" and all of it has been attained by Soviet Russia in bringing about acquiescence by the United States in these Soviet conquests.

Each step along this way was achieved by Soviet power under the plea that we should live in a friendly way together, by bringing forward the fake Stalin constitution of 1936, as an instance. We fell for that completely, for Stalin's pretension that he was guaranteeing "freedom of speech," "freedom of press," "freedom of worship," "freedom of demonstration."

But by 1956, to serve his own purposes, Khrushchev let the world know that none of these promises had been kept, that under cover of these pledges one of the most horrible reigns of terror in the history of the world had been carried on.

Then Khrushchev himself proceeded to deceive us with his glib talk of collective leadership and the new turn of affairs in Soviet control, to the point where we were induced to look on helplessly while the Hungarian and Tibetan people were massacred in cold blood, and while the right to worship was restricted and in fact obliterated in China and many other lands.

The much-heralded collective leadership that Khrushchev spoke so loudly about proved to be his own rule as the new Stalin.

It was by similar deceit that we were led to Geneva in 1955, and while we were debating there Soviet Russia made its breakthrough in the Middle East.

But apparently we had learned very little or we who had learned did not express ourselves strongly enough, for we fell victims to the same game by going to Geneva in 1959.

Then, while our representatives were again engaged in endless and fruitless discussions, Soviet power made its great thrust through southeast Asia by way of Laos.

Having this experience in mind, the average American can oppose at once—among his neighbors, in organizations to which he belongs, in any other way that he can express himself—any concession whatsoever to Soviet Russia.

It will not be possible for him, even in exercising his rights as a citizen, to become a thorough student of the Marxist-Leninist classics—the teachings of Marx, Engels, Lenin, Stalin, Mao Tse-tung, and Khrushchev.

He can know, however, that these teachings—as the expression of a world view—hold that there can be no peace with the United States until we are completely destroyed.

He can know that this philosophy holds that there must be set up a world Soviet dictatorship, and that every act of the Kremlin and every act of its followers, every hour of every day, is for the purpose of advancing that objective.

He can know that this goal must be advanced by guile as well as force.

Knowing that, he can in his own way stand out against any further friendship with Soviet Russia or any Soviet power until the invasion of southeast Asia is halted permanently.

He can also continue to hammer home the necessity of expelling Red Hungary from the United Nations. With this can go a reiteration of the necessity for refusing to recognize Red China or to admit it to the U.N.

Within America, he can also stress that we must end our namby-pamby, careless policy toward the Communist conspirators in our midst and urge Congress to enact legislation which will protect us and our freedom.

If one reads the press through the country, it is most encouraging to note how many Americans have written letters to their local newspapers expressing opposition to the Khrushchev visit. It is more encouraging to observe how intelligent many of these letters have been.

That development gives us an indication of what the average American can do if he is spurred to understand one fundamental thing: That Soviet Russia, from its very foundation-philosophy, is determined to destroy him, his family, his liberty, and his right to worship God.

Depletion Rate Is Major Factor in Oil's Success

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oil Daily of Thursday, August 27, 1959:

DEPLETION RATE IS MAJOR FACTOR IN OIL'S SUCCESS

This simple explanation of oil depletion, by a leading authority, Russell B. Brown, general counsel for the Independent Petroleum Association of America for 30 years, will be understandable to readers in the year 2000 A.D.—(EDITOR.)

Among the many complexities presented to Congress by the adoption of the 16th amendment to the Constitution of the United States, which gave Congress authority to tax incomes, there was probably none more difficult of solution than providing a fair basis of taxation for the extractive industries and oil in particular.

Obviously, the total take or total value of sales from products or services was not a fair basis for determining taxable income.

Somewhere between total income and zero was a figure that should represent taxable income, else taxes could destroy all business.

A series of deductions was provided. The difference between total income and allowed deductions should provide a real approach to profit and profit was the nearest approach to taxable income under the amendment.

Since Congress was not given authority to tax capital by this amendment, capital must be preserved free of income tax.

Whatever part of total income represented capital return should be provided for in the deductions. The cost of material used in the process of manufacturing or of goods sold should provide another deduction. The cost of doing business or operations is another.

In the case of a manufacturing industry, the cost of the plant and equipment and the probable life of the plant and equipment were capable of mathematical determination and were provided for through depreciation whereby the capital was returned annually distributed so as to return the capital by the time of the exhaustion of the plant. While never quite exact, this system provided a reasonably accurate base for deduction.

The cost of raw material used in the factory and the cost of operating the plant varied from time to time. Therefore, a deduction was allowed based on the actual cost.

In the case of merchandising or service, the cost of goods sold usually constituted the largest deduction, to which was added depreciation for property used and the cost of services rendered.

These deductions subtracted from total income provided net income to be used as the basis of determining taxable income.

In the case of an oil well, the well itself provided little base for capital values. The cost of the well rarely provided an accurate basis of value as capital to which the depreciation principle might apply.

An oil well is not a factory or plant. It is in effect a highway through which oil may be moved from its source to the surface where the processing for use begins.

Two wells of equal cost normally provided varied amounts of income. An expensive well might pentrate a rich deposit of oil or a poor one. The formation penetrated might release the oil rapidly or slowly, depending on the character of the producing formation. All of the recoverable oil might be produced in a few years, such as 1 or 2 years, or it might be a long period such as 40 or 50 years. But once produced and used this oil was gone forever.

The courts have recognized the "ferae naturae" of oil in place, which meant that oil belonged to no one until reduced to possession.

The fugacious character of oil meant that owning land under which an oil-producing horizon existed did not always mean that you could reduce all of that oil to possession. Operating conditions and practices

often gave to an adjoining landowner a larger portion of the oil than originally was in place under the adjoining land. By this method, properties were drained disproportionately.

The nature of land titles in the United States gives to the owner of the surface the right to explore for and reduce to possession the minerals beneath his soil. This has probably contributed more to the successful search and finding of oil than any single condition. At the same time, it required constant alertness and action to preserve these inherent rights. The "law of capture" made necessary conservation laws to protect these rights.

These and many other differences in the character of the business of producing oil required a treatment in our tax laws that was different from the factory or the merchandising establishment. It required much study and experimentation by Congress and by the tax authorities and administrators to develop an understanding of these characteristics in oil production which required "differential" treatment of this activity in our tax laws.

After much study and experimentation, Congress in 1926 adopted the principle of allowing as a deduction from gross receipts a percentage of such receipts as a method of determining that part of income that should not be subject to the application of income tax.

This new method simplified tax administration and provided equitable treatment to all producers and was welcomed by government and taxpayer alike.

At the same time, Congress provided, in the case of oil production, that the rate of deduction should be 27.5 percent of the income from the property not to exceed 50 percent of the net income.

This method and the amount were not the result of an exact mathematical experience.

They were arrived at by Congress after long study. It was intended to provide a reasonable basis for taxation that would encourage entry into this business, which was recognized to be a risky and hazardous business, of enough capital and operators to insure activities that would find enough oil to meet the expanding industry of our Nation as well as to provide oil necessary to our national security.

To insure the continuous competition of the many individuals and companies, large and small, that would avoid monopoly of this essential resource by a few aggregations of wealth, the Treasury Department provided, by regulation, for allowing deduction from other income for loss through dry holes of the cost of such dry holes and for the intangible expenses in the year in which such expense occurred. This later provision, after about 30 years experimentation, was adopted into law by Congress in the Internal Revenue Code of 1954.

These provisions have now been in our tax laws for more than 30 years. They are no longer an experiment.

Wise mineral tax policies have been a major factor in the success of finding and development of this Nation's oil resources. Finding and producing of adequate supplies of petroleum have brought forth a new and dynamic era that has made possible yet unknown heights in the productivity and standard of living of the United States.

Petroleum has opened up new sources of national wealth that have contributed greatly to both the areas where oil has been found and also to the width and breath of the entire national enocomy. Petroleum can be credited with providing at low cost the energy supplies and raw materials which have made and are continuing to make more and better things for more people.

The industry has accomplished this feat while paying its fair share of the cost of government and has not inordinately profited.

Why Not Tell Me Face to Face?—That Is the True American Way

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend by remarks in the RECORD, I will include a letter I have written to a number of people in the Seventh Congressional District of Iowa which I have the honor to represent. This letter relates to certain unwarranted criticism by the Governor of Iowa of the position I have taken through the years on Federal appropriations for public works projects, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 27, 1959.

DEAR FRIEND: On last May 7 Herschel Loveless, Governor of the great State of Iowa, had a prepared statement read by another at a hearing of the House Public Works Appropriations Committee, of which I am the top Republican member. In that statement he listed six other States which had received more funds for public works than had the State of Iowa—for which he blamed Iowa Congressmen—but he failed to state that Iowa had received over the past years more public funds for flood control, river bank stabilization, soil conservation and valley watershed projects than had other States of the Union.

Congressman CARTER, of Iowa, a Democrat, was present at that hearing to testify in favor of several Iowa projects, and he heard the Governor's statement read—after which, he had this to say in part:

"Mr. CARTER. I want to make a record here expressing my personal gratitude as the Representative of the Fourth Congressional District to my friend, BEN JENSEN, whose district joins mine, for his efforts in behalf of the great Commonwealth of Iowa in this respect. He knows what he is talking about, and knows what he is doing." See page 1618 of the hearings.

Then on June 19 last, Mr. Loveless had another prepared statement submitted by another person to the Senate Public Works Committee of Appropriations. He saw fit to severely criticize me without naming me—but it is crystal clear he meant none other than BEN F. JENSEN. He criticized my speech of May 4, in which I exposed a well organized group of Communists and Socialists in the U.S.A., who planned and schemed for years to get control of our entire Government by establishing River Valley Authorities patterned after the Tennessee Valley Authority. In Mr. Loveless' prepared statement to that committee, and I quote in part from the hearings, page 257: "Recently a Member of Congress from Iowa has attacked the power programs of the Federal Government, which have been made possible by money appropriated by Congress. While he included all the Federal programs in his attack, he was especially vitriolic in his attack on TVA. As Governor of his State, I wish expressly to disassociate myself from his remarks. I am positive that he does not speak for the people of Iowa." Please find herewith enclosed my speech of May 4, which Mr. Loveless referred. I trust you will read every word, then decide for yourself which of us speaks best for the people of Iowa.

A number of Members of Congress, all senior to me in service, have told me that they had never known of a Governor of any State submitting a statement, or making a statement in person, to any committee of Congress critical of a Member of Congress from his own State. Such a performance was new to them. Hence, the Governor of the great State of Iowa has established some kind of a new record.

Facts are, that I have supported such federally financed projects as could be justified, and I have opposed such federally financed projects which it was plain to see could not be justified by facts and figures.

In Mr. Loveless' prepared statement to the Senate committee, he inferred that Iowa Congressmen should support the Public Works projects for all other States in order that Congressmen from other States would support Iowa projects. Had the House Public Works Appropriations Committee approved funds for all projects requested by 243 Members of Congress who appeared before our committee this session, along with 1150 interested people from every State in the Union, our Public Works Appropriations bill would have called for an expenditure of over $2½ billion instead of a little $1⅛ billion, which was the exact amount requested by President Eisenhower.

In closing may I say to you, it has afforded me no pleasure to write this letter, but I am sure the people of the Seventh Iowa District, whom I have the honor to represent in Congress, would expect me to state these facts in order to set the record straight.

Sincerely yours,

BEN F. JENSEN.

Now, Mr. Speaker, I also wish to make reference to the action of our colleague from the State of Tennessee [Mr. EVINS] in inserting in the Appendix of the CONGRESSIONAL RECORD for August 17, 1959, a statement that was highly critical of me and which included a reference to Governor Loveless' attack on me. Congressional courtesy requires that a Member be informed in advance if a personal attack or criticism is to be made by another Member, either on the floor of the House or through an insertion in the Appendix of the RECORD. Why not tell me face to face?

"What is in the heart, let the mouth speak." Thus was I taught by my parents. Because I have spoken out against the things which in my heart I believe to be contrary to the welfare of our beloved country, I have been attacked as an extremist and accused of being intemperate with respect to my contention that TVA is a socialistic autocratic empire within our free Republic.

On August 10, 1959, under permission to extend my remarks in the RECORD, I included excerpts from a newsletter of August 9, 1959, written by Mr. Thurman Sensing, executive vice president of the Southern States Industrial Council, of Nashville, Tenn. This Tennessean, Mr. Sensing, is fully aware of the socialistic nature of the TVA, notwithstanding the statements to the contrary by Mr. EVINS or any other apologist for the TVA.

It is to be noted that Mr. EVINS made no reference whatsoever to the statements of Mr. Sensing, of Nashville, Tenn., located right in the heart of the TVA area, even though Mr. Sensing's statements were the basis for my remarks. It was this Tennesseean who, with firsthand knowledge of the operations of TVA, said that—

A Senator has written the President a letter urging him by all means to have Mr. Khrushchev include a survey of the TVA in his tour of the United States. Well, if the thought is to make him feel at home, we should say that is a pretty good idea—

because he will certainly find no free enterprise there. But what is Mr. Khrushchev himself to think, when we parade the TVA before him with pride, than that we are already aping his philosophy of state ownership and state control—and that we are already on our way toward making his prophecy about our grandchildren come true? We all want peace, yes; but must we obtain it at the expense of consorting with Communists and by the loss of our self-respect?

The prophecy referred to by Mr. Sensing was the Khrushchev statement that our grandchildren would be living under socialism.

Now I have no apologies whatsoever for my contentions that TVA is a socialistic autocratic empire within our free Republic; but I do think that Mr. EVINS might have let his readers know that the thought that Khrushchev would feel at home in making a survey of the TVA was not mine but originated in the TVA area itself.

The realization that TVA is socialistic is not a recent one. Speakers on the floor of the House at the time the original TVA bill was passed in 1933 referred to it in terms such as these:

Representative RICH. It is socialism and Russianism on a gigantic scale.

Representative EATON. This bill, and every bill like it is, is simply an attempt to graft on our American system the Russian idea and make the Government everything and the citizen nothing.

And upon its passage, Norman Thomas, the perennial socialistic candidate for President, so aptly described TVA as "the only genuinely socialistic act in the New Deal—a flower in the midst of weeds."

Nor am I alone in the thought that TVA has not been the blessing TVA and its proponents would have us believe. An outspoken editor of a newspaper published at Tupelo, Miss., in the TVA area itself had this to say after 20 years of TVA:

The time has come for TVA to back up and admit that the fastest growth in the South actually has taken place outside the TVA area and we who live within its borders are still as a whole just about the poorest people in America.

This of course would be quite true. For with the exception of giant projects like the Oak Ridge atomic energy plant that Uncle Sam has plunked down in Tennessee, the TVA area has shown less rapid industrial growth than several other portions of the South.

And in income, the TVA area is still dollar for dollar further behind the national average than it was in 1933 when the Tennessee Valley Authority was first established.

Mr. EVINS says if Mr. Khrushchev is invited to visit Tennessee, that his people will proudly show TVA to him—the world's greatest example of water resource development—where floods have been harnessed, navigation and commerce promoted, and where great hydroelectric power dams produce low-cost electricity for sale to the people and for the defense of our country."

Will Mr. EVINS and his fellow Tennesseans tell Mr. Khrushchev that the harnessing of the floods was done by permanently flooding hundreds of thousands of acres of the finest land in Tennessee, an action which a president of the University of Tennessee protested long and loud? Will Mr. Khrushchev be told that the so-called low-cost electricity was made possible only through a subsidy by the taxpayers of the Nation, who have furnished in round figures $2 billion—interest free and Federal tax free—for the construction of the TVA dams and powerplants? Will Mr. Khrushchev be told that the TVA, while claiming credit for pioneering farm electrification, for nearly 20 years consistently lagged behind the country as a whole in the percentage of farms electrified? Will it be pointed out to Mr. Khrushchev that only a few years ago a TVA spokesman admitted only one out of four farms in the TVA area had running water? This compares with a national average of more than double the TVA area, with a number of States in which more than 9 out of 10 of the farms have running water.

Mr. EVINS denounces what he refers to as the implications in my remarks of August 11, 1959 to the effect that the people of Tennessee are accepting and living with a communistic institution in their midst; that those who voted for, and the President who signed the recent revisions of the TVA Act, indicated acceptance of communistic ideas by such action. Of course, Mr. EVINS is free to read whatever implications he wants to into my statement or anyone else's statement in the CONGRESSIONAL RECORD; but that does not make his interpretation a valid one. The record over the years of the TVA—from its inception in 1933 as a navigation and flood-control project with incidental development of electric power, to its present day growth into a gigantic autocratic electric power empire—is one of progressive usurpation of powers which TVA itself contended earlier it did not have nor contemplate. That the Congress later condoned such progressive usurpation of powers, over the years, does not make it right nor change the socialistic nature of TVA.

I did not say TVA was communistic, but if Mr. EVINS or anyone else believes there is so little difference between socialism and communism that they are inclined to treat the two as synonymous, that is their privilege. I would have to agree that there is not a great difference between the two. Socialism destroys freedom by degrees, communism kills freedom by one death blow.

Mr. EVINS in a reference to visits of Russian Communists to farms in the State of Iowa appears to classify the individualistic free enterprise of farming in Iowa with that of the socialistic power program of the TVA. Nothing could be farther apart. I am sure the people in my district realize that a farmer in Iowa who pays Federal taxes and who buys his own farm and provides for his own farm machinery, stock and other operating costs, with his own funds or funds borrowed from a bank, could not compete in the marketplace with a farmer who pays no Federal tax and who is furnished interest free Federal funds to buy his farm and to provide the capital to operate it. To say that this same comparable sort of program under which TVA has been operating is not socialistic is to deny Webster's or any other universal definition of socialism.

Mr. EVINS charges that I do a disservice to the people of Iowa when I point out the dangers of letting socialism—as exemplified in TVA—spread to the other river basins in the Nation. May I assure my colleague that an overwhelming majority of the people of Iowa back my stand against the expansion of socialism, which poses a constant threat to our great Nation and to individual freedom—the statements of Mr. EVINS and the Governor of Iowa notwithstanding.

Thousands of patriotic Americans from every section of the United States of America have requested a copy of my speech of May 4 last entitled "The Power Not To Tax Is Also the Power To Destroy—Socialism or Freedom for America." Because of this great demand, I now have a supply on hand and will be pleased to send a copy to anyone requesting same. I can assure you the reading of this speech will open the eyes of any patriotic American.

Mr. Speaker, this is not the first time an attempt has been made to ridicule me for being a conservative. I am proud to admit that I believe in being conservative with the inherent constitutional liberties of the American people and with the taxpayers' hard-earned dollars. I also believe each section of our great Nation should pay its fair share of the cost of government in keeping with the constitutional requirement. And that the Federal Government should not be called upon to provide for those services for which the people can provide for themselves.

If believing in and fighting for the Constitution of the United States and the individual freedoms which it provides is being an extremist, then I plead guilty to the charge. If belief in the American principle of free enterprise which has made this Nation great makes an extremist of me, as Mr. EVINS charges, then I plead guilty to the charge before man and God.

Mr. Speaker, I think it is better to be an extremist in the defense of the Constitution and the freedoms and principles for which it stands than to be a modern liberal. The American people have long ago correctly defined a modern liberal as one who is liberal with the people's inherent liberties and liberal with the taxpayers' hard-earned dollars and who desires the creation of an all-powerful autocratic central government which will look out for us from the cradle to the grave. Whether you call it socialism or some other name matters not. In my estimation it is contrary to the constitutional rights and principles upon which this great Nation was founded.

In regard to the recent passage of the so-called TVA bond bill which Mr. EVINS referred to, it is of interest to note that the entire Republican membership of the House Public Works Committee voted against reporting the bill out of

the committee. And in the vote on final passage of this bill, 138 Republican Congressmen were joined by 32 Democrats in voting against passage. Only seven Republicans voted for passage. It can be seen that I am not alone by a long shot in my opposition to giving TVA practically unlimited power to operate without proper executive and congressional control. For those who think TVA is under proper control, I should like to end my statement with a quote from a recent issue of the Congressional Quarterly:

A TVA spokesman said TVA would not be bound to follow any recommendations that the President made about its expansion plans.

Dangerous Situation Developing in the Caribbean

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FLOOD. Mr. Speaker, a forthright editorial in the August 25, 1959, issue of the Hopewell News, of Hopewell, Va., emphasizes the dangerous situation now developing to the south of the United States in the Caribbean. Its statements attributed to me were made in an address by me on "Storm Clouds Over the Caribbean" on August 24, 1959, at Reading, Pa., before the Patriotic Order of Sons of America of Pennsylvania, which was quoted by Representative FRANCIS E. WALTER in his address to the House of Representatives on August 26, 1959.

The indicated editorial and an accompanying newsstory by Sam Fogg, of United Press International, follow:

[From the Hopewell (Va.) News, Aug. 25, 1959]

DANGEROUS SITUATION IS DEVELOPING IN CARIBBEAN

The International Communist conspiracy has been stirring up trouble in South and Central America and the Caribbean area for a long time. But right now they seem to be having more success than usual.

Apparently something new has been added. We call your attention to the article on this page today by Sam Fogg of United Press International. According to this the Chinese Communist are now active in the Caribbean area, as well as Central and South America.

The foothold that the Communists have secured in Cuba under Fidel Castro has given them a beachhead where they can stir up trouble over a wide area. The more trouble they can start the better it is for the Communists.

One of their favorite tricks is to stir up hatred of the United States. The way that Fidel Castro has lambasted the United States sounds like his speeches were written by Communist agents. In spite of all that we have done for the nations south of us, the United States is still the whipping boy for Reds, Pinks, liberals, politicians and so-called intellectuals.

SET UP ALLIANCE

Just what the Chinese Communists hope to gain in the lands south of us is not very clear. But a delegation of Chinese Communist journalists were welcomed to Cuba by prominent Cuban officials and have been touring Central and South America. They have established the New Chinese Democratic Alliance in Cuba and announced they would publish a newspaper there.

Of course such shenanigans within 50 miles of the United States can prove most troublesome and disruptive.

It must not be forgotten that one of the objects of all this Communist plotting is to take over or neutralize the Panama Canal. In a recent speech Representative DANIEL J. FLOOD, of Pennsylvania, long a student of Pan-American affairs, had this to say about the attempted invasion of Panama last spring:

"The situation at Panama did not remain quiet for long. Victorious revolutionists in Cuba, trained in revolutionary jungle warfare in Oriente Province of that important island country and seeking new worlds to conquer focused on the isthmus.

"In collaboration with radical elements of Panama, a few of them exiled in Cuba, some Cuban mercenaries, on April 26, 1959, landed at historic Nombre de Dios on the Caribbean coast of Panama, a short distance east of the Atlantic entrance of the Panama Canal. One of the objectives of this armed invasion of Panama was a token occupation of the Canal Zone. Its main objective was to bring about the overthrow of the duly elected and constitutional Government of Panama. What a crisis might thus have been created."

PEOPLE EXCITED

"Despite the strength of the 3,000-man National Guard of Panama, the people there became gravely excited by the invasion, with evident hysteria among certain political leaders. Had Panamanians known that some of their high officials had sent their families into the Canal Zone as a haven of refuge, the people of that country would have been far more apprehensive.

"Fortunately for all, the invasion collapsed, with the Cubans surrendering to the Panamanian forces. After brief detention and virtually no punishment, the invaders were shipped home where they were disavowed by those who sent them, thus closing the immediate crisis. But the end is not yet.

"Who was responsible for that assault? The best answer to that questions is by President de la Guardia, who stated: 'This was not a group of adventurers from our own country, or even from Cuba. These people were mostly Cubans, but directed and led by militant Communists. Their ambition is the long-stated one of taking over the Panama Canal.'

"This description by President de la Guardia is conservatively expressed and conforms generally to the pattern of current Caribbean turmoil. Similarly motivated by Communist influence this turmoil has already included invasions of two other countries, Nicaragua and the Dominican Republic, which repelled them."

This is a highly dangerous situation and one that calls for constant vigilance on our part, with action wherever it can be taken. Unfortunately under our good-neighbor policy we have pledged nonintervention in the affairs of our neighbors to the South. But we cannot allow any of them to become Communist satellites. We are glad to see that Secretary Herter is working with the other responsible statesmen of the organization of American States on this grave problem.

REDS EXPLOIT CARIBBEAN?

(By Sam Fogg)

Communist desire to establish a beachhead on this country's Latin-American doorstep has been underscored by Secretary of State Christian A. Herter's warning that bristling tensions in the Caribbean are playing into Red hands.

Mr. Herter told the conference of western hemisphere foreign ministers at Santiago, Chile, that the ferment of disorder, dispute, hostility, and threat in the Caribbean countries provides "just the opportunity international Communists are always seeking" to undermine democracy in the Americas.

Ominous evidence that Communist leaders in the Kremlin and Red China are seeking to exploit Latin-American unrest has been accumulating steadily this year.

Latin Americans are being given the "red carpet" treatment in Moscow and Peiping. Soviet premier Nikita Khrushchev and Red China strong man Mao Tse-tung have lent their personal prestige to the drive.

Here are some of the significant signposts that have marked the Red campaign in the trouble-torn Caribbean as well as other Latin-American countries beset by political hostilities and economic distress:

During the 21st congress of the Communist Party of the Soviet Union in Moscow this year, delegates of 18 Communist Parties in Latin America were present and accorded an emphatic Red spotlight. Eleven of these delegates delivered addresses to the congress. Reports from various sources indicate that their problems were accorded "preferential consideration." Khrushchev himself hailed what he called Latin America's struggle against U.S. "imperialism."

Twelve of the Latin-American delegates went from Moscow to Communist China where Mao Tse-tung received them with assurances of "continued fraternal support."

Since the visit by the delegates in March, Spanish-language broadcasts from Peiping have approximately doubled. There has been a substantial increase of visitors from Latin America to China. Non-Communists as well as known Communists have been given the red-carpet treatment.

In one 5-day period in July, Communist China entertained student delegation from Bolivia, and a former Vice President of Chile. The welcome mat is out particularly for women's groups, youth organizations, trade unionists, and former government officials.

A delegation of Communist Chinese journalists has toured Latin America. Their visit developed into a subtle campaign to hire local reporters in those countries to assist in preparing propaganda broadcasts to Latin America. The delegation arrived in Cuba July 8 and was welcomed by a number of prominent Cuban officials.

There is some evidence of a close alliance between Chinese Communists and their party colleagues in Fidel Castro's Cuba. On July 10 a broadcast from Lima, Peru, said that the New Chinese Democratic Alliance would shortly publish a newspaper in Havana known as Kuan Wa Po. The New Chinese Democratic Alliance was described as the only Chinese Communist organization officially established in Cuba.

The Senate Internal Security Committee is focusing its attention on the Communist maneuvers.

Maj. Gen. William P. Fisher

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ARENDS. Mr. Speaker, it has been announced that Maj. Gen. William P. Fisher, director of Air Force legislative liaison, will be leaving in a few weeks to assume command of the Eastern Air Force Military Air Transport Service.

General Fisher has brought great ability and outstanding results to this complex assignment. He has been a persuasive advocate of our defense program and he has done much to keep alive the cordial relationship which exists between the Congress and the Department of the Air Force.

I wish General Fisher his greatest success in his new assignment and I know that my colleagues will join me in welcoming General Fisher's successor as Air Force director of legislative liaison, Maj. Gen. Thomas C. Musgrave, Jr.

The Landrum-Griffin Bill Spells Out the Basic Rights of the Worker, the Union, the Business Community, and the American Public in General

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. COLLIER. Mr. Speaker, few issues before the Congress of the United States have been as punctuated with emotion, heated controversy, misinformation, and contradiction as the labor reform measure of 1959.

Actually, one must sensibly analyze and appraise the structure of our present day economy and its basic goals to properly appraise the issue in its proper perspective.

We must not forget for 1 minute that everyone living in a democracy such as ours has certain rights. These rights are both legal and moral and must remain so if we are to preserve a proper balance in our society.

Can anyone deny that every man seeking to earn a living has the right to pursue his trade or occupation in the best interest of his own standard of living as well as for his family? Under his constitutional rights and freedoms he must not be forced to pay tribute nor be subjected to forced labor.

Labor unions and their leaders must be provided with the same right to peaceably organize and represent employees in collective bargaining to secure a good standard of wages and better working conditions for their members.

The business community, on the other hand, must be provided the right under the law to do business by the same standards and to show a profit for their investment of time, money, and effort.

The American public has the right to expect that these forces within our gigantic economy maintain a relationship which is not detrimental to the general welfare of the public.

Because in years gone by, management engaged in a selfish drive for power and profits with little regard for the welfare of the individual worker, labor unions organized for the collective protection of the workingman. How necessary this was when one considers the old days of the sweatshop, poor working conditions in the shop, child labor, and inadequate wages. It became necessary for Federal law to provide protection of the individual to be represented by a union and to permit the union to speak for him.

In 1935 Congress passed the Wagner Act at a time when organized labor was still struggling for survival. It was during this era that Congress gave union leaders an almost absolute right to picket, strike, or treat employers in any way they desired just as long as the objective was to bring employees into the union.

Laws have different effects upon our way of life under different economic conditions, and it is the job of Congress to constantly consider the rights of all segments of our economy, to protect the rights of all people and to maintain a degree of balance necessary to the best interests of the American public in general.

In 1947 Congress passed the Taft-Hartley law because this picture became so totally out of balance that establishing ground rules became necessary to the very survival of the business community. At any time the power of any group or individual is curtailed by law, one must expect the emotional shouting of that particular group. So it was at the time of Taft-Hartley. Union leaders charged that passage of this law would ruin organized labor and would create slave labor throughout industry if it were ever enacted. Many of the same folks who made these allegations were those who charged the House-passed Landrum-Griffin bill, which I supported, was a union buster and antilabor legislation.

Yet, 12 years after passage of what union bosses called the slave labor Taft-Hartley law, we find American labor with the highest wages and best working conditions in the history of this Nation. We find, too, union membership across the country has increased by nearly 3 million members since the Taft-Hartley law was passed. In all fairness, does it not seem understandable that the same wild charges against Landrum-Griffin failed to modify the judgment of nearly two-thirds of the membership of the House of Representatives?

It is ridiculous to say that the House-passed bill is in any manner of means a union buster. If it is ultimately enacted into law in a form resembling that which was approved by the House, it will do nothing more than cure some of the abuses which unfortunately put a stigma upon the many honest and sincere labor organizations.

The Landrum-Griffin bill does not interfere in any way with the collective bargaining rights of organized labor in a dispute between union and management.

It does not prohibit picketing in such disputes.

It does not attempt to tell any labor organization how it may spend its dues and funds.

It does not prevent proper recourse against management where legitimate contracts exist.

It does not curb the legitimate objectives of organized labor.

The Landrum-Griffin bill does provide equal rights to union members in the conduct of their union affairs.

It does provide freedom of speech and assembly for union members to meet and assemble with each other, to freely express their views and to speak up at union meetings without reprisal by union bosses. Makes the use of force or violence to deny such rights a crime.

It does prohibit increases in dues, initiation fees and assessments, or imposition of general or special assessments by labor bosses except by vote of the membership.

It does grant a union member the right to take court or administrative action against his union or its officers, after his right to a union hearing within a 4-month period is exercised.

It does guarantee workers the right to a hearing to prevent improper fine or penalty imposed by labor bosses.

It does provide for free and fair union elections by secret ballot, with opportunity for the nomination of candidates, elections at reasonable intervals, no reprisals for supporting any particular candidate, no use of union or employee money to influence elections, membership lists made available to candidates to insure membership of election information.

It does provide machinery for members to remove crooked officials by making possible court-ordered elections by members to remove such crooked union officials.

It does provide for the protection of union funds by making union officials give members a full accounting of union funds, with penalties for misuse of funds.

It does provide for the regulation of trusteeships and prevents power-hungry labor bosses from using dummy locals to force themselves on unwilling union members.

It does provide for the protection of economic strikers against the use of strikebreakers' votes in NLRB elections.

It does provide for allowance of union security agreements by building-trades unions, before hiring, with employees in the construction industry.

It does end no man's land, giving union member and employer a court or board remedy to enforce his rights under the law where NLRB refuses to hear such cases.

These are 12 things that the Landrum-Griffin reform bill does to benefit union members. These are 12 reasons why I joined with the majority of the Members of the House of Representatives in supporting it.

Farewell to Walter Lee

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ANFUSO. Mr. Speaker, it was with mixed feelings that I recently learned of the impending retirement at

the conclusion of the current session of Walter Lee, the very able legislative assistant of the House Judiciary Subcommittee on Claims. I am happy for him that he has the opportunity to retire and to take it easy after his many years of service on Capitol Hill. I am sad that he will no longer be around to assist us in his very courteous and efficient manner.

It was my pleasure to know Walter since I first came to Congress in 1951. He has been most cooperative whenever I would call on him. His advice in connection with legislation has always been straightforward, sincere, and wise. I shall miss his good counsel in these matters. Somehow Capitol Hill will just not be the same without Walter Lee.

In his well-earned and well-deserved retirement, I wish him and his family many years of good health and happiness. May his years be long and his memory of his many friends on Capitol Hill always pleasant.

Under Self-Help Provision of Wool Act Woolgrowers Are Helping Solve Their Own Probems

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. FISHER. Mr. Speaker, during the month of September the woolgrowers of America are voting in a national referendum on the question of allowing deductions of 1 cent per pound from incentive payments in order to finance continued promotion, advertisement, and merchandizing of wool and lamb.

Under the Wool Act certain incentive payments are made annually to growers to encourage more sheep production in this country. These payments are derived solely from import duties from wool that is brought in from foreign countries to compete on our own domestic markets. And the 1 cent deducted for promotion is taken from the money provided by the import fees. The incentive level for wool is established each year by the Secretary of Agriculture at a figure calculated to allow for the deduction and at the same time provide encouragement and incentive for our American growers, in the national interest, to increase the sheep population of this country.

This promotion program is handled by the American Sheep Producers Council, headed by Mr. Don Clyde, of Utah, an able grower who is dedicated to the best interest of our woolgrowers. And even though during the 4 years the program has been in effect—there has hardly been enough time to observe its capabilities—definite improvement has been noted.

Despite the great drought and the world depression in the textile field, our sheep population has increased by 1,227,000, according to the Department of Agriculture. During the first third of 1959 there has been a 40 percent increase in wool consumption over the same period during the preceding year; and prices have jumped more than 27 percent in the first half of 1959.

NEED FOR PROMOTION EVIDENT FROM INROADS IN TEXTILES BY SYNTHETICS

The necessity for an effective promotion program is self-evident when we look at the competition record in recent years with the manmade fibers. The Department of Agriculture informs me that in 1921 apparel wool accounted for 10 percent of all fabrics consumed in this country, in 1937 it was 6.3 percent, and in 1958 it had dropped to only 3.7 percent. This despite some improvement already noted as a result of promotion and advertisement by the American Sheep Producers Council.

During that same period the synthetics or manmade fibers accounted for 0.6 percent in 1921 of all fabrics consumed in this country; in 1937 it was 6.9 percent, and in 1958 it had reached 28.6 percent.

It is significant, too, that in 1 year the manufacturers of synthetics spend nearly $25 million in promoting and advertising their manmade fibers. This is more than woolgrowers have spent in this country during the life of their industry.

WOOL ACT RENEWAL LAST YEAR INCLUDED SELF-HELP PROVISION

Mr. Speaker, it will be recalled that after a 4-year trial run, the Wool Act was last year extended by the Congress for an additional 3 years. The act included section 708, which authorizes the deductions for promotion.

Many will recall that one of the selling points in obtaining an extension of the law was section 708. It was pointed out then that here was a provision which enables the growers, by their own voluntary agreement if they should by a two-thirds vote choose to do so, to help themselves to regain their rightful place in our national economy.

Some 94 organizations directly connected with the sheep owners and all general farm organizations, with but one possible exception, gave unqualified support for the renewal of the Wool Act with section 708, the self-help provision, included.

Only the American Farm Bureau entertained any misgivings about the need for section 708. The Congress, being anxious to have the growers do more for themselves toward the solution of their own problems, gave little heed to objections raised against section 708, and these objections were promptly discounted and overruled.

Thus, it was quite evident that the Congress felt that if the Government was to continue to help support the woolgrowers, the growers would be expected to continue to help support themselves through the continued use of section 708.

NEUTRAL POSITION PROMISED BY FARM BUREAU LAST YEAR ON ISSUE POSED BY REFERENDUM

Last year when the Wool Act was before the Congress for renewal the Farm Bureau representative who was testifying before the House Committee on Agriculture on the question of extension, Mr. Frank Wooley, the Farm Bureau spokesman, testified:

Well, we take the position in the American Farm Bureau Federation, Mr. Hill, that it is our responsibility to present as many facts as we can through all of our various media to the farmers as to what the pros and cons are with respect to any referendum that is put to them for a vote. We do not take the point of view that it is our responsibility, we think it is improper on our part, to tell them how they are to vote. We just merely do everything we can to see that they understand that a vote is being taken, and that it is in the interest of everyone to know the issues on both sides, and we do everything we can to urge that they vote with respect to the subject.

Unfortunately, however, in some recent releases on the issue being decided by the referendum, the Farm Bureau has publicized some information that has not told the entire story. Indeed some of the published figures I have seen have been very misleading in regard to the success of the promotion program under section 708. Perhaps this has been an inadvertence, but nevertheless it is not in keeping with the policy position outlined by Mr. Wooley in his testimony.

Let me give one or two examples of what I mean. As one example, the Farm Bureau has in effect pulled two figures out of the air to show that from 1954 to 1958 the U.S. farm price of wool dropped 31.6 percent, but failed to state further that wool prices in 1958 dropped to an extremely low point because of prices of wool all over the world were extremely depressed due, as I previously pointed out, to a worldwide textile recession. Except for the promotion program, the prices might very well have dropped even more.

Moreover, in order to get the full picture before our growers the Farm Bureau should have gone further and explained that in the last 6 months the farm price of wool has increased 27.4 percent and that in the first third of this year, wool consumption increased 39.5 percent over the same period of 1958. Without a recital of these facts, the information put out by the Farm Bureau was obviously very deceptive and misleading to our wool growers.

Surely, Mr. Speaker, the American Farm Bureau, the great farm organization that it is, does not want to see manmade fibers, with their huge advertising budgets, make even further inroads into the fiber field enjoyed by wool, cotton, and other superior natural fibers.

We have our backs to the wall in this fiber battle, and we need to marshall all the support obtainable from all organizations interested in our sheep industry.

Mills Scores

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. EVERETT. Mr. Speaker, it is my privilege and honor to place in the Appendix of the RECORD an editorial on our colleague, Congressman WILBUR D.

MILLS, from the Commercial Appeal of Memphis, Tenn., one of the Nation's leading newspapers.

This editorial was so outstanding that I thought the membership would like to read it:

[From the Memphis (Tenn.) Commercial Appeal, Aug. 26, 1959]

MILLS SCORES

WILBUR D. MILLS of Kensett, Ark., has zeroed in on the main target for this year's session of Congress, and for the people who elect Congressmen.

That target is governmental spending program that quits when the money runs out—a balanced budget—an end to the part of shrinking purchasing power due to deficit spending.

As senior Democrat on the Ways and Means Committee, Mr. MILLS is one of the most powerful men in Congress. This committee has turned away from proposals for getting money to keep up the pace of interstate highway construction by bookkeeping devices that amount to reaching into the Treasury.

It has voted 16 to 9 for 22 months of 1 more cent of Federal gasoline taxes to support the special pay-as-you-go fund for interstate highways.

The idea is, Mr. MILLS said, that getting highway fund money from the General Treasury would jeopardize any chances of balancing the Federal budget.

Well said, Mr. MILLS.

Berkeley County, W. Va., War Memorial Park Dedicated; Popular Recreational Area Is Debt Free

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1959

Mr. RANDOLPH. Mr. President, it was my privilege to have participated in the dedication for the Berkeley County War Memorial Park near Martinsburg, W. Va., Saturday, August 29, 1959.

The program for this significant event contained a history of the park, including these cogent sentences:

The Berkeley County War Memorial Park stands today as both a memorial to our community's honored war dead and as a tribute to the cooperation of thousands of our citizens who have made the park possible. * * * The memorialization has been chiefly in the planting of maple trees and installation of individual markers, one to each of the war dead. The park, a suitable recreational area that also is a living memorial to the nearly 200 youths who gave their lives in World Wars I and II, contains about 20 acres of land and was purchased for $15,000. More than $100,000 in cash has been contributed toward development of the park during the past 13 years, plus thousands of dollars' worth of volunteer labor and free material. * * * All money for the park development has been obtained through voluntary contributions without a cent coming from any governmental agency. * * * Dedication has been long delayed but it comes at a time when the park is reaching new peaks of popularity and when it stands debt free.

Appropriately, the present officers and the original members of the board of the Berkeley County War Memorial Association, Inc., and others who contributed much to the successful development of the park and to its dedication program, were recognized in the historical review, including Paul B. Martin, president of the park board and the mayor of Martinsburg when the original park committee was appointed on August 17, 1946; Garland L. Dunn, chairman of the board; Ernest H. McKee, vice president; Donald G. Rentch, secretary; Thom R. Keller, treasurer; Douglas Shipley and Mrs. Harry L. Reeves, members of the original mayor's committee and the original board; Russell J. Scrivener, Lovell Alderton, Rev. Frederick F. Bush, Jr., and Charles V. Sullivan of the original mayor's committee; Lacy I. Rice, Judge D. H. Rodgers, Frank C. Thomas, Philip T. Seibert, Lou Cohen, Rev. Father George Huber, Mrs. Paul Hammann, M. L. Depenbrock, Mrs. Jacob Schleuss, Harry C. Hammann, Mrs. C. A. Kitchell, and John Skelly of the original board.

Preceding the dedication program there were band concerts by Musselman and Martinsburg High School bands, and the Martinsburg Municipal Band.

In response to the association's invitation, I delivered the dedicatory address.

Mr. President, I ask unanimous consent that extracts from my speech be printed in the Appendix of the RECORD.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

AN ADDRESS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, AT THE DEDICATION OF THE BERKELEY COUNTY WAR MEMORIAL PARK, MARTINSBURG, W. VA., AUGUST 29, 1959

I am strengthened as I look about me and see the fruits of 13 years of community endeavor in your memorial park. We are gathered to dedicate this effort to the memory of your loved ones who gave their lives in freedom's cause. Their names and the remembrance of their deeds will be perpetuated in the life of this area. They died that our Nation's future might be more secure. It is fitting, therefore, that this memorial to your sons and brothers also looks to the future. Though monuments in stone and bronze may have their place, you could offer no finer tribute to the valiant dead than this shrine which so enriches the lives of those they left behind.

In setting aside these 20 acres—in thus dedicating this ground, you have consecrated it to the living as well as the dead. In this way we help to keep alive and fresh the values and ideals of those who fought and died. This is our charge and our responsibility.

Yet, our obligation to those young men does not end with the dedication of this ground today. The Berkeley County Memorial Park is but a beginning of the fulfillment of our trust. Our responsibilities will be discharged only when we have also consecrated our lives to tasks worthy of the human sacrifices that have already been made.

MEANING OF SACRIFICE

Our words can but revive the memories of our departed loved ones; but it is our actions and our lives which will continue to keep alive the meaning of their sacrifice. The courageous young men to whom we give our homage offered their blood and their lives in the cause of humanity—in the right of the individual to achieve for himself a way of freedom and dignity. This is the idea which in the past has given the thrust to American life. More than any other idea, it continues to give meaning and vitality to our present life, and it has been the ultimate goal toward which man's constant progress through the centuries has been directed. Thus, the journey toward the American dream has been man's journey toward the full humanity of man. Yet the struggle has not ended.

It has been a dispiriting and tragic disillusionment for Americans, and for citizens of other free nations as well, to see in the years since the end of World War II, the extinguishment of the ideals of freedom and individual dignity among the millions of people under the domination of the Soviet Union and Communist China. In the face of such terrifying repression and assaults upon the integrity of man, we might, in moments of weakness, wonder if it has been worth the cost in blood and treasure.

For those who gave their lives in the cause of human freedom, we find assurance in the words of the Gospel (John IV, 14) that "* * * whosoever drinketh of the water that I shall give him, shall be in him a well of water springing up into everlasting life." While this offers consolation to those who have lost friends and members of our families, it does not relieve us of the responsibility of carrying on their struggle and thus, in some measure, giving meaning to their sacrifice. Only in this way can we truly memorialize those who gave the full measure of devotion to their country.

When the great American poet, Walt Whitman, was confronted by the tragic death of President Lincoln he sought in some manner—as did the people of the Nation as a whole—to find a meaning in such an irrational and devastating event. Whitman solved his problem in the beautiful and moving poem, "When Lilacs Last in the Dooryard Bloomed." Here he indicated that, since Lincoln had given his life for the Union, the only meaningful manner in which one could acknowledge his death was to contribute to the growth of the Union and the ideals for which the President had worked and died. These the poet symbolized in the sprig of green lilacs which he brought to the deceased President as a token of his commitment to the future and to the promise of growth and creativity that the future holds.

LIVING COMMUNITY TRIBUTE

This useful memorial park is your sprig of lilac. In the creation of this center you have also created a richer and better community. For families and for single folk, for young and for old, this park offers opportunities for a healthier and more wholesome life. And for the individual who may simply want to leave the indoors for a few minutes' contemplation of the wonder of sky and clouds, of the miracle of youth and the sound of laughter, it offers balm to the heart and a lift to the spirit. And for other fortunate ones it may offer what Nature offered to the poet, William Cullen Bryant, when he wrote:

"To him who in the love of Nature holds
Communion with her visible forms, she speaks
A various language; for his gayer hours
She has a voice of gladness, and a smile
And eloquence of beauty, and she glides
Into his darker musings, with a mild
And healing sympathy, that steals away
Their sharpness, ere he is aware."

This park thus exists as a living community tribute to the sacrifices of the sons of Berkeley County. Yet we may not rest with this. Each of us, individually, has the responsibility to consecrate his life to the fulfillment of the American dream if those sacrifices are not to have been in vain.

And what is this dream? It is what brought generations of men and women from Europe across 3,000 miles of ocean to settle on unknown shores. It is what brought later generations of men and women to cross our own Alleghenies into the great valley of the Midwest, and from there up across the high plains to the Sierras and finally to the Pacific Ocean itself. It is the dream embodied in our own State motto: "Mountaineers Always Free."

Men and women did not leave Europe because of what they feared and hated; they came to America because of what they loved and hoped. Later, when they left the eastern seaboard and started the long trek westward, they departed, not because they despised the East, but because they were drawn to the West by challenge and by belief—by the belief that they could create a future of greater worth and human dignity. This belief in the possibilities of man has shaped the destiny of America.

It is true that there were intolerances and repressions. But the love and the faith outlived them. The belief in freedom of conscience outlived the theocracy of colonial Massachusetts. And the assurance in the dignity of the individual blotted out the misunderstanding of 200 years.

LOVE AND HOPE—NOT FEAR

Until recently we Americans have lived in the light of what we have loved and hoped, not what we have feared. For 300 years we followed the American dream of the future. And that dream became real. It became real in the land that Tom Jefferson and Sam Adams found—in the land that Emerson and Whitman explored—in the land of the free human spirit with eyes aimed at the future. For 300 years this was the dream that we lived and loved.

But in recent years we have become guided less by our loves and hopes than by our fears. Less by our love of America than by our fear of Russia. Less by the hope and possibilities of the future, than by the fear and dangers of the future.

It is a sick man who lives, not by his loves, but by his fears. Thus so, it is true of a nation.

At the height of our power, the most common talk is about our fears—our fear of the Soviet Union, our fear of inflation, our fear of an unbalanced budget, our fear of the power of organized labor.

Where is the talk, and where is the faith in the vision and the fulfillment of the dream? I said a moment ago that the dream had become real. While that is true, it does not mean that the task is completed. Men are not truly free when they and their families live in squalor and poverty. Children are not educated for freedom when our schools are inadequate. Future generations will not be free if we squander the natural resources on which freedom is maintained. In brief, the challenge of the future and the hope of the future are still before us. "The American journey," as the poet, Archibald MacLeish stated, "has not ended. America is never accomplished, America is always still to build; for men, as long as they are truly men, will dream of man's fulfillment."

This, then, is the memorial we must dedicate as individuals: to rekindle the faith in the American future, and to live with a renewed vision of the possibilities of man. We Americans have reason thus to live; whether we have the will depends upon the individual heart.

End of Cold War Will Cause Reduction in Defense Expenditures

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. SANTANGELO. Mr. Speaker, the Nation is deeply concerned about the high cost of living and the tremendous Government expenditures. Relief from big defense spending is not in view. The forthcoming exchange visits between the President of the United States and Nikita S. Khrushchev stir high hopes in the breasts of many Americans. Practical prognosticators predict no material results. The cold war and huge Government expenditures are likely prospects. We all hope that the President succeeds in bringing sanity to the viewpoint of the Soviet representative. We foresee that if the cold war ends, the public will obtain some sort of relief in taxes or in defense expenditures.

A critical analysis by a brilliant writer of the New York Herald Tribune sets forth clearly the possibilities of savings if the cold war ends. I believe that a reading of an article by Allen M. Smythe, feature writer of the New York Herald Tribune, found in the August 23, 1959, issue, will prove interesting reading and describes the hopes and aspirations of an economy-minded public. The article follows:

BIG DEFENSE CUTS SEEN LIKELY IF COLD WAR ENDS

(By Allen M. Smythe)

Top Pentagon officials deride the possibility, but at the same time admit that the $41 billion defense budget could be cut a fourth almost immediately if President Eisenhower ordered it as a result of Premier Khrushchev's visit, Big Four disarmament negotiations or a reappraisal of Soviet military strength.

They disagree as to where cuts should be made, but most contend that if world conditions would justify halting the expanding race for arms supremacy a downward trend in military spending would naturally follow.

Any easing of international tensions exposes the vulnerability of many defense expenditures. More than $4,300 million is scheduled to be spent during fiscal year 1960 on air defense against Russian bombers. Congressional criticism this session has been continuous against the billions already spent in Canada in this effort.

The knowledge of or agreement on the size of Soviet naval strength could influence naval spending. The estimate of Soviet strength is based largely on the assumption that it is top priority. This assumption, in turn, is based on a calculated intelligence report of Russian industrial capacity.

Congress recently appropriated $35 million for a start on a $380 million nuclear aircraft carrier. This is primarily an offensive weapon and needs many supporting warships that will multiply this amount.

During World War II submarines cost $5 million each. The Navy wants a dozen submarines carrying ballistic nuclear missiles, to cost more than $100 million each. When shore establishment and supplies are included the total is doubled. Only recently Secretary Neil H. McElroy has questioned the size and capability of the Russian fleet.

Pentagon fiscal officials are thoroughly cognizant of the economic effect that a sudden reduction in military spending might cause if it were not cushioned by properly prepared plans. The recession of 1953–54—although a mild one—was triggered by an abrupt reduction in military hardware.

Key officials now point out that in the unlikely event of a disarmament agreement with Premier Khrushchev a gradual reduction in the $14 billion annual spending on military hardware could be made that would not wreck the aviation, shipbuilding, and electronic industries. The possibility is that no reduction might be made in missile, reresearch, and electronic efforts.

Savings could be made in other areas. Nearly $2 billion annually could be cut from military construction. A large part of this program is for oversea bases and dispersal of heavy bomber air bases.

OTHER SAVINGS

The elimination of the draft and a 20-percent manpower reduction in the armed services could result in a continuing saving of several billions in pay, housekeeping and housing expenses. The closing of many obsolete bases would save utility and maintaining expenses.

Congressional investigations of improper influences, excessive military profits and duplication of weapons have caused the Pentagon to review its plans for expensive new projects.

Already under review for possible abandonment are North American's contracts for the all steel mach 3 B–70 bomber and F–108 fighter. Under continuous scrutiny for costs and performance are three ICBM missile programs—the Atlas (Convair), the Titan (Martin), and the Minuteman (Boeing). Eight to ten of the missile projects have been quietly dropped. A little top-level displeasure would disqualify that many more.

One Senator equally concerned over inflation and the Nation's security expressed it this way: "We learned from the recession in 1953 that defense reductions should not be made suddenly and exclusively with military contractors. Also, any defense savings should be accompanied by tax cuts for both individuals and business. They should also coincide with stepped-up Federal plans to improve schools and hospitals. Our highway program should be speeded. More Federal aid for slum clearance, especially for the smaller cities, new jet airports and nuclear cargo and passenger ships would also help cushion any economic shock resulting from reduction in our war efforts."

Talk Before Annual Meeting, Southside Electric Cooperative, August 29, 1959, by E. H. Will

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ABBITT. Mr. Speaker, on Saturday, August 29, 1959, Mr. E. H. Will, president of the Virginia State Chamber of Commerce and vice chairman of the board of directors of the Virginia Electrict & Power Co., delivered a most informative and interesting address be-

fore the annual meeting of the Southside Cooperative at Crewe, Va.

The Southside Electric Cooperative is one of the outstanding rural electrification co-ops in the country. Mr. Will is an outstanding businessman and a great Virginian.

In the hopes that the Members of Congress will profit from his speech, I include it as a part of my remarks:

Congressman ABBITT, Mr. Chairman, members of the Southside Electric Cooperative, and friends, realizing my limitations as a public speaker, I was reluctant to accept the honor of speaking before you but acquiesced at the insistence of my good friend, Charlie Hooper. I am sure that I will disappoint many of you, particularly if you are expecting any controversial fireworks.

Under the able guidance and leadership of your board of directors, your general manager and staff, your cooperative has made significant strides in promoting electricity in your rural areas. The splendid record written as to substantial increase in customers, and to an even greater degree, increase in usage, has come about by efforts of your management and the economic prosperity of the area that you serve. I congratulate you on a job well done.

Unfortunately, when I accept as a speaker, I find myself in a position comparable to most ladies who have a number of hats to wear. It has been my good fortune to be associated with several organizations in various capacities, most of them of a statewide civic nature. Therefore, it is necessary that my comments be made not as a representative of these various groups with which I am associated, but as a citizen of this fine State.

With your permission and kind indulgence, I should like to touch on three subjects of vital interest to the economy of the State and, I believe, to the area in which your cooperative operates. I refer to the subjects of population, education, and industrialization. While not speaking as an expert or an authority on these subjects, I will try to bring to you some of the information that I have accumulated in my travels around the State.

I mention first population, because this will be one of the key factors in the future economic progress of the various areas throughout the State of Virginia. Our exploding population, already in evidence and projected with scientific accuracy for 1970—about 10 short years hence—will increase 20 percent nationally from 175 million to 210 million. Virginia should do as well as the average and, as we would normally expect, slightly better. While in the next several years births will level off—and this might surprise you, mainly because there aren't enough new mothers to go around—a new baby boom will start around 1965 when the early postwar baby group will reach marrying age.

Somewhat startlingly, we will find that the population upsurge by 1970 will produce a nationwide economy nearly 60 percent larger than it is today. One way of expressing this tremendous potential is the use of a national index known as the gross national product, which is likely to expand to, roughly, $750 billion compared with the present $475 billion.

While we may expect this population increase, we must also be constructively thinking in terms of how to be sure that these new citizens remain in Virginia and, particularly, remain within the rural areas in order that our economy will be maintained and improved.

Population and area growth go hand in hand, which emphasizes the importance of holding our young people and attracting others.

It may or may not be consoling to you to know that the fastest growing age group will be the teenagers. The population between the ages 15 and 19 will increase more than 60 percent in the interval before 1970. Doesn't this challenge the educational needs and facilities of our high schools and colleges? And, the cultural environment in which they will live?

My other two topics are education and industrialization which will have a strong bearing on the effectiveness in maintaining our rural growth.

I do not propose to solve our education problems or to comment on the major question that has been posed in recent months, but I think a review of the progress of education in our elementary, high school, and higher institutions of learning is of utmost importance and should be receiving the careful attention and consideration of community leaders throughout the State. My remarks are in no way a criticism, but I trust that they may be constructive and productive of some new thoughts in the general improvement of education throughout the State. At the outset I must say that I am of the opinion that great strides have been made in our educational system within the past few years. This, however, should not result in relaxing our efforts to further improvement and to bringing us more in line with our proper place in comparison with other States. Recently, surveys have been made pertaining to the educational level in the State and, in general, the findings are not ones that we can read with too much pride.

Comparisons of our educational level with all States rank Virginia in the bottom one-third group as to the educational level of its people.

It has been definitely proved by comprehensive surveys and studies that there is a distinct correlation between the educational level and the economic status in any general area such as the State as a whole and, almost without exception, in smaller segments such as counties. Since we find that Virginia is in the tail end group as to educational level, it is not surprising that it is also in the tail end group of the States of the Nation as to the economic status of its people. Taking the latest available figures on per capita income, which cover the year 1958, Virginia ranks 35th among 49 States with $1,674 as compared with an average of $2,057.

You might ask whether we are getting our money's worth from our educational system and I believe that the answer would be that we are getting our money's worth but that, since our expenditures for education related to our ability to spend places us in the lower group among the various States, we have some basis for an approach to step up our expenditures for education and, thus, pull ourselves up somewhat by our bootstraps.

Here again, we can see a definite relationship between population and expenditures for education since, with the present and expected expanded population, we will necessarily have to provide increased facilities and an increased number of teachers and professors. Thus, volume alone will require additional expenditures even though our scale of salaries remains the same. I do not think that Virginia wants to be ranked in the lower group as to proper compensation for the men and women with whom we are entrusting the education of our children and grandchildren. May I touch with particular reference on our colleges and universities as to their needs in the foreseeable future. Our schools of higher learning deserve and need the moral and material support of all of our citizens and, particularly, our business and professional people who have to look to higher education for their present and future executives much in the same way that people in rural communities have to look to college-trained men and women who will be so important in supplying the needs of the various rural areas, which include not only farming and allied interests but rural industrialization.

You may ask, where are we going to get the money to take care of our expanding additional needs? At this point, I shall get out on the end of the limb. I am now referring to the touchy subject of a sales tax, and I am sure that there will be groups on both sides of this question. In my opinion, it is the case of "eventually—why not now?" The subject has been put forth during the last several sessions of the general assembly and, in all probability, will raise its head again next January.

May I hasten to add that if a sales tax is the answer, it should come only by adjustment of other taxes so our entire tax structure is on a fair and equitable basis. I realize that this is expecting the impossible, but certainly it should be the overall objective.

We are an island State surrounded on all sides by sales tax States and are one of the few remaining States in the Nation without a sales tax. Virginia is necessarily going to have additional revenues. Shouldn't the additional tax burden have a broader base of taxpayers in order that they may contribute their fair share to the cost of necessary State functions, including schools and colleges? With the built-in inflation of our national economy having its direct effect on Virginia's cost of government, some other source of revenue must be explored. Virginia has had for a long time a sound fiscal policy and its credit rating is among the highest of any State in the country. I believe it attained this enviable position because of its pay-as-you-go plan. The sales tax possibility fits in so logically and well in continuing our pay-as-you-go plan, but at the same time would not mortgage our grandchildren's future in order to take care of our present-day needs. I do not have to remind those of you here that our State highway system is built on a sales tax principle.

Every gallon of gasoline that you buy is taxed by a specialized type of sales tax. We, of course, pay many hidden types of Federal sales tax when we buy various commodities. I will mention two that are not so hidden: that on each package of cigarettes, and that on the purchase you may make at the ABC store for medicinal purposes. Many communities levy a consumer tax on utilities, but this is again only a specialized sales tax. We are confronted with the degree to which we apply the principle of a sales tax, which we already have to a limited extent. It has been suggested that a sales tax may be the best answer for the various counties in meeting their responsibilities to the citizens in supporting the necessary functions of governmental service. I believe that a great deal can be accomplished by the presentation to our citizens of the pros and cons of the sales tax issue in order that the fundamental facts may be brought out and understood.

My third topic—one that has received considerable attention in recent months and one that is of the utmost importance to the economy of Virginia and, in my opinion, of particular importance to the counties which are seeking proper ways to balance their basic agricultural economy with a diversified income—is industrialization. Many signs point to an awakening on the part of leaders everywhere throughout the State. The present and future potential of this necessary segment of Virginia's economy cannot be overlooked and must be aggressively pushed to keep ourselves abreast of the stiff competition that we face from other States around us and in the southeastern area.

You will recall that Governor Almond pledged in his platform and in his inaug-

ural address his active support in this direction and we are beginning to see some real rays of hope and realization.

Constructive criticism by some individuals has needled all of us to direct our attention and efforts to this facet of our business life. We needed some real prodding and I think it has made us sit up and take notice and begin to do something about it. I believe that it has so far produced a change in the complexion and objectives of our board of conservation and economic development as well as stepped on the toes of the State chamber of commerce, and also pointed to the lack of leadership on the part of business and community interests. It was a good healthy dose of medicine that was prescribed, and I certainly think it has helped the patient to eventually get well.

To carry out the Governor's determination to improve our economic climate, an additional appropriation was made by the last general assembly to set up increased industrial activity under the State board of conservation and economic development. This included added professional personnel as well as additional money for promotional effort, including national advertising. Recently, a large page ad appeared in the Wall Street Journal commenting on the Governor's industrial conference which he called several months ago, attended by 750 interested people, many of whom are here today. The conference was a real start on a stepped-up industrial program and was, as many expressed, a success. Regional conferences are already in the making to further this interest throughout the State and I hope that this progressive area will take an active part in one of these conferences. Today many interested groups are working closer together than ever before to further our industrial progress.

While some may differ, I believe the various groups, including the State board of conservation and economic development, the Virginia State Chamber of Commerce, the railroads, utilities, port authority, local industrial groups, local chambers of commerce, city and county commissioners and many others are cooperating—maybe not to the extent that they will be in the near future but far better than in past years. We are beginning to see some results and should experience tangible gains in the not too far future. The recent announcement of a plywood firm's locating in South Boston was a direct result of a State board of conservation and economic development ad appearing in a national magazine.

Certainly, we are going to realize more by pulling together than by pulling apart. It goes without saying that we have our faults—who doesn't have some—and we should try to correct them.

You might be interested to know that in the recent survey of the State chamber of commerce, the industrial development question led the list in the interest among its members. An almost unanimous recommendation was made to the effect that the State chamber of commerce should materially step up its industrial development activity.

Many communities within the State have formed and are forming industrial district organizations in a concerted effort to make available facilities for those industries seeking expansion and decentralization, which seems to be almost universal among the national business concerns throughout the country. It has been demonstrated in many instances that the availability of property or buildings or local capital to construct such buildings makes the difference between a choice where many other industrial asset factors are approximately equal. These local industrial groups are motivated by a progressive interest in the future well-being of their community areas, which is really an investment in maintaining and expanding their local economy.

Within recent years the industrialization picture has changed in its fundamental concept and, fortunately for the counties, has changed in their directions.

Of necessity in bygone days, industries had to be built in heavily populated areas in order that employees would be readily available for its operations. Today the operating personnel comes to the manufacturing plant without difficulty by automobile and our splendid system of State roads and highways. According to surveys recently made, this working traveling public can be expected from a radius of 30 miles and, in many cases, employees travel even greater distances. Also, in this day of automation, which the electric industry makes possible, fewer employees are required, but these employees are better paid and work under better conditions than ever before and bring a higher degree of economy than some of our manufacturing concerns did in bygone years.

As a matter of fact, many companies are seeking the rural areas for their future plants in order to have available a source of competent and established employees such as Virginia offers. Many of these employees come from families whose primary interest may be agriculture and, thus, a balanced family economy results.

I think we shall witness more and more opportunities for locating manufacturing concerns which will not only help the communities but will be mutually beneficial to the well-being of the organizations. Bear in mind that these incoming plants, in addition to their payrolls, contribute materially to the local interest in the payment of taxes.

Of course, the local development of industrial interest necessarily takes leadership, time, effort and money on the part of a dedicated group of citizens, but our American way of life places this responsibility on us in return for the many blessings that we have received and our responsibility to the coming generations. While in many cases efforts may be discouraging at first, the eventual success will reward those who are farsighted enough to see that we owe something to our communities.

May I conclude by reemphasizing the importance that I think population, education and industrialization will play in the present and future economy of the various communities and our State. Since I have made several observations which I am sure are controversial, may I again say that I make these observations as an individual and not as an official representative of the organizations it has been my privilege and honor to be associated with.

I again congratulate the Southside Electric Cooperative on its achievements and say that I appreciate the honor of appearing before you today.

If I have left one little thought of a constructive nature that can be used as a seed to germinate into a community effort, I will be greatly rewarded by your gracious attention to my remarks.

We should remember the words of Benjamin Franklin—who taught us so much wisdom—

"If time be of all things the most precious,
Wasting must be the greatest prodigality,
Since lost time is never found again.
Let us then be up and doing,
And doing to the purpose."

Contempt of the People

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial from the Allendale County Citizen, Allendale, S.C., concerning James B. Carey's threat against me and the other 229 Members of the House who supported the Landrum bill. I also enclose therewith a copy of my letter to Carey along with his record in the archives of the Un-American Activities Committee.

[From the Allendale County Citizen, Allendale, S.C., Aug. 28, 1959]

CONTEMPT OF THE PEOPLE

The arrogant, well-nigh stupid, attitude of union labor leaders is well exemplified in letters which James B. Carey, AFL–CIO vice president, sent to 229 Representatives who voted for the Landrum-Griffin labor bill, which Carey opposed. The letters over Mr. Carey's signature threaten the legislators with retaliation at the polls.

The same type of letter could have been written by the head of a criminal syndicate to law enforcement officers trying to protect the lives and property of their neighbors. The labor movement is not a government and has no more right to interfere with due process of law than any other group in this Nation.

Thousands of people, who hitherto have desired to give labor its due, will be disgusted by the Carey tactics and will vote for those Congressmen who, faced with the mounting power, almost the power of life and death, accumulated by union leaders, saw fit to set the Nation's welfare above that of a group seeking only its own benefit at whatever cost to the public.

Too often in the past several years we have seen how a powerful minority, using pressure, blackmail and other unethical if not criminal methods, can force its will upon a reluctant people in spite of all those safeguards assured us in the Bill of Rights and the U.S. Constitution.

We know that the power exercised unscrupulously by these minorities enters into the highest and most sacrosanct areas of Government, in direct contempt of the people of this Nation.

The people of this district and every other congressional district in the land should at once let Congressmen know that no influence within or without the district can be used against men who have honorably made decisions within their best ability and understanding.

Few of us object to the right of labor to better itself, or to seek its full value; but when the power of labor unions is used to serve the ends of racketeers and gangsters, the people have a right to call a halt. They called such a halt in the Congress, where 229 Congressmen, moved by the wishes of the people, conveyed to them by every form of communication, voted for the Landrum-Griffin bill.

The men and women who form the rank and file of the organized labor movement probably realize that the Landrum-Griffin

bill provides them a voice in their own affairs. They know that to date they have not had a voice. They, too, will be with and of the people when Mr. Carey's showdown comes at the polls.

Meanwhile, the severest condemnation should be Mr. Carey's lot. His threatened blackmail of Congressmen speaks poorly, indeed, of his concept of justice, democracy, and American principles of honest dealing and fair play.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 31, 1959.

JAMES B. CAREY,
Washington, D.C.

SIR: Your insolent letter of August 18 wherein you, among other things, attempt to threaten me for my support of the Landrum antiracketeering and antiextortion bill, has been received. This bill will harm nobody in organized labor who is honest. It has nothing to do with the rights, privileges and immunities of labor. These are taken care of in the Taft-Hartley Act. The Landrum bill is to protect the American public and the American workingman from those who are wrecking the labor movement in America.

As you and I go through life we make a record. My record in public life, for the most part, is in the archives of the Congress of the United States. Yours is in the archives of organized labor as well as the Committee on Un-American Activities. Of all the labor leaders in America, you should be the last one to try to intimidate anybody from my section of the world. South Carolinians in the ranks of organized labor will not heed your advice.

If I had to hold public office at your pleasure and under your sufferance, I would rather go down to the "tongueless silence of the dreamless dust" then ever again be entrusted with the high responsibility of serving my fellow man. My people know my record and they know yours and will know it better when I place the Un-American Activities' report in the CONGRESSIONAL RECORD. They will be quite interested to learn how many years it took you to get religion. I will see you at the ballot box.

Sincerely,

L. MENDEL RIVERS,
Member of Congress.

INFORMATION FROM THE FILES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES, U.S. HOUSE OF REPRESENTATIVES

AUGUST 21, 1959.

FOR: Hon. L. MENDEL RIVERS, Member of Congress.

SUBJECT: James D. Carey.

This committee makes no evaluation in this report. The following is only a compilation of recorded public material contained in our files and should not be construed as representing the results of any investigation or finding by the committee. The fact that the committee has information as set forth below on the subject of this report is not per se an indication that this individual, organization, or publication is subversive, unless specifically stated.

Symbols in parentheses after the name of any organization or publication mentioned herein indicate that the organization or publication has been cited as being subversive by one or more Federal authorities. The name of each agency is denoted by a capital letter, as follows: A—Attorney General of the United States; C—Committee on Un-American Activities; I—Internal Security Subcommittee of the Senate Judiciary Committee; J—Senate Judiciary Committee; and S—Subversive Activities Control Board. The numerals after each letter represent the year in which that agency first cited the organization or publication. (For more complete information on citations, see this committee's "Guide to Subversive Organizations and Publications.")

Mr. Carey was a featured speaker at the national convention of the United Electrical, Radio, & Machine Workers Union, CIO, which was held in Cleveland, Ohio, as was shown in the Daily Worker of September 3, 1940, page 1: he was reelected president of the union at that convention, as was revealed in the Daily Worker of September 4, 1940, page 1, September 5, 1940, page 4, and New Masses of September 17, 1940, page 18. He testified at hearings before a special subcommittee of the Committee on Education and Labor during an investigation of Communist infiltration of the UREMWA (hearings held during September and October 1948); Mr. Carey identified himself before that committee as secretary-treasurer, Congress of Industrial Organizations, Washington, D.C.

The Special Committee on Un-American Activities, in its report of March 29, 1944, pages 18 and 19, listed the United Electrical, Radio, & Machine Workers of America among the 21 CIO unions in which the committee had found Communist leadership strongly entrenched. The 1949 convention of the Congress of Industrial Organizations expelled the United Electrical, Radio, & Machine Workers from the CIO on grounds of Communist domination (press release, 12th CIO constitutional convention, November 20–24, 1950).

After the expulsion of the United Electrical, Radio, & Machine Workers, the Congress of Industrial Organizations set up a new anti-Communist electrical union and at an organizational convention held in Philadelphia formally approved the name, International Union of Electrical Radio, & Machine Workers, and the identifying initials, IUE–CIO. The convention inserted in the constitution of the new union clauses barring Communists or adherents of other totalitarian organizations from holding national or local office. (See article in the New York Times of December 1, 1949, p. 3, datelined Philadelphia, November 30.)

It is noted that James B. Carey was listed as chairman of the International Union of Electrical, Radio, & Machine Workers (IUE–CIO) on a letterhead of the union dated January 12, 1950.

An article in the Daily People's World, west coast Communist Party organ (issue of October 18, 1952, p. 3) reported that "Under impetus from Red-baiting union buster James B. Carey, a new anti-Communist organization was being projected today by the Los Angeles CIO Council." The organization was described as "a chapter of Carey's latest brainchild, the so-called Negro Labor Committee, U.S.A." which, "he said frankly, is being designed to counteract the influence nationally of the Negro Labor Council."

The Committee on Un-American Activities, in its annual report for 1952, released December 28, 1952, stated: "The National Negro Labor Council is a Communist-front organization, designed to infiltrate communism into Negro life" and "by accusing established labor organizations of overlooking the needs of the Negroes, it hopes to capture more Negroes for communism" (p. 11).

The National Negro Labor Council has been redesignated as subversive and Communist by the Attorney General in a list of organizations previously designated pursuant to Executive Order 10450, released April 1, 1954.

Reference to Mr. Carey is found in the committee's report, "100 Things You Should Know About Communism," released May 14, 1951, as follows:

"96. What's a good program for an American union man against communism? Here is one given by James B. Carey, secretary-treasurer of the CIO: Full exposure of the Communists, plus a strong, progressive policy far in advance of the bogus progressivism of the Communists. Swift, flexible infighting that defeats the Communists at their own game within the union" (p. 86).

Masses and Mainstream of November 1950 (pp. 53–54) reported that Mr. Carey had headed a delegation to the Soviet Union in October 1945; the article revealed that "Mr. Carey, speaking for the delegation, said they had 'been deeply moved by the personal warmth and friendship' shown to them by the Soviet workers. He emphasized that no American could himself see the Soviet Union and its peoples without being 'moved by the same feeling of deep human sympathy which we have felt and by the same desire to assist and cooperate in the great tasks in which the Soviet people are now engaged.' The delegation, said Mr. Carey, was especially impressed by the manner in which 'the Soviet trade unions * * * promoted the interests of the workers' and by the 'many activities of a social, welfare, and cultural character and the comprehensive nature of the social security system which they operate.'"

A pamphlet, "Report of the CIO Delegation to the Soviet Union" (p. 1), reveals James B. Carey, secretary-treasurer of the CIO, was the chairman of the CIO delegation which visited the Soviet Union as guests of the All-Union Central Council of Trade Unions in return for a visit paid to the United States by a Soviet trade union delegation invited by the CIO.

The Daily Worker of September 3, 1940 (p. 4), identified Mr. Carey as a member of the National Council of the Emergency Peace Mobilization (C—1944; A—1942) at which the American Peace Mobilization (C—1942; A—1942; I—1956) was formed. Mr. Carey was a delegate to the American Congress for Peace and Democracy (C—1944), according to the Daily Worker of January 6, 1939 (p. 2). He was nominated for membership on the National Labor Committee of the American League for Peace and Democracy (C—1939; A—1942), which was formed by the Congress held in Washington, D.C., January 6–8, 1939 (pamphlet "7½ Million * * *," p. 32); he spoke on the subject "Labor and Democratic Rights" at a meeting held during the congress (ibid., p. 46); in this source he was identified as president, UERMWA, and secretary, CIO. A letterhead of the American League, dated February 8, 1939, named him as a member of the national labor committee of the league.

The "Call to a Conference on Civil Rights, April 20–21, 1950," page 3, issued by the Washington Committee for Democratic Action C—1942; A—1942), named James B. Carey as one of the speakers at the conference. He was one of the sponsors of the Greater New York Emergency Conference on Inalienable Rights (C—1944), as was revealed by the prorgam of the conference dated February 12, 1940.

Mr. Carey contributed to the publication, Champion (C—1942), as shown by the November 1937 issue, page 9, and by the Daily Worker of February 17, 1938, page 7.

According to the Daily Worker of March 29, 1938, page 4, James Carey endorsed the Committee for Peace through World Cooperation (C—1944). He spoke before the committee (Daily Worker of Apr. 2, 1938, p. 1; New Masses, April 5, 1938, p. 27) and before the Jewish People's Committee (C—1944; A—1948) (Daily Worker of Jan. 21, 1939, p. 4).

Equal Justice for October 1938, page 4, named James Carey as having been arrested in Chicago for distributing leaflets and as having been defended by the International Labor Defense (C—1939; A—1942). He spoke at the fourth annual convention of the American Student Union (C—1939) on December 26–30, 1938, as shown in "The Student Almanac" for 1939, page 32; he was identified as National Secretary, Congress of Industrial Organizations in this source.

In the call to the New York Legislature of Youth, issued by the American Youth Congress (C—1939; A—1942) for January 28–30, 1938, James Carey is shown as one of those who signed the call; he was identified as president, UERMWA. In the proceedings of the American Youth Congress, July 1–5,

1939, page 48, he was named as vice chairman; "Youth Defends America," a report of the Sixth American Youth Congress, July 3–7, 1940, reveals (on p. 44) that he was elected vice chairman of the group; he was identified as president, UERMWA.

Mr. Carey was a member of the organizing committee of the World Youth Congress (C—1939) (Daily Worker, April 4, 1938, p. 3) and a delegate from the United States to the Second World Youth Congress, August 16–23, 1938 (report of the congress entitled "Youth Demands a Peaceful World").

A leaflet announcing a public meeting to revise the neutrality act to be held in Carnegie Hall, February 13, 1939, named James B. Carey as a speaker at the meeting held under the auspices of the Union for Concerted Peace Efforts (C—1944). He spoke before the Negro People's Committee to Aid Spanish Democracy (C—1944) (Daily Worker, February 8, 1939, p. 2). Mr. Carey was one of those who signed a petition of the American Committee for Democracy and Intellectual Freedom (C—1942), as shown on a mimeographed sheet attached to a letterhead of that committee dated January 17, 1940.

Mr. Carey signed a telegram of the Joint Committee for Trade Union Rights (C—1944) addressed to President Roosevelt on behalf of the International Fur and Leather Workers Union (C—1944) defendants (Daily Worker, Nov. 11, 1940, pp. 1 and 5).

Mr. Carey's activities in the World Federation of Trade Unions were described in Free Trade Union News for July 1948, pages 3, 4, and 7. The Daily Worker of September 19, 1947, page 5, reported that he had praised the Soviet trade unions, and the Daily People's World of October 11, 1948, page 6, quoted him in a statement of cooperation with Soviet trade unions.

However, after the CIO withdrew from the WFTU, an article, "Why the CIO Bowed Out," by James B. Carey, secretary-treasurer, CIO, as told to Sidney Shallett, appeared in the Saturday Evening Post of June 11, 1949, pages 28, 128–132. In brief, Mr. Carey commented as follows:

"The CIO was under no illusions when, in February, 1945, we took the momentous step of participating in organization of the World Federation of Trade Unions. We knew that Soviet Russia and her satellites were in the WFTU. From the pitched battles we had fought against Communist attempts to dominate our own organization, we had a precise blueprint of what could be expected from the Reds. Still, the CIO, together with the British and other democratic trade unions, took on the job of attempting to work with the Communists in building a solid, lasting structure of security for the workingmen of all nations.

* * * * *

"Three years and eleven months later, the CIO and the British Trades Union Congress, disillusioned and doublecrossed, had to walk off the job. * * * Thanks to the Reds, the foundation of our structure for the international workingman was built of sand, its timbers were wormy and its roof was full of leaks. Once again we had learned the old lesson that when the Communist brethren give you the kiss of friendship, they also take a bite out of your cheek."

Steel's Pyramid

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor which appeared in the August 27 issue of the Cleveland Plain Dealer, written by Mr. Edgar S. Byers, of Cleveland, entitled "Steel's Pyramid":

STEEL'S PYRAMID

EDITOR, PLAIN DEALER.

SIR: In your issue of August 14 you published a letter to the editor over the signature of Lewis E. Zender, district director of public relations, United States Steel Corp. Time and space will not permit detailed analysis of this letter but, as I read it, it was the kind of thing which has come to be known as Madison Avenue propaganda to mislead the public.

It discussed dividends and profits of the United States Steel Corp. and was undoubtedly calculated to convince that both have been very reasonable indeed. As a matter of fact, the profits of the steel industry, as they have grown under the system of administered prices which made its open appearance under the Eisenhower administration, have been fantastically exorbitant.

The following facts and figures, the latter all from the steel corporation's annual reports, may be of some interest:

In 1949, just 10 years ago, United States Steel Corp. had 8,703,000 shares of issued common stock. In that year a so-called split of this stock was effected by corporate action, with result that certificates for three new shares were issued to the holders for each old share they had held.

When this legerdemain was completed the corporation had 26,110,000 issued shares of common stock, representing precisely the same equity in the assets and business of the corporation which had previously been represented by the 8,703,000 share original issue.

The highest price for which any of these new shares were sold in the market in 1949 was $26.75. So we find that the highest value placed by the market upon the total number of the issued common shares of United States Steel just 10 years ago was under $700 million ($698,442,000).

In 1955 there was another split of the common shares, and this time the shareholders received two new shares for each of the 26,110,000 shares outstanding after the first split in 1949. The corporation then had 52,220,000 shares representing the common stock equity in place of 8,703,000 shares as issued before the first split in 1949, and the holders of the original shares had 6 shares for 1. Again, all of this had not added $1 to the assets of the corporation nor had anything whatever been added to the several interests of the holders of the original shares in the corporation's assets and business.

United States Steel presently has 53,909,000 shares of issued common stock. It has issued a considerable number of shares at favorable prices to executives and favored employees, this practice enabling them to avoid a considerable part of the income tax on their actual earnings.

Recently United States Steel common stock sold on the New York Stock Exchange for a fraction above $105 per share. At this price, $105, the total evaluation which this market price has placed upon the common shareholder's equity or interest in the business and assets of United States Steel Corp. is $5,660,445,000 or more than eight times the value placed upon this equity by the highest market price of the shares in 1949.

To have added nearly $5 billion to the value of this equity in 10 years the corporation would have had to have earned an average of about $57 per share per year, net after taxes, and have paid nothing out of such earnings in dividends.

Of course, it didn't have such earnings. But the corporation did earn in 1957 about $44 net after taxes for each of the original shares, and for the first 6 months of 1959 it reports earnings which, if applied to the number of shares before either of these splits, would mean earnings at an annual rate of $54 on the common shares outstanding originally in 1949 and for many years prior to 1949.

All of this should convince the reader, as Mr. Zender attempts to do, that our steel industry is just a patriotic, unselfish, public-spirited business, concerned only with the welfare of the country in its time of peril and that union labor, which knows all about all this and has participated in and profited by acquiescence in it, is unreasonable to ask for a bigger share of the take.

But be sure of this: No matter what the division is to be, for so long as Mr. Eisenhower is in office the consumer is going to pay administered prices, this being a polite term for illegal restraint of trade.

EDGAR S. BYERS.

CLEVELAND.

Need for Action on Another Application for Foreign Service From Friendship

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FRIEDEL. Mr. Speaker, I would like to call to your attention and to the attention of my colleagues an article which appeared in Monday morning's Baltimore Sun newspaper. This article carries the headline "City May Get Orient Flight."

The author Albert Sehlstedt, Jr., announcing that Pan American World Airways has today submitted its written arguments and exhibits to the Civil Aeronautics Board in support of its proposal to establish direct air routes from Baltimore and other eastern cities to the Orient, points up a general problem facing United States airlines.

The demand for services from this area to foreign ports grows continuously. The SAB has failed to grant permission to even one U.S. airline to fly out of Friendship destined for Europe. Generally petitions filed by foreign-flag airlines seem to receive speedier action than those filed by U.S. airlines, although not necessarily from Friendship. This problem, of being granted routes from Friendship to foreign ports, is equally applicable to all American-flag airlines and is pointed up by the newspaper article.

The Friendship International Airport in nearby Maryland is the only port on the east coast capable of handling jetplanes and one of the few in the entire country serving these modern aircraft. I have long supported and advocated more complete use of these facilities. The institution of transcontinental flights from Friendship to the west coast has proven successful. In the short period of time that this service has been available, the number of passengers making use thereof has increased over 100 percent. Statistics show that a large number of these passengers are from the Baltimore area itself. Direct flights from Baltimore to Puerto Rico were originally established on a one-a-week basis. Today there are five flights each week and reservation requests indicate the need for daily flights.

The people of this area have proven, when given the opportunity, that if the service is available use will be made of it. This goes far to prove the need for expanding the points of destination from Friendship. The same will hold true for service from Friendship to the Orient.

The CAB now has before it the opportunity to implement the President's expressed objective "that the American-flag service we ultimately envision for the Pacific must be developed as rapidly as it can be justified by the growth of United States-Orient traffic." The demand for such service is present or Pan-Am would not make this request. All that is needed now for further development of American-flag service to the Orient is the approval of the CAB. The same is true for service from Friendship to other foreign ports.

It is hoped that the CAB will act expediently and expeditiously on this request, as well as on the other requests for air routes from Friendship to foreign ports.

Mr. Sehlstedt's article from the Baltimore Sun follows:

CITY MAY GET ORIENT FLIGHT—PAN AM TODAY ASKS CAB TO FLY FROM EAST COAST

(By Albert Sehlstedt, Jr.)

Pan American World Airways today will ask the Civil Aeronautics Board to establish direct air routes from Baltimore and other eastern cities to the Orient.

A favorable decision from the CAB would make it possible for a Baltimorean to board a jet plane at Friendship International Airport and fly to Tokyo in about 16 hours.

The flight would follow a great-circle course over the globe with a refueling stop at Fairbanks, Alaska. A great-circle course is the shortest route between any two points on the surface of the earth.

Today, Pan American will submit written arguments and exhibits to the CAB in support of its proposal.

On October 21, hearings will begin before a CAB examiner who will weigh the statements of litigants favoring and opposing this and other plans for air travel across the Pacific.

The examiner will present his recommendations to the five-member Board. A decision from the Board, subject to the approval of President Eisenhower, is expected about the first of next year.

WEST COAST TO EUROPE NOW

One of the principal arguments of Pan American is that east coast cities should have the same type of direct routes to the Far East that west coast cities now have to Europe.

Last February, President Eisenhower and James R. Durfee, chairman of the CAB, exchanged several letters discussing the overall airline-route situation in the Pacific area.

The President emphasized the need for competitive American-flag service on all international air routes serving major U.S. points.

PRESIDENT'S INTEREST

"Over the North Atlantic," Mr. Eisenhower wrote, "our objective has been substantially achieved, but in the Pacific, because so far it has not been deemed feasible, very little progress in the desired direction has been made.

"This history only emphasizes that the American-flag service we ultimately envision for the Pacific must be developed as rapidly as it can be justified by the growth of United States-Orient traffic."

This case now before the CAB is called the Trans-Pacific Route case and is considered one of the most important ever to come before the Board.

TOKYO, MANILA, HONG KONG

Pan American is proposing that Boston, New York, Philadelphia, Baltimore, Washington, Detroit and Chicago be linked with Tokyo, Manila and Hong Kong.

The carrier also wants to establish direct service between east coast cities and Hawaii and operate between certain military bases in the United States and other bases in the Pacific.

A Pan American spokesman in Washington said his airline wants to develop air-cargo business in the Pacific.

ORDERS 10 CARGO PLANES

He said the carrier is ordering 10 specially-designed turboprop planes from Lockheed Aircraft Corp. for hauling freight.

The planes, to cost a total of $60 million, would be similar to the C-130 Hercules now in service with the Air Force.

Pan American also is converting 10 of its DC-7C Douglas transports to cargo use.

Public Works Veto Unjustified

EXTENSION OF REMARKS

OF

HON. DONALD F. McGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. McGINLEY. Mr. Speaker, the recent Presidential veto of the public works appropriation bill cannot be justified by any reason of economy insofar as the Nebraska projects are concerned.

If the veto is sustained, the Gering Valley flood control project will again go begging. After years of justification of the project and proof of its validity, it again is threatened by unwarranted delay.

Following a disastrous flood in 1947, the Corps of Engineers made a study of the needs of the valley. Its planning and designs progressed until the project was victim of the veto in omnibus bills twice before becoming an approved project in the second omnibus bill in 1958.

The effect of these delays has been the utter waste of money. In 1958, after emergency funds in the amount of $125,000 had been spent on repair work, all of the structures were carried away by floodwaters. Because of the imprudence of attempting to do anything short of complete control of the area, the raw, unprotected drainage area lays open to the ravages of further heavy rains.

With each delay, extensive flood damage has resulted which constantly increases the end cost of an effective control system. The flooding has done serious damage to rich farmland in the North Platte Valley, as well as to roads, railroads and farmsteads.

Expenses on the part of Scotts Bluff County and local irrigation districts have been exceedingly heavy in the valiant attempt of the local people to fight the overwhelming odds of the situation.

And yet this critical problem which had its formal recognition nearly a dozen years ago is stifled because of a label called new start. This label ignores reason or practicality. It ignores the duty of Government. It flaunts the will of the people as expressed by the majority of Congress.

If this project had been fortunate enough to have been in Korea, India, or some other remote area, there would have been funds and a program to take care of the situation—without specific consent or review of Congress.

The public's reaction to the President's action and the wise recommendation that Congress override the veto is, I think, expressed in a recent editorial in the Lincoln Evening Journal of Lincoln, Nebr., which I include at this point:

[From the Lincoln (Nebr.) Evening Journal, Aug. 29, 1959]

President Eisenhower has flung his strongest challenge yet at the Democratic-controlled Congress by vetoing the $1.2 billion public works appropriations bill.

This is an almost unprecedented step with far-ranging consequences. Unless Congress takes further action, it means that construction work on vital irrigation and flood control projects all over the Nation will have to be stopped. This would surely lead to vastly increased costs when these works are resumed and a serious blow to the conomy during the interim.

Obviously, Congress cannot leave the situation as it stands. The most likely and, in this case, the most warranted action will be to override the President's veto. Despite the overwhelming Democratic majority in both Houses, Mr. Eisenhower this year has been able to keep intact his record of never having had a veto overridden. But he has never before put Congress in such a position as this.

True, the public works measure attempts to include "something for everybody" and is, to some degree, politically inspired. But it also is true that with very few, if any, exceptions, the projects called for in the bill will add immeasurably to the productivity of the United States and to the safety and welfare of its people. It is, in every sense of the word, an investment in the future of the Nation.

The President has objected to the bill because it calls for starts on 67 new projects. He contends there should be no new projects started at this time.

Why the United States, during one of its most prosperous periods in history, cannot expand development of its resources by new projects such as these is difficult to comprehend. Whether there should be 67 new projects or some lesser number seems to be a proper function for Congress to determine.

Nebraska is vitally affected by the vetoed measure. It contains funds for continued work on the Bostwick and Frenchman-Cambridge irrigation projects in the Republican Valley, on the Farwell irrigation project on the Middle Loup River, on Missouri River channel improvement from Sioux City to Kansas City. It has money for new construction starts on the Red Willow and Gering Valley flood control projects and for a start of planning on the Salt-Wahoo project around Lincoln.

This should be a matter of deep concern for Nebraska's Senators and Congressmen. It will be in the best interests of the State for each of them, regardless of party, to give the utmost support to overriding the President's veto of this bill.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of August 29, 1959:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

AUGUST 29, 1959.

Before flying to Europe, President Eisenhower appealed to Congress to pass necessary legislation in the closing days prior to adjournment. In two messages to Congress he stressed three programs. He asked: (1) Remove interest rate ceilings on long-term Government borrowing; he explained this is necessary because (a) bondholders deserve a fair rate of return; (b) $85 billion refinancing of Government debt is necessary in the next 12 months; (c) it costs Government more to refinance time and again, on a short-term basis, as we're forced to do now; (d) present law stimulates inflation, weakens our currency, and worries investors both here and abroad; the urgency of this item he made clear when he warned that those unwilling to pass the needed legislation "must assume full responsibility for the possibly serious consequences," for the administration cannot and will not; (2) FHA loan insurance authorization—the President said, "An increase in FHA's loan insurance authority should not be made contingent upon the possibility of approval by the President, after the Congress has adjourned, of legislation which contains features that the administration finds seriously objectionable and that are entirely unrelated to FHA's home loan insurance program." (3) Increased tax reserves to pay for highway program—he stressed the need, in his opinion, for maintaining the pay-as-we-go play by providing the money needed for the increased costs. (See Newsletters of August 1 and July 25.)

The Housing Act of 1959 (second version) passed 283 to 105, containing many features objected to by the President in his veto of the original bill. The House leadership completely disregarded the earlier message from the President (see above) and tied many undesirable items to the necessary extension of FHA home insurance authority. Efforts to eliminate (a) public housing, and (b) direct loans for college classroom construction, failed. Efforts to reduce urban renewal by stretching the $650 million to 2 years failed. The bill contains other administration-opposed provisions as well. I voted to improve the bill, and the amendments failing, voted against the bill. This bill may well be vetoed again.

The vehicular safety standards bill offers a prime example of a bill whose noble sounding title and obviously desirable objective makes it difficult for Congressmen to vote against, however impracticable its language. Who wants to appear to vote against safety? This bill directs the Commerce Department to establish minimum safety standards for all Government autos. It would put the Government into the auto design and engineering field and was condemned by every Government agency which considered it. Result? It passed, pointing up again that many feel that any need can be met by simply passing a law. Incorrect solutions, though they bear fine and imposing titles, can do more harm than good, and that has been pointed up, in my opinion, by congressional action on housing, highways, and interest rates, no less than on vehicular safety standards.

Political issues, and how to find, define and exploit them, seem to be dominant in these closing days of Congress. A special session now appears quite possible since the President may have to force Congress to face up to its responsibility, primarily in the fields of housing and interest rate flexibility.

A lot of dust is being thrown in the voters' eyes these days in the debate over who is really economy minded. Under pressure from home, economy, you know, has suddenly turned fashionable again among political candidates. Hence, it's not surprising that the back page of each day's CONGRESSIONAL RECORD now features a chart, crammed full of figures and purporting to show that Congress, far from exceeding the President's budget, has actually slashed administration requests by a present total of some $650 million. Oh? Take just one item, out of several which might be mentioned, housing. According to this chart, the President wanted $1,650 million for housing, while Congress "reduced" that figure to $1,300 million, a cut again according to the chart of $350 million. What the chart doesn't say is that the figures cover entirely different periods of time. Hence, the President's proposal called for spending $1.5 billion on urban renewal over the next 6 years. Congress instead voted to spend almost one billion in only 2 years. Some cut. If you "economized" around your house this way, you could "save" yourself broke in a hurry.

The President's veto of the public works appropriation (money for rivers, harbors, dams, reclamation, etc.) will spark a fight next week on the floor. It seems to me that if we're to live within our means, these public works programs provide an obvious opportunity to cut down spending. The only responsible alternatives is to raise taxes, and I believe they are too high now. Hence, though only 20 of us voted that way when this bill passed the House, I believe the President should be commended for his determination to hold the line on public works spending.

Diablo Dam

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FISHER. Mr. Speaker, the proposed Diablo Dam on the Rio Grande River was further spotlighted this past week by a visit to the site of the project by the U.S. Ambassador to Mexico, the Honorable Robert C. Hill. The Ambassador went there at the request of President Eisenhower to make an inspection and obtain certain information to be relayed to the President.

It will be recalled that the urgency of the proposed dam was a subject of top priority in conversations between President Eisenhower and Mexico's President Mateos at their historic meeting in Acapulco last February.

This project would be authorized by H.R. 8400 which I recently introduced, following an economic feasibility report made by the U.S. Boundary and Water Commissioner, Col. L. H. Hewitt. That report finds the annual primary benefits from the project to the United States compared with annual costs would be 1.96:1 for a 50-year life and 2.48:1 for a 100-year life of the project.

By way of comparison with others, it is of interest to note that in the case of the Colorado River storage project—Glenn Canyon and Echo Park Dams, the ratio of benefits to costs are recorded as 1.64:1; the Whitney Dam and Reservoir, 1.1:1. And similar comparisons are numerous.

The early authorization and construction of the highly justified Diablo Dam is of highest importance.

Under leave to extend my remarks, I include a newspaper article from Del Rio which reports on the Ambassador's recent visit:

AMBASSADOR VIEWS SITE OF DEL RIO DAM

DEL RIO.—U.S. Ambassador to Mexico Robert C. Hill, made a flying inspection of the Diablo Dam site Friday at the suggestion of Preisdent Eisenhower.

"I am well impressed with what I saw," Ambassador Hill told Del Rio and Ciudad Acuna, Mexico, officials following a helicopter trip over the damsite.

Hill and his staff stopped for a visit in Del Rio following the International Bridge dedication at El Paso and Juarez, Mexico, Thursday. A helicopter from Laughlin Air Force Base, piloted by Col. A. J. Bratton, wing commander at LAFB, took the Ambassador and County Judge Jim Lindsey over the damsite shortly after 8 a.m. Friday. Other members of the party flew in private light planes.

"At the Acapulco (Mexico) Conference President Eisenhower suggested that I inspect Diablo Dam site and get the answer to certain questions on the damsite at the earliest opportunity," said Hill at LAFB shortly after landing.

Following the inspection of the damsite the Ambassador and his staff left for Mexico City at 11 a.m. Friday.

The Acapulco Conference was held in February of 1959 between President Eisenhower and Mexico's President Adolfo Mateos. They discussed plans for joint construction of the new $100 million dam on the Rio Grande.

Location of the damsite is 11 miles upstream from Del Rio. The dam will be 253 feet above the riverbed below the confluence of the Rio Grande and Devil's River.

An estimated 5 years will be required to build Diablo after it is approved by the Bureau of the Budget and passes Congress. The U.S. share of the cost, estimated at $100 million, will be 56.2 percent, or $45,400,000. The center section of concrete will be 1,950 feet in the river with the earth sections extending 2 miles in the United States and 4 miles in Mexico. The concrete section in the channel includes the spillway with a capacity of 1,550,000 second-feet.

Flood control capacity is 1,775,000 acre-feet with additional flood superstorage set at 335,000 acre-feet. Mexican conservation storage capacity is 1,314,000 acre-feet and U.S. conservation storage is 1,686,000 acre-feet for a total of 5,660,000 acre-feet.

At peak construction, between 500 and 1,000 persons are expected to be employed on the dam, which will have a shoreline of more than 200 miles, and will extend beyond Langtry.

Leadership and Progress: The Test of Our Time

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable Arthur E. Summerfield on the occasion of the oil industry centennial, Titusville, Pa., August 27, 1959:

LEADERSHIP AND PROGRESS: THE TEST OF OUR TIME

(Address by the Honorable Arthur E. Summerfield, Postmaster General of the United States, on occasion of the oil industry centennial, Titusville, Pa., August 27, 1959)

Any man in these United States would be honored to be asked to speak here today.

I think, however, he would realize quickly that this is more than an honor. It is also a very formidable challenge.

Here, within this room, is as great gathering of distinguished minds as you could find anyplace, at any time, for any occasion.

Here is the leadership that has built the modern American petroleum industry. And the accomplishments of this industry are so fabulous as to be almost incredible.

From this industry comes the very life-power behind the growth and progress and security of not only America, but the free world.

We thrive as a free and dynamic people because this industry, in the face of immense problems, is able to provide abundant, low-cost energy for our tremendous needs.

We are gratefully mindful that our country, with 7 percent of the world's population, produces some 40 percent of the energy used by the entire human race.

It is generally forecast that, in our country alone, energy requirements by 1975 will increase by 94 percent. And we have complete confidence that this industry will supply most of this increase—because you who lead it have shown that no challenge is too great for you to accept and meet.

In such presence, the wise speaker will adhere to a subject with which he is most familiar.

I feel I can do this best by reporting to you on some specific problems we face in Washington today. Since any problems in Washington are in fact the direct concern of every citizen—and especially those of you in capacities of leadership—I believe my purpose is appropriate to this occasion.

Further, I should like to do more than report. I should like to tell you what I believe to be the most crucial problem confronting us. And I would then dare to ask you to assess what you can do to help in its solution.

Let me approach the definition of this problem by making two observations that are well known to you:

The first is that government policy vitally affects the economy of any nation. In a dictator state, of course, the effect is absolute. But even in a republic with a free enterprise system, the government literally determines the broad conditions under which the economy shall operate.

The second point is that, in a republic, the elected representatives of the people presumably are to provide the kind of government the majority of the people want.

It is therefore to be assumed that the people have the right—if not the obligation—to insist upon getting the policies they want.

One natural consequence of this process is the formation of pressure groups—groups that may represent only a small fraction of the electorate, but that organize their efforts, vocally and actively, to advance their own self-interest.

When their interest represents the needs and desires of the great majority of the people, they deserve support.

When their interest is detrimental to the people, they deserve defeat. But the fact is, they may still succeed—and all too often, do. They succeed because the interests of the people have too few champions—too few men and women with the talents and the willingness to speak up, to lead the fight in the people's behalf.

To the public officeholder, the self-interest groups appear to have the initiative; the public appears to be apathetic.

If I may be allowed a personal reference, I would mention that I first became aware of these simple facts back in 1940, when I was a businessman very much absorbed in my own business.

There occurred in my home town a shocking demonstration of the worst kind of pressure-group tactics. No one in public office seemed to be willing to cope with it. I began to envision what would happen if such pressure groups, across the land, should come to dominate our local and State, and even our Federal, Governments.

And it became clear to me that I had a responsibility beyond the voting booth—that I should try, in any event, to contribute as I could to the kind of sound government that would make pressure-group government impossible.

My interest, it seems, proved to be more than a passing fancy. I am exceedingly happy that it did. I have cherished my participation in politics and public service. Nothing in my life has been quite so spiritually rewarding, so satisfying.

The basic issue which moved me in 1940 has expanded many times over, today. It is the main force to be reckoned with, as we make our decisions on national economic policy. This year, and in the years directly ahead, these decisions will be crucial.

Upon them will rest the future of our whole security, and freedom and progress as a Nation.

For these are times of supreme challenge. We are engaged in a mammoth cold war in which no quarter is given. It is a war involving economic, as well as physical and moral, strength.

In all the writings of Karl Marx, there is not a line which advocates the overthrow of capitalism by force. Instead, the entire creed is that capitalistic nations will fall because their currencies will weaken and their economies fail.

Certain it is that economic folly, on our part, would be an invitation to disaster. A sound and growing economy is utterly essential to victory.

So our fundamental decision comes down to this: Whether we are to have economic folly through Government by pressure group, with inflation, higher taxation, and deadly monopoly power; or, whether we are to have sound Government, with sound economic policies that rid us of inflation, confiscatory taxation, and abuses of monopoly power.

At present, our Nation has reached the highest level of prosperity in our history. We have the healthiest, strongest economy America has yet known.

Our people are enjoying higher wages and better living standards than ever before.

Overall output is at record levels, and rising steadily.

Employment is rising steeply. Unemployment is falling sharply.

For more than a year, the cost of living has remained generally stable.

The battle for a sound dollar is at least temporarily won.

And the outlook for a balanced budget is the brightest it has been in a great many months.

These are achievements made possible by sound policies of Government—policies maintained by a determined Federal administration.

They are the result of a resolute battle to bring a rampant inflationary momentum under control.

They are the product of clear-thinking, far-sighted leadership—the kind provided by the President in the 1958 recession, when he guided with a steady hand and refused to rush into panic spending.

All these are hard-won gains. And, my friends, it will be harder still to hold them and to continue advancing along these sound ways.

The battle against economic folly is only begun. It must be waged persistently and firmly, as long as there are forces seeking to resume the inflationary process.

The pressures for extravagant Government spending remain very much in being. The groups behind them never rest. Washington is swarming with their representatives, wielding every political weapon that can be applied.

Many in the Congress are inherently bent on limitless spending and taxation. They will ignore the consequences of cheap dollars and deficit financing.

Almost all of these particular Members are saying—for public consumption—that they are opposed to inflation. But what happens every time they have the opportunity to act?

They fight and vote for budget-busting bills that would give inflation another boost.

We have seen examples in just the past few weeks. We are seeing examples now.

I hope you have read the first reports from our Cabinet Committee on Price Stability for Economic Growth. I hope, in fact, that all thinking Americans have read them.

I can tell you they represent a tremendous amount of careful study and work. They look at the problems squarely, and they call a spade a spade.

Few men of responsible position, in either political party, in Washington or elsewhere, have sought to quarrel with the findings or conclusions. I believe that even those who would like to discredit them recognize that their strength lies in their truth.

The reports face up to the fact that new inflation can also come from sharp new spirals in wages and prices.

The challenge to the American people is to demand real statesmanship from all concerned—all who influence the factors that bear on prices, and thus the cost of living.

Union members, with most other Americans, want their leaders, as well as the leaders in management, to exercise basic economic commonsense. They have said so in many surveys of their views.

They do not want an ever-rising cost of living forced upon the country by wage increases that outrun increases in productivity.

They do not want inflation. They want fairness with a future.

They—and all our citizens—must realize, too, the important place that taxation holds in that future.

Our population is growing rapidly. Business can create new jobs to meet this growth only as billions of dollars are invested in new tools and capacity.

From where is this money to come, if Federal, State, and local taxes eat up business income?

There are over 100,000 taxing authorities in our country. Their weight can literally crush the ability of business to meet its job-creating capital needs.

As you so well know, our present tax structure is seriously outdated. It is a set of laws reflecting largely the conditions of the past, especially World War II, when the

goal was the confiscation of war profits, not the building of a sound peacetime economy.

A dynamic program of tax reform and reduction is needed in its place. Such a program can ease the burden our taxes are placing on the accumulation of capital for investment.

It can relieve the stifling taxload being carried by the individual citizen, and by our business system.

The Revenue Act of 1954 was a major step in this direction, bringing the greatest dollar reduction in Federal taxes in our history.

Today, the President's insistence on a balanced budget is essential to this goal.

And, needless to say, the broad support of the people will be necessary if this program eventually is to be accomplished.

Let me repeat: The forces devoted to irresponsible spending and taxation are strongly organized. They are highly vocal. They are grimly persistent. They remain confident.

As opposed to them, the number leading the fight for sound government has been relatively small. In Washington, this fight has been led, in large part, by the President and the Vice President, sustained by key members of the administration and some stalwart Members of the Congress.

These are the men who have battled for fiscal sanity, for a balanced budget, for steps leading to tax reform and reduction. More—many more—are needed in every state in the Union.

And here I submit, gentlemen, is the most crucial problem facing this country. It is the need for all who believe in sound government to stand forth and support the efforts that must be made to maintain it.

It is the need for men who have talents of leadership to apply these talents to the political life of the nation.

I would suggest that too much is being expected of too few. The majority of our people want sound and responsible progress by all segments of our society. There has been a vast increase in public consciousness of the fact that only the people, in the end, can see to it that this kind of progress is maintained.

No more dramatic example could be given than the way in which the people have made it clear that they want the abuses of labor monopoly power stopped. Their mandate has been so strong that the adoption of a vitally needed labor reform law—which the labor monopoly leaders appeared to have blocked as little as 3 months ago—is nearly a reality.

We have seen, too, how the forward march of inflation has been slowed by an aroused public opinion. In no other way could the inflationary forces that ran rampant for so many years have been brought to a halt.

But we must not be misled. Let public vigilance fall away only a little, and the pressure groups will be in the ascendence again. The spenders and taxers will not yield easily, nor will those determined to exploit labor monopoly power.

To keep the public interest uppermost, the people will need articulate help and leadership in every community; not advice from the sidelines; nor cautious detachment from the arena where the decisions are being made.

I know of no men in America life whose leadership could be more important than the men in this room at this moment.

No one could speak with greater authority, for you have shown how successfully you can deal with the very problems that confront us.

This great industry has been outstanding in fighting inflation by holding down prices. In the 10 years from 1949 to 1958, gasoline prices, exclusive of taxes, increased less than 6 percent on a national average, while the cost of living rose more than 20 percent. And these were prices for gasoline constantly improved in quality through huge expenditures in research and development.

Your experience in this industry, too, equips you to emphasize the necessity of vast expenditures by private industry for technology and facilities to meet public needs.

The oil industry knows only too well that, if its capital is taxed away, it cannot continue to make the enormous investments, and take the risks, that have enabled it to serve the public so well to this time.

You know, at first hand, such inflationary pressures as that behind the highway construction program. You know that we must be extremely careful that our Federal highway program is carried forward on the most efficient basis possible.

Already, we find, the estimated costs of this program are running 45 percent higher than in 1956, when it was first approved in Congress.

Our people must be urged to see that this program does not become immersed in a pork barrel. Its potential as an element of inflation is great and serious.

I know very well, indeed, how easy it is to become engrossed in the problems and duties of daily business. I know how difficult it is to find the time for other activity.

But it can be done. In time of war, all of us are ready to change our lives, to go where we are needed, to serve in the best way we can. We are willing to make any sacrifice to preserve the life and future of our Nation.

We are enaged in no shooting war, but my friends, we are engaged in a battle to preserve the life and the bright future of our country.

It is a time for service, for sacrifice, for leadership.

There is in this room, a tremendous reservoir of vital political thinking, and of great ability to communicate this thinking.

This, too, is demonstrated on the record. I have been told that at least 10 major oil companies have launched public affairs programs to make their employees better informed citizens—and to encourage employees to participate, as citizens, in political activity.

I know personally that many of you are giving increasingly of your time and ability, as citizens, to public affairs and political participation. This, of course, is of first importance. If a public affairs program for employees is to succeed, it must certainly have the demonstrated leadership of the management of the enterprise.

I would appeal to you, in all events, to speak, work and fight for sound policies and a stronger America.

I would ask you to assess anew the importance of your political participation.

The political party of our choice is, and will be, what we make of it—either by participation, or lack of participation, in its affairs and its choice of candidates.

Unless more responsible citizens devote real time and effort to unselfish politics, Government by pressure groups will triumph.

Only by genuine participation can we be sure that the Government will serve all the people—not some special interest—and assure the greatest opportunities for all our citizens.

This is a day of great meaning in our Nation's history. All America is proud and grateful on this anniversary of these first magnificent 100 years.

It is a day of even greater meaning to our Nation's future. We know that untold wonders will come in the years ahead, in the second century of oil progress.

We salute you—we look to your leadership in industry, and in our national life.

In the spirit of your accomplishment, we shall move forward into the golden era of opportunity that lies before us.

We shall prove anew there is no conceivable limit to the advance of a free people—no goal they cannot, with wisdom and courage, attain.

The Pentagon Book Ban

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. HOLIFIELD. Mr. Speaker, we live in a time of world crisis when the life and death issues of peace or war are debated in the halls of Congress, the press, and public forums throughout the country. The new personal diplomacy of the Eisenhower administration and the forthcoming exchange of visits between Mr. Khrushchev and Mr. Eisenhower signify the intensity of the search for peace.

In these critical times there is need for basic data and the informed judgment of experts to help the American people find the right road to peace. I have tried, as chairman of a subcommittee of the Joint Committee on Atomic Energy, to bring to the Congress and the American people the basic facts of nuclear radiation—the effects of radiation from bomb testing as well as the nuclear damage from hypothetical mass attack. As chairman of the Military Operations Subcommittee of the House Committee on Government Operations, I have tried to do the same in the missile field—bring together in one authoritative document the basic facts of the missile programs which support our strategy of deterrence and defense.

We need more information, Mr. Speaker, not less, to put into the crucible of national debate which will mold the American policy for survival and peace. Therefore, it is with great concern that I note the Department of Defense decision to ban a book by Gen. Thomas S. Power, who heads our Strategic Air Command.

This Pentagon book banning is a shortsighted policy. Granted that there may be some technical problems about books and articles written by Government officials, military and otherwise—technical problems concerning royalties, copyright, and the like—it is vastly more important for the Congress and the public to have the benefit of the seasoned judgment and experience of men like General Power.

General Power's book was written to help the American people understand better the issues of war and peace in the nuclear-missile age. The book analyzes the revolutionary impact of nuclear bombs and missiles on military strategy, the nature of the enemy threat, problems of deterrence, the implications of all-out and limited war, the vital role of civil defense in deterrence, and other important matters.

The Air Force has approved this book for publication. A publisher is waiting

the word to put the book into print. General Power has given up any financial returns that may be derived from the sale of this book.

Mr. Murray Snyder, Assistant Secretary of Defense—Public Affairs—has decided that this book should be withheld from publication. His office issued a press release to this effect, although neither General Power nor the Secretary of the Air Force were informed directly beforehand that a decision to withhold the book had been made.

I presume that Secretary of Defense McElroy has approved Mr. Snyder's action. If so, I believe that the Secretary had better reconsider this action and permit General Power's book to be published.

Secretary McElroy should recognize that book banning, like book burning, is a vicious and futile policy which does no credit to a free nation. The right of the people to learn and to understand should not yield to bureaucratic policy which conflicts with that right.

In the CONGRESSIONAL RECORD of Monday, August 31, 1959, at pages 15927–15928, there is a list of 15 books by high-ranking military officers written while on active duty. I notice among them "Crusade in Europe," by Gen. Dwight D. Eisenhower, written while he was Chief of Staff of the U.S. Army during the period 1945–48; the book was published in 1948. This book has been highly rated by scholars and commentators on World War II. It was an important work by the general in command of the allied invasion forces. The American people are the better off for its publication.

I believe the same could be said about General Power's book. I have not had access to the book, although I am familiar generally with the subject matter of which it treats. I may not even agree with certain things General Power says and, doubtless, he would not subscribe altogether to points recently made by my subcommittee in its report on organization and management of missile programs. But General Power has an important message for the American people. He should be allowed to convey that message. I hope that the Secretary of Defense will reconsider the ill-advised and unwarranted book-banning decision.

Osceola Mills, Pa., Celebrates Its 100th Birthday

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. VAN ZANDT. Mr. Speaker, highlighted by congratulatory messages from President Eisenhower and Gov. David L. Lawrence of Pennsylvania together with introduction of a concurrent resolution by the Congress of the United States extending felicitations and expressing appreciation for the century of splendid services rendered to the Nation by its citizens, the Borough of Osceola Mills in Clearfield County, Pa., observed the 100th anniversary of its founding the week of August 23–29. During that period many former residents responded to the welcome home invitation and returned to join in the centennial festivities.

First named Osceola and then changed to Osceola Mills to avoid a conflict in names and because of numerous sawmills in the area, the town was established in 1859 and incorporated as a borough in 1864. Located on the banks of Moshannon Creek—now the dividing line between Centre and Clearfield Counties—like many other communities in central Pennsylvania the town was named for an Indian.

The community was named for Osceola, the famous war chief of the Seminoles, a Florida tribe, after he, his family and tribe had been persecuted by the whites. Chief Osceola was born in Florida about 1813 during the War of 1812. In 1835 his wife was carried off as a slave after which Osceola and his tribe waged a relentless war against the whites for 2 years with varying success. He was finally taken prisoner by treachery and confined at Fort Moultrie where he died 2 years later. Twenty-two years later the present town of Osceola Mills was named Osceola in honor of the Seminole war chief whose daring and ability won him nationwide sympathy.

Other Indian names in the area including Bald Eagle, Moshannon, Warriors Mark, and Snow Shoe were taken from Delaware, Shawnee, and Corn Planter Indians that lived in the area prior to and after the coming of the white settlers.

History records that the first settlement in Osceola Mills was made by a family named Winter followed by Daniel Hoffman who cleared a piece of land near the junction of Pruner and Coal streets.

Among the oldest settlers in the Osceola Mills area was Valentine Flegal who bought extensive tracts of land in 1800. He was a local minister and held services at Stumptown in 1815. The Stumptown church was later used as a school for more than 80 years and in 1951 after having been abandoned as a school, it was again made into a church where Free Methodist services are held each Sunday. Located across the road from the old Goss Cemetery, another famous landmark, the church was among many points of interest during the centennial celebration.

Osceola Mills was visited by a devastating fire on May 20, 1875, that almost wholly destroyed the town, inflicting property losses of over $1½ million. Despite the fact that all inhabitants were made homeless the residents of the stricken community with the aid of neighboring towns soon recovered from such a staggering blow and from the ruins there arose a new and more beautiful community.

Clearfield County, which was among the principal lumbering areas in central Pennsylvania, is noted for its production of bituminous coal. However, because of the lack of railroad transportation, development of the coal industry was retarded.

It is recorded that about 1830 a mine was opened on what was known as the Goss Farm in Decatur Township, and coal was hauled on wagons to Spruce Creek. The transportation of coal by such crude methods naturally amounted to very small tonnage. It was not until 1846 with the opening of the Tyrone and Clearfield Railroad to Osceola Mills and Philipsburg that the real development of the coal industry in Clearfield County commenced. Prior to that time not one pound of coal was shipped by rail from Clearfield County. In fact, the first shipment of coal from Clearfield County was made during lumbering days when coal was loaded in what were called "Arks" and floated down the Susquehanna River to Lock Haven and Williamsport as early as 1822.

Today, Clearfield County bituminous coal is known throughout the Nation and abroad and it is of interest on the occasion of the Osceola Mills centennial celebration to recall the important part that Moshannon Valley community has played in the coal production records of Clearfield County.

As the residents of Osceola Mills reminisced on this eventful occasion, they were reminded that the community, in addition to lumbering, farming, railroading and coal mining, for a number of years harbored a tannery built in 1873. Other sources of employment include a modern brick plant, and some smaller industries. Railroading has been prominent in the industrial life of the town as evidenced by a large railroad yard which was located in Osceola Mills because it was situated at the junction of the Moshannon branch with the mainline of the Tyrone & Clearfield Railroad, which years ago was absorbed by the Pennsylvania Railroad system.

To commemorate the community's 100th birthday, the Osceola Mills Centennial Committee was formed headed by Chief Burgess John Redding as president and general chairman, with Andrew Tocimak, secretary; Herman Hirsh, treasurer; and William B. McFeeters, publicity chairman. The finance committee was comprised of Neal Baney, Gordon Kephart, Lee Kennedy, George Stranko, and Justin O'Brien. With president John Redding serving as a member of the steering committee, the other members were: Robert Heath, George Mandell, Russell Olenick, Herman Hirsh, John McDonald, Charles Mostyn, Fred Brown, Eugene Danko, Earl Thomas, Norman Stevens, Arthur Bush, and John Timchak.

Following is the week-long centennial program featuring a parade each evening at 7:30 p.m.:

Sunday, August 23: Religious day with special services in all churches and a centennial evening vesper service in the park at 7 p.m. at which time Rev. Ira Duvall, of Curwensville, Pa., former pastor of the Methodist Church was the speaker.

Monday, August 24: Veterans and Defense Day softball game, 6 p.m., merchants versus Little League officials; military parade, 7 p.m., featuring 2d Army Headquarters Band from Fort George G. Meade, Md.; 3d Reconnaissance Squadron, 104th Armored Cavalry; representative units of the U.S. Army, Navy, Marine Corps, and Air Force; fly-over by Navy and Air Force jetplanes; program at memorial stadium 8 p.m.; concert by 2d Army Headquarters Band; address by Congressman JAMES E. VAN ZANDT, captain, U.S. Navy Reserve; Marine Corps attack on fortified bunker position by 34th Infantry Company, U.S. Marine Corps.

Tuesday, August 25: Education Day.
Wednesday, August 26: Founders Day.
Thursday, August 27: Industrial Day.
Friday, August 28: Firemen's Day.
Saturday, August 29: Carnival Day.

Mr. Speaker, in addition to introducing a concurrent resolution in Congress to extend felicitations to the residents of Osceola Mills, it was a great privilege to be accorded the honor of acting as grand marshal of the splendid Veterans and Defense Day parade on August 24 and later to deliver the principal address at Memorial Stadium.

Prior to the parade, it was my privilege to be guest of the Rotary Club and to speak during its centennial dinner program.

In cooperation with General Chairman John Redding, Publicity Chairman William B. McFeeters, American Legion Comdr. Stephen Sidorik, and Eugene Danko, commander of the Veterans of Foreign Wars, I was instrumental in arranging with the Department of Defense for the necessary authorization for participation by military units in the program for Veterans and Defense Day. In addition, it was my pleasure to arrange with the Atomic Energy Commission for an eight-panel library unit exhibit titled "The Useful Atom." The display which was made available by the American Museum of Atomic Energy operated by the Institute of Nuclear Studies, Oak Ridge, Tenn., illustrates the story of the atom and some of the peaceful applications in the fields of agriculture, industry, and medicine.

Osceola Mills, despite its population of 2,000, has a fine record for patriotism, a large number of young men from that area having served in World War I, World War II, and the Korean conflict. A total of 37 young men from Osceola Mills offered their lives on the altar of freedom in World War I and World War II.

In one section of the borough park there is a large stone monument, with the inscription "A tribute in commemoration of those who made the Supreme Sacrifice in the Great World War." The two names on the stone are Lt. Harry B. Peters, who was killed in action October 15, 1918, near Romagne, France, and Pvt. James L. Gorman who was killed August 28, 1918, near Fismes, France.

In the other section of the park is another monument in memory of World War II servicemen who died in action. The monument was dedicated jointly by the American Legion and Veterans of Foreign Wars posts and is inscribed as follows:

This memorial dedicated to perpetuate the memory of our valiant defenders of freedom who made the supreme sacrifice in World War II.

These are the names on the bronze plaque: Jack Arnold, Porter Albright, Chester Beres, Peter Busko, John Domack, Michael Fronslick, William Heath, Vincent Hughes, William Jarrett, Harry Keith, Robert Keller, Leslie Kephart, Jesse Kephart, Clair Kizer, Clark Kizer, Albert McKinney, Cecil McNeish, Francis McNeish, Darrell Merritt, Fred Miller, John Parana, Joseph Petulla, Michael Philiposki, Lewis Price, Robert Redding, Clare Riley, Adam Slabon, Raymond Sokol, Philip Sokolofsky, George Spittler, Harry Stewart, Paul Stevens, William Stevens, Jack Vroman, John Young.

It was fitting that in view of the gallant war history of Osceola Mills that the Department of Defense cooperated to a splendid degree by making a worthwhile contribution to the success of the centennial program.

Opening the celebration on a deep spiritual note with special services in all churches, the centennial program was varied, with each day's program interesting and enjoyable and ending in a carnival-like spirit on August 29 climaxed by a horse show and rodeo at Memorial Field.

The residents of Osceola Mills are to be warmly commended for their enthusiasm and community spirit that always plays an indispensable part in a centennial observance.

The success achieved reflected due credit on the leadership of Chief Burgess John Redding, who acted as president and general chairman of the Osceola Mills Centennial Committee. He was ably assisted by William B. McFeeters, publicity chairman, and by the other officers and members of the various committees who worked as a team of unsung heroes in making certain the success of the centennial program.

In saluting the residents of Osceola Mills on the community's 100th birthday, I am not unmindful of the spendid cooperation extended by members of the clergy, borough council, school officials and teachers, business and industry, veterans' groups, civic, fraternal and service clubs, who with the average citizen pooled their efforts and thus succeeded in making the Osceola Mills centennial an event long to be remembered in the history of central Pennsylvania.

Demands on the Federal Treasury

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BERRY. Mr. Speaker, one of the rough detours on the road to the adjournment of Congress is the controversial problem of financing the highway program. Pressure has been built up from the States, the construction people, and the material suppliers for a bond issue to finance the bulk of the cost and then a diversion of the excise tax on new cars and parts.

The people demand a program of "pay as you spend or do not spend." The President has recommended an increase in the gas tax of 1½ cents per gallon to "pay as you spend." The committees of Congress have been wrestling with the problem for months. Each time they add two and two, they come up with the disgusting figure of four and then they must go back and start all over. Surely if they wait long enough, Members will become so anxious to get home that they will buy a set of figures that do not add up.

The problem presented is as old as the philosophy of planned spending. The pattern has been followed many, many times, and each time it has produced the desired results. Is there any reason to expect it will not this time? Yes, the garment is new, but the pattern is old.

THE PATTERN

A few years ago the States were suffering financial difficulty with mounting highway traffic. There was increasing demand from the people for more and better roads. The States had levied close to their limits. Although under the Federal highway program the Federal Government matched 60 percent, the States could not meet their 40 percent without tax increases. This they were reluctant to do.

It was becoming serious when someone came up with a plan—an interstate "defense" highway program where the Federal Government would match 90 percent and the State only 10 percent. The State groups reasoned that if they could just get the Federal Government to build one good superhighway across every State, this would relieve the pressure on State governments.

In order to insure that each State would be given at least one good cross State superhighway, the plan provided for the connecting of principal industrial cities. It was labelled a "defense measure," and to sugar-coat the pill, a separate fund was established so the program could be sold as a "pay as you build" program. Certainly Congress would buy that one.

It was neatly wrapped and tied with a lovely "defense" ribbon. Congress bought it. The thing Congress failed to do, however, was to put any brakes on the law. Almost before it was unwrapped, the spenders had their plan in action and construction was accelerated on an antirecession basis. What happened? The same thing that happens to every program which is shifted to the Federal Government—they ran out of gas.

Anyone who could add two and two and come up with a total figure of four would know that with such an outlay of money, the program would go in the hole—$241 million by June 30 next year and $2.1 billion by June 30, 1962. It did, and the program is bankrupt.

However, anyone who understands Congress also knows that it is only nec-

essary to get the ball started rolling downhill—then when the crisis comes, if they can pour enough telegrams into Washington, Congress will surrender and mortgage the future of the Nation to secure the continuance of the program.

The oil companies are stirring up the people against a gas-tax increase to pay for the increased cost, the contractors and suppliers who are caught in the middle are pleading for help—so Congress goes into the Treasury, either directly or indirectly, and the whole ball of wax is added onto the national debt.

As I have indicated, the garment is new, but the pattern is as old as the New Deal philosophy. Add it to the national debt. Paper and green ink are cheap—so we print more bonds and more money. The farmer and miner whose prices do not fluctuate, the retired people on pensions, and those on fixed incomes must pay the bill as these cheaper, inflated dollars—the most vicious of all forms of taxation—pile up.

Yes—the garment is new, but the pattern is old. Local and State governments shift the burden of their obligations to the Federal Government because they do not have the courage to levy additional taxes on themselves. Another thing, legal or constitutional debt limits prevent them from going further into debt, whereas the Federal Government has no effective debt limitation. The national debt limit can be moved up each time Congress spends in excess of national income.

ANOTHER GARMENT, SAME PATTERN

Three years ago the cities were having difficulty doing all the things they wanted to do without increasing the tax burden on the local taxpayer, so they decided to shift more of their burden to Washington.

The Leagues of Municipalities worked out a plan and sold it to the sportmen's groups. The sportsmen carried the ball and the leagues simply ran the interference.

On the basis that clean fish need clean water, they attached an amendment to a simple bill extending the Anti-Stream-Pollution Act, to provide that the Federal Government would make grants to cities for the building of sewage systems.

Sponsors pledged that it would be for only 2 years and cost only $100 million. This year we hit the crisis—too many cities needed help—they needed twice as much for five times as long—and, of course, will get it.

What business does Congress have heaping the city sewers on top of the national debt when all that is needed is a little exercise of the police powers of the State. The answer is "None." It had no business going into this purely local governmental function in the first place, but if it did wish to take this function over, then certainly a tax should have been levied which would raise the money to pay this additional cost.

The purpose was to shift the burden of paying for the sewer system at Podunk from the people of Podunk to the people of the Nation. There it could be added to the national debt.

ANOTHER GARMENT

School districts across the Nation have been having great difficulty meeting the increased cost of school operation without placing the burden too heavily upon the neighbors who pay the taxes. The educators have been looking to the Federal Government for financing on the theory that with Federal money the Federal wage scale could be adopted in the schools. The boards of education have been looking to the Federal Government as money from Washington would relieve the pressure on them, pressure from teaching staffs on one side and pressure from the taxpayer on the other. Another thing, the districts must live within legal debt limits, the Federal Government does not.

The National Education Association with a strong lobby in Washington has sold the "free money" plan to the State associations and the parent-teachers groups across the Nation. Their bill, known as the Murray-Metcalf bill, has been reported by the House Education and Labor Committee and is now before the House Rules Committee.

The bill would cost over a billion dollars annually in the beginning, but will cost many, many billions in a few years. It makes no provision for financing, no provision for increased tax levies. It anticipates adding the cost of educating the children of the Nation onto the national debt. Federal control of education would be serious, but increasing the national debt in this manner and further "watering down" the already deflated dollar would be much more serious.

THE PROBLEM

Senator BYRD of Virginia recently reported that by 1957 Congress has provided 57 different grant-in-aid laws, all of them assisting local groups and local governments in financing projects and programs that are fundamentally the obligation of such local governmental units.

The problem has grown up primarily because individuals, communities, local governing boards and legislatures desire these many improvements, but lack the courage to levy the taxes necessary to provide payment for them. In addition, many States have a constitutional debt limit and local governments have either a constitutional or legal debt limit which prevents them from further increasing their bonded indebtedness. The Federal Government has no effective debt limit. The result is that they look to the Federal Government to finance all of these program. Congress, having no greater stamina than the local governing boards, passes these grant-in-aid laws with the result that each year Federal expenditures increase, the national debt goes up, the value of the dollar goes down, interest rates on cheap money go up, and the whole ball of wax gets bigger and more explosive.

OTHER DEMANDS

It is not only the States and local governmental units that are coming to the Federal Treasury for help. In recent years, friendly foreign nations have learned that when they are short of funds for improvements, for unbalanced budgets, for relief purposes, for defense, and for their many other needs, they, too, can come to Uncle Sam with a package tied in a defense ribbon and have their needs added to the national debt through the foreign aid appropriations.

NEEDED ACTION

How can these raids on the Treasury with resultant additions to the national debt be stopped? The voters can elect Members to Congress who have the courage to say "No." This, of course, is only temporary as the pendulum swings forth and back each two years. They can, however, effectively and permanently halt any additions to the national debt by adopting a simple constitutional amendment.

If Congress were prohibited from enacting any bill which provides for spending any money in excess of the national income for that year without incorporating in such bill a tax levy to raise sufficient revenue to pay for such spending, it would effectively prohibit further Federal indebtedness.

I have introduced a resolution providing for a constitutional amendment which would require that every appropriation bill contain either a certificate that this expenditure, when considered with the whole, will not exceed the anticipted revenues, or that such bill contain within its provisions a tax measure sufficient to meet such expenditure.

I am convinced this is the only method by which increased demands for federally financed programs can be reduced. I am convinced this is the only way deficit spending can be stopped. I am convinced this is the only way a balanced budget can be effected and the national debt can be limited.

While this amendment is an absolute must, if the financial integrity of the Nation is to be preserved, it does not do the whole job. There is another hole in the dike that must be plugged.

FOREIGN AID

At the present time Uncle Sam is being called upon not only to defend but to finance the nations of the entire free world. This would not be so serious if such financing was being paid as we spend. The fact is, however, it, too, is being added to the national debt.

This picture requires a different frame. Uncle Sam cannot levy a direct tax upon our free world friends requiring them to contribute toward the cost of their own and our defense, or to repay our Treasury for the contributions we are making toward bolstering their budgets, contributing to their relief load, their internal development, and so forth, but he can and must require some assistance from them to the American taxpayer.

We cannot levy a tax on the manufacture and shipment of their products being used in trade with other nations, but we can require them to assist our taxpayer and we can require them to help us keep our budget in balance in spite of our great defense outlay, by levying an import tax upon the goods they import into this country. Trade with us is vital to them. The import tax could be based not so much upon the commodity as upon the cost to us of defending and financing that particular country.

THE ALTERNATIVE

The present trend must be halted if national bankruptcy is to be averted. The present national debt is equivalent to a first mortgage on the property of every family in the Nation of $6,400. The deficit of the last 2 years of $16 billion means $360 for each family.

The present program and present policy is rapidly moving this Nation toward the fearful situation of where a housewife must take a market basketful of money to the grocery store to buy a purse full of groceries.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. DADDARIO. Mr. Speaker, a discharge petition on one of the basic issues of democracy lies in the well of this House. I intend to sign this petition, as I signed a predecessor, so that this House may have an opportunity to entrust to some of its people the right to vote and to have a say in their own affairs.

I should also like to offer for the RECORD a resolution of the Common Council of Hartford, in a State which is proud of its own long tradition of self-government, supporting the people of Washington, D.C., in their bid for home rule.

RESOLUTION OF THE COMMON COUNCIL OF THE CITY OF HARTFORD, AUGUST 25, 1959

This is to certify that at a meeting of the Court of Common Council held August 24, 1959, the following resolution was passed by rollcall vote.

"Whereas local self-government is the bedrock of free government; and

"Whereas the rights and benefits of local self-government should be available to all American citizens; and

"Whereas the residents of the District of Columbia are denied the rights and benefits of local self-government; and

"Whereas the Congress of the United States has the authority to assure local self-government by granting Home Rule to the District of Columbia; and

"Whereas the principle of home rule has been endorsed by a substantial majority of the residents of the District of Columbia; and

"Whereas the Board of Commissioners of the District of Columbia have unanimously endorsed proposals for granting home rule to their city; and

"Whereas the Senate has passed a home rule bill for the District of Columbia five times during the last 10 years, while in the same period such measures have been bottled up in the District Committee of the House of Representatives, and no hearings held: Now, therefore, be it

"*Resolved*, That (1) The Congress be, and it is hereby urged to approve home rule legislation to assure local government to the residents of the District of Columbia; and be it further

"*Resolved*, That (2) Members of the House of Representatives be urged to sign a discharge petition so that the Commissioners' bill, otherwise known as the territorial bill, be brought on to the floor of the House so that the full membership can have the opportunity at last to vote on the measure; and be it further

Resolved, That (3) a copy of this resolution be forwarded to the President of the U.S. Senate, to the Speaker of the House of Representatives, to the majority and minority floor leaders of the Senate and the House of Representatives, and to the State delegation to Congress."

Attest:

WILLIAM A. LINNANE,
City Clerk.

Military Air Transport Service Comes Under Congressional Attack Again

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory which appeared in the New York Times on Sunday, August 30, 1959, written by Mr. Edward Hudson, on the subject of the Air Force's Military Air Transport Service:

MATS ATTACKED IN CONGRESS AGAIN—TWO SENATORS SEE CONFLICT BETWEEN AIRLINE OPERATION AND MILITARY MISSION

(By Edward Hudson)

The Air Force's Military Air Transport Service came under renewed attack last week in Congress in the wake of Air Force opposition to plans for a privately run national aircargo fleet.

Proposals aimed at establishing the cargo fleet have been submitted to President Eisenhower by Elwood R. Quesada, Federal Aviation Administrator. They call for turning over to private carriers the bulk of MATS routine pipeline traffic.

In addition, the Government would assist airlines in buying efficient new cargo aircraft by guaranteeing up to 75 percent of private loans made to carriers for the purchases.

The purpose is to build up at private expense a sizable fleet of cheaper to operate cargo planes that would stimulate the growth of the aircargo industry and provide a ready reserve for use in a military emergency.

Secretary of the Air Force James Douglas reportedly blocked the loan-guarantee proposal at a White House interdepartmental meeting on August 17. The Secretary was said by trade sources to have demanded new cargo planes for MATS as his price for agreement. Congress refused the Air Force funds for 10 jets earlier this year.

TWO SENATORS CRITICAL

Renewed congressional criticism of MATS came from two Democratic Senators, A. S. MIKE MONRONEY, of Oklahoma, and STUART SYMINGTON, of Missouri. Both are considered authorities on the subject.

Senator MONRONEY has studied MATS over the last 2 years as chairman of a special subcommittee of the Interstate and Foreign Commerce Committee. Senator SYMINGTON is a former Secretary of the Air Force.

Both men, in Senate speeches, indicated they believed that MATS was carrying on its extensive airline type of operation to the detriment of its mission of airlifting military forces in time of national emergency.

"The simple fact is," Mr. SYMINGTON said, "that MATS cannot be both a commercial-type airline, with 460 stewardesses, and a combat airlift force constantly on the alert, comparable to the Strategic Air Command.

"It is important to note," he went on, "that the Army and the Marine Corps can only obtain adequate airlift through the Air Force; and while the Air Force continues to build up its airline operations, it also continues to refuse to give the Army that lift impartial experts believe is essential if we are to handle a possible limited war."

CONFLICT IS CITED

Senator MONRONEY said there was a growing conviction in Congress and the Defense Department "that the peacetime airline operation of MATS is in direct conflict with its primary responsibility in an emergency."

He argued that the MATS strategic transport fleet was, at any given time, scattered all over the world delivering routine military supplies, and was kept busy at a high utilization rate.

"Not only must its planes be recalled and necessary maintenance be performed before MATS could conduct any large-scale movement of troops, but some arrangements must be made on a crash basis for commercial aircraft to take over routine air logistics on which oversea units depend," Senator MONRONEY added.

If, instead, MATS relied on commercial carriers for routine oversea supplies it could keep its fleet always ready for emergencies abroad, he declared.

The Oklahoma Senator ridiculed a MATS contention that he called the "anyhow theory." This referred to statements by MATS officials that it was economical to utilize MATS planes for military traffic since "the planes are going anyhow" for training purposes.

PROFICIENCY HOURS NOTED

Senator MONRONEY said Brig. Gen. Albert T. Wilson, MATS Deputy Chief of Staff, had acknowledged to his Subcommittee on Military Air Transportation that only 15 percent of MATS flying hours were actually required for the agency's qualification and proficiency-training program.

"The number of hours flown by other units, with missions no less demanding," Senator MONRONEY told the Senate, "confirms the accuracy of this estimate."

He said MATS needed to be reequipped with "substantial numbers" of a specialized workhorse aircraft capable of carrying at least 50,000 pounds of troops and equipment over an intercontinental range.

They should also be able to operate in and out of primitive fields and short runways without the need for elaborate ground-handling equipment, he said. He indicated he thought the same type of plane should be produced for civil use.

"No plan to reequip MATS in these terms has been submitted to the Congress," he said.

He declared that the usefulness for hard-core missions of converted jet transports recently requested by the Air Force was "dubious," while "their usefulness for deluxe passenger service is unquestioned."

He invited the Defense Department to present a comprehensive plan for a modern military transport program and give evidence of its intention to get MATS out of the airline business. He said he was confident of strong congressional support for such moves.

MODERNIZATION IS URGED

Meanwhile, MATS has been making its own case for fleet modernization. Maj. Gen. Raymond J. Reeves, deputy MATS commander, told an American Legion meeting in Minneapolis that "the weakest link in our national security system may well be our strategic military airlift unless we take the trouble now to remedy its deficiencies."

General Reeves said three types of planes were needed—a high-speed turbine aircraft to support jet bombers wherever they go;

a general workhorse plane to replace the piston-engine Douglas C-24 Globemaster, and additional Douglas C-133 Cargomaster turbo-props, a plane that is now in inventory in limited numbers.

"Cutting MATS flying hours to less than the present five a day would hinder its ability to respond in a war emergency," General Reeves said.

"Our maintenance and supply, our own logistic support, once geared below 5 hours, simply cannot accelerate in time, any more than an idle factory can come to peak production overnight," he asserted.

Senator MONRONEY had contended that missions that MATS had to perform because of the size, nature, or destination of the cargo would provide MATS with enough flying hours to maintain proficiency.

Growing Menace of Unrestricted Foreign Trade

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein two foreign trade briefs recently issued by the Nationwide Committee on Import-Export Policies.

These briefs contain truly alarming factual material on the decline of U.S. export trade and the increase of the flood of foreign imports into this country.

The plain facts indicate current economic trends in foreign trade both in and out of this country which, if continued, could well be disastrous to many great American industries. The fact of the matter is that these trends have already produced virtual disaster for some American industries which we believed were basic and virtually indestructible.

According to the cited figures, foreign automobile imports have greatly increased and are causing widespread unemployment. Foreign electrical equipment and turbines are undercutting the American market and even getting Government business which should be going to domestic producers.

Sewing machines coming in from Japan alone amounted to about 1 million machines in 1958.

The great watch industry has been forced to cut its employment by two-thirds as a result of foreign imports which now take 70 percent of the annual domestic market.

Japanese-produced tunafish has cut some of our fleets more than in half.

Shirt imports from Hong Kong and Japan strikingly increased the past year bringing unemployment to an estimated 6,000 American workers.

Our great steel industry has been most adversely affected by a variety of steel products and wares coming into this country, and we are facing the loss of our entire export business in steel according to authoritative reports.

U.S. maritime and shippers business has been cut from about 70 percent of American foreign commerce in 1946 to 8.7 percent in 1959.

The United States is now taking two-thirds of the total Japanese output of binoculars and for the first time in history we are importing more typewriters than we are exporting.

Japanese caps costing 20 cents are undercutting U.S. caps which cost $1, and every branch of the male apparel industry is complaining of cutthroat competition endangering thousands of jobs

In the knit glove industry, imports presently amount to 250 percent of total American production.

The copper and brass industry has been gravely hit by foreign imports and in 1958 operated at less than 45 percent of its 1946 capacity.

The United States has been converted from an exporter to an importer of brass mill products.

The cut in exports and the great increase in imports is gravely imperiling employment in the steel industry and authoritative leaders in the steel industry state that the American steel industry is no longer competitive with the rest of the world.

Special wire products are arriving in the American market in alarming quantities, and for the first time in many years we are importing more steel than we are exporting.

These figures speak for themselves. I have repeatedly presented similar facts indicating these trends and predicting these results, if we did not speedily alter our foreign trade policies. But this was not done.

However, the protests which many of us made regarding these dangerous trends fell on deaf ears and the situation is steadily growing worse.

The escape clause has provided no remedy because in only a relatively negligible percentage of cases has the executive department taken any action which would stem the growing flow of competitive, cutthroat, foreign products which are undermining American industry and labor.

If the Congress does not act soon to stem this flow it is very obvious that this nation will be facing an economic disaster more widespread than any that has ever faced us.

The drastic revision of our present reciprocal trade treaty program has become the most critical and burning economic issue of our times. This Congress must tackle it at once—fearlessly and vigorously—and across a broad front—or this Nation and our industries and working people will suffer the loss of prosperity and the impact of depressed conditions that will make the depression of the 1930's fade by comparison. Let us act now.

The above-mentioned follows:

FOREIGN TRADE BRIEFS, JULY 23, 1959

U.S. auto exports-imports: Since 1955, U.S. auto exports dropped 50 percent, from over 200,000 annually to expected 100,000 in 1959. Three hundred and seventy thousand foreign car imports sold in United States in 1958; present rate indicates 600,000 this year.

UAW aroused: A. J. Mattes, president of local 239, UAW, wrote Baltimore Mayor Grady that over 300 General Motors workers in that city were laid off and remaining 1,500 are working less than 40 hours a week because of increasing number of foreign car imports. Thirty-five thousand autos imported via Baltimore the first 5 months of 1959 could have given employment to 2,500 workers at Chevrolet plant there, working two 8-hour shifts for 13 weeks.

Auto production abroad: Daily output at Fiat's Mirafiore Works over 2,500; Volkswagen heading for 3,000 at Wolfsburg. Plymouth's mammoth Detroit line turns out 1,100 daily; Rambler at modern Kenosha plant about 1,600 units.

Electrical equipment: Florida Power & Light Co. ask foreign producers of heavy electrical generating equipment to bid on two 200,000 kilowatts steam turbogenerators—probably first effort by foreign manufacturers to penetrate private utility market, following successful efforts on Federal-State projects. Domestic firm salvaged contract on basis of delivery date.

Turbines: English Electric bids 30 percent under nearest American competitor to win Army engineers' contract for eight hydraulic turbines for Big Bend Dam, S. Dak.

Sewing machines: Brief filed with Tariff Commission reveals foreign sewing machine manufacturers now control about 75 percent U.S. market, e.g., U.S.-imported Japanese machines, up from 64,000 in 1950 to about 1 million in 1958.

Watches: Ranks of American watch workers steadily reduced from 16,000 to 6,000 employees as foreign imports take 70 percent of annual domestic market or 14 out of 20 million units.

The gold facts: United States now has $19.6 billions in gold, smallest reserve in over a decade, but foreign organizations and individuals have dollar claims of $15.1 against reserve.

Tuna fleet: Imports of Jap tuna reduced ranks of San Diego's tuna clippers to 125 ships from 1952 high of 214. Sales sliced from about $40 million in 1954 to expected $19 million this year.

U.S. manufacturer literally losing his shirts: National Association of Shirt, Pajama and Sportswear Manufacturers went on record opposing State and Commerce Departments' representations on behalf American business and declared in favor of congressional regulation of foreign trade. Shirt imports from Hong Kong-Japan alone totaled 1.75 million dozen in 1958, equivalent to $15 million in U.S. wages for 6,000 American employees.

Tourism: Dollar source: Frequently overlooked as dollar source to foreign nations is tourist industry; Americans spent $2.1 billion on foreign travel last year—10 percent jump from 1957.

Steel: "What's Behind the Rise in Foreign Competition?" [1]

"Let me cite the predicament of one American industry. * * * The industry is that which makes table flatware * * * and recently stainless steelware. * * * This is a new industry in Japan; flatware such as we use is not used generally in Japan.

"By 1955, imports had reached 3,134,000 dozen against U.S. production of 14,654,000 dozen; * * * in 1958, Japanese imports amounted to 8,444,000 dozen, with U.S. production of 14,740,000 dozen. * * *

"While this rise in imports was going on, the gentlemen of GATT progressively reduced tariffs.

"The big reduction was made in 1950 but further reductions were made in 1956, 1957

[1] Excerpts, address by W. H. Wiewel, senior vice president, Crucible Steel, to the American management Association, New York, May 20, 1959.

and 1958, after this industry had really been hurt.

"Japan, fearing action by the United States, voluntarily announced a quota limit to the United States of 5,500,000 dozen for 1958. * * * Up to this time, this industry has been given no relief and employment is off 25 percent. In spite of the announced quota of 5,500,000 dozen, 1958 imports were 8,444,000.

"The time will soon be here when we have completely lost our entire export business in steel, except for a few specialty items which are not made elsewhere."

FOREIGN TRADE BRIEFS, AUGUST 10, 1959

Special note: Representative CLEVELAND BAILEY and colleagues launch House attack on press bias in tariffs and trade field. Cite O. R. Strackbein's request for hearing before American Society of Newspaper Editors. (See CONGRESSIONAL RECORD, July 30, p. 13522.)

Escape clause box score: "Oh, but industry does have an official remedy," exclaims the liberal-trade enthusiast to import-wounded industries. But "let us ask the man" who sought one. Here's the January 1954 to May 1959 record:

Industries seeking remedy from Tariff Commission	45
Remedy denied by Commission	19
Remedy recommended by Commission to President	[1] 26
But denied by him	17
Remedy granted by President	8
But drastically diluted by him	6
Full recommendation granted (out of 45)	2

[1] One in process.

Foreign cars: Japan's Batsun, plastic-body sports car, speed of 86 m.p.h., now in order-taking stage and slated soon for U.S. market. Also targeted for United States is their tiny Subaru-360 at $1,100.

European-English cars captured 17 percent of Canadian market first 5 months of 1958; now up to 23 percent for same period in 1959. Imports here running about 10 percent of market.

Shipping bottoms take beating: U.S. shippers' share of American foreign commerce had rough sailing since World War II (military excluded):

U.S. share:	Percent
1946	68.0
1951	43.0
1952	35.0
1953	30.0
1954	28.0
1955	22.0
1956	20.0
1957	18.0
1958	13.0
January 1959 [1]	8.7

[1] Latest.

Binoculars: Jap binocular industry, principally geared to U.S. market, produced over 1.5 million units in 1958; United States purchased two-thirds of total output.

Typewriters: $19.9 million of imported typewriters and parts in 1958 outstrip U.S. exports of $14.7 million first time in history.

Cap imports: National Cap and Cloth Hat Institute, joint labor-management group, seeks escape clause action to increase duty on Jap caps. Self-imposed Jap annual export quota of 15 million caps too large for U.S. market to absorb without serious damage, reports institute. Comparative prices: Jap cap, 30 cents; U.S. caps, $1.

Clothing workers concerned: Amalgamated Clothing Workers of America, formerly strong trade agreements supporters, adopt resolution attacking destructive imports. Cite cutthroat competition in every branch of male apparel threatening thousands of jobs. Knit glove industry well on the road to destruction, as imports now 250 percent of U.S. production.

Copper and brass: Copper and Brass Research Association's study of causes in decline of domestic brass mill industry reveal: first year after sharp tariff cuts, imports multiplied 42 times preceding year level; imports almost 100 percent of U.S. tubular plumbing goods market; U.S. industry in 1958 operated less than 45 percent of 1943 capacity; United States converted from exporter to importer of brass mill products.

West Europe's gold mounts: Gold and dollar reserve holdings in West Europe increased from $7 billion in 1950 (December) to $18 billion in 1959 (March).

Luxury liner lambs: Indicative of price differential in foreign-U.S. competition was arrival at San Diego of 30,000 Australian lambs on converted luxury liner *Wesoralia*. Estimated delivery price: $10 a head or half of U.S. price. Importer's yearly goal: 100,000 head.

Steel: "The Big Squeeze on Little Steel." [1]

"In 1957, the United States exported 5.2 million tons of steel mill products, and imported 1.1 million tons. But this ratio of almost 5 to 1—in favor of steel mill exports—dropped to less than 2 to 1 in 1958, when exports fell to 2.7 million tons, and imports reached a high of 1.7 million tons. * * * (1959 steel imports running double U.S. exports, NWC.)

"Because of these developments, we appear to have lost much of our foreign market, and a portion of our domestic market is in jeopardy. For example, the United States exported 721,000 tons of semi-finished steel in 1957. This dropped to 124,000 tons in 1958—a decrease of 83 percent. Exports of structural shapes decreased from 453,000 tons in 1957 to 292,000 tons in 1958, while exports of plates declined from 604,000 tons to 249,000 over the same period—a drop of 59 percent. Exports of tinplate, an item in which the United States has long had a preeminent position, fell from 538,000 tons to 244,000 tons—a decrease of 54 percent. * * *

"In the domestic market we are at a competitive price disadvantage in such products as rods, barbed wire, nails, reinforcing bars, and other items. * * *

"Within the past year or so, a number of specialty wire products have arrived on the American market in alarming quantities. * * *

"These are facts. * * * The American steel industry in certain areas is no longer competitive with the rest of the world."

---

Poland Stands Today as a Symbol of Courage

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. GALLAGHER. Mr. Speaker, as we pause to look back two decades to the day that Hitler released his panzers to plunge across the borders of Poland to kill and to plunder, we should be mindful that the United States has a close and intimate relation with the brave people of that freedom loving nation which dates back nearly 200 years to the time when the founders of this Nation were fighting for their own freedom against a powerful empire. A number of Poland's great soldiers volunteered their services and fought with the colonial army to victory, sharing all the bitter hardships of America's war for freedom.

It saddens our heart to look back on the brutal and inhuman treatment suffered by the people of Poland, first at the hands of the Nazis and later the Russians. Since the end of World War II, Poland has lived under the yoke of the Communist, but the spirit of her people, their longing for freedom is as evident today as it was two centuries ago. The Communist masters in Moscow have found that their most brutal methods have been unable to suppress this desire for freedom and today of all the nations behind the Iron Curtain, Poland remains the most independent and there the fire of freedom burns brightest, 20 years since her people have known freedom.

Poland stands today as a symbol of courage, a nation that refuses to let freedom die.

Washington Inches Toward Home Rule

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Courant of Hartford, Conn., under date of August 14, 1959, entitled "Washington Inches Toward Home Rule":

WASHINGTON INCHES TOWARD HOME RULE

Certainly one of the great paradoxes in this land of the free is the fact that taxpayers and resident of its Capital City, Washington, D.C., have no vote in their local affairs. In the old phrase, it would be comical if it wasn't so sad. Since 1802, when the city was chartered, it has had virtually a half dozen forms of rule. But except for the period from 1820 to 1871, when the people biennially elected a mayor, the rule has been imposed from without and above, chiefly by the Federal Government itself or its appointees.

Thus, Washington has gone along something like a second-class colony of some ancient monarchy. But not willingly. For some time there has been an organized demand for home rule. During the last 10 years, five home-rule bills for Washington were passed by the Senate. Now, for the first time in that decade, the House District Subcommittee is holding hearings on legislation that would give Washington residents voting rights in their municipal or local government. Four previous home-rule measures, passed by the Senate, were bottled up by the District Committee and Subcommittee and never reached the floor of the House. The reason is the Neanderthal-type southern racists who dominate the subcommittee.

Even as it is, the current hearings were begun only after a group of home-rule proponents in the House had introduced a resolution to discharge the District Committee

and Subcommittee from further consideration of home rule bills and bring the issue to the House floor during the current session of Congress. Representative BYRON L. JOHNSON, Colorado Democrat, declares that he thinks it safe to say that if the House committee does not report a bill within a reasonable time, we can expect that many House Members, including himself, will sign the discharge petition to force the bill onto the floor. All other citizens of the United States who have a voice in their local affairs will think that from 1878, when Washington's present system of appointed Commissioners was established, to now is already more than a reasonable time. It's about time the House allowed Washington to join the democratic process right at headquarters.

Deputy Premier Anastas Mikoyan Will Tour Latin America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. FLOOD. Mr. Speaker, an illuminating article by Thayer Waldo, published in the United States as "Continental Closeup No. 46," supplies additional information on the mounting crisis to the South.

The indicated article follows:

CONTINENTAL CLOSEUP No. 46

(By Thayer Waldo)

MEXICO CITY.—While President Eisenhower is in Russia on the return half of top-level exchange visits designed to thaw out the cold war, the Kremlin's No. 1 trader will be touring Latin America, busily seeking to undermine U.S. influence throughout that vital area.

Soviet Deputy Premier Anastas Mikoyan is scheduled to stop off in at least five of our neighboring Republics—Mexico, Cuba, Argentina, Uruguay, and Bolivia—during this significant junket, now set tentatively for late October and early November.

Russian diplomats in Mexico City and Buenos Aires are making every effort to get Mikoyan official invitations also from Brazil, Chile, and Venezuela, none of which has relations with Moscow. (Neither does Cuba or Bolivia.)

Behind his unprecedented trip—the first time such a highranking Kremlin functionary has ever gone to Latin America—lies a new and drastically revised Soviet campaign to infiltrate that region.

Russia's "fresh look" at the countries to the south of us was authoritatively outlined in a Moscow lecture, delivered last May 17 by B. Ermolaeff, a professor of political science and recognized specialist on Latin-American affairs.

The lecture was supposed to be private, with attendance by official invitation only. However, a Russian-speaking attaché of a South American Embassy secured admission and took extensive notes on the address.

A full transcript of those notes has been obtained by this correspondent.

Prefacing a detailed analysis of present economic conditions in Latin America, Ermolaeff bluntly criticized Soviet commentators and textbook writers for their "outmoded" descriptions of the area.

Though they usually refer to it as industrially backward, with one-crop economies in most countries, Latin America has actually made enormous advances in recent years, the lecturer said. He pointed out that overall production there has increased by more than 200 percent since World War II.

This rapid development, including much heavy industry and a wide variety of consumer-goods manufacture, has favored "monopolistic" U.S. interests, Ermolaeff continued—but has also built up nationalist and anti-American sentiment.

He quoted Comintern figures showing that Communist Party membership all over Latin America has climbed steadily again since the early 1950's, after falling off sharply from its 1947 high of 480,000, "due to U.S. pressures."

Today's estimate of total native, active Reds in the 20 republics is 350,000, Ermolaeff said. He described Cuba as the present revolutionary center of the Americas, but warned that Fidel Castro and many of those around him are "unreliable," from the Communist point of view.

There are also "good" men in the Cuban regime, he added. The only one he named was Raul Castro, Fidel's younger brother and heir-apparent to the premiership.

"Speaking among ourselves," Ermolaeff said, "Raul Castro is a Communist."

The "middle-class" political parties now dominant in a number of Latin-American countries, he went on, are hostile to U.S. "monopoly" practices. Only a real union of farmers and workers, though, can bring "freedom" to those countries—and that is what all Communist parties in the region are striving to bring about, Ermolaeff concluded.

With this refocused outlook on Latin America to guide him, shrewd Anastas Mikoyan can be expected to propose deals and agreements which will further the long-range Soviet aim of driving U.S. interests out of that entire area.

Thousands of Americans Reach for Guns in TV Western Craze

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. KOWALSKI. Mr. Speaker, the State of Connecticut has made many contributions to the defense of this Nation. One of these is through its famous and ever-vigilant firearms industry. The names Colt and Winchester are bywords the world over.

Today, television has encouraged a renewed interest in firearms which made history in the past. Connecticut companies again figure in this revival of interest.

This is a well known story in the Northeast. But it has been set down for national attention by Kenneth Scheibel, who writes for the Hartford Timess and other Gannett Newspapers, in a specially syndicated article.

Under leave to extend my remarks, I include it in the Appendix of the RECORD, as it appeared in the Watertown, N.Y. Times:

THOUSANDS OF AMERICANS REACH FOR GUNS IN TV WESTERN CRAZE

(By Kenneth Scheibel)

On a winter night in 1953 President Eisenhower picked up a Colt revolver from his collection and showed the first lady of our land how to "fan" a six shooter.

He cut himself on the hammer but gave a competent demonstration. Wearing a bandage on his hand, he flew off to the first Bermuda conference the next day to ponder global matters with Winston Churchill.

General Eisenhower didn't know at the time. But he was ahead of a trend. Today the old-time six gun which intrigues the president of the United States has thousands of new devotees.

Sam Colt's rugged .45 caliber "Peacemaker" revolver blazed a page in early American history. The fragile television tube set off a western craze and caused its 20th-century revival. It gave birth, too, to a new generation of gunslingers."

The gun finding new favor is the "single action, army" revolver once adopted by the U.S. cavalry. Legend is that Indians dubbed it "The Peacemaker" when they could not withstand its rapid fire. It is the same gun worn low on the hip by Wyatt Earp, "Bat" Masterson, "Wild Bill" Hickok, "Doc" Holliday and other frontier gun toters.

The revival of the six gun has been a bonanza for the gun companies—Colt's Patent Fire Arms Manufacturing Co., Inc., Hi-Standard, Ruger, and Great Western Arms.

At their plant in Hartford, Conn., Colt's President Fred A. Roff, jr., looks up from his desk where figures tell the story of the six gun's amazing comeback in the space age.

"Production of western-type guns at our plant, and by other companies, is about 10,000 a month," Roff says. That is a hefty production rate considering that the only war going on is between cowboys and Indians on television.

The irony of it all is that the gun which is helping gun companies was discarded as obsolete by Colt's in 1941. It was put back in production in 1955 after national surveys indicated a lively interest in it because of television.

"We had to work nights for a while to fill orders," grins production chief Joe Vante. Sales are still high. Colt's business is 35 percent ahead of a year ago.

The "gun that won the West" is a heavy caliber revolver—most popular in .38 and .45. But Colt's, Ruger, and others, angling for the teenage set, brought out a less expensive .22 version. It is a spit-and-image of the "Peacemaker," and, according to Colt's veteran Arnold Goodwin, "sells like hotcakes."

On the western frontier a six gun sold for $15. Before it was dropped in 1941 by Colt's it was priced at $35. Today it fetches $125.

The "Peacemaker" revolver became popular with civilians in the unsettled days after the Civil War. It was part of the dress when a man was his own law and Judge Sam Colt's "justice" reigned supreme.

Sam Colt is credited with invention of the first repeating arm. He went to sea briefly as a youth, and observed there a ship's wheel which could be controlled by a clutch. The idea of a revolving cylinder for a hand gun was born. After early failures, Colt achieved fame and fortune. He died a young man—only 48—in 1862.

"General Custer died with a smoking Colt revolver in each hand," says company literature. And Teddy Roosevelt's "Rough Riders" stormed San Juan hill packing Colt guns. In modern times, General George Patton carried a six-shooter into battle. President Eisenhower has several—one, inlaid with gold, is valued at $2,400.

The six-gun fad has taken many forms. The clips, cigaret lighters and table lamps are patterned in the form of a revolver. Small fry blaze away at each other in "fast draw" duels, with electric lights rigged to holsters to show who is fastest.

The leather goods industry also is cashing in, producing new and fancier holsters and probably better "rigs" than old-time gunslingers ever dreamed of.

Arvo Ojala, who teaches Hollywood stars the art of fast draw, invented and patented

a holster with a metal lining inside the leather. This keeps the holster open so a six gun can be cocked while still inside. Ojala says this is essential to a fast draw.

Another intriguing aspect of the craze is the fast draw club movement. The clubs have sprung up in the West and Midwest and may engulf the Nation with perhaps an annual match yearly to decide who is the fastest gun alive. At local levels, claims of who is top gun are flying as thick as .45 slugs. When you read in the newspaper occasionally that someone shoots a friend while practicing, you can be pretty sure a couple of fast draw artists are at work—and who still have a lot to learn about gun handling.

Jim Devine, a member of the Foothills Shooting Club, Glendora, Calif., travels in the West on business. A quick draw enthusiast, Devine finds clubs range in size from 10 to 110 members, mostly young men in their twenties.

"The challenge is to outdo your fellow man," Devine says. "But recreation is also an element in this movement. Most clubs use wax slugs instead of real lead * * * you can practice drawing and shooting in your living room that way," he declares.

Fast draw clubs meet once a week, sponsored by a local gun dealer usually. "Some of our boys can draw in a tenth of a second," Devine reports. The quick draw fever has caught up the kids, too.

Devine tells of a local Sunday school teacher, quizzing a member of her class.

"Johnny," she asked, "what would you do if you met the devil?"

Johnny, crouched in the stance of a gunslinger, replied:

"I'd say, 'Draw you ———.'"

"That broke up the meeting," Devine says.

McClure says, "Not many people buy these guns for shooting." Significantly, Colt's advertises six guns as a "den decoration," or "conversation piece." Whether it's sex appeal, or shooting appeal, thousands of Americans today are going for guns.

Nazi Invasion of Poland

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. McDOWELL. Mr. Speaker, 20 years ago today the black shadow of war hung ominously over a frightened world. By nightfall of September 1, 1939, war was no longer a shadow, but was a stark and brutal reality. Germans entered Poland from the west, north, and south, and dropped the first bombs on the country. Sixteen German armored divisions faced one Polish division; 4,320 German planes pitted themselves against 404 Polish aircraft. Out of Poland's 34 divisions of infantry, only 24 were ready for battle, since Poland, under Allied pressure, had suspended the mobilization demanded by the Polish authorities. German population outnumbered Poland's by almost 3 to 1.

To put it quite bluntly, Poland had been sold out. The people of Britain and the United States who had quietly watched the remilitarization of the Rhineland and the Anschluss, who had held their breath and their tongues at the partitioning of Czechoslovakia, had not let themselves believe that this could happen. "Europe is too far away," they said. "It does not matter what happens there." They had appeased a maniac, and the result of their appeasement was a devastated Poland.

September 1 was the dividing line. No longer could the isolationists delude themselves about the aims of Nazi Germany, for Hitler had invaded Poland. Furthermore, the manner in which this invasion was conducted clearly indicated that Hitler had no intention of conquering the Polish peoples. Instead, he meant to obliterate them from the face of the earth, and Russia meant to help him. Russia had taken her position at the signing of the Molotov-Ribbentrop Agreement.

"Go ahead," Russia had said; "take what you want of Poland. We won't bother you; we want only some of the spoils."

It is a brutal, devastating thing which we commemorate today, and I think it good that we have this commemoration. It is a reminder of blindness, of delusion, of fear, and of a totally unrealistic foreign policy on the part of the allies. The President of the United States had said again and again that appeasement had to stop, but the people would not listen to him. He had stated that in order to defend the United States we had to insure more than our own continental frontiers. We had to insure the frontiers of the countries bordering Germany. No one had listened. No one believed. No one wanted to—Europe was too far away, remember?

So a nation had been sacrificed to the cowardice of an unthinking world. A peace-loving country, desiring no more than to be left alone, had become the scapegoat of a man who had converted the German State into nothing more than a war machine. It must be remembered, however, that Poland's blood is on the hands of many people besides the hands of the Germans. It is on the hands of ignorance and it is on the hands of all peoples who refuse to grow in a growing world.

I would like to bring to the attention of my colleagues a press statement released by the Polish Societies and Clubs of Delaware. It puts very well those things which must never be forgotten as we live in this world of cold war and threats, of power and land hungry people. There can be no more isolationism, there can be no more appeasement. The world owes Poland that chance for freedom which it had denied her throughout history:

WILMINGTON, DEL.,
August 27, 1959.

To the EDITORS OF JOURNAL-EVERY EVENING AND WILMINGTON MORNING NEWS.

DEAR SIRS: September 1, 1959, marks the 20th anniversary of Germany's brutal and completely unjustified attack on Poland with the aid of Soviet Russia, and the beginning of World War II.

It will be a day of mourning for the people in Poland as they can never forget that the German-Nazi barbarians have wantonly, in cold blood, murdered over 6 million people in Poland.

They will never forget the Nazi gas chambers, the human incinerators and the dastardly, inhuman plot to completely extinguish the Polish Nation. They will also remember the Soviet massacres of 20,000 Polish officers in the Katyn Forest, the occupation of part of eastern Poland by Soviet Russia, the mass deportations of millions of Poles to Siberia, and the labor prison camps.

On this tragic anniversary, we wish to issue this statement, reminding the world of these facts and plannings by Poland's centuries-old enemies and neighbors.

Yours truly,

ADAM J. ROSIAK.
LUDWIK KOPEC.

Minshall Traveling Office Set for Week of December 7

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. MINSHALL. Mr. Speaker, during the 5 years in which I have been privileged to serve the 23d District of Ohio, every effort has been made to maintain the needs and desires of the people. In an effort to make the title "Representative" truly meaningful I have made it one of my first duties to be continuously well-informed of the views of the residents of this outstanding district. This is possible only through frequent personal meetings, regular newsletters, television and radio reports, and opinion polls.

Like the family doctor, a Representative should always be "on call." Accordingly, a year-round congressional office is maintained in room 525 of the Federal Building in downtown Cleveland. This gives me the opportunity of meeting with people during frequent trips back home as my official duties in Washington permit. While I am at work in the Nation's Capitol, a competent staff in in charge of the Cleveland office. The dual office system means that at all times I am prepared to help constituents with the least possible delay in their dealings with the Federal Government.

A further service to the people of the 23d District is my "Washington Report," which in newsletter form periodically presents a concise accounting of events and views on Capitol Hill. In return, the opinions of the voters of my district are solicited through my annual questionnaire on major legislative issues. This constant interchange of ideas between voter and representative has helped me keep my finger on the pulse of the district.

Because of my heavy workload as a member of the Defense Department Appropriations Subcommittee, it has not been possible for me to return to Cleveland as often as I should have liked. Therefore, as has been done for the last 4 years, a traveling office has been scheduled once again in the various suburban communities which comprise the 23d District.

This method of meeting with the public has proven tremendously popular, and gives me a wonderful opportunity to dis-

cuss and learn firsthand the views and the individual needs of the people.

In that this 1959 session has run late into the year, I accordingly have planned this year's traveling office for the week of December 7–11. Meetings are scheduled so that every resident of the district may conveniently meet with me. The following schedule is a guide only—choose the time and date most convenient for you.

I wish to emphasize that these are not group meetings—they will be individual office conferences open to every person who has a problem involving the Federal Government, who wishes to express his views on national issues, or who just wants to chat and get better acquainted. No appointments are necessary. Individuals are urged to meet with me on the date and at the place most convenient.

The knowledge obtained through my traveling office has gone far in helping me give effective representation of the 23d District in the Congress of the United States.

I am most appreciative of the splendid cooperation given by the many officials who are making meeting places available for the traveling office.

Following is a schedule for the forthcoming office conferences:

Community	Location	Date	Time
Bedford, Bedford Heights, Valley View, Cuyahoga Heights, Walton Hills, Oakwood, Maple Heights, Glenwillow.	Bedford Police Station, 683 Broadway	Monday, Dec. 7	2 to 4:30 p.m.
Shaker Heights, University Heights, Beachwood	Shaker Heights City Hall, 3400 Lee Rd	do	6:30 to 9 p.m.

The New Gasoline Tax

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues, the thought-provoking editorial from the Bayonne Times of August 31, 1959, entitled "The New Gasoline Tax":

THE NEW GASOLINE TAX

In the long, long struggle in Congress over taxes to support the Federal-State highway program too little attention has been given to the Federal version of New Jersey's tax muddle. At the bottom of the controversy is not the reasonableness to adding a cent or so to the price of each gallon of gasoline in order to provide new and better roads; of course it's reasonable. The trouble is that the Federal Government (like New Jersey's) has found gasoline taxes easy to impose and collect, and consequently has been diverting the proceeds to nonhighway uses. Now we have the wryly comic situation of having some legislators argue soberly that we should not tax gasoline more, but should simply take funds from the Treasury for the highways. Thus we would be diverting gasoline taxes to general purposes because they're needed there, and then taking them back again because we find we need them for roads after all.

What is needed, of course, is someone in Washington (as in Trenton) to take a fresh, hard look at the whole tax structure, and then make some intelligent proposals. It makes no sense at all to levy enormous sales taxes on gasoline, and then use the proceeds for general purposes. General purpose taxes should be levied on some better basis than slugging those of us who happen to drink or smoke, and they certainly should not be levied on a necessity like gasoline, which people in very modest circumstances must have these days to make a living.

In the absence of long overdue reform, no doubt the added cent of Federal gasoline tax is about as well as we can do. Surely we should pay for the roads as we get them (posterity is going to have highway problems enough), and no doubt the gasoline tax is as reasonable a way of raising such money as we can find. But let's not forget that if the 3½-cent-a-gallon tax had been devoted to roads, we would never have found ourselves in this jam. There is a point of diminishing returns as well as diminishing justice in selective sales taxes.

Has United States "Sovietized" Federal Workers?

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, we are greatly concerned these days about labor-management reform legislation. It is past time that we also show concern over the need for reform of labor-management relations affecting the Federal Government and its employees.

My bill, H.R. 6 and companion bills introduced in the House are still gathering dust in the House Post Office and Civil Service Committee. This legislation would establish a modern, workable system of settling grievances and promote sound employee-management relations in the Federal service.

Under leave to extend my remarks, I include an editorial from the August 1959 issue of the Federal Machinist News, published by District 44, International Association of Machinists, and commend it to my colleagues:

HAS UNITED STATES "SOVIETIZED" FEDERAL WORKERS?

In the July 16, 1959, issue of our International newspaper, the Machinist, appeared a straightforward story called "Making Russians Wish for IAM Representation." The story reported that America Illustrated (a publication of the U.S. Information Agency, for distribution in Russia and Poland) featured the activities of an IAM business agent as an example of real, free collective bargaining.

Naturally, this is quite strange to Russian union members. The story probably would make them wish for IAM representation. Trade unions in Russia are actually organs for the Communist Party, and tools of the government.

If the U.S. Information Agency, however, would feature a story about unions of employees of the U.S. Government, the typical Russian union member would feel right at home.

Under law and regulations in the United States, Federal employee unions are deprived of the right to take meaningful political action through political advocacy; the right to bargain collectively for labor contracts, mutually arrived at and mutually binding, with impartial arbitration where there are disagreements.

Regulations are first of all formulated by Government agencies. Then the unions are consulted; meaning they are allowed to make comments. Whether or not the comments are accepted is arbitrarily in the power of the agency. The resulting regulations, often minus any union-recommended changes, are then sent to the field activities as an accomplished fact.

The idea of the identity of interest between the union and the Government is a basic concept in U.S. Government labor relations. Appeal channels on grievances are Government agencies themselves, and are confined thereto. Finally, the U.S. Government considers itself a "sovereign employer." This means, in practice, that labor duty to the Government is the basis of Federal Government labor relations.

The U.S. Department of Labor's Bulletin No. 1026, "Elements of Soviet Labor Law," outlines the factors in the Soviet labor system. Here are some of the significant highlights:

"Soviet Russia does not know of any free contract of employment, nor of any legal relations usually connected with the concept of the employment contract. In Soviet Russia, labor duty is the basis of labor relations."

"Under the Soviet system, labor is deprived of the main effective devices by which it may protect itself in a labor dispute in the capitalist world."

"In general, all the channels through which labor can pursue its objectives in the capitalist world—legislation, courts, administrative agencies * * * are in Soviet Russia

agencies of the principal employer of industrial labor—the state."

"The notion of the identity of interests of the workers and the Soviet State was put forward, and the primary function of Soviet labor unions is to serve the interests of the state."

"In plain English * * * the Soviet leaders chose to abandon the last vestige of contract relations between labor * * * and state management * * * for the sake of outright government regimentation. Capitalist free collective bargaining was frankly declared unfit in the Socialist surroundings of the Soviet Union."

"The (labor) regulations are based on the assumption that the 'interests of the workers are the same as the interests of the state.' Accordingly, a model agreement is drafted by each ministry upon consultation with the central offices of the appropriate trade unions. Then the model agreement is sent as an accomplished fact to the establishments concerned."

All of this plainly parallels the U.S. Government relations with its own employees. The Russian worker would find himself right at home in U.S. Government labor concepts.

Union members in private enterprise in the United States of America, building U.S. ships, subs, planes, missiles, and atomic projects, being paid out of the U.S. Treasury, can freely bargain with their immediate employer—an employment agent, by contract, for the U.S. Government.

But what a pity. Their brother union members working in U.S. Government shops, building and maintaining the same ships, subs, planes, missiles, and atomic projects that are being built by their counterparts in private industry, being paid out of the same U.S. Treasury, are, in effect, "sovietized" in their labor relations.

Senators, Congressmen, before the Russians pick this up and exploit it as a propaganda windfall, you can change this into a propaganda advantage to the United States.

H.R. 6 and S. 95 are waiting in the legislative hopper. Passage of these bills would take a long forward step toward giving Federal workers the kind of democracy in the work place for which American is justifiably famous in all industries other than Government. You owe at least that much to your own employees.

Levering Will Hold Conferences in District

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. LEVERING. Mr. Speaker, when I was elected to Congress last fall, I resolved that I would strive in every way possible to maintain a close contact with the people of the 17th Congressional District of Ohio, who elected me to represent them.

Since then, I have made regular radio speeches to my people, filling them in on the problems of Government which I think are important. I have circulated a weekly newsletter to the newspapers of my district, so that the editors and the people would be able to understand the issues and the many views relating to them. I have had personal contact with thousands of members of the public from my district. I have corresponded with other thousands.

This year, as did my predecessor in the past, I am arranging a series of meetings in the courthouses of the seven counties in my district, and I am urging members of the public to come to these meetings and to talk over any and all subjects they choose. It is my thought that only by personally contacting the people I serve, can I do the best possible job for them in the Congress of the United States. I will be in the courtrooms of the seven county courthouses from 9 a.m. to 5 p.m. each weekday.

Here is the schedule:

Friday, September 25, Ashland, Ashland County.

Monday, September 28, Mansfield, Richland County.

Tuesday, September 29, Mount Vernon, Knox County.

Wednesday, September 30, Delaware, Delaware County.

Thursday, October 1, Newark, Licking County.

Friday, October 2, Coshocton, Coshocton County.

Monday, October 5, Millersburg, Holmes County.

I not only welcome visitors at these conferences, I urge individuals, regardless of political party or how they may have voted in the past, to come to see me. I am striving to represent all the people of the 17th District, regardless of their beliefs about any political or legislative issue, and I know that it is of great help for a Congressman to talk over personal, national, and international problems with the people at home.

No appointments are necessary. I hope to see a large number of persons. The discussions can help me to serve them better, and it can help them to understand my problems in striving to do the best possible job for all of the people of my district.

Oregon Leads the Census Away From the Spoils System, Maybe

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. PORTER. Mr. Speaker, on August 20, 1959, I asked on this floor that the spoils system be taken out of the census. I called upon Mark Hatfield, the Governor of Oregon, to use his influence against the use of political tests in the selection of the 2,130 temporary employees needed in Oregon.

Five days later Governor Hatfield wrote to me that he is "completely opposed to the spoils system." He enclosed a letter from the Republican State chairman, Peter Gunnar, which states there are no "political tests" for applicants for census positions.

Oregon leads the way? Are we in Oregon, as we have done so many times before, going to show the Nation a shining example of integrity, efficiency, and economy? I would like to think so but I must mention my growing doubts.

The hiring of these employees is still done through the Republican Party organization instead of allowing the census officials to do their own recruiting. Can the foxes guard the chickens?

Does not this place a tremendous strain on the objectivity of these party officials? They do not ask anyone's political affiliation, it is alleged. Presumably they know the political affiliations of many good Republicans.

All those Republican county chairmen are going to be like hungry seals in the circus balancing fish on their noses. They can balance the fish but they cannot gulp them down.

In any event many of us will be watching to see just who goes to work and who does not go to work for the census in Oregon.

Apparently Don Quesinberry, Republican chairman for Clackamas County, has not accepted any position with the census. Apparently he just takes applications like the other chairmen—with no political test or thought flitting through his head as he hires people.

He sent me a telegram August 27:

Your statement that I have accepted a supervisory position for the U.S. Agricultural Census is completely inaccurate and untrue. I consider your news release an unfavorable reflection on my integrity and I demand an immediate public retraction.

He may not be a paid employee but, according to Gunnar, he and the other chairmen are helping the census recruit people. In that sense he does have a position with the census. My statement was based on a news item in the Milwaukie Review for August 23. I never mentioned his name in any news release of mine but I did mention him in my speech.

I sent him the following telegram:

I regret any embarrassment caused to you by my use of news item alleging you would organize Clackamas County Agricultural Census. I am glad you have not accepted any such position. I hope other Republican Party officials agree with us as to the impropriety of mixing the discredited spoils system with the complexities of a modern census. It is my further hope that you Republican officials will see fit to remove yourselves completely from census employee recruitment and leave it entirely to nonpolitical census officials.

Governor Hatfield, as quoted in the Oregon Journal August 28, says:

I don't think teachers want to be singled out for special favors.

Of course, the main point of my speech was that the political test be removed. I mentioned teachers as a deserving, well-qualified group who might well be called upon on a merit basis.

And I don't think the teachers appreciate the attempt to make them political pawns—

He goes on—

Charlie is simply trying to create publicity.

Again he is not very responsive. He did better in his letter dated 3 days earlier to me where he says in a postscript that he is opposed to the spoils system.

The spoils system in the census is what the shooting is all about. Hatfield stated,

according to the news story, that no party test is given and no one can be active in party affairs while serving as a census employee. This is evasive and unresponsive. The question is, are the faithful being rewarded with jobs or is merit the only test?

Hatfield said I was "ignorant of the regulations governing selection of census takers." I sit on the Census Subcommittee of the House Post Office and Civil Service Committee. In my recent speech I included a memorandum on the requirements for crew leaders and enumerators.

Hatfield asserted it was "inappropriate" for a State official to ask for changes in the Federal regulations for a particular State. I never asked him to do anything like that, only to speak to Republican officials about not using the spoils system for these census employees. Now he tells me they are handling the recruitment but that no political tests are being used. Well, it may be so. We shall see.

Under consent previously granted I include below a news story from the Portland Oregonian, a letter from Governor Hatfield to me, and a letter from State Republican Chairman Gunnar to Governor Hatfield:

[From the Portland Oregonian, Aug. 27, 1959]

PORTER ACCUSES HATFIELD OF EVASIONS AFTER MAKING PLEA ABOUT CENSUS BUREAU JOBS

(By A. Robert Smith)

WASHINGTON.—Representative CHARLES O. PORTER, Democrat, of Oregon, claims that Gov. Mark Hatfield has been evasive in saying whether or not he is willing to take the spoils system out of the upcoming U.S. census in Oregon.

PORTER urged Hatfield to have more than 2,000 census jobs in Oregon go to schoolteachers on a nonpartisan basis rather than be passed out as rewards for party service to Republican workers. Under the prevailing practice, the employees taken on by the U.S. Census Bureau are cleared by local party leaders, but must pass standard tests to qualify for the work.

The only reply PORTER has received, after several months of letter writing to Hatfield and Representative WALTER NORBLAD, Republican, of Oregon, has been one in which Hatfield said hiring teachers exclusively would not be any more fair than hiring GOP party workers exclusively.

NORBLAD PASSES QUERY

Hatfield said "what applies to Oregon should be the same policy applied across the board to other States." He suggested PORTER settle the question with NORBLAD at the Federal level. "NORBLAD," PORTER said, "replied that he had passed the question on to Peter Gunnar, Republican State chairman, and Bob Mautz, GOP national committeeman."

The Census Bureau recently informed PORTER it will require the following personnel in Oregon during the coming year:

1. For the agricultural census—2 agricultural field assistants to work 4 months at about $500 per month; 30 crew leaders at $16 per day; and about 390 enumerators paid on a piece-rate basis designed to yield $12 to $13 per day for 3 weeks.

ONE THOUSAND SIX HUNDRED AND FORTY-SIX ENUMERATORS PLANNED

2. For the population and housing census—four supervisors, one each in field offices at Salem, Portland, Eugene, and Bend, lasting about 4 months at $500 per month. Each office will employ about four clerks. About 104 crew leaders, paid $16 per day, will be employed 10 to 12 weeks. And 1,646 enumerators, working at the same piece rate for up to 3 weeks.

In his letters to the GOP leaders, PORTER said he had protested this use of the spoils system to the chief of the Census Bureau. He urged the Republicans in Oregon "to stand above this shoddy practice."

"It may be that you would wish to use schoolteachers exclusively. Not only would they be very well qualified for the information gathering which is required, but they certainly could use the extra earnings this would mean."

PORTER said if the Republicans started this approach, he would do all he could to get the Democrats to follow suit in the future.

HATFIELD DOUBTS EQUITY

"Your suggestion," replied Hatfield, "of the use of schoolteachers exclusively is an interesting contrast to your insistence that the applicants be considered on a basis of qualifications alone. I would not think exclusion on the basis of vocation would be any more fair than would the alleged preference to which you refer at length in your letter."

In rebuttal, PORTER wrote Hatfield: "It was my hope that you would be willing to make a positive statement against using the spoils system in Oregon and that you would be willing to tell Mr. Gunnar and Mr. Mautz that you wanted these selections made without their interference and without the use of any political tests."

Taking the issue to the House floor, PORTER referred to Hatfield as "a former teacher of political science and a man whose well-cultivated 'image' includes a rigid belief in the merit system and, of course, an antispoils system attitude." In supporting his allegation that Hatfield has been "evasive" about the issue, PORTER said his last letter to the governor, written a month ago, has gone unanswered.

The fourth District Congressman noted that a supervisory position for the agricultural census has recently been granted to Don Quesinberry, Republican chairman of Clackamas County.

OFFICE OF THE GOVERNOR,
STATE CAPITOL,
Salem, August 25, 1959.

The Honorable CHARLES O. PORTER,
U.S. Representative,
Washington, D.C.

DEAR CHARLIE: Please accept my apologies for the delay in answering your letter relating to the selection of individuals to serve as temporary employees of the Bureau of the Census. This delay was occasioned by my desire to have a full understanding with Peter Gunnar and Robert Mautz prior to answering your letter.

I am enclosing a copy of a letter which I have received from Mr. Gunnar which outlines the policies which we plan to follow. You will be pleased to note in the last paragraph of page 2 of the letter that at no time is any question asked, verbally or in writing, of the individual's political registration. Rather, selections are to be based on the basic fitness of the individual for the job to be done.

Your interest in this matter is most sincerely appreciated and you may be sure of my own personal insistence that these individuals be selected upon the basis of fitness rather than political affiliation.

Sincerely yours,

MARK,
Governor.

P.S.—Charlie, I know you are fully aware that I am as completely opposed to the spoils system as you personally evidenced in your own letter. This is borne out by the fact that I have appointed a number of Democrats to key policy positions in my own administration.

JULY 29, 1959.

The Honorable MARK HATFIELD,
Governor of Oregon,
Salem, Oreg.

DEAR GOVERNOR HATFIELD: In answer to your letter of July 29, regarding the coming agricultural census, please rest assured that neither Republican National Committeeman Robert T. Mautz nor I as Republican State chairman have any intentions or plans to turn the hiring of Census workers into a shoddy system of political spoils as has been the case under previous national administrations.

Our objective is to cooperate as fully as possible with the Director of the Census and give all possible aid to the Bureau of the Census as it conducts a speedy, efficient, and economical census.

I welcome the opportunity to elaborate on our activities as they relate to the census.

I want to make it very clear that there are no "political tests" for those who wish to become census crew chiefs or enumerators. As you will note in the two U.S. Department of Commerce pamphlets (A32 and A13) which I am enclosing, crew leaders and enumerators are specifically prohibited from "holding office in any political organization or engaging in any political activity during the period he is employed."

The only tests which an applicant must pass before becoming a census worker are described in these pamphlets as (a) "Pass a written test proving he can follow instructions, do simple arithmetic, and read maps; and (b) satisfactorily complete a week's training course."

Because the Bureau of the Census does not have enough permanent employees to do the job, local residents must be recruited. To aid in this recruitment, we have supplied all our county chairmen with complete information on the coming census and have asked them to assist the western Oregon field assistant and the eastern Oregon field assistant in recruiting workers.

We have asked that all applications for these jobs be routed through the county central committees in order that the two field assistants not be swamped with letters and personal applications from persons who may not be qualified.

Our county central committee officers can screen applications and eliminate those who are unqualified and, therefore, aid the field assistants in doing their job efficiently.

Let me also say a word about the two field assistants. I do not have full information on Mr. Homer Rainey, the eastern Oregon field assistant. Therefore, I cannot elaborate on his qualifications. I will obtain these qualifications and forward them to you at the first opportunty.

However, Mr. Edward Bates, the western Oregon field assistant, is eminently qualified for the position. I am enclosing a fact sheet on him, but would like to point out that he has previously been assistant Oregon agricultural census supervisor, was assistant Oregon economic census supervisor, worked on the property evaluation census, worked on the real estate sales census, served on the Portland Chamber of Commerce Agricultural Commission, and is a former State legislator. Those are just a few of his qualifications.

He was recommended by this office on the basis of those qualifications and was appointed by the Bureau of Census for the same reason. We believe that his wide experience and broad qualifications will make it possible for him to operate with positive efficiency.

As you may know, originally National Committeeman Robert Mautz was designated as referral authority for the census for the Second Congressional District, while Representative WALTER NORBLAD was charged with similar responsibilities in the first, third, and fourth districts.

Representative NORBLAD contacted census officials and requested that this responsibility be transferred to me because he felt that this office "could better refer to you names of people for the census than I could * * * here in Washington."

I want to point out that all applications for jobs on the census have been quickly referred to Mr. Bates and we have never asked any applicant verbally or in writing his political registration. Mr. Rainey was just recently appointed and we have not had the opportunity to refer any applications to him. Should such applications be received, we will treat them in the same manner.

In summation I want to point out that our activities have been directed toward helping create an efficient, economical census organization.

It is my understanding that there have been past instances in which the census activity has been seized upon as a means of paying off political debts. This is certainly not the case now.

I will welcome further inquiries.

Sincerely,

PETER M. GUNNAR,
State Chairman.

Poison in Your Water—No. 162

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Twin Falls (Idaho) Times-News of July 16, 1958, entitled "Washington Area Told Columbia River Contaminated, but Snake River Worse":

WASHINGTON AREA TOLD COLUMBIA RIVER CONTAMINATED, BUT SNAKE RIVER WORSE

PASCO, WASH., July 16.—The water wonderland of the Tri-City area is "buggy."

Benton-Franklin district health officers don't want to cause people to shun the rivers but they can't declare them safe for swimming.

The Columbia is contaminated; the Snake is worse; and the Yakima is worse still. The degree of contamination fluctuates daily and according to seasons, the condition of the sewage treatment plants, and other factors.

A 6-week survey to check bacteria count in the Columbia is under way by the health department. The check will show the population of potential disease causing organisms in the water.

Dr. Vernon Michael, district health officer, stated a great deal of sewage flows into the river despite sewage disposal plants, plus industrial pollution and bacteria from other sources.

For instance, the sewage disposal plants of Richland, Kennewick and Pasco all meet requirements but they have different degrees of proficiency. Kennewick and Pasco plants give primary treatment and Richland a more complete treatment of the effluence. But in all plants a certain amount of bacteria is carried into the river despite chlorination. The amount varies.

Columbia River water always contains this bacteria. The extent of diffusion depends on the amount of it, river flow and certain other factors such as lagoons, etc.

Dudley Beall, sanitarian, said today the Yakima River is polluted with animal refuse, sewage and perhaps conditions outside the health district jurisdiction.

The Snake River contains more bacteria than the Columbia. This is believed due to animal refuse.

Dr. Michael said the 6-week test will determine bacteria count and try to find its sources. He added that many known germs come from runoff and sewage. Sometimes raw sewage flows into the river when a treatment plant breaks down he stated.

"Because of these facts it is difficult to judge the pollution of the river from day to day," Dr. Michael said.

More and more people are using the rivers. Beaches and parks are being formed. The health department doesn't want to be a killjoy but the fact is that the river just isn't safe for swimming.

Some may swim for years, and not be affected because of immunity, health, amount of water ingested. Others may get sick right away. Principal diseases would be intestinal such as dysentery.

The health department says: "They're swimming at their own risk. We feel the river is more contaminated today than ever."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Stuart Symington Cited by AMVETS

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. ENGLE. Mr. President, at its recent national convention in Grand Rapids, AMVETS presented our distinguished colleague from Missouri, Senator SYMINGTON, with its first defense award in "recognition of exceptional contributions to the defense of the United States and the free world." I can think of no one more deserving of this recognition than Senator SYMINGTON. In its citation, AMVETS points out that Senator SYMINGTON "has brought to the Senate unique understanding of the times in which we live." I concur wholeheartedly with this statement and with the other commendations in the citation.

I ask unanimous consent that the citation be printed in the Appendix of the RECORD, together with an excellent address which Senator SYMINGTON delivered before the AMVETS convention.

There being no objection, the citation and address were ordered to be printed in the RECORD, as follows:

AMVETS NATIONAL CITATION

The 14th Annual National Convention of AMVETS, assembled in St. Louis, Mo., on August 22, 1958, unanimously resolved that its first defense award be presented to the Honorable STUART SYMINGTON, U.S. Senator, in recognition of exceptional contributions to the defense of the United States and the free world.

Throughout his outstanding career, the Honorable STUART SYMINGTON has contributed exceptionally to the national strength of the United States. He has consistently emphasized to the Government and the public the necessity for impenetrable national defense, as a threat against aggression and to successfully counteract aggression should it occur. Senator SYMINGTON continues to protect the United States and the free world through his active participation on the important Senate Armed Services Committee and Aeronautical and Space Sciences Committee.

Senator SYMINGTON, who in 1958 was elected to the U.S. Senate by the highest percentage of votes cast in the history of Missouri, has brought to the Senate unique understanding of the times in which we live. His is the voice of a dedicated American with exceptional knowledge of current military needs. His is the voice of authority on national defense. His is the voice of authority on airpower. His is the voice of authority on defense reorganization.

Senator SYMINGTON'S brilliant service as the Nation's first Secretary of the Air Force was responsible for many of the initial and subsequent contributions which the Air Force has made to the defensive strength of the United States and the free world. Earlier, the devoted public servant enhanced national welfare as Assistant Secretary of War for Air, Chairman of the Surplus Property Board, and Administrator of the Reconstruction Finance Corporation.

AMVETS and the United States—and the free world which looks to America to help preserve its freedom—are deeply indebted to the Honorable STUART SYMINGTON. It is with the greatest pride and appreciation that AMVETS present to him their first national defense award.

Presented August 27, 1959, AMVETS 15th Annual National Convention, Grand Rapids, Mich.

W. E. BURDINE, M.D.,
National Commander.
P. E. HOWARD,
National Executive Director.

THE PROTRACTED PSYCHOLOGICAL CONFLICT

(Address by Senator STUART SYMINGTON before the AMVETS National Convention, Grand Rapids, Mich., August 27, 1949)

It is a great privilege to be with you here in Grand Rapids at this national convention of the AMVETS.

Your organization is unsurpassed in its efforts towards adequate national defense.

Those in Government charged with responsibility in this field depend upon groups such as yours to keep our citizens both informed and alert about whether or not the strength of this Nation is adequate enough to insure our remaining a free people.

National defense is not just physical defense. It involves far more. It is the whole of our effort to keep the peace. It includes economic growth, scientific progress, the state of our morale and the quality of our education.

AMVETS does a magnificient job for its veteran members. But when it branches out—exploring the meaning of Americanism; granting scholarships; helping make better communities; speaking out for the legislation in which it believes—then your great organization makes its complete contribution to our overall security.

In the 15 years since its founding, AMVETS has grown steadily in stature.

And now you stand a vigorous, far-reaching, forward-looking organization, dedicated always to the welfare of our country.

In these 15 years this Nation has matured and expanded under the continuing challenge of world communism. We have disarmed, and armed again; forged great alliances; begun to build up underdeveloped areas; and learned some of the patience which must go with leadership of the free world.

Now we enter a new phase. In less than 3 weeks, Premier Khrushchev will come to this country.

It is hoped that he will leave these shores without incident—and with a better understanding of our basic strengths.

But it would be a tragic error to believe that his visit connotes any shift in Communist goals or strategy.

The Sino-Soviet Empire is committeed to a single objective. They seek it at times by talk of peace, at times by war; in one place through professed efforts towards peace; in another by subversion.

But the basic goal is always the same: namely, the overthrow of parliamentary government, all over the world—resulting in their rule of all people.

We seem now to be headed for a phase which will be marked by increasing contact between communism and free peoples.

This means an increasing competition of words, ideas, and performance; and it is about this—what I would call the psychological side of the conflict—that I would speak briefly today.

The Russians are ready.

In his speech to the Second Congress of the Communist International, back in 1920, Lenin said: "Great are the military victories of the Soviet Republic, but still more significant is the victory over the minds and hearts of the masses, the victory of Communist ideas all over the world."

Following Lenin's advice, the Communists have developed the most effective machinery and the most refined strategy of propaganda the world has ever known.

Their assault on the mind takes many forms. It may be a peace congress in Sweden, a youth festival in Vienna, a strike in Paris, or a fair in New York.

Wherever it is, and whatever it is, you can be sure it is a well planned monolithic effort, with the inspiration coming primarily from two places—Moscow and Peiping.

In this area of protracted psychological conflict the Communists are believed to be spending between $2 and $3 billion a year. It is an effort which has but one purpose—to drum home the Communist line, so as to soften up any opposition, as they move on with their plans for conquest.

But deeds are stronger than words; and the most ingenious propaganda is weakened if belied by actions.

This is what happened recently in Hungary, and even more recently in Tibet.

And that is why, despite the scope of the Communist effort, it is they, not us, who are vulnerable in this propaganda field at this time—if only we will shed the current complacency and go to work.

Greater effort in the psychological field could draw rich dividends for the cause of freedom.

Behind the Iron Curtain—in the so-called zone of peace in which we now let Communist rule go unchallenged—the people are nevertheless stirring.

Ideas of freedom have seeped through the blockade of indoctrination and thought control.

Why else would 250,000 Poles turn out to cheer the Vice President of the chief capitalist nation of the world?

Why else would 1 out of every 10 East Germans have left their country since 1950, drawn by the symbol of freedom which is West Berlin?

Yes; dissent and doubt are on the rise in many places behind the curtain.

Let me tell you a story, the authenticity of which is vouched for by the distinguished free Austrian magazine, Forum.

At the time of the Hungarian revolution 140 students were expelled from a Moscow university.

Their crime? In the middle of a class on Marxism they began to ask why, in Hungary, workers and peasants had risen against the Communist state.

The Russian students were not satisfied with the answer of their teachers, so they went to the rooms of Hungarian students

and literally dragged them out of bed to ask some searching questions.

They wanted to know whether the Communist Party has not in fact become the exploiting class Marx warned against; and, if this were true, whether Marxist theory would not demand that the people revolt against the party.

These discussions spread to other Russian universities, where the question was even asked whether "the Russian workers, under Lenin's banner, will not rise against their bureaucratized exploiters."

Only extreme subsequent disciplinary measures quieted this outbreak of criticism. But the incident shows that, after 40 years of control, the Communists would seem to have failed in the indoctrination of some of their youth.

With wise and careful effort, we can carry on this battle of ideas behind the lines to great advantage.

We should utilize holes that have been opened up in the Iron Curtain to intensify our efforts to win converts to freedom's cause.

The crucial weapons of such an effort, I am glad to say, cost nothing.

They need no lead time, because we have them.

They are not subject to mechanical failures.

And they have not grown obsolete in 183 years.

They are parts of our life which many of us take for granted. But translated into the lives led by the people behind the Iron Curtain, they become concepts of great motive power.

First of course is the idea of freedom. The Iron Curtain people should know that if they lived under our system, they would be able to walk the streets without identity cards. They could move to a new city without registering with the police. They would be able to apply for the kind of job they wished, instead of being assigned by the state. They could read, think and speak what they pleased.

And then there is self-determnation—people being free to choose their own form of government, without pressure from foreign troops on their soil; living in a land where men can choose their own government representatives in free elections.

Also there is the concept of material well-being. Better pay, better working conditions, a better standard of living.

How interested these men and women would be to study the way we in America have narrowed the historic gap between rich and poor without revolution or bloodshed.

Why should we fear increasing contact between the Communists and ourselves? Their way of life has no attraction for us. But our way of life has much attraction for them.

The more they learn about how we live, the more they will realize that the free world has actually delivered the better life which the Communists promise.

Why is it that the truth about the West is so largely unknown behind the Iron Curtain?

A few comparisons can answer much of that story.

In the last year, while the Russians were spending billions in psychological warfare, our total effort in this field amounted to less than $150 million.

That is about 3 hours' output of 1 day of our annual income.

We have the weapons to lead the world to peace. But we neglect the means of delivery.

Therefore, I recommend a four-point program to help our country mount a new major offensive in this battle for men's minds.

First, there should be intensification of our radio broadcasting behind the Iron Curtain, our presentation of the truth about America.

We should be able to broadcast long enough, loud enough, and on enough channels to break through Communist jamming efforts.

We should not raise false hopes in the hearts of people—but we should keep constantly before them the difference between their life now, and the life they could have under freedom.

Second, we should increase personal contacts between Communist and free world peoples—through travel, letters, and exchange programs.

The young Americans serving as guides at the Moscow Fair have reported that their own personal views and experiences about life in the United States are a most effective counter to Communist propaganda.

Third, there should be better preparation of our Foreign Service people for jobs abroad. We cannot get over our message to another land or person if our representatives do not know the language. They cannot be effective unless they understand the culture and customs of the country in question.

Far too many of our representatives abroad are not properly equipped for their job. It was for this reason that I proposed the establishment of a Foreign Service Academy, to train the free world advocates of a lasting peace so they could present their message with maximum effect.

Finally, there should be a much more effective use of religion as an antidote to communism.

Eighty percent of the people held in bondage behind the Iron Curtain are Christians.

A large percentage of them are devout; and therefore, when their beliefs rub against the atheistic policies of their Communist rulers friction is automatic.

We have not yet made full use of our creeds and religious convictions as a weapon in this cold war. Through broadcasts, we could do much more in emphasizing the strength of our faith.

These broadcasts should stress the dignity of man under God, along with other religious ideals incompatible with Communist doctrine.

Why not, for example, translate and dramatize some of the outstanding religious broadcasts we hear on our own networks every Sunday.

I present these opportunities and suggest how we might use them. At this point, however, let me make it clear that I do not suggest stirring up any revolution.

But we do want to spread the truth, for there is a good chance that this truth will spread dissatisfaction, and thereby force some relaxation of Russian rule, in terms of more understanding and therefore more good will.

The head of the Central Intelligence Agency, Mr. Allen Dulles, asserted in a recent speech that while the Soviet Government is still a closely regulated autocracy, it is not today quite as free as under Stalin to disregard wholly the desire of the people.

This applies at least as much to the Soviet satellites. They would be grateful for the slimmest ration of the fruit of freedom.

If we can help them to that end, all our effort will have been worthwhile—and the goal of peace will be much nearer to mankind.

First Hungary, and then Tibet, have shown the Communists that if control of their satellites is based on force alone, they damage their cause in the uncommitted nations.

And by spreading our ideas, and ideals, we can stimulate apprehension in the countries they still do not control; plus unrest in the countries they do.

Such possible progress through truth can only reduce the Communist threat to our own security.

As our country heads into the uncertain future, testing new methods of diplomacy, facing new techniques, I have faith that this great organization of AMVETS will support these efforts, efforts essential for our security, our prosperity, and the greatest of all blessings, a just and lasting peace.

High Interest Rates Inflationary?

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. McGOVERN. Mr. Speaker, I believe that the following letter to the editor of the Aberdeen American-News written by one of my constituents, Mr. Herman Pickus, of Aberdeen, S. Dak., will be of interest to the Members of Congress:

[From the Aberdeen (S. Dak.) American-News, Aug. 30, 1959]

OUR MONEY MARKET

AUGUST 30, 1959.

To the EDITOR:

The Eisenhower administration maintains that it is greatly worried about inflation, and rightly so. It maintains that a raise in wages for labor, unless accompanied by corresponding increases in production on the part of labor, too, is inflationary, and rightly so. That is about as far as its position is consistent.

Wages is the money that one pays for the use of another man's labor. Interest is the money that one pays for the use of another man's money. The President maintains it is dangerous to our economy and our national well-being to raise wages, but at the same time, and since 1953 when he became President, he and his advisers have advocated and put into effect a tight-money policy which has continually raised interest rates. Now he demands a law which will raise the limit on bonds running for more than 5 years from 4¼ percent to heaven-knows-what.

The last annual budget of the Truman administration carried $4.7 billion for interest alone. The present budget of the Eisenhower administration carried $8.1 billion for interest. On August 3, the U.S. Treasury offered for exchange $13 billion of 4¾-percent bonds for maturing and 1⅝-percent bonds. You can readily see where our interest costs are heading.

The extra interest that the Eisenhower policy has forced on the Treasury, and therefore on all borrowers as well, has added fuel to the fires of inflation until the interest alone paid by the U.S. Government is the second largest item, next only to national defense, in the Federal budget.

Today a 2½-percent bond for which the U.S. Treasury receives $1,000 can be bought for $816, a new alltime low.

The Republican administration thinks it is wrong for labor to strike for higher wages at this time, but can see nothing wrong when capital strikes for higher interest (wages) for the use of its money. What name can you give it except a strike on the part of capital when it refuses to buy the

best security in the world today (U.S. Government bonds) at 4¼ percent but over subscribes $13 billion worth of 4¼-percent bonds. Is it anything but a strike, almost bordering on lack of patriotism, when there is no money to buy bonds at the lower rate, but plenty at the higher rate of interest or "wages."

I wish that some economist, Federal Reserve official, or Eisenhower administration official, would explain how a higher rate of interest is accompanied by a corresponding increase in production as is asked of labor when it asks for higher wages.

HERMAN PICKUS.

ABERDEEN, S. DAK.

Alaska's Air Transport

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. MONRONEY. Mr. President, my distinguished colleague, the senior Senator E. L. (BOB) BARTLETT, of Alaska, recently participated in a most important meeting of short-haul airline operators in a twin city Alaskan appearance in Anchorage and Fairbanks, July 28 to July 31.

This meeting of the Association of Local Transport Airlines featured an address delivered by our distinguished committee member, Senator BARTLETT, on Wednesday, July 29, 1959, in Anchorage, Alaska, saluting civil aviation in Alaska, past and present, and should be of the greatest interest to all the distinguished Members of this body.

Recognizing the active and most constructive aviation role my distinguished colleague has played in this, his first session as a member of the Subcommittee on Aviation, Senate Interstate and Foreign Commerce Committee, I ask unanimous consent to have Senator BARTLETT'S address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR E. L. (BOB) BARTLETT, OF ALASKA, TO THE ASSOCIATION OF LOCAL TRANSPORT AIRLINES AT ANCHORAGE, ALASKA, JULY 29, 1959

I am exceedingly pleased to be here addressing you this evening, and want to thank you for honoring me with the invitation to take part in your winged visit to Alaska and to speak to you.

My friends from the Anchorage Chamber of Commerce will join me, I'm sure, in expressing our State's warmest welcome to you of the Association of Local Transport Airlines.

I was all the more ready to accept this invitation to be with you of the association because it was extended to me by Col. Joseph P. Adams, general counsel and executive director of this splendid aviation group. I count it a privilege to name Joe Adams as a friend. Joe has a way of getting around on Capitol Hill and in the executive departments of Government which is just as effective as it is proper. Come to think of it, I wonder if all these local airlines would be in existence if it were not for Joe Adams. As a member of the Civil Aeronautics Board, who served the public interests faithfully and well, Joe insisted that the little fellow get a break. He prevailed. There were many times, I know, when it would have been easier for him to give up, and jettison his cargo, to lower his landing gear and set down in the face of the very formidable opposition which confronted him. But Joe is not that kind of a man. He persevered, and won out. The public won at the same time.

We Alaskans feel we have an important stake in your association. After all, 5 of the local service airlines that are lifelines in our farflung State form a rather substantial part of your membership of 16 companies. We remember, too, that you had the courtesy, when you first organized in 1957, to reflect Alaska in your original name—the Association of Local and Territorial Airlines. And I can well imagine that you were almost as pleased as we when the march of American history caused you to change that name by dropping the territorial reference.

For many long years "statehood" was a word that had a bitter flavor for us. Now it tastes deliciously sweet as it rolls off our tongues. I understand that statehood has been sweetening the balance sheets of the local service airlines in Alaska and Hawaii, too, by booming the business and tourist traffic. For the benefit of any Civil Aeronautics Board auditors who may be within earshot, let it be stated that this comes to me strictly as rumor. I haven't examined a single account sheet. And I hope this effect extends to your members in what we've taken to calling "the other 48 States" by picking up the pace of their traffic.

It is my fond belief that we have had only the first taste of the benefits of Alaska and Hawaii statehood, and that your palates and ours will be more and more delighted as we grow in the coming years.

Now, having welcomed you on Alaska's behalf, I want to do a turnabout and join those of you from outside in saluting our hosts—Alaska Airlines, Northern Consolidated Airlines, Reeve Aleutian Airways, and Wien Alaska Airlines.

The labors of our intrepid bush pilots gave birth to these airlines. And their history, for high drama, is unexcelled anywhere.

Some of you may recall that one of these airline founders, Bob Reeve, was my rival in a delegate election a few years ago. If things had turned out a bit differently, your speaker tonight might well be one far better qualified on the subject of Alaska aviation.

But I can speak with a good deal of experience as a passenger. Having been a patron of your four host companies during the travels involved in eight campaigns plus a lifetime of residence in Alaska, I can truly say that I know them well, and I hold them in the highest respect.

Even so, a speaker is bound to gulp a few times when he gets upon his feet to talk about aviation to a group of aviation experts. But a politician is never noted for his lack of temerity and so I prepare to take the plunge. Not earthward, however. We are on a higher level tonight. Even as a layman, I can and will make a brag. In about 35 years of flying, most of it within Alaska and starting in the very early days of aviation, I have never had a forced landing. And I attribute this remarkable record less to my own luck than to the splendid skill of the Alaska aviators who have manned the Alaska skies from then until now.

Happily, one does not have to be a flyer himself to make reference to Alaska's air-mindedness, air traffic, airports, aircraft and aviators.

Will anyone rise to challenge the statement that Alaskans are the most airminded people in the world? I don't think so—at least not successfully.

Tonight we are dealing almost solely with facts, and very little if at all with fiction. You have no choice in the matter. I am on my feet in firm, if temporary, control and you may escape a barrage of facts only by departing the room. First, I hand to you one which defies analysis, which is simply incredible, which nonetheless has its veracity attested to by the Civil Aeronautics Board. It is that certified Alaska air carriers last year carried 409 passengers per thousand population. This was more than 22 times the U.S. average of 18 passengers per thousand. Let this be a goal for the 11 non-Alaska members of the Association of Local Transport Airlines.

Alaska is the smallest State in population, making up only twelve one-hundredeths of 1 percent of the U.S. total. But in proportion to this population, her air commerce traffic pattern is fantastic.

In 1958, Alaska aircraft departures totaled almost 88,000, equal to 2.8 percent of the U.S. domestic total—or 23 times what the population proportion would lead you to expect. The number of passengers boarded was about 320,600, equal to seventy-four-one-hundredths of 1 percent of the domestic total—or six times what you would expect. Tons of cargo totaled more than 10,000, equal to 2.3 percent of the domestic total—or 19 times what you would expect. Tons of airmail was the greatest of all: 7,192 tons, equal to 4.8 percent of the domestic total—or 40 times the population proportion. When we say "send it airmail," as so many of our firms do on their business letterheads, we really mean it.

Of course there are sound reasons for our air-mindedness. We are short of highway and railroad mileage. The operation of ocean and river vessels is seasonal in many areas, while on the other hand our flying weather in many regions is best in winter. In vast parts of Alaska the local service airline or the bush aircraft is the only practical means of transportation. Then, too, our people have always been eager to be linked as closely as possible with the rest of the United States, which helps explain why we're the flyingest, airmailingest people anywhere.

How about airports? The State Division of Airports estimates that Alaska has about 600 landing areas of all categories. Gene Roguszka, director of aviation, recently sent me a very handy Alaska airport directory. It lists more than 300 airstrips and seaplane landing areas, and provides maps of most of them.

The 1959 National Airport Plan issued by the Federal Aviation Agency includes 270 Alaska air commerce airports—4 of them intercontinental, 9 continental, 68 trunk, 111 local, and 78 seaplane facilities. Also included in the plan are 64 general aviation airports.

Aircraft? Alaska's owned total of active registered aircraft was 1,179 as of last January 1. In this measurement we were not, as you might expect, close to such sparsely settled Western States as New Mexico, Wyoming, and the like—but rather to more populous States like Oregon and Louisiana. To put it another way, Alaska has 1 aircraft for every 180 residents, which is unquestionably the highest ratio in the United States.

Of these 1,179 aircraft, 56 were, under the new FAA classification, listed as scheduled and irregular air carriers. However, some of our carriers are in the next two categories—among the 64 multiengine planes and 420 postwar 4- and 5-place single engine plans listed under general aviation. Finally, in the all other category, we have 639 more aircraft.

At the same time, we had 2,677 active pilots, or about 1 Alaskan out of every 75. A number of others who once were licensed no longer are on the active list. There has been a lot of talk lately about retiring pilots at the age of 60, or thereabouts. This reminds me that I am now engaged

in a research operation aimed at discovering whether A. A. Bennett is still in the land of the living. If he is, you may be sure that he is still flying at an age not exactly known to me but surely such that he would consider a pilot of 60 a mere youngster. From Fairbanks, where he was one of the organizers of the Bennett-Rodebaugh Airplane Co., A. A. Bennett went down to Idaho. He had his commercial license renewed there in 1957 but as yet my research organization has not advanced beyond that point. Bennett was one of the fabulous characters of early-day Alaska aviation. He steadfastly refused to go in for such a modern contrivance as a cabin airplane. Forced finally to give in by the stress of economic competition, Bennett persuaded the Zenith people to build him a special plane with a cabin for the passengers up forward and open cockpit for the flyer way back aft. Bennett was not adverse to telling anyone, most particularly his passengers, the reason for this. He admitted that airplanes fell down once in a while out of the sky and hit the hard, hard earth and he did not propose to be right on top of the engine when and if this occurred. Let the passengers bear the brunt of this while he took charge from the rear, Bennett said.

And he had the clearest blue eyes ever possessed by man. It was this oldtimer's persistent insistence that his eyesight was perfect because when flying he took off his goggles and stuck his head out of the cockpit. He said the gale into which he then faced toned up his optic muscles, and did everything except erase original sin. But I must guard myself for it is easy to start reminiscing about an extraordinary breed of men—the early-day Alaska pilots.

A significant illustration occurred right here in Anchorage last week, revealing that today's men of wings are in tune in every way with those who started Alaska's aviation. This came about when Don Sheldon of Talkeetna was presented with the Special Service Award by General Necresop. This is the highest award given a civilian by the Air Force.

No doubt you have heard Anchorage referred to as the air crossroads of the world. Lest you think our chamber of commerce friends are overstating their case, let me note that in calendar 1958 the FAA towers at International Airport, Merrill Field, and Lake Hood controlled a total of 406,701 aircraft movements. This was only a few thousand less than at the busiest single airport in the Nation—Midway at Chicago.

Our international airports at Anchorage and Fairbanks are in superb locations astride the aerial routes from the Eastern United States to the Far East, and from the Western United States to Europe, over the Pole. I think the day is approaching when—if with God's help the peace is kept—other Asia air centers, in China and the Soviet Union, will be reached by flights from Alaska. But even if Peiping, Moscow, and Irkutsk do not go up on our destination boards, we can nevertheless look ahead to great growth in our international traffic.

While our intercontinental air traffic is significant today and has great future potential, intra-Alaska traffic is even more striking in relation to national figures. FAA records show that some 66,500 landings were made last year at the 28 intermediate airfields in Alaska. That figure is higher than the total of landings made at the 74 intermediate fields elsewhere in the United States. Air carriers accounted for more than one-third of these landings, which testifies to the vigor of our local service airlines.

These airlines offer plane-window vistas of scenery as awe-inspiring as any on the face of the globe. They offer, too, unique recreational tours—to the Arctic, to the Pribilof Islands in the fur seal mating season, to Katmai National Monument for unmatched trout fishing, and to the national park at America's highest peak, Mount McKinley.

Congress and the Federal Government have for years recognized the importance of aviation to Alaska. But our Territorial status and our lack of voting representation have tended to hold back full development of our airports and related facilities.

In 1948 Congress authorized Federal construction and operation of completely new international airports at Anchorage and Fairbanks. The initial appropriation of $13 million was raised to $17 million 2 years later.

Anchorage International Airport received the lion's share of the money and was somewhat more adequately planned and built than Fairbanks International. Today both these airports urgently need runway extensions to meet the demands of the jet age.

The coming of statehood altered our airport situation and presented problems to which the Alaska delegation in Congress and the State government have devoted major attention.

In recommending provisions for the Alaska omnibus bill this year, the Eisenhower administration proposed to get Uncle Sam out of the international airport business in Alaska by giving the Anchorage and Fairbanks Airports to the State without charge.

The omnibus bill—now enacted into law—also provided transitional grants of $28½ million during the 5 fiscal years, beginning with the current one. Of these transitional grants, it was understood $4½ million should be applied to capital improvements at the international airports.

However, the extensions at Anchorage and Fairbanks were estimated at a cost of some $9,800,000. So it became obvious that Alaska would have to get more than the flat sum of $1,350,000 a year it received in recent years under the Federal airports prograra if the improvements were to be made.

Under the old Airport Act, Alaska was of course treated as a territory. It did not share funds on the basis of a land area and population formula, as the other States did. Nor was Alaska eligible to receive any of the $15-million-a-year discretionary fund which could be allocated by the program administrator to the most important projects, wherever they might be. But the territory did have one advantage in the old law. It was required to match funds on a 3 Federal dollars to 1 territorial dollar basis, instead of the split of about 2 Federal dollars to 1 State dollar for public lands States.

Early in this session, the Senate passed a new airport bill. It would have boosted the available funds considerably, but would have continued to treat Alaska—and Hawaii—on a basis similar to that in the old law as far as matching and eligibility were concerned.

The House of Representatives, however, took a quite different approach to the airport bill. The House cut back the proposed expenditures in relation to the Senate version, but on the other hand it proposed to treat Alaska on the same basis as other States.

The House, while it was more modest than the Senate, still favored a higher level program than the old one. But the administration wanted to phase out the entire airport program gradually. So the battle of the budget soon was raging around the airport issue.

Senate and House conferees could not agree on either one of the bills passed, nor on a compromise somewhere in between. As their discussions wore on, tempers grew more and more brittle. The upshot was that, under the pressure of a June 30 deadline, the conferees finally recommended a simple 2-year extension of the old $63-million-dollar-a-year program. Both Houses reluctantly accepted this recommendation.

This meant Alaska would get only $1,350,000 and still would be treated as a territory. When this decision was reached in conference it was simply impossible thereafter to make any changes referring to Alaska especially, or to make any changes at all in any part of the program.

The inadequate treatment of Alaska was so flagrant that the President called for its correction when he signed the Airport Act extension.

Next, the Alaska delegation introduced an amending bill. It would have boosted our State's share of the airport funds by adding money to be distributed under the overall formula and by making Alaska eligible to share on the same basis as other States. However, as more pencils were brought into use to do the necessary calculations, it became apparent that around $11 million in additional funds would have to be authorized by amendatory legislation if Alaska were to receive that which it would be entitled to as a State without any of the other States suffering cutbacks, which they were not at all willing to accept. We were told very frankly that an effort to add any such sum would, if successful, confront a Presidential veto.

Obviously, there was no point then in engaging in legislative exercises in the Congress for the fun of it. And, very factually, I must add that I think that neither the House nor the Senate would have accepted a bill adding to the total airport sum by about $11 million. When the conferees decided, and the two Houses accepted the proposal for a simple extension of the existing act there was no likelihood that any substantial amendment would thereafter be accepted.

What to do, then? The members of the Alaska congressional delegation considered this as a proposition of the greatest urgency and importance. We held meetings with the Deputy Director of the Bureau of the Budget and a group of his people. It was then that the hopelessness of expecting a worthwhile amendment to the Airport Act became apparent. If I may give myself a measure of credit it was about that time that I came to the conclusion that the most we could hope for—and the very vital most it could turn out to be—would be to amend the law so as to permit Alaska to share in the discretionary funds allotted to the Administrator of the Federal Aviation Agency. Following the meeting with the Bureau of the Budget the members of the Alaska congressional delegation had another meeting with Deputy FAA Administrator James T. Pyle, and members of his staff. Whether it was by coincidence or whether in the circumstances it was the only decision that could be made, they and I about simultaneously at this meeting put the stamp of endorsement on a sharing in the discretionary fund.

The Administrator's views were not long after communicated to the Senate Interstate and Foreign Commerce Committee when Jim Pyle said in part:

"If the amendment which I recommended is adopted, Alaska will receive money to meet its urgent needs out of the discretionary fund. The Administrator will be in a position to insure that such money is used to meet these needs, and he will also require that Alaska be treated like other States in matching the Federal funds advanced. Alaska will also retain the advantage of having its share of project costs financed out of the $1,350,000 already authorized remain at 25 percent."

Mr. Pyle's statement about matching any discretionary funds granted means Alaska must put up 37½ percent to Uncle Sam's 67½ percent. But on the basic allocation Alaska will continue to match one-quarter to the Federal Government's three-quarters.

The amendment recommended by the FAA was accepted by the Senate committee which unanimously reported the bill. The bill was then passed by the Senate last week. I have talked with Chairman HARRIS of the corresponding House committee and urged prompt action on the bill there. I am hopeful that it will be granted, and that affirmative action will be taken.

Does this mean that substantial grants will be made from the discretionary fund to Alaska in the next 2 years? Not at all. It means that Alaska will have a chance, together with every other State, to request such funds. But I am confident that the high urgency of the need for runway extensions here at Anchorage and at Fairbanks, plus other airport needs in Alaska, are recognized by the FAA and will receive appropriate consideration from that agency of the Federal Government. In this connection, I cannot speak too highly of the splendid cooperation which has and is being given to us in the Federal Aviation Agency from General Quesada and Jim Pyle on down. Uniformly, they have been understanding, helpful and possessed of a vigor and will to advance the cause of Alaska aviation.

Taking a look back, you may be interested to know that from the 1947 fiscal year through fiscal year 1959, $7,284,904 had been made available as Federal allocations to Alaska. With this money 38 projects have been physically and financially completed, 12 are physically completed but awaiting financial payment from the Federal Government, 19 are now under construction and should be completed before October this year and 13 are programed for construction.

But even if the discretionary fund amendment becomes law, we shall be operating under a jerry-built stopgap arrangement. The airport program which was extended to mid-1961 is by no means a wholly adequate program to meet the Nation's jet age needs. It is a program that was veto proofed to meet most of the President's objections and to assure the country that the airport program would not expire completely. I think that you will all recall that the President vetoed a new airport program in 1958.

I look forward to passage of a much better and more comprehensive program under the new administration that will take office in 1961. One point of that program must be treatment of Alaska and Hawaii on an equal footing with the other 48 States.

Senator GRUENING, Representative RIVERS, and I were pleased to have been able to help our State government work out arrangements for the change of hands of the two international airports. This change should be completed in the next year. In the meantime, the FAA will operate the airports as the agent of the State.

In addition, the smaller intermediate airports held by the FAA are to be transferred to the State gradually.

When these transitions are completed, the State of Alaska will be operating one of the most extensive and busiest airport systems in the country. It will still need plenty of improvement in the future. We in Congress will do our best to see that it is as adequately supported by Federal grants as any other State's.

When two-motored aircraft first came into use in Alaska, Alaska pilots first went into uniform. I can remember ever so vividly those great big, marvelous Lockheed Electras, which must have carried 12 or 14 passengers and which opened up an entirely new era in Alaska aviation. The pilots denounced the uniforms they were required to wear with an understanding and ability to use the language comparable to that of a cowpuncher trying to lasso a balky steer. But I always thought that secretly they were proud and pleased as could be. Those were the days when on landing the passengers were told to remain in their seats until the pilot and co-pilot had made leisurely and grand exit from the plane.

Today it is otherwise. But the aura of romance, of accomplishment, of derring-do, of pioneering, of adventuring in the far places, still surrounds the Alaska aviator. They are successors to those elder giants of the Yukon of the gold stampede days. Romance. Mystery. Physical daring and hardihood. All of these are elements that go into the makeup of the true pioneer, wherever he is found at whatever time in history. For example, I cannot think of Ray Peterson as the president of a successful airline which is a constituent member of the Association of Local Transport Airlines, so much as a helmet and goggle flyer in the perfect days of long ago.

So I would conclude here by saluting a brave race of men who have carved their place in Alaska history and whose exploits and vision have opened up for us—for all Americans—the vastness of the Alaska skies and the treasures of land and ocean that lie beneath.

Presidential Veto of the Public Works Appropriation Bill

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. BLATNIK. Mr. Speaker, on August 26, 1959, the President vetoed the public works appropriation bill for the fiscal year 1960 which contained funds to carry on the civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, and the Tennessee Valley Authority. As chairman of the Subcommittee on Rivers and Harbors of the Committee on Public Works, I, of course, am vitally interested in the flood control, navigation, and beach erosion projects, funds for which are in the appropriation bill because of the fact that these projects were originally authorized by the Committee on Public Works.

I believe that the veto of the entire program is a grave error on the part of the President and is a shining example of his indifference to water resource development.

It will be recalled that in 1956 and again in 1958 he vetoed the omnibus river and harbor and flood control bill, title I of which was the work of the subcommittee of which I am chairman, and title II of which is the work of the Subcommittee on Flood Control of which the distinguished gentleman from Tennessee, the Honorable CLIFFORD DAVIS, is chairman. I have had long and sad experience therefore with the President's attitude toward water resource development. This attitude even extends to problems of water pollution, and on this subject the President, in his budget message, reduced the amount contemplated by Congress for appropriation and expressed his desire to eliminate the Federal grant system entirely at a future date.

Returning to the most recent veto, I would like to invite attention to the fact that the total appropriation of $1,206 million is only $50 million in excess of the President's budget. This addition is the amount agreed to in conference after the other body had added a total of approximately $80 million. I feel that the House is to be commended for having reached a compromise which is only 4 percent in excess of the budgeted figure. This is an amount which is well within the margin of error in the cost estimates themselves.

The President gives as his principal reason for the veto the fact that the ultimate cost of these projects will be more than $800 million. He fails to point out, however, that by the time these unbudgeted projects reach their peak of construction, many of those now underway will be completed. The impression is left that some future budget will be increased by $800 million which is, of course, ridiculous since this amount would be spread over many years.

I would also like to point out that the President does not criticize the merits of the 67 projects. In fact he states that the unbudgeted projects in the bill will, at the proper time, make an important contribution to the economic development of the areas in which they are to be built and to the Nation as a whole. The Appropriations Committees gave long and careful consideration to the testimony presented and selected only those economically justified, worthwhile projects which, in its opinion, should go ahead at this time. These projects are only a small fraction of the backlog of projects in the field of flood control, navigation, and reclamation.

I urge every Member of this body, whether he has a project in the bill or not, to vote to override the veto for the good of the country as a whole.

Journey for Peace

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILEY. Mr. President, the heartwarming way in which President Eisenhower is being greeted abroad, I believe, is something in which we can take great pride as a nation.

In addition, it bodes well for further strengthening and cementing good relations with the Federal Republic of Germany, Great Britain, and, I am confident, with France.

Engaging in one of the great experiments of history—that is, a willingness to meet with Khrushchev, the No. 1 leader of the opposing camp in the world—President Eisenhower is laying solid groundwork upon which to carry on his discussion with the Soviet Premier.

At home, there are, of course, still differing viewpoints on the exchange of visits idea. Naturally, we must—and shall—continue to respect all opinions.

In Wisconsin, and across the country, our newspapers are showing a commendable responsible attitude in evaluating for their readers the significance of the visit—attempting to create the kind of climate in which best results may be obtained from the meetings.

Now, I ask unanimous consent to have two editorials, first, "Journey for Peace," from the Janesville Daily Gazette; and second, "Chinks in the Armor," from the Superior Evening Telegram, of Superior, Wis.—reflecting this responsible attitude—printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Janesville (Wis.) Daily Gazette, Aug. 28, 1959]

JOURNEY FOR PEACE

President Eisenhower believes deeply and fervently that the cause of peace can best be promoted through personal diplomacy. He has the confidence of most Americans, who pray that his current visit to West Germany, Britain, and France will pave the way toward Western unity in the forthcoming Eisenhower-Khrushchev talks.

By the usual signs of character and spirit, the President reveals a new strength and sureness and health that breathes hope. There is no cocksureness, but rather firm determination and assurance that our cause is right.

Bonn's lusty welcome was quite balanced by Chancellor Adenauer's sober realism and recognition of the critical Berlin issue raised by the Kremlin. After agreeing to respect West Berlin's freedom, at the end of World War II, the Reds have fomented the issue out of thin air. But the firm refusal of the West to capitulate has at least brought the Reds to extend their deadline.

Mr. Eisenhower has a unique talent for creating confidence in negotiations by his show of sincerity and firmness and honesty. He, of course, fully recognizes the problem left by the failure of the foreign ministers' conference to agree on anything regarding West Berlin.

Perhaps he can achieve, first, more unity of purpose and action among our closest allies, Britain and France, before he talks to Khrushchev. Certainly, the three must approach agreement on aim. Prime Minister MacMillan wants a softer approach to Moscow. But he is surely more susceptible to a unified front than Premier de Gaulle, who is always difficult.

The President is assured of an almost explosive welcome from the people in each country, for this is something of a triumphant return—his prestige is at its peak. That welcome should tend to strengthen his hand, but he faces a most difficult and vital task in working with Macmillan and De Gaulle toward an agreed approach to the Soviet Premier.

There will be no departure from Western ideals and principles in the coming exchange of visits with Khrushchev and no abandonment of the captive nations, he has declared.

In every speech he has stated clearly and sincerely that the United States will work toward peace, individual freedom, and human dignity, and that it is ready, if necessary, to fight to prevent aggression, and he included assurance to West Germany of U.S. protection in the Berlin crisis.

There are many who are skeptical that any possible achievement or agreement can come out of talks between the American and Soviet chiefs, but as Vice President NIXON points out, there is no alternative to talk or fight.

This newspaper is inclined to be skeptical, also, but the alternative to talk is so compelling that the anticipated risk seems hardly a choice.

What concerns us is that Khrushchev has achieved this exchange by blackmail, that he raised the Berlin crisis by threat of war after the Soviets signed the Berlin truce agreement.

One can only pray that President Eisenhower is at the peak of his abilities as a negotiator, peacemaker, and statesman, and that his firmness of purpose shall persuade the British and French, first, and shall convince Khrushchev, secondly, that there are grounds for melting the cold war.

[From the Superior (Wis.) Evening Telegram, Aug. 22, 1959]

CHINKS IN THE ARMOR

Calm voices in America have been saying for years that, in the marketplace of ideas, this country's free system has nothing to fear from the competition of communism.

Despite these thoughtful assurances, many men have been troubled by the competitive menace. And some have felt that the way to meet it was to freeze out all mention of communism, and to bar the study of it in our schools.

The calm ones have argued against this course, saying for one thing that the fundamental necessity to "know your enemy" compels us to have the fullest understanding of what communism is and how it works.

Beyond that they have, as noted, contended that the totalitarian concepts of communism could not possibly stand the gaff when set beside our ideals of freedom and democracy.

The highly agitated performance of the Russians in recent days lends strong support to this view.

The visit of Vice President NIXON to the Soviet Union, and the daily showing of American life at the U.S. exhibition in Moscow, seem to have driven the Reds nearly frantic.

They began to attack basic features of the U.S. fair even before it opened. They have taken particular alarm at the showing of a typical American home, and have tried hard to argue that it is untypical. Again and again they have sought to depreciate the things we show, and to insist that they don't prove anything.

By the same token, they have shown fear that NIXON would be judged too favorably by ordinary Russians. The Kremlin complained that translation problems put Khrushchev at a comparative disadvantage in their now famed TV "debate." Soviet leaders have felt it necessary to have him heckled.

If communism is so strong a force, what are they so worried about?

The truth, naturally, is that in their hearts the Russians know communism isn't a worthy competitor of freedom. They're far more afraid of our ideas than we need be of theirs.

For a long time they've jammed our propaganda broadcasts for that very reason. But they obviously can't jam NIXON, and they can't jam our exhibition in Moscow. That's what has them so pitifully upset.

Communism is the weak one in this competition, and Soviet behavior this summer is striking proof of it.

Mr. WILEY. Mr. President, in relation to this matter, it was my privilege last night, as I know it was the privilege of millions of Americans, to see the exchange of ideas between Mr. Macmillan and our President. It brought tears to my eyes. These are two great men and humble men—I call them great statesmen—who are seeking to find answers to the troubles of this troubled world. They were giving to the peoples of the world their ideas in relation to the panacea. It was indeed a heart-warming experience, at least for me.

Chemical Warfare

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the use of gas and germ weapons has received the attention of only a handful of the American people. A major Chemical Corps installation which stores nerve gas lies in my district. I believe the Members and the public will be interested in the report on gas and germ weapons which appeared in the Denver Post editorial section on August 30. I welcome public attention to the issue:

GAS-GERM WEAPONS POSE U.S. ISSUE

(By Robert M. Byers)

At Pugwash, Nova Scotia, last week, 25 scientists from the United States, the United Kingdom, and the U.S.S.R. discussed the horrible consequences of gas and germ warfare.

The occasion was the Pugwash Conference of International Scientists on Biological and Chemical Warfare, sponsored by Cyrus Eaton, Cleveland industrialist, and held at Eaton's Pugwash estate, Thinkers' Lodge.

Attitudes expressed by the scientists at this latest conference reflect how most Americans view gas and germ weapons. They are too horrible to contemplate. Only a beast would use them.

It is this attitude, however, which has some of our top military leaders worried.

We seem to have a national reluctance even to discuss or inform ourselves about chemical warfare (CW) and biological warfare (BW).

Some military leaders fear that because of this national blindspot this country is a prime target for an aggressor using gas and germs.

Our present national policy—and there is no indication it will be changed—was set by President Roosevelt in 1943 when he announced to the world we will never use gas or germ warfare unless it is first used against us. That seemed to put CW and BW into a closet, to be opened only in the event of an emergency.

But in the years since 1943, CW and BW research and development has been going on behind a veil of secrecy, not only in this country, but also in Russia.

It was a Russian scientist at the Pugwash meeting who said CW and BW agents could be as devastating as nuclear weapons.

Several key military leaders want to see the American public better informed about BW and CW warfare.

They believe support for continued research and development of these weapons to keep us abreast of the Russians, and more importantly support for research and development of defense against these weapons

can come only from an alert and informed public.

Recent hearings before the House Committee on Space and Astronautics brought out the far-reaching potentialities of BW–CW warfare. The committee has recommended that this country step up research and development in this area from $40 million a year to $125 million a year.

Actually, not all BW and CW agents are as lethal and devastating as is generally believed.

Statistics, published first in 1939, showed that from the standpoint of killing and maiming, gas as it was used in World War I was less devastating than conventional high explosive weapons.

There were 272,000 casualities among American forces in World War I. About a quarter of them were gas casualties. Two percent of the gas casualties died. Twenty-five percent of the nongas casualties died.

Seven percent of the gas casualties were permanently disabled. Conventional high explosives, however, permanently disabled 25 percent of those wounded by them.

America was the only participant in World War I not to use gas.

War gases come in as many different varieties as high explosive shells and each has a specific tactical and strategic purpose.

There are blister gases (mustard) which destroy internal and external tissues and against which personnel must wear special clothing as well as gas masks for protection.

There are choking gases (chlorine) which irritate and inflame the lungs, but against which gas masks are effective.

There are gases which when breathed in find their way via the lungs into the blood and poison it.

There are tear gases and vomiting gases which make it impossible for victims to perform their duties properly.

Blister, choking, and blood gases are considered casualty producing agents.

Gases were not used in World War II. But the Germans carried out research on new agents and before the war was over their scientists had come up with a new kind of agent—the nerve gases.

Nerve gases are deadly. There's no other way of looking at it.

They are based on a chemical modification of the phosphoric acid molecule and are called organo-phosphorus agents. This is the same chemical principle underlying modern insecticides.

Insecticide poisoning works the same way in the body as nerve gas poisoning. Nerve gases, of course, are more potent.

The modified phosphoric acid molecules, when introduced to the body through the lungs or through the pores of the skin, combine with and inactivate a body enzyme called cholinesterase.

This enzyme plays an important role in transmission of nerve impulses to muscles and when cholinesterase is interfered with nerve impulses cannot be transmitted into muscle action. Paralysis results.

A particularly sensitive nerve-muscle system is the one which controls breathing. Nerve gas victims die of suffocation. Their breathing mechanism is interrupted.

A major producer of this country's nerve gases has been the Rocky Mountain Arsenal northeast of Denver. Production there was terminated several years ago when it was felt sufficient supplies had been accumulated.

But nerve gas is not the last word. The newest series of war gases are not deadly. These are the "psycho gases," some of which can destroy the will to fight and others which induce bizarre behavior bordering on insanity. Both effects are temporary.

Maj. Gen. William M. Creasy, former chief Army chemical officer, told a House committee hearing recently there are psycho gases which could be sprayed by a hand aerosol bomb in the Capitol Building and cause half the Members of Congress to start dancing on the tops of their desks while the other half applauded.

These, then, are the potentialities we face in gas warfare. What about germs?

Using bacterial agents in war is considerably more difficult. Our development here is not as far advanced as it is with gas. But we know it is feasible to seed large areas with, say, anthrax germs causing widespread pulmonary disease.

Those not stricken would be needed to care for those who were. The Nation would be paralyzed. An enemy could take over without blowing up a single building, his own troops protected by immunization.

Germs need not kill. But by the time the attacked nation recovers, it would be too late.

Beyond germs that attack humans, there are other organisms which can destroy crops and animals and leave a nation without food.

What about defense? Most military leaders believe an effective defense for the general population against both BW and CW will come only when the public understands these agents and willingly undertakes to meet them.

The Army Chemical Corps has developed an efficient protective mask good against gases and germs and simple enough to be made and sold to the public for $2.50 or $3.

The mask has been turned over to the Office of Civil Defense Mobilization for possible manufacture and marketing. If large numbers of these masks were in the hands of the public, they would lessen the value an enemy might hope to obtain from a BW or CW attack.

Also, the Army has developed filters which detect CW agents in the air and set off a warning alarm.

BW detection filters are more crude. They only indicate the presence of unusual particles in the air without identifying them. This must be done by standard culturing techniques which take precious time. An effective method of detecting a biological attack quickly and accurately has a high development priority.

But do we really need BW and CW defensive and offensive capabilities? Would not an arsenal full of the latest and best nuclear weapons deter any would-be aggressor from attacking us?

General Trudeau, Army R. & D. chief, answers this way:

"We cannot ignore the tremendous potential of chemical and biological defense. Any weakness here is an invitation to an enemy to use these weapons, and against an unprepared nation they could be decisive."

It is my own observation, however, that America should be even more concerned with the development and operation of a foreign policy that will help assure that we will never be called upon to use the weapons which we have created. Surely the same human mind which has the genius to develop these deadly weapons can also come to understand that the best way to destroy an enemy is to make him your friend.

Because this has frequently been stated best by religious leaders we tend somehow to want to keep it out of politics. But truth is indivisible, and we must learn to apply the highest and best truth that we know to our political decisions, even as we would apply them to our personal and business decisions.

Progressive Enid, Okla.

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. MONRONEY. Mr. President, a magazine called Lykes Fleet Flashes, published in New Orleans, La., has paid tribute to Oklahoma in its August issue.

In its continuing series on the cities of the United States, the magazine features Enid, Okla., one of our fast growing cities. The article gives a lively account of Enid's progress and its economy, with accent on its grain storage facilities, its oil refining industry, its business generally, and the wide variety of agriculture in its immediate area and I ask unanimous consent to have it printed in the Appendix of the RECORD. I retain, however, the editorial privilege of failure to endorse every line. As as representative of the entire State, I must state that the view of the writer that the old Cherokee Strip is Oklahoma's most progressive section is not necessarily the view of this Senator, but I assure the Senate that it is one of the most. I am proud of the development of our northern strip, but I also can speak with enthusiasm for many parts of my great State, as the Senate well knows.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENID, OKLA.

Sixty years ago, a spot on the prairie—today, an ideal family city in the heart of a land that offers agriculture, industry, and oil—that's Enid, Okla. Since Oklahoma's statehood, Enid has enjoyed steady growth and development primarily due to these three factors. A young city with an eye on the future, an aggressive city reaching to gain more industries for the betterment of her people, and to develop the potentialities at her grasp.

Here in the center of the State's most prolific wheat farms, excellent storage facilities, operated by six different firms are available. In regard to national storage facilities, the city stands fourth with a total wheat storage capacity of 64,431,500 bushels. The Continental Grain Co. exports 40 percent of all grain; exportation made easy because of the intricate and elaborate railway system to U.S. gulf coast ports.

The strategic location of Enid and the fine railway system make the importation of grain from Nebraska and Colorado for storage purposes convenient.

Enid's largest industry is oil refining. Oil has been a great factor in the growth and development of Enid with major oilfields located on all four sides of the city. Other sizable payrolls are provided by the milling, steel, and butter, and drilling rig manufacturing industries.

Of the two manufacturers of the portable drilling rigs, the George E. Failing Co., of Enid, has been exporting materials since 1934. At the present time, 38 percent of these are exported to worldwide areas such as the Middle East, the Far East, the Philippine Islands, South America, and Europe.

The principal crop raised by farmers in the Enid area is wheat. Close behind is alfalfa, vetch, and other feed crops. Livestock rais-

ing also is important in the area with emphasis on beef cattle. However, many farmers raise dairy cattle, swine, sheep, and poultry. The turkey industry provides important income to many farmers. Additional farm income is provided by marketing whole milk, cream, and eggs.

Consistently, year after year, the city of Enid ranks third in retail sales in the State, being exceeded only by Tulsa and Oklahoma City, both of which have much greater population. The population of Enid increased to an estimated 44,800 in 1958. There are in Enid 475 retail establishments doing an annual business of over $52 million with an annual payroll of $5½ million.

The area served primarily by retail outlets and service industries in Enid covers more than 2,500 square miles and extends in a circle of approximately 75 miles in diameter from the center of the city. Enid's primary trade area covers all of Garfield County and most parts of Blaine, Logan, Kingfisher, Major, Alfalfa, Woods, and Grant Counties.

Enid has 100 wholesale establishments and 59 manufacturing firms with a combined annual business in excess of $108 million. The annual payroll for these wholesale establishments is more than $11 million.

The city owns and operates a fine, modern airport. Air taxi service, rental planes, and pilot instructions are available. Operating from the municipal airport is Central Airlines with six scheduled flights daily, providing passenger, airmail, airfreight, air express, and air parcel post, and connecting with most all other scheduled carriers.

Vance Air Force Base, located 3 miles south of Enid, is one of the vital installations of the Air Training Command. Present training is being given in T–33 jet engine planes. The base was opened originally in 1941. It was closed after World War II but was reactivated in 1948. Vance Air Force Base occupies an area 1 mile wide by one-half mile long. The military and civilian payrolls at the base put about $10 million annually into Enid trade channels. Local purchases by the base add another $800,000 to yearly trade in the city.

There is close coordination between the officers and men at the base and the Enid Chamber of Commerce and other civic groups. Men from the base participate in many downtown events during each year.

The city of Enid has one of the finest school systems in the Southwest. Educational facilities consist of 15 public elementary schools, 4 junior high schools, 2 public senior high schools, 2 parochial schools, 1 parochial high school, 1 school of nursing, a business college, and Phillips University. The pupil-teacher ratio in the city is 22 pupils to each teacher.

Phillips University, with a student body of over 1,000 is a fully accredited university, offering bachelor's and master's degrees in several liberal arts and professional fields. In addition to the normal educational services offered by Phillips University, it also contributes to the cultural facilities of Enid through its national famous fine arts and bible colleges.

Located in the city of Enid are 60 churches, representing 17 different denominations. A recent survey disclosed that 3 of every 4 families in Enid maintain church membership and 7 of every 10 residents of the city attend church regularly. Ministers of the city cooperate among themselves through an active ministerial alliance and many of the city's ministers take part in civic activities.

Enid and immediate area offers much in the way of recreations and outdoor sports. In the city there are three golf courses, a fine country club, 11 parks, 3 municipal tennis courts, 4 swimming pools, 7 softball diamonds, a skating rink, 2 bowling alleys, and 7 motion picture theatres. Enid is located in one of the major hunting areas of the Great Salt Plains. Lake Canton, Lake Carl Blackwell, and Roman Nose Park are within a short drive.

Enid, the county seat of Garfield County, lies in an area which was originally called the Cherokee Strip in the Indian Territory days. The famous Chisholm Trail, which served as a route for the driving of cattle from Texas to the railroad at Abilene, Kans., passed through this area. And from that opening has grown the finest section of the State—the old Cherokee Strip has become Oklahoma's most progressive section, abounding in agriculture and industry.

Tough Workout for Tall IQ's

EXTENSION OF REMARKS
OF
HON. DAVID M. HALL
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HALL. Mr. Speaker, there appears in the August 31, 1959, edition of Life magazine a very interesting article on a special program administered by Western Carolina College at Cullowhee, N.C., in my congressional district. Western Carolina College is one of the first colleges in the country to conduct a program for children with unusually high IQ's, and this article explains the benefits derived by both children and teachers from this program. This college is nestled in the mountains of western North Carolina within approximately 4 miles of my home, and I have watched it grow from a 2-year college for the training of teachers to a 4-year college of the arts. Western Carolina College is demonstrating that it is a progressive institution of higher learning with imagination, the desire to develop the utmost of intellect potential, and the determination to experiment and expand the educational processes. Under leave to extend my remarks in the RECORD, I include this article, "Tough Workout for Tall IQ's," in its entirety:

TOUGH WORKOUT FOR TALL IQ'S—GIFTED GRADERS DO HIGH SCHOOL WORK IN EXPERIMENTAL SCHOOL

Secure from the distraction of carefree but less bright contemporaries, a group of small geniuses at tiny Western Carolina College in Cullowhee, N.C., have been enjoying the toughest intellectual workout of their lives. Fifty-nine fifth- and sixth-graders, hand picked for the 6-week stint from schools all over the State, are up to their IQ's (average: 166, well over the genius level) in advanced English, math, and science taught at senior high school level. An additional 21 fourth-graders, who are merely brilliant, commute daily from surrounding communities to study French.

The experimental summer school, now in its second year, was devised by the college and Douglas Carter, head of the Winston-Salem School District's gifted child program, one of the finest in the country. It started when a foundation gave the college $10,000 for 20 schoolteachers to study gifted children in action. As things have turned out, the children are profiting at least as much from the study as the watching teachers.

At their regular schools, the bright children complained, they had to listen impatiently to the teacher explaining the same thing four or five times to those of lesser intellectual attainment. At Cullowhee learning is pitched at them as fast as they can handle it. Up at 7, the pupils clean their own rooms and spend three strenuous morning hours in class. Afternoons they engage in research in the library, or in sports, which they pursue as fiercely as their studies. Each evening they have more than a solid hour's study, without talking or leaving their rooms.

The class program is tight and disciplined, but in their library hours the youngsters can strike out on their own. One pupil studied Greek tragedy, another—fittingly enough—the influence of environment and heredity on IQ. Each child, to give focus to his reading, must deliver a lecture in his chosen field, ruthlessly graded by his classmates. The novelty of intellectual competition has delighted them. "These kids really stimulate one another," says Douglas Carter. "The vocabulary flows, the eyes sparkle." Last month, as the summer school ended, the youngsters took their newly acquired knowledge and enthusiasm home with them and unanimously petitioned their teachers for another session next year.

Golden Dollars—Poets and Poetry

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. BARTLETT. Mr. President, proof is readily available, and I shall supply it here, that Capitol Hill is inhabited not only by statesmen but also by poets, or, at least, versifiers.

Only recently the Members of the Alaska delegation in Congress, Representative RALPH J. RIVERS, Senator ERNEST GRUENING, and I sent to each Member of Congress "a golden dollar" supplied by the Fairbanks, Alaska, Chamber of Commerce and good for $1 in trade—in Fairbanks. These were "minted," or so our covering letter stated, in commemoration of Alaska's admission to the Union. Accompanying the letter sent to each Member of Congress was a rhymed presentation, a wonderful work of art, no less, from the mind and pen of Charlie Hughes, administrative assistant to Representative RIVERS. So that the whole wide world, or, at least, that part of it which turns to the CONGRESSIONAL RECORD for education and enjoyment, may have the benefit of reading Charlie Hughes' verses, I present them now:

Today we all holler for a good sound dollar,
A low-priced car and a no-wit collar;
But, despite the advance of this thing "automation,"
We can't even return nickel beers to the Nation.

But up in the city of Fairbanks, Alaska
(A wonderful place, if people should ask ya),
The chamber of commerce has done some-about
A fair return for what you put out.

In honor of Alaska's becoming a State,
And joining you all in the "south 48,"
They've minted a dollar that's worth a whole buck
In all sorts of merchandise, including "muktuk."

They've sent us a "golden dollar" for you,
In honor of statehood—a dream come true;
It comes to you with the chamber's good cheer;
But spend it in Fairbanks—it's no good here.

Mr. President, another "CHARLIE" has retaliated in rhyme. He is none other than my friend CHARLIE BOYLE, that is to say the Honorable CHARLES A. BOYLE, Member of the House of Representatives for the 12th District of Illinois. CHARLIE BOYLE responded to the gift of the "golden dollar" in these words:

Your "golden dollar" has been received
What will be done with it can't be perceived
Spending in Fairbanks will have to wait
For it looks like we're stuck in the "south 48."

With adjournment appearing not coming forth
We won't get a chance to journey north
But thanks anyway for your little token
Perhaps we can use it for the highway program.

Mr. President, the situation is getting out of hand. Poetry begets poetry. Before we are done with this we shall doubtless have a sufficient supply of the muse on hand for the publication of a book, or books. Even as I set about to leave my office to go to the floor to make sure that these enduring words were preserved in print for posterity, another stanza reached me, responsive to the "golden dollar" theme. This is from Congressman HOWARD W. ROBINSON of the 37th District of New York:

Thanks for the dollar—it's welcome you bet;
But my only problem is how to get,
From here to Alaska—so please send the fare,
And I'll spring for the beers, when I get there!

Our Tribute to Walter Lee

SPEECH
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. AUCHINCLOSS. Mr. Speaker, under permission granted to Members to extend their remarks about Walter Lee, I am most pleased to have this opportunity to record my appreciation of his services during the 21 years that he occupied the responsible position of executive secretary of the Committee on the Judiciary. Mr. Lee became associated with the Congress only a few years before I was elected but immediately it was evident by his interest in the problems of my office that he was dedicated to his job. He fulfilled his responsibilities to the very highest degree and it is no wonder that he made so many friends among the Members of Congress. Always courteous, always efficient, and always available to discuss any problem that came within his jurisdiction with any Member of the House, I join my office staff in expressing our appreciation and thanks to him for his never-ending courtesy.

It must be a great satisfaction to him at this time of his retirement from public office to leave knowing that he has done his job well and has merited the praise and thanks of the Members of the House. I hope that the days to come may be filled with many rich blessings and I know that he will look back with contentment and satisfaction over the years which he spent in the service of his Government.

Asserting U.S. Claims in Antarctica: Resolution of District of Columbia Society of Sons of American Revolution

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILEY. Mr. President, the growing interest in Antarctica—particularly as a result of the fine work carried on during the International Geophysical Year—has again emphasized the need to assure that the U.S. interests are protected.

As we know, the continent itself is yet, to a large degree, unexplored, and, in fact, is now the target for a wide variety of explorative efforts by many countries.

As a matter of fact, I am delighted that the University of Wisconsin, one of the finest educational institutions in the country, is sharing substantially in the overall U.S. program to learn more of the "great white continent."

In these days—during which scientific and technological efforts are unveiling new mysteries of the workings of nature—the scientific work being carried on in Antarctica becomes increasingly significant. With the advent of satellites designed for a variety of purposes, strategic contact points at the bottom of the world, too, become increasingly important; not only in terms of scientific advancement, but also for purposes of defense.

Consequently, I have stressed again and again the need for clarifying the U.S. policy for Antarctica, as well as constructive efforts to assure that our interests in this South Pole region are protected.

Recently I was pleased to receive from Mr. Jesse Byron Manbeck, president of the District of Columbia Society of the Sons of the American Revolution, a resolution adopted by that organization of descendants of American patriots. The resolution emphasizes the need for assuring the protection of U.S. rights in Antarctica.

I ask unanimous consent to have the text of the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the National Society of the Sons of the American Revolution has on several previous occasions urged the Government of the United States of America to assert claims to the lands discovered and explored by U.S. citizens and by official U.S. Government expeditions in the antarctic; and

Whereas the U.S. Government has to date made no official claims; and

Whereas the President of the United States under date of May 3, 1958, proposed to 12 nations that had taken part in collection of scientific data in the International Geophysical Year that for the sake of harmony and peaceful continuance of such scientific work in the antarctic a treaty be concluded among these nations to the effect that, among other things during the treaty no new claims to territory in the antarctic be made; that the status quo be maintained in Antarctica; and that this treaty be signed by all 12 nations and deposited in the United Nations:

Now, therefore, we the District of Columbia Society of the Sons of the American Revolution, do urge the Congress of the United States of America and the Department of State to study thoroughly the effects of the proposals in this proposed treaty to see if they do not deter future explorations by U.S. citizens and official U.S. Government expeditions in the antarctic since they bar any new claims being made; and that the Congress and the Department of State study most carefully the proposal which in effect will place political matters in Antarctica under the United Nations, as this disposition of our rights in Antarctica may lead to the loss of rights since we have as yet made no claims to territory there.

We call to the attention of the Congress of the United States the resolutions of Hon. THOR C. TOLLEFSON, Representative to Congress from the State of Washington, calling for the assertion of our claims in Antarctica, and particularly we call attention to the proposed treaty of May 3, 1958, which prohibits assertions of claims while the treaty is in effect.

Dr. William M. Coppridge

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks I include an editorial in the Durham Morning Herald on the occasion of the death of Dr. William M. Coppridge of Durham, N.C., which occurred on Friday, August 28, in Boston.

I knew Bill Coppridge for many years, since he was a medical student at the University of North Carolina and at a time when I was engaged in the practice of pharmacy in Chapel Hill, the location of the university. Through the years our friendship deepened both professionally and personally. The editorial expresses better than I can the wonderful influence of this man's life and his dedication to excellence in all phases of life and action. He was the good physician of tradition and story and his kind are all too infrequently encountered today. There was a dedicated spirit in his practice of medicine which set him apart from the rank and file of physicians. That he who healed so many others could not heal himself is one of the tragedies of our times. A life such as

Bill Coppridge lived should be an inspiration to all of us.

The editorial follows:

[From the Durham (N.C.) Morning Herald, Sept. 1, 1959]

DEATH CLAIMS AN OUTSTANDING PHYSICIAN

Dr. William M. Coppridge, whose death took place Friday in Boston, was one of that company of exceptionally able medical men who have done so much to make Durham one of the Nation's great medical centers.

At the funeral services for Dr. Coppridge Monday, the Reverend Kelsey Regen said of him:

"Were I asked to set in a single phrase the dominant and lasting impact of Dr. Coppridge's life upon my own—over and beyond his personal friendship and his churchmanship—I would say it was his devotion to and zeal for excellence in all things. First—excellence of character. Second—excellence of mind. Next excellence of workmanship. He pursued excellence with a passion. He demanded it in and of himself. He cherished it for his family, his home, his church, his community, the hospital, the university, his profession, and his colleagues in their respective professional organizations. Excellence in all things might be said to have been the guide, mentor, and judgment of his life and labors.

"And yet this pursuit of excellence did not make him, as it does some men, hard or cold or rigid. In him it was mixed and matched by the capacity for warm and enriching friendship, a gracious kindness, an innate compassion and patience, and a virile and practical faith in and commitment to his Lord. Many honors came to him as the fruit of his own excellence; yet he wore them all with genuine humility. And his whole life was seasoned with a delightful and subtle humor."

All those who knew Dr. Coppridge can agree with this estimate.

For almost 40 years Dr. Coppridge had practiced here. His professional standing, earned by successful practice and by notable contributions to the progress of his field of specialization, attained its highest recognition last spring in his election to the presidency of the American Urological Association.

Durham people are always gratified when one of their number receives such high honor. In the case of Dr. Coppridge's election to head the urological body, the unanimous opinion was that it was richly deserved. But it will not be such honors which will keep his memory fresh; a host will remember him for the skill which brought to them healing and relief from pain. To them he will be more than a able surgeon, an outstanding member of the Watts Hospital staff, a respected president of the American Urological Association; to them he will ever be a trusted friend, a beloved physician whose skill and understanding meant the difference between illness and health, between death and life.

The Weyerhaeuser Timber Co.—10 Years at Springfield, Oreg.

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. NEUBERGER. Mr. President, 10 years ago the Weyerhaeuser Co. came to Springfield, Oreg., and constructed a large integrated pulp and lumber plant. For many years it had owned substantial land holdings in this part of Oregon which had not been operated. At the close of World War II, the Eugene-Springfield area had expanded to become one of the major forest product centers of the Nation, and today, if I am not mistaken, more timber is produced in Lane County than in any other county in our country. The Weyerhaeuser Co. has announced that its policy on the lands that supply this mill, which incidentally are located primarily in Linn and Douglas Counties, are managed to provide a continuous growth of forest trees.

With the huge investment in plant and facilities required for a modern large forest products operation, continuous production in perpetuity cannot be obtained unless such a policy is actually in practice. The welfare of our State and, in fact, our Nation depends upon the universal adoption of true conservation programs.

I am pleased to note the 10th anniversary of this Weyerhaeuser plant at Springfield. It is my hope that the conservation practices followed will permit anniversaries in perpetuity and that the initial dedication to a sustained yield policy, which this company announced when it started operations, will continue to be the guiding principle of its management.

Mr. President, I ask unanimous consent that a brief article from the Weyerhaeuser magazine of August 1959 be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A HAPPY 10TH BIRTHDAY

The echo of the carpenters' hammers had barely stopped when the first sheets of paperboard rolled through the presses at Weyerhaeuser's spanking new millsite in Springfield, Oreg. That was 10 years ago this month. Just a few weeks earlier the first load of lumber was shipped from the new sawmill.

Today our Springfield plant is a bigger, busier place, quietly celebrating a decade of growth and progress. When the sawmill at Springfield went into operation in 1949, it was Weyerhaeuser's first new lumber producing unit since 1930. The modern forest products factory was hailed as the most up-to-date forest products plant in Oregon's history. The integrated sawmill and pulp mill operations had been tailored to fit the timber of that region.

Integration was, and still is, the key to operations at Springfield. The sawmill, power plant, and pulp mill were linked by a conveyer system to obtain the greatest recovery of every bit of wood, sawdust, bark, and shavings.

A visitor to the Springfield plant then and now would notice few visible changes around the plantsite. But 10 years of progress have forced the "tailors" to make a great many alterations inside the plant. Ten years ago Springfield produced lumber and pulp. Today, almost every scrap of timber that enters the 460-acre plantsite becomes lumber, plywood, Pres-to-logs, Ply-Veneer, paperboard, or power.

In the words of Harry Cullens, "They use everything but the noise." Harry is a clean-up man in the planer mill. He is also 1 of the almost 300 employees who have watched the Springfield plant grow from the ground up. "When I started," Harry said, "all they had on the grounds was the field office. It was really interesting to watch the plant go up. I'd never seen anything like this before. The immensity of the operation impressed me. In looking back now, it's a marvel to me how everyone worked together to produce all these products."

Land Supervisor Les Calder gets the credit for being the first man on the scene. Les came to the Eugene-Springfield area as a Weyerhaeuser land agent in 1940 and has watched both plant and community grow. "Our people have worked hard in both Eugene and Springfield. We've built a fine relationship between plant and community. It's one of our best achievements in the past 10 years," Les said. "You have to expect progress, but the thing that was most startling to me was the rapidity with which it came. Ten years ago we had no idea we would be producing some of the items we make today."

Tucked away in the bottom drawer of a battered filing cabinet in the millwright office is a unique record of many of the men who helped the plant grow. The information is all there in Millwright Foreman Bill Grout's time books. Bill has the name of almost every man who helped build and maintain the plant since March 1948. Bill came to Springfield after 20 years at Weyerhaeuser's Everett plant. "We've seen lots of gradual improvements," he said: "They come along with anything. You never stand still."

"I've learned a lot in the past 10 years," said Millwright Jim Sneddon. "I believe that anybody who was here during construction, then left, and came back now wouldn't know the place. I hope to be around for the next 10 years. There will probably be as many changes as there have been in the past. This was a busy, hectic place during construction. Things have settled down to a more routine pace now. But the people are nice. I like the area. I think I'll stay."

Gang Sawyer Leon Mingo was on hand when the first log entered Weyerhaeuser's new sawmill at Klamath Falls, Oreg., in 1929. In 1949 he ran the first timber through the gangsaws as Springfield. "I don't know how much lumber I've sawed," he said. "I'll bet if it were laid end to end, it would go around the world several times. I've seen lots of improvements in the mill, too. It's been a good 10 years here. I like the valley, the rich soil, the climate, and the people."

Accounting Clark Dortha Benton came to Springfield on sort of a vacation. "We liked it so much we decided to stay," she said. Dortha started in the accounting office in January 1949. "The company has made considerable progress in many things," she said. "We've gone through a lot of growing pains, too. Some times have been trying. But it has been a thrill to know the people here, and to watch the plant grow. We'll probably be surprised at what will come up in the next 10 years. Things will be better, though. We know the company will be here a good many more years. It's a good secure feeling."

Henry Hull, a pipefitter for the Springfield pulp mill, started the same month the pulp mill began operations. "The plant has gotten bigger," he said. "We've had our ups and downs. But it's as good a place to work as a person could find."

"We have gone through two major expansions," said pulpmill Carpenter Clarence Jeffers. "And I don't doubt that we'll see a lot more changes. There are good opportunities here if a man wants to take them. We've had some awful good people here, and probably will have 10 years from now."

Warren Stillwell has been with the millwright crew since the pulpmill started. "I've enjoyed the whole 10 years," he said. "Working on and in a new mill, watching

it grow from the ground up, makes it lots more interesting. I've seen a lot of improvements and expansion. What's more, I really like it here. You couldn't ask for better country. We've got a nice mill and good men. What more could you ask?"

It has been a decade of continuous progress and improvement at Springfield. When the mill opened, it was devoted to lumber manufacture and pulp production exclusively. In 1950 a Presto-Log plant was added. A plywood plant went into operation in 1952. In 1953 two new products, ply-veneer and edge-glued lumber, went into production. In 1956 an end-gluing operation started producing high quality panels from short length boards. The pulpmill has more than doubled its capacity and has improved the quality of paperboard produced. It is an endless program, aimed at achieving complete utilization of the raw material from the 270,000-acre Calapooya Tree Farm.

"We're using more of the log," said Springfield Lumber Manager R. A. Kronenberg. "A more intensive utilization of what our lands produce has meant more jobs at Springfield. This plant was expected to employ about 650 people in the lumber division. Increased utilization has created jobs for about 1,400 in lumber division operations at Springfield. There will probably be changes in the next 10 years, just as there were during the first decade of operation. We will undoubtedly be using still more of the log. Our goal is complete utilization."

Pulpmill Manager J. O. Julson said, "It has been a decade of gradual improvement for the pulpmill. We have had two plant expansions that have more than doubled our productive capacity and have improved the quality of our pulp. Our employees have all taken part in helping to make this a better community."

The cities of Springfield and Eugene have grown in the past 10 years. Both communities are busy industrial centers. All in all, it has been a big, busy decade for the employees at our Springfield plantsite. But no one is spending too much time looking backward. They are too busy keeping in step with progress.

The Misunderstood Bloodhound

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. DURHAM. Mr. Speaker, there are a few of my colleagues here who know of my interest in and love of dogs, particularly of the hunting variety. My esteemed chairman, the gentleman from Georgia [Mr. VINSON] and the esteemed gentleman from Alabama [Mr. BOYKIN] have had some of the dogs which I formerly raised of the Red Bones strain.

While I have never had any experience in raising a certain type of hunting dog, and while I am glad to say I have never been pursued by one of this particular kind of dog, I was interested in reading an editorial in the Greensboro (N.C.) Daily News, published in my district, on "The Misunderstood Bloodhound." Since I always believe in clearing a good name, especially in the world of dogdom, I think other dog lovers in this House will appreciate the editorial describing the true nature of this misunderstood animal, and I would further draw the analogy of pointing out that all of us here, who try to keep our noses to the ground in legislative fashion, should take care that in the pursuit of our obligations and assignments and commitments here, we do not miss, as did Mr. Thurber's bloodhound, all of the beauty of the outside world.

The editorial follows:

[From the Greensboro (N.C.) Daily News, Aug. 31, 1959]

THE MISUNDERSTOOD BLOODHOUND

Contrary to popular impression, the bloodhound is the friendliest of dogs. He is docile and likes people.

We have this on the authority of the American Bloodhound Association. Out to do right by its client, the association in its publicity releases heaps blame on Harriet Beecher Stowe for the bloodhound's unsavory reputation.

Mrs. Stowe, "the little lady," as Lincoln said, "who started the war," not only gave a distorted picture of slavery in the Southern States, as all southerners know; she also slandered the bloodhound.

Recall the chilling scene of Eliza crossing the ice in the dramatic version in Mrs. Stowe's classic, "Uncle Tom's Cabin": Ice floes bobbed, a heavy snow fell, thunder and lightning resounded and flashed backstage. But these were nothing compared with the baying of Simon Legree's bloodhounds in the background.

Even today TV and movie shows reach the ultimate when the sheriff says, "Call out the bloodhounds." Harriet Beecher Stowe set a pattern of viciousness which has hounded bloodhounds way into the middle of the 20th century.

"If the bloodhounds had caught Eliza, fleeing across the ice," says the American Bloodhounds Association, "they merely would have licked her face." Mistakenly identified for years as a beast that "trails his quarry and ruthlessly attacks," the bloodhound is in fact "one of the friendliest of dogs."

Instead of chewing his quarry to pieces, the bloodhound identifies the object of his search by placing his paws on the individual's shoulders and licking his face.

Of course, we too might have fallen for the stage, screen, and video version of the bloodhound had we not read some years ago James Thurber's story of "The Patient Bloodhound" in his "Fables for Our Times."

In it he told of a bloodhound which lived in Wapokoneta Falls, Ohio, and was put on the trail of a man suspected of a certain crime. The bloodhound followed the man to Akron, Cleveland, Buffalo, Syracuse, Rochester, Albany, and New York. The dog missed the Westminster dog show going on at the time because the man got on the first ship for Europe.

Naturally, the faithful bloodhound followed and when the two got off at Cherbourg the dog trailed him to Paris, Beauvais, Calais, Dover, London, Chester, Llandudno, Bettws-y-Coed, and Edinburgh, where he wasn't able to take in the international sheep trials. From Edinburgh the trail led to Liverpool, but since the man immediately got on a ship for New York, the dog didn't have a chance to explore the wonderful Liverpool smells.

Back in America the bloodhound traced the man to Teaneck, Tenafly, Nyack, and Peapack—where the dog didn't have time to run with the Peapack beagles. From thence the manhunt led to Cincinnati, St. Louis, Kansas City, St. Louis, Cincinnati, Columbus, Akron, and finally back to Wapokoneta Falls. There the man was acquitted of the crime he had been followed for.

What was the animal's reward for all this fidelity to the main purpose? He developed fallen paw-pads and was so worn out that he could never again trail anything faster than a turtle. Furthermore, as Mr. Thurber pointed out, since the dog had gone through the world with his eyes and nose to the ground, he had missed all its beauty and excitement.

In other words, not only has the bloodhound been misunderstood, but in keeping his nose, if not to the grindstone, then certainly to the trail, he has become a drudge in the process. The bloodhound's lot, like the policeman's is not a happy one.

Activities of the New York State Society

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. KEATING. Mr. President, the New York State Society of Washington recently completed its golden jubilee year. The society, which seeks to retain the strong ties of its members with the Empire State, has held a number of functions and participated in a number of events during the year.

I ask unanimous consent to have printed in the Appendix of the RECORD, a compilation of the year's activities of the New York State Society.

There being no objection, the compilation was ordered to be printed in the RECORD, as follows:

REPORT OF THE NEW YORK STATE SOCIETY'S ACTIVITIES FOR 1958–59

Your society has just completed its golden jubilee year. There has been substantial progress both in the number and type of functions held, and in membership, which increased by 30 percent.

We started off the year with a picnic at the home of Mr. and Mrs. Pascal D. Fallon. Four formal parties were held at the Shoreham Hotel and four at the Roosevelt Hotel.

Your society participated in the Cherry Blossom Festival. We were honored by the presence of three foreign Ambassadors, two U.S. Senators, and many distinguished guests at the coronation dance on March 6, when Miss Diana Anfuso, daughter of Congressman ANFUSO, was crowned by Senate Majority Leader LYNDON JOHNSON, of Texas. During Cherry Blossom Week, on April 8, we were again honored by a foreign Ambassador, when the Ambassador of Spain held a reception for our members, our congressional delegation and our princess. At the Cherry Blossom Festival Parade we were awarded first prize. The trophy was presented by Mr. Clarence Arata, executive director, Washington Convention and Visitors Bureau, at our member party in April. Several of the maids of honor from Marjorie Webster Junior College rode on the float along with the princess. The float was sponsored by F. & M. Schaffer Brewing Co., of Brooklyn. The trophy will be sent to them for their trophy room after we have displayed it in several local establishments in Washington.

We were supported in our efforts by donations from New York corporations, including Remington Rand, Hickok Co., Yale &

Towne, Taylor Wine Co., and American Safety Razor Corp. In addition we received several donations from local stores; Woodward & Lothrop, Barricini, Hot Shoppes, Gude and Bromwell & Co., also one of our members.

Congratulatory letters were received from both Governor Harriman and Governor Rockefeller.

Through public appearances, newspaper stories and television and radio shows the activities of your society were kept before the public throughout the year. Your president appeared on WRC–TV, as well as on local radio stations. Your society was represented by its president at the Empire State Chamber of Commerce dinner, which was attended by Members of Congress, distinguished New York citizens, and delegates from many local chambers in the State of New York.

Our golden jubilee year not only marked the successful completion of the first 50 years of your society's existence, but provided a cantage-point from which we were able to evaluate past accomplishmets and plan worthwhile activities in the years that lie ahead.

Respectfully submitted.

DOROTHEA J. MACKAY,
ETHEL MAY NODEN,
Historians, New York State Society.

Walter Lee

SPEECH
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. McCORMACK. Mr. Speaker, many of my colleagues and I were saddened to hear of Walter Lee's decision to retire at the end of this session of Congress. For more than 21 years, he has served faithfully and efficiently as legislative assistant to the House Subcommittee on Claims. We were further distressed to learn of his brain hemorrhage and cerebral upset last week which confined him to a hospital for emergency treatment. We note that improvement has been made and that he is now resting quietly at home with his loved ones.

Walter Lee will be sorely missed by many of us in the halls of Congress. Fifty-one Members are still in the House of Representatives who were here when Walter first came to serve more than two decades ago. All of us who have had anything to do with this House subcommittee will remember him for his cheerfulness and cooperation in preparing and handling the difficult and complex claims bills presented to Congress. In his work, Walter Lee was one of those quiet, capable, conscientious souls who are never fully appreciated until they have left. Only then is the full measure of their contribution, of their helpfulness, of their devotion, realized. We wonder, certainly in the case of Walter Lee, how we are going to get along without him.

At this time let us, first of all, pray that our colleague will soon regain his health. Then may we all wish him and his wife many happy, rich, and full years of retirement that they so richly deserve.

Observant Citizen

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. COTTON. Mr. President, the animated public discussion over the visit of Russian Premier Khrushchev has almost driven news of the steel strike off the front pages and out of the minds of many Americans. A timely reminder of the importance of the steel strike and its impact on inflation and rising prices has come to readers of the Manchester (N.H.) Union-Leader, from Mr. Maurice J. Grant, of Manchester. I ask unanimous consent to have Mr. Grants letter to the editor printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Manchester (N.H.) Union-Leader, Aug. 28, 1959]

LETTERS TO THE EDITOR

OBSERVANT CITIZEN

Enemy No. 1

Addressed to William Loeb: While many of our citizens are eyeing with distaste the approaching visit of the Russian Premier Khrushchev, they are giving apparently scant consideration to the present steel strike. Certainly we must be concerned with the enemy from without our Nation; but we should be equally worried about the enemy from within.

I refer, of course, to the disastrous effect of inflation upon our economy.

The statements of disfavor regarding the Soviet official's visit here are, at least subconsciously hinged upon a fear of war. But how many of our citizens realize that the constant attack of inflation upon our economy could make us the losers in a war with Russia even before the shooting started? All too few of our average citizens, among whom I include myself, are taking the time to be concerned with the ever mounting cost of operating our Government and our private businesses, an increasing cost which does not give us a compensating increase in the value of our money.

As an example the cost of a jet fighter plane today, according to published reports, is almost five times the cost of a similar plane purchased by our Government at the end of World War II.

Now comes the statement from steel management that a wage increase is inevitable. Just as inevitable is an increase in the price of this basic commodity which will just as inevitably produce price increases throughout our economic structure. Does not this wave a red—not a Soviet Red—flag warning us that the maggots of inflation are tearing away at the internal value of our dollar?

When are we going to learn that a price increase—and this is exactly what a wage increase means—in steel is going to reflect itself throughout our entire business world? When are we going to learn that the worker who is forcing this price increase upon all of us Americans is not going to be a real gainer but actually will be the loser in the long run because everything he sets out to buy with his heavier pay envelope will be at a price that will far outstrip any wage increase he can hope to gain from steel management?

None of us who have been in business long want any more Federal interference in our business; in fact, we can do with substantially less than we have today.

But it seems to be that if our Government can dictate how few cows should be milked and how short a crop should be planted under the guise of helping the farmer, then the same Government could find some way of helping the wage earners through a simple explanation of the dangers of inflation and the dread effect of an everlasting, never-ending spiral of price increases. Somewhere at some time those who are in a starting position in the wage-price raise for the top must come to grips with the fact that they are committing suicide by consantly pressuring for more and more. They must understand that eventually they will get less and less.

These people, whether they be with union leaders or the workers themselves, who demand the wage increase or the millowners who grant that demand, must understand that by feeding the flames of inflation they are becoming internal enemies of our economic system, and they must be stopped.

Our President has asked us to hold the line. He should receive all of our support regardless of political affiliation.

MAURICE J. GRANT.

MANCHESTER.

Juvenile Gangsterism

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HALEY. Mr. Speaker, for the past few years we have been talking about juvenile delinquency. While numerous groups have been diligently seeking some sound solution, for the most part, we have simply been talking without taking enough positive action to curb juvenile crime. We have been shocked by recent news reports of juvenile crimes, and it is readily apparent that we must begin to take more affirmative action in this matter.

In this connection, I want to bring to the attention of my colleagues an editorial from the Lakeland Ledger, of August 31, 1959, entitled "Juvenile Gangsterism." Mr. Harris G. Sims, the distinguished editor of this fine newspaper, has been a devoted leader in this field. His opinions are certainly worthy of every consideration. In this editorial, Mr. Sims raises a point that I feel should be emphasized, that being, we must put stronger emphasis upon law enforcement. The editorial follows:

JUVENILE GANGSTERISM

The spotlight is upon New York City at the moment because two more teenagers were killed in a gang fight there during the weekend. Those two fatalities raised to eight the total of teenagers killed in New York gang warfare this year.

It is not surprising that the violence there has taken on the pattern of adult gangsterism. Juvenile toughs are being "imported" from other sections of the city to do the killing.

New York police and other adults there who are concentrating their attention on

the problem frankly admit they are baffled. As soon as they get juvenile gangsterism in one area quieted down, violence among teenagers breaks out in another area.

It is a sickness that has the juveniles acting in such a manner, a sickness brought on by a combination of circumstances. They are restless, unstable, insecure youngsters caught in a web as baffling to them as it is to the law-abiding members of society.

Much of it is traceable to lack of proper guidance at home. Many of the youths perpetrating the violence live in homes of squalor, poverty, and strife. Most have time on their hands and have not been taught how to use it constructively.

They have become animals on the prowl, attacking adults as well as other teenagers. They are making a blind effort to prove themselves. Many go along with the gang pattern because in the gang they find security.

Unfortunately, the sickness is not confined to New York City teenagers. In other large cities, juvenile gangsterism is a problem of alarming proportions. Some of the most vicious of the juvenile gangs are in Washington. Night after night for many months, they have been roaming the streets and attacking people within sight of the Capitol itself.

It is not a sickness that can be cured by strict law enforcement. Law enforcement as applied to the present situation is much more punitive than preventive.

Until a long-range preventive program can be made to work much more extensively, however, there is no choice but to put strong emphasis upon law enforcement. The gangs will continue to operate but not with such ruthless abandon when they know they will be dealt with roughly by the police.

The whole problem presents a phase of American life our diplomats, missionaries, and others cannot easily explain away as they tell the people of other lands about American culture.

Address of Dr. Robert L. Sumwalt, President of University of South Carolina

---

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. THURMOND. Mr. President, the able and knowledgeable president of the University of South Carolina, Dr. Robert L. Sumwalt, on Friday, August 28, 1959, addressed the Wade Hampton Camp of the Sons of Confederate Veterans in Columbia, S.C. Dr. Sumwalt's subject was the University of South Carolina and the Confederacy, and his remarks illustrate clearly that the University of South Carolina has probably an unequaled record in its contributions to the cause of southern independence during the conflict of 1861 to 1865. I ask unanimous consent that Dr. Sumwalt's remarks, as printed in the State on August 30, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the State, Columbia, S.C., Aug. 30, 1959]

SUMWALT SPEAKS ON CAROLINA AND THE CONFEDERACY

(The following address, on "Our University and the Confederacy," was delivered Friday by Dr. Robert L. Sumwalt, president of the University of South Carolina, before Wade Hampton Camp of the Sons of Confederate Veterans.)

Commander Wright, members of Wade Hampton Camp, Sons of Confederate Veterans, and guests, the opportunity to address this group is an occasion for both pride and humility. Of course I am proud that you have invited me to talk about our beloved university and its part in the tragedy of 1861 to 1865. At the same time I am humble because even if I were an authority on the Confederacy—and no words of mine could enhance the record of patriotism, honor, and valor established by the illustrious South Carolinians of whom I shall speak.

We are on the eve of a centennial celebration which will give appropriate recognition to the awesome events of the Nation's great tragedy.

I shall use the term "university," although the institution was known on various occasions as the South Carolina College and the South Carolina College of Agriculture and Mechanics.

PREWAR LEADERS

In the crucial years leading up to the actual war, many distinguished alumni were leaders in the events which shaped the course of history. Among them were Wade Hampton, George McDuffie, William C. Preston, James H. Hammond, Francis W. Pickens, Milledge L. Bonham, Maxcy Gregg, and James H. Rion.

One of the most prominent opponents of the secession movement was James L. Petrigru, valedictorian of the class of 1809.

One of these leaders, Francis W. Pickens, was Governor of South Carolina when Fort Sumter was fired upon and another, Milledge L. Bonham, succeeded Pickens as wartime governor early in 1863. Meanwhile, Bonham had served as a brigadier general on the battlefields of Virginia.

UNSELFISH DEVOTION

The unselfish determination of South Carolina's soldiers is typified by James H. Rion, fiery Winnsboro attorney. Rion, a member of the class of 1850, was colonel of his regiment until he lost an officers' election, whereupon he enlisted as a private and served just as enthusiastically. Later he received an appointment as colonel and served gallantly in this capacity until Appomattox.

Maxcy Gregg, a grandson of the first president of the university, was an ardent secessionist. On one occasion he was chairman of a meeting on the campus at which a number of politicians had been invited to speak on seccession. When the audience assembled but the speakers failed to appear, Maxcy Gregg apologized to the crowd, then embarked on a 3-hour speech which was enthusiastically received.

FIRST REGIMENT

Maxcy Gregg, a member of the class of 1835, had other distinctions. He was one of the most colorful figures the university has produced. He worked for secession, his State was the first to secede, and he is credited with having organized and commanded the first troops raised to defend South Carolina—the First South Carolina Volunteer Infantry Regiment. Of all the initial forces in all the seceding States, his was the first regiment to join the Virginians, and Gregg was also the only native Columbian to attain general rank in the Confederate Army.

On December 13, 1862, General Gregg was mortally wounded while leading his brigade on the Fredericksburg battlefield. As he lay dying, he dictated this telegram addressed to Governor Pickens to his adjutant, Col. A. C. Haskell of the class of 1860:

LAST WISH

"I am severely wounded, but the troops under my command have acted as they always have done, and I hope we have gained a glorious victory. If I am to die now, I give my life cheerfully for the independence of South Carolina, and I trust you will live to see our cause triumph completely."

Apprised of Gregg's death, Gen. Robert E. Lee said, "From my first acquaintance * * * I have admired his patriotism and his unselfish devotion. He was always at the post of danger, and his services in this army have been of inestimable value. The death of such a man is a costly sacrifice, for it is to men of his high integrity and commanding intellect that the country must look to give character to her councils, that she may be respected and honored by all nations. Among those of his State who will proudly read the history of his deeds, may many be found to imitate his noble example."

GREATEST GENERAL

Wade Hampton, of the class of 1836, was South Carolina's greatest general of the Confederacy and its first citizen in the postwar years. My friend, the late Dr. J. Rion McKissick, former president of the university, often stated that Wade Hampton was "the George Washington of South Carolina."

At the beginning of the war, Wade Hampton was recognized as the wealthiest planter in all of the South, and he used this wealth to equip Hampton's Legion which he led brilliantly on many battlefields in Virginia. A man with no previous military training, he became a lieutenant general, and with the death of Jeb Stuart succeeded him as chief of cavalry of Lee's Army of Northern Virginia.

TWENTY GENERALS

Many other former students at the university became distinguished officers, and the institution furnished the Confederacy with no fewer than 20 generals of whom one was a lieutenant general, 3 were major generals, and 16 were brigadiers.

Maj. Gen. M. C. Butler of Edgefield, who left the university in 1855 while a junior as a result of the "Guard House Riot," reached two-star rank before his 30th birthday.

Martin Witherspoon Gary of Cokesbury, left the campus in 1852 because of his part in the "Great Biscuit Rebellion," but he completed his education at Harvard and subsequently became a major general.

The third was John A. Wharton of the class of 1850. Much of his service was performed west of the Mississippi.

SERVED WITH LEE

Most of the 16 brigadiers were infantry or artillery officers serving with General Lee in Virginia, having entered the army as company grade officers early in the war, then advancing from rank to rank until attaining bridgade commands in 1864 or 1865.

A. C. and J. C. Haskell and Dixon Barnes were among the many able Confederate colonels representing the university.

Dr. Daniel W. Hollis, the talented historian of the university, writes: "There were scores of majors, captains, and lieutenants and, serving with perhaps less distinction but with no less devotion were the privates and noncommissioned officers. * * * All these brave men, whether corporals or brigadier generals, served to the utmost of their ability, and there is no reason for disagreement with the statement of Iredell Jones, lieutenant in the cadet company and later

captain in the Confederate Army, that all Carolina men who were physically able to bear arms did service in the Army of the Confederacy."

ONE HUNDRED AND SIXTY DIED

How unfortunate it is that there is no complete record of the alumni who served the Confederate Army. It is estimated, however, that approximately 160 of these brave men gave their lives for the Confederacy as a direct result of the conflict.

Although the university had been established for 60 years and had been in operation for 56 when war came, only two alumni served in the Union Army. This may be unparalleled by any other institution of comparable age in the Secession States.

TWO UNION SOLDIERS

The two Union soldiers were sons of Prof. Francis Lieber, for whom our Lieber College is named. An able scholar and educator, Professor Lieber opposed slavery and secession so vigorously, and dispensed his views so openly and freely, that he left the campus under pressure in 1856. He relocated in New York, along with two sons, Norman and Hamilton, who later became Union soldiers.

A third son, Oscar, remained in South Carolina. Oscar Lieber was the State geologist and had grown up in South Carolina except for a few years spent in Germany to complete his education. He kept one of his father's slaves when the family moved north, and continued to live on the campus with another faculty member.

CONFEDERATE BROTHER

Oscar Lieber lost his life in 1862 while fighting in Virginia as a soldier in Hampton's Legion, and subsequently Professor Lieber wrote, "My son Oscar fell on the Southern side, and his two brothers went to Richmond to place the tombstone on his grave. They fought and bled on the national side. You see the Civil War has knocked rudely at my door."

The records show that all but two members of the 1861 faculty served the Confederacy—as soldiers or as civilians active in the war effort.

TRUSTED LEE AIDE

Charles S. Venable, professor of mathematics and a native Virginian, was a man of mature years and judgment at the outbreak of the war. The students comprising the cadet company which volunteered for service in Virginia elected him their captain, and later he served as a major on General Lee's staff, perhaps the closest and most trusted of the great commander's aides.

Robert W. Barnwell, professor of history and political economy, joined the first cadet company as chaplain at Sullivan's Island in the spring of 1861. Later, after this company was disbanded, he organized the Hospital Aide Association in Virginia, and remained in this work until his death of typhoid fever in Richmond in June 1863.

Beverly W. Means, treasurer and librarian of the university at the outbreak of the war, was fatally wounded in the Battle of Seven Pines in the summer of 1862.

SOLDIERS' RELIEF

Prof. Maxmillian LaBorde was chairman of the faculty during the war years, and was the founder and chairman of the Bureau of the Central Association for the Relief of South Carolina Soldiers, an organization which dispatched supply cars weekly to the Army of Northern Virginia, to Charleston and the coast, and to the Army of the West.

John LeConte, professor of natural and mechanical philosophy, held the rank of major and was in charge of the Confederate Nitre works in Columbia, located at the Old Fair Grounds on Elmwood Avenue, where Logan School now stands.

His brother, chemistry Prof. Joseph LeConte, was made chemist for the Nitre and Mining Bureau with the rank and pay of major. He had previously manufactured medicines for the Confederacy.

CAMPUS SAVED

Our physical plant was saved during the burning of Columbia the night of February 17, 1865, because buildings on the campus were being used as hospital facilities for the wounded of both sides. These same buildings formed the nucleus of the present institution and continue to provide educational resources for the thousands of descendants of the Men of Carolina who served so nobly in the cause of the Confederacy.

It has been a very special pleasure to share this evening with you and to recall some of the great South Carolinians and momentous events of the Confederate War, especially because these concern an institution which I hope means as much to you as it does to me, your University of South Carolina.

President's Veto of the Public Works Appropriation Bill

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. KING of Utah. Mr. Speaker, it was most regrettable that the President saw fit to veto the public works appropriation bill. It will be noted that he did not question the merit of the 67 projects which had been added to the ones which he had originally recommended. On the contrary, he based his veto essentially on the grounds that the timing was bad.

Some opponents of reclamation, in their news releases, have suggested that there were phony or pork-barrel projects mixed into the public works bill, and that it was therefore necessary to first weed them out. I, personally, challenge the truth of this proposition. I have placed myself in touch with the officials of the Bureau of Reclamation of the Department of the Interior, and with the Army Corps of Engineers. I have been assured by those who did the planning on these projects that all 67 of them have a favorable cost-benefit ratio, and that from an engineering and economic point of view, they are meritorious.

Why, then, was the bill vetoed? The reason given is that it was for budgetary considerations. In other words, this is the year for no new starts. Regardless of the need, there shall be no new starts. We cannot afford them.

This shortsighted policy was first conceived at a time when it was thought that the 86th Congress might embark on a wild and uncontrolled orgy of extravagance. The actual record, however, shows how wrong this hypothesis turned out to be. Yet the misconceived policy of no new starts still lingers on. The evidence is strong that we shall end this session with an impressive surplus. No person interested in balancing the budget can honestly say that the $30 million which the public works appropriation bill adds to our budget for fiscal 1960 will throw it out of balance.

The administration has therefore shown an inflexibility and unwillingness to adapt its program to ever-changing realities.

When a private utility company launches a plan to spend many hundreds of millions of dollars of equity funds and borrowed funds for capital expansion to meet the needs of a growing community, we give it the accolade of praise and public approval. We call it a bold and imaginative step forward. We call it good business, and a sound investment in the future, because every dollar spent will bring back rich and ample returns.

But when the United States of America makes a capital investment in its future in the form of dams and reservoirs, flood-control projects, and irrigation works, those who philosophically oppose such measures cry out: We cannot afford them.

Mr. Speaker, if we cannot afford an investment in the sound and economical utilization of our natural resources to create more business and more wealth and more productive capacity, to take care of our exploding population which, within the lifetime of many of you in this room will reach 250 million and more, then what under heaven can we afford?

This money is not in the nature of a gift. It is a loan. It will be repaid, with interest. It is secured, and that security consists in our mountains, our rivers, our fertile prairies, and our almost-unlimited productive capacity. This security is as good as America is good.

In 1915 the U.S. Government undertook to construct in the State of Utah what is known as the Strawberry Reservoir project. As was to be expected, it was resisted by those to whom its immediate cost seemed more important than its ultimate benefits.

Let us look at the record of this humble little project, which cost $3⅓ million.

Forty-four years later we find that it has paid back 80 percent of its initial cost, with interest. In addition, it has made possible the growing of $78½ million worth of crops, which represents 22 times the value of the original investment. Power, municipal water, and recreation associated with the project bring in one-half million dollars per year. Personal incomes directly attributable to this project amount to $18 million per year. Twelve thousand people live on land made livable by this little project, and Federal taxes paid into the Federal Government from income made possible by this project amount to some $4½ million a year, which is more than a million dollars a year in excess of its entire cost. All of this, as a result of a mere $3⅓ million investment—and this is just the beginning.

Mr. Speaker, the Strawberry Reservoir, in 1915, was a new start. I am thankful that that did not deter wise

men from seeing its value to the future of this Nation.

In closing, I cannot resist the temptation, half in whimsey, but half in seriousness, to inquire whether President Eisenhower is prepared to ask Premier Khrushchev wheher he, too, is willing to adopt a no-new-starts policy in Russia, so that our country will not be too embarrassed by the difference in the speed at which the two nations are increasing their productivity. Obviously Russia will not slacken its pace, regardless of how well Khrushchev is treated by the State Department, and every year's delay in our own reclamation program will give us that much more cause for regret.

I support the public works appropriation bill of 1959 because it is an investment in the future and the prosperity of America.

New Interest Grows for Economic Class I Pricing Formula

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILEY. Mr. President, it will be recalled that recently I brought to the attention of the Senate the need for overhauling the Federal milk order system.

Today, over two-thirds of the milk sold wholesale by the Nation's farmers is priced under this system. Unfortunately, the present formulas for determining prices result in what appears to be too wide a differential between milk markets. For example, milk prices range from $6.63 per hundredweight on some of the eastern and southern markets; down to $3.34 per hundredweight in Milwaukee.

While there are, naturally, a number of factors which need to be considered in establishing price levels, I frankly feel that there is no justification for such a wide variation in pricing levels.

As a matter of fact, I brought this matter to the attention of the Secretary of Agriculture and urged that a new look be taken at the milk pricing formula under the Federal milk order system.

Recently, the Pure Milk Products Press, published by the Pure Milk Products Cooperative and the official organ of that organization, contained an article entitled "Interest Grows for Economic Class I Pricing Formula." Since I feel that this article is representative of thoughtful views for revision of the overall milk pricing program, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEREST GROWS FOR ECONOMIC CLASS I PRICING FORMULA

Interest seems to be growing among midwestern milk producers and their cooperatives in the use of an economic formula for pricing class I milk in Federal order markets, President Paul Affeldt told the State board in Fond du Lac August 20.

In general two types of class I pricing are used in Federal orders in the United States. About half a dozen eastern markets, including Boston, New York, and Philadelphia, have been using economic factors indicative of farm production costs and consumer purchasing power in the area. The remaining orders throughout the Nation use the price of manufacturing milk as a basis for establishing class I prices. Chicago and other midwestern markets have used the latter method with the result that fluid milk prices have followed manufactured milk prices downward in response to price support levels regardless of the ability of consumers to pay for milk.

Some 2 years ago Pure Milk Products began work on a formula to incorporate the general economic level of the area into a basis for pricing milk in midwestern markets. The idea developed by Pure Milk Products Co. would be based one-third on consideration of farm production costs as reported by the Wisconsin Crop Reporting Service and two-thirds on consideration of the general purchasing power level in the midwestern markets in which our milk is sold. About a year and a half ago the Pure Milk Products Co. proposal was discussed with several other groups in the market, including both managers and directors. However, at that time little interest was expressed in the idea by the other groups.

Some months later, in July 1958, Pure Milk Products Co. filed a proposal with the U.S. Department of Agriculture to amend order No. 41 to provide for economic formula pricing. To date, the USDA has refused to take any action to consider incorporating such provisions into Midwestern orders. Recently Pure Milk Association of Chicago announced support of economic formula pricing for class I sales. It is hoped that this additional support will encourage the USDA to give new consideration to such ideas.

Pure Milk Products Co. stands ready to cooperate with any other group which may wish to consider or support this method of pricing and will cooperate in developing a formula acceptable to all regardless of claims to credit or past opposition. It is hoped that united support by cooperatives in the area may help to break midwestern fluid milk prices away from the ever-depressing effect of manufactured milk prices as they have occurred under the present price support program, and permit fluid sales to bring return in line with the nonfarm economy.

How Long Can the Benevolent Philosophy of Foreign Aid Continue To Blind Us to the Reality of Its Failures?

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. COLLIER. Mr. Speaker, reality is the only means of discriminating between the virtues of benevolence and the sin of misdirected charity.

The foreign aid program most certainly was conceived in a sincere sense of virtuous benevolence. Its history in recent years reflects a sense of indiscriminate charity. Millions of Americans who have been burdened with the expense of this program regard the realities of its colossal waste and failures as reason to bring it to an end either immediately or in the near future. Countless others seem to be willing to accept it as a permanent program for reasons varying from benevolence to the calculated desire to maintain allies. Hence foreign aid has become an issue of deep controversy and one which will more than likely culminate in its slow death if the increasing number of votes in opposition to the program continues in the Congress in the years ahead. By its very nature, foreign aid is doomed—perhaps within 5 years and possibly 10.

There are those who justifiably fear that this program must be continued as long as the world is engaged in a titanic struggle between the forces of capitalism and communism. Be that as it may, no conscientious legislator can view the colossal waste and failures, so vividly revealed in committee investigations, without deep reservations. Neither can any conscientious legislator simply look the other way and blindly assume that we cannot turn back to some path of good judgment in this area of international life.

The U.S. Comptroller General, Joseph Campbell, told a House committee investigating foreign aid earlier this year that military and other oversea spending agencies of the U.S. Government have had more money to hand out than they can judiciously plan and use. Certainly a man in this high position, whose competence has never been questioned, would make no such statement without fact and knowledge.

Just what are some of the things which prevent some Members of Congress from voting "Yes" on foreign aid appropriations? In a number of countries, for example, the major item of expenditure is for training and supplying of a native army. One of these places happens to be Laos, in southeast Asia, now the center of a Communist-inspired rebellion. Representative PASSMAN testified that we supplied funds for maintaining an army of 25,000, but that U.S. military inspectors have never been permitted to find out just what kind of an army does exist there, if any.

But even if no army exists, there is plenty of evidence that there are uniforms, warehouses full of them. Among the thousands of uniforms waiting to be worn there were sizes 44 to 46. Each one of these, it appears, could accommodate two Lao soldiers since the average Lao weighs about 115 pounds and is 5 feet 3 inches tall.

In one depot oversea investigators discovered a 20-year supply of WAC clothing. At another place 70,000 sets of new tire chains were left out of doors to rust. Enough of one ammunition item to last for 185 years was found at a supply base. A 45-year supply of 30-carbine ammunition was uncovered at a military school in another foreign country. Then there was a motor pool which revealed the hoarding of 44 tires for each truck there. U.S.-equipped factories to build airplanes for the personal use of officials, it was found, were getting part of the foreign aid money.

Aid to foreign countries includes the stationing of U.S. missions to supervise

the distribution of the funds and materials. While these supervisors are powerless to control the stealing, they are not without power to live sumptuously themselves. The Comptroller General told of some goings-on in Pakistan. There, for 271 Americans, the United States sent 529 refrigerators costing about $105,800. Since the 271 included wives and children, it is obvious that for each American more than two refrigerators had been supplied. There were also 669 air conditioners valued at $135,600; 650 stoves at $47,100, and household furniture at $128,500.

To bolster an apparently unpopular Pakistanian Government and win its support from the people, the United States decided to build in that country an installation which would supply a billion gallons of water a day for irrigation. A Japanese firm was engaged to do the job and over a million dollars was appropriated. When the pump house was completed it was discovered that there had been insufficient study of the problems to be solved, that the pumps would not be able to withstand the silt and mud and that the whole project was therefore useless as it stood.

Of Burma, Representative PASSMAN said:

> When you go into a country and you cannot find any trace of any benefit from that program, you wonder what we did teach them while we were there.

After hearing how much has been poured into Okinawa and other Ryukyu Islands, Representative CONTE asked of a testifying general whether these moneys had gained us the support of the people of these U.S.-occupied Japanese islands. The general asked that his answer be kept off the record. It was:

Perhaps one of the most authentic and striking appraisals of foreign aid recently came through Max A. Thurn-Valsassins, a member of the Austrian finance ministry and a former consultant to the World Bank.

Our foreign aid, he says, is based on three idealistic assumptions that are peculiar to the United States: that it will help underdeveloped countries raise their standard of living, that this will make them more stable, and that this, in turn, will contribute to American security.

Europe—

He says—

> may be just as conscious of the Russian threat. It may have just as much to lose if the underdeveloped countries fall under Russian domination. Yet, in Europe, economic development has not aroused the big popular concern that exists in America.

The reason is not lack of money, he says. Some European countries could now afford foreign aid programs of their own. Instead, they let the United States struggle along under its self-imposed burden.

It is inconsistent, he says, for Americans to think that they can foster free enterprise, which they regard as essential to rising production, by giving money to rulers who regard our aid only as an instrument for subjecting the productive forces of their countries to their political and ideological objectives. These rulers resent any conditions or supervision accompanying our aid, and without these reins the money will go to build up public ownership and State control—the same things Russia deliberately fosters with her aid.

Such a system—

He says—

> is incompatible with western type political and legal institutions. Unless present policies are altered, these institutions will become progressively weaker. Their final collapse may mean the end of western influence.

What underdeveloped countries need first, he says, is not money; indeed many Latin Americans have been investing large amounts in the United States while their governments are crying for investment capital. What they do need, he says, is a legal and institutional framework which will repatriate local capital and attract new investment from abroad. Lack of capital, he says, is not the cause of underdevelopment; rather, it is the consequence.

Developing this framework, he says, will require time, tact, and patience. But without it, foreign aid will remain futile, and, once it is accomplished, foreign aid will probably be unnecessary. This logic will probably not appeal to foreign aid lobbyists who think that with a generous dose of dollar bills, they can mold Asians and Africans into the image of Americans.

In the final analysis, it might be said that the answer to an effective foreign aid program lies in its proper administration. Perhaps this is true. But, how can a nation administer a foreign aid program when it has little or no control over the distribution of such aid it renders once the gift has been made to another nation? One does not give gifts with the positive direction of their use by their recipients. If the United States has no control over the distribution of economic assistance, nor the right to investigate military assistance given to foreign nations, how can we possibly direct a successful foreign aid program? As a matter of fact, even if we were able to clean up the waste and corruption in the controlled phase of its administration, we would have no means of channelling the gifts of foreign aid to the areas of need. We cannot blindly place a label of benevolence on indiscriminate charity.

Financing of Federal Indebtedness

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. THURMOND. Mr. President, I have always felt that high interest rates were unconscionable, and as a result I have been loathe to support any legislation which had the effect of raising interest rates, whether such interest was to be paid by members of the public directly or by members of the public through taxes and, thereby, the Federal Government.

It is quite obvious, however, that some action must be taken to facilitate the financing of our enormous Federal indebtedness.

A most distinguished citizen of South Carolina, Mr. A. L. M. Wiggins, chairman of the board of the Atlantic Coastline Railroad, has served as a member of an advisory group to the last four Secretaries of the Treasury. He recently wrote a most enlightening and informative letter to me concerning the problem involved. In order that the entire Senate may have the benefit of his statement with reference to this problem, I ask unanimous consent that his letter to me be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HARTSVILLE, S.C., *August 28, 1959.*

Senator STROM THURMOND,
U.S. Senate,
Washington, D.C.

DEAR SENATOR THURMOND: I am terribly disturbed over the failure of the Ways and Means Committee of the House in refusing to authorize an increase in the rate of interest paid by the Government on savings bonds and on the failure to remove the interest ceiling on long-term Government bonds.

I cannot believe otherwise than that some Members of Congress are not aware of the dangers of the present situation with respect to financing the public debt.

Sales of savings bonds have declined and cash-ins have increased as a result of the present unrealistic rate of 3¼ percent. The public is converting their savings bond money into other investments that yield a higher rate of return than savings bonds. As savings bond investments decline, the Government is forced to replace these funds by borrowing on marketable issues thereby adding to the inflationary pressures of the present credit situation.

The faiulre to remove the 4¼ percent ceiling on the interest rate on Government bonds means that the Government cannot sell in the present market Government bonds maturing in more than 5 years for the reason that other long-term investments yield a higher rate of interest. The result is that the Government in its refunding operations and in borrowing new funds must limit the maturities of its marketable obligations to less than 5 years. With a large amount of Government securities outstanding with maturities of less than 5 years, the market for such additional securities is considerably restricted and is largely dependent upon purchases by banks. Due to the present credit stringency, many banks are not in a position to buy additional short-term Government securities but will do so in order to help the Government meet its critical financing problems. The serious result of the purchase of additional Government securities by commercial banks is to inflate bank deposits and thereby add fuel to the inflationary pressures. From an inflation standpoint it is highly desirable that new issues of Government securities be sold to nonbank investors, but in order to do this the Government must pay a rate of interest that will secure the funds in a competitive

market. It is obvious that the Government cannot sell long-term bonds to nonbank investors at an interest rate of 4¼ percent.

I might add that personally I am concerned over the present credit situation, particularly with reference to the Government's obligations. I might add that personally I would like to see interest rates lower because in the financing of our railroads we are frequent borrowers of capital funds for modernizing equipment and would like to be able to borrow money at a much lower rate than at present market. However, we are forced to pay competitive rates. The Government is in the same position.

It is obvious that under our freedoms of choice, the Government cannot force investors to lend money to the Government nor will investors buy Government securities at a substantially lower rate of return than they can secure on other investments.

In my opinion, we are approaching a critical situation in Government financing in which the Government will be forced to add to the fires of inflation through borrowing from commercial banks unless it can get competitive interest rates in the sale of long-term bonds to non-bank investors.

I have served as a member of an advisory group to the last four Secretaries of Treasury (continuously for 17 years), and during all of this time I have never seen a situation as to Government financing more difficult or more critical than it is today.

I am sending a similar letter to other members of our congressional delegation from South Carolina in the belief that all of you will be interested in my observations and conclusions with respect to the problems of financing the Government, because they are based on long and intimate study and observation of this problem. I trust they make good sense to you.

With warm personal regards, I am,

Sincerely yours,

A. L. M. WIGGINS.

Harold S. Vance

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. BRADEMAS. Mr. Speaker, I rise to pay tribute to a distinguished American businessman, Harold S. Vance, whose death this week is a serious loss to our country.

Mr. Vance since 1955 had served with dedication and great ability as a member of the Atomic Energy Commission and before that time had been president of the Studebaker Corp. in South Bend, Ind.

In Harold Vance we have a splendid example of an outstanding American businessman who, by serving in high public office, contributes mightily to the security and wellbeing of our Nation.

Mr. Speaker, under unanimous consent, I include at this point in the CONGRESSIONAL RECORD a fine editorial in tribute to Mr. Vance in the Washington Post of September 2, 1959. The editorial follows:

HAROLD S. VANCE

Harold S. Vance was one of those eminent business executives who contributed to public service in the final years of his life the rich accumulation of administrative experience gained through a long and successful career in private industry. From 1955 until his untimely death on Monday he was a member of the Atomic Enery Commission—a member who brought to that exacting assignment exceptional courage and balance and judgment. Earlier, as president of the Studebaker Corp., he had done other important jobs for the Government—summoned to service alike by President Truman and by President Eisenhower.

In times like the present when the Federal Government is inescapably involved in tremendous industrial undertakings as a part of its defense program, the capabilities and knowledge of men like Harold Vance are indispensable. Perhaps, indeed, it is not too much to say that the margin of American strength in relation to the Russians rests in no negligible part in just the sort of experience which such men have acquired in the private enterprise which is the foundation of the American economy.

Report on Missile Management

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. HOLIFIELD. Mr. Speaker, I would like to call to the attention of the Congress a report just issued by the Military Operations Subcommittee of which I am chairman. This report is a factual study and systematic account of our major missile programs. It describes in some detail the resources, procedures, and special agencies that have been acquired or established for prosecuting this all-important missile effort. This report was unanimously approved by the full Committee on Government Operations under the distinguished leadership of Chairman WILLIAM L. DAWSON.

The missile programs play an increasingly vital role in the defensive strength of our country. The tremendous costs and expenditures involved in acquiring a missile capability alone demand that careful scrutiny be exercised in this field. The Military Operations Subcommittee has attempted to analyze the missile program from several points of view with objectivity and thoroughness.

We have carefully reviewed the agencies and committees and individual offices at the Department of Defense level over the past 10 years for directing and coordinating the missile effort. We have demonstrated the problems involved in attempting to achieve effective top-level control and the bewildering array of mechanisms that have been set up in the process. While this review may be critical, it is not carping. We have set forth the facts as we have found them. We have set them forth fairly and without partisanship or prejudice to any service.

The Military Operations Subcommittee has analyzed the procurement and management methods used by the military services in the missile programs. We have shown that the priorities assigned to these programs have often resulted in the creation of ad hoc agencies and the necessary circumvention of ordinary procurement procedures. While we have pointed out the tremendous waste involved, we have tried to show that the imminence of the Soviet threat and the urgent need for operational missiles were partly responsible.

The report sets forth a detailed account of the Air Force ballistic missile program starting with the Von Neumann committees' recommendations in 1953 that an ICBM program was feasible and should be undertaken.

After public hearings and visits to the Ballistic Missile Division on the west coast we have analyzed the circumstances under which Ramo-Wooldridge Corp. and its successor Space Technology Laboratories became enmeshed in the Air Force program. We have analyzed this company's relationship to the Air Force and the role it plays as a private concern sitting behind Government desks and helping to make governmental decisions. There has been a great deal of concern in the Congress and elsewhere over the tremendous power and responsibility exercised by Space Technology Laboratories. We have proposed that if this same relationship is to continue in the future the company must be converted into a nonprofit institution similar to the Rand Corp., the Jet Propulsion Laboratory, the Allied Physics Laboratory of Johns Hopkins University, and others.

We have spelled out in some detail the controversy over the Thor and Jupiter missiles. We have reviewed the recurring problem of duplication and overlapping roles and missions in the field of air defense. We have discussed the role of the military in space and the problems that have been created by the establishment of an Advanced Research Projects Agency in the Department of Defense and a new independent civilian space agency, the National Aeronautics and Space Administration.

The subcommittee has directed its attention primarily to land-based strategic missiles. We have found that the basic clash in the ballistic missile field is between the Army and the Air Force. After careful study we have concluded that duplication, waste and interservice rivalries will continue unless the Air Force and the Army "join hands in a single service effort." Our report has called upon the President to initiate studies looking to an Army-Air Force merger.

These strategic missiles are the decisive weapons of the coming decade—decisive for the strategy of deterrence and retaliation. These weapons, however, have no unique service orientation. Land-based missiles can be built and fired by the Air Force or the Army equally well. This creates a dilemma for both services. The Air Force now has operation control over all land-based strategic missiles, but this fact had nothing to do with the basic reasons for creating a separate Air Force. The Army faces a bleak future under prevailing roles and missions assignments

which bar it from any part in deployment of the weapons that are to dominate global military strategy.

As the report states, "no amount of effort spent in clarifying roles and missions can overcome the ruthless logic of weapon technology."

While we believe that an Army-Air Force merger would by no means solve all of the problems of military organization and command relationships, it would solve many and lay the groundwork for the solution of others.

With the full cooperation of all the subcommittee members and the military services we have submitted a report which carefully and objectively tells a story which is of great concern to all of us. I believe that this report will cast light on little-known factors involved in the complex missile effort and contribute to everyone's understanding of the successes achieved and the problems that lie ahead. It will show that the nature and rapidity of missile and space technology demand a reappraisal of organizational arrangements in the Department of Defense.

Eisenhower Abroad

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. WALLHAUSER. Mr. Speaker, the writer of the editorial that appeared in the Newark, N.J., Evening News on August 31, has, in a few sentences, expressed some of the reasons why the forthcoming visit of Premier Khrushchev may have some good results for the lessening of the cold war, and the return to normalcy of the economy of the free peoples of the world. No one expects miracles, but it is important to know that our spokesman has the confidence and admiration of allies of differing opinions.

The editorial follows:

EISENHOWER ABROAD

President Eisenhower's rare ability to inspire the confidence of divergent allies is being displayed anew on his tour of the Western capitals.

The crowds of Bonn and London greeted him with equal enthusiasm, as the symbol and spokesman for the hopes of the free world. But their impulses were as different as the attitudes of the West Germans and the British toward the forthcoming Eisenhower-Khrushchev talks.

To the West Germans, the President symbolized their hopes for German reunification and unremitting firmness on Berlin. London seemed to reflect the desire of the British for some sort of accommodation with the Soviets.

Despite differing national aspirations, the West Germans and the British place their common trust in the good faith and the integrity with which Mr. Eisenhower is identified the world over.

These qualities, in combination with the warmth and humanity of the Eisenhower personality, arm the President with potent weapons for his momentous encounter with Premier Khrushchev.

Need for the Item Veto

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the Appendix, I desire to include a fine editorial which appeared in the Evening Chronicle of Allentown, Pa., on August 31, 1959, and which expresses with great clarity the need for the item veto:

A WEAKNESS IN OUR SYSTEM

Just because Congress reached too deeply into the "pork barrel" flood control projects on the Lehigh River have been placed in jeopardy by a Presidential veto.

For the first time since President Eisenhower took office in 1953, Congress may override a veto. If it does, the Lehigh River work will go on. If it doesn't, work will stop and the project will remain unfinished.

The situation developed when Congress added 67 new projects not recommended by the President to the bill providing funds for flood control, reclamation and other water projects all over the United States. Although the amount earmarked for these projects is a relatively small $50 million in a total appropriation of $1,206,000,000, the President vetoed the bill. He had no other choice, if he was to be consistent. He had to accept or veto the whole thing. Unlike the Governor of Pennsylvania, he does not have a selective veto on appropriations.

Actually, he was looking ahead. Although the initial cost would be only $50 million, eventually the new projects would cost more than $800 million. In his veto message he said:

"By any sound test of urgency, these projects should not be started this year if we are to have a responsible Federal fiscal policy."

Because the President committed himself to the other projects in his budget, Congress hoped it could force him to take what he did not want, especially since it represented only about 4 percent of the total appropriation.

Congress should know by this time the President does not hesitate to kill a whole bill when even one small part does not suit him.

But bills like this are dear to the hearts of Congressmen. In them are found the funds for public works. These can be cited to the folks back home as tangible evidence that their elected representatives are looking out for their interests and grabbing their share of meat out of the "pork barrel." That is why an Eisenhower veto may be overridden for the first time. This, incidentally, was his 144th veto since he took office and the 7th of this session.

If the President were given selective veto authority, situations like this would not develop. No longer would there be an incentive to add to an appropriation bill something the Chief Executive does not want in the hope that it will be accepted as part of the whole package.

The lack of that provision is a weakness in our system. The all-or-nothing rule gives no choice but acceptance of the bad with the good or rejection of the good with the bad.

The selective veto would give the President an opportunity to weigh each appropriation on its own merits and relieve him of the responsibility of vetoing a whole bill because he dislikes only a small portion of it.

"Heard and Seen"

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal-News, of Nyack, N.Y., August 22, 1959:

HEARD AND SEEN
(By Frank Ernest)
FARLEY ON RACING BOARD

"Farley Named to Trot Board" was the front-page headline in the Daily News last Thursday. The appointment was made by Gov. Nelson A. Rockefeller, a Republican, and the appointee, one of three who will comprise the new commission to govern harness racing in the State of New York, is a former Rockland County, State and national Democratic chairman, the man who, more than anyone else, made Franklin Delano Roosevelt President of the United States, a former Postmaster General and one of the great citizens of the world today.

I make no secret of the fact that I like Jim Farley nor of the fact that in my early days in the newspaper business I did all I could to see that he was defeated in his efforts to seek reelection as Rockland County's member of assembly. Along with the others who sought that end, I felt a sense of accomplishment when Mr. Farley lost. What we actually did was a favor to him. For, had he won that election, he might have been condemned to a long term in Albany and might not have had the opportunity to demonstrate his exceptional abilities as a politician.

Governor Rockefeller's appointment indicates his belief that Mr. Farley, along with the other members of the commission, is incorruptible. That is a long-recognized fact. When Mr. Farley, during the first two terms of the late F.D.R. was, to a large extent, responsible for the distribution of patronage, he was on the spot plenty. Cartoons, stories; headlines put the stamp of an ogre on him. "Farleyism" was a nasty word.

It must be assumed that there were people who were very busy, digging into records, turning over the stones in all fields of politics and looking under them for some sign of a misstep somewhere along the line in order to put him on the spot. Throughout his years in office, from the time he was a committeeman in Stony Point and then town clerk and supervisor and on up, it appeared that there must be a slip somewhere. But none of the probers ever came up with the slightest scintilla of evidence that such a thing had occurred.

I rather imagine that these are some of the things Mr. Rockefeller considered when he made the nomination. I don't believe he took into consideration a point I mentioned a few days ago that, had the Democrats not missed the boat at their Buffalo convention and turned down Mr. Farley's bid for nomination as United States Senator, Mr. Rockefeller might not have been elected. And then again, maybe he could have. But of one thing I am convinced. If then Governor Harriman and State Chairman Michael H. Prendergast hadn't been scared out by Tammany Boss Carmine DeSapio and if the State committee had the opportunity to vote for the nomination of James A. Farley without dictation from the party bosses, New York State would be represented in the U.S. Senate today by one Republican and one Democrat instead of two Republicans.

That's all water over the dam now, of course. But it's nice to see that the talent

and the honesty and the ability of Jim Farley have resulted in his appointment to a post into which he will fit like a glove. When he was chairman of the New York State Athletic Commission, on which his son now serves, he and the other members took a pushing around, too. Sports writers called them "The Three Dumb Dukes." But under his guidance the phony business of winning fights by claiming fouls was eliminated. There may have been some questions about rules and regulations but nobody ever questioned the honesty of the commission while Mr. Farley headed it.

Jim knows horses, too. When he was a youngster there was a harness track near his home in Grassy Point. He saw trotting races too at Sliney's Grove in West Haverstraw, at the New City and Orangeburg Fair Grounds tracks, and at other places. In boxing, in horse racing, in politics and in human relations, Jim Farley can spot a phony from away off. The Governor has made one of the finest appointments possible. It's a little late now but Rockland County Democrats might well have taken a lesson from the man they strove so hard to beat but couldn't.

Philip Henry Handmaker

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. VAN ZANDT. Mr. Speaker—

We know when moons shall wane
When summer birds from far shall cross the sea
When Autumn's hue shall tinge the golden grain
But "Death, Oh" who shall teach us when to look for thee?

Leaves have their time to fall
And flowers to wither at the North wind's breath
And stars to set—but all
Thou hast all seasons for thine own, O Death!

Holy Scripture tells us when Abner, son of Ner, was killed and the word was brought back to King David, he said:

And the King said unto his servants, Know ye not that there is a prince and a great man fallen this day in Israel?

In a similar vein of thought, residents of Altoona, Pa., and those associated with the late Philip H. Handmaker in his farflung business enterprises realized through shock and sorrow that his sudden death on August 9, 1959, was indeed an irreparable loss.

Phil, as he was known to his legion of friends and business acquaintances, was born August 7, 1903, in Russia. At an early age he came with his parents to America where the family settled in Pittsburgh, Pa. He began his business career in Altoona, Pa., in 1925 and despite a humble beginning in true Horatio Alger fashion he reaped phenomenal success in the business world, thus becoming a symbol of the benefits to be derived from the American system of free enterprise.

At the conclusion of this tribute to my departed friend, I wish to include as part of my remarks the obituary of the late Philip Henry Handmaker which appeared in the August 10, 1959, issue of the Altoona Mirror, together with tributes of love and respect from his associates, and by Rabbi J. H. Henderson, which appeared in later issues of the Altoona Mirror. The authors enjoyed the rewarding privilege of association and friendship with Phil Handmaker, and their expressions reflect their love and admiration for his many fine qualities.

Phil Handmaker by his short, yet fruitful life fully deserved the glowing tributes accorded him for he left a proud heritage to his family and his friends—the only heritage that is really worthwhile—an honored name. Trully, as one of the prophets of old said:

He lived humbly, did justly, and walked reverently with God.

As a member of Agudath Achim Synagogue and Temple Beth Israel in Altoona, Pa., his deep faith in God was manifested by his devout manner in caring for his own spiritual welfare aided by his firm adherence to the tenets of his ancient faith.

By his exemplary life which portrayed his deep-rooted convictions that it is mandatory to accept the brotherhood of man and the fatherhood of God as eternal truths, he brought honor to his age and his people.

Divine providence blessed him with God-fearing parents who bent upon giving their children every possible advantage toiled and sacrificed like countless other immigrant families who have come to America's shores seeking liberty, freedom, and equal opportunity for all God's children.

Fortified by their divine faith which was supplemented by toil, sacrifice, and perseverance, their love and solicitude for their children made an indelible impression on their son, Phil, and provided him with added inspiration to serve as an additional incentive in his successful effort in scaling the heights of the business world. It is of such loving and self-sacrificing parents that the poet has said:

Those distant seas I have not crossed
Bright jewels I never wore
The prizes now forever lost
And comforts languished for—
The rich rewards for which men sigh
That I have never won
The years, the hopes, the dreams go by
Are found in you, my son.

One of the many fine qualities that Phil Handmaker possessed was the confidence he instilled in those fortunate to have crossed his path in life. He had the happy faculty of being able through his kindness to others to encourage his friends and associates to feel free to discuss their problems with him. This admirable trait of character is expressed by the poet when he said:

Oh, the comfort, the inexpressible comfort,
of feeling safe with a person,
Having neither to weigh thoughts nor words
But pouring them all out, chaff and grain together
Confident that a faithful hand will take them
And sift them, keep what is worth keeping,
And with the breath of love and kindness
blow the rest away.

Those of us in central Pennsylvania, who knew Phil Handmaker intimately, recognized and appreciated his great civic consciousness and the insatiable desire he had for advancing the best interests of the city of Altoona and Blair County. That area of Pennsylvania owed him an undying debt of gratitude for his great contribution toward its progress and welfare.

It is common knowledge and a striking illustration of his depth of character that even though Phil was privileged to walk and sit with the mighty, he enjoyed the reputation of never losing the common touch despite his spectacular success in the realm of business. Shunning ostentation and declining to bask in the glare and glamour of publicity, his innumerable acts of charity unheralded and unsung and dispensed without regard to race, color or creed, brought rays of sunshine into the bleak and barren lives of the poor, the underprivileged and the downtrodden.

Such golden nuggets of kindly deeds are treasured and will live forever in the hearts of the lowly and needy of society whose lives he touched. They are an inperishable monument to the memory of such a great American who by his altruistic deeds gives credence to the thoughts expressed in two lines of a poem by the celebrated English poet, William Wordsworth:

The best portions of a man's life—
His little nameless acts of kindness and love.

It can be truly said that Phil's death at the zenith of his career was a tragic loss to his loved ones and to the community, State, and Nation. His noble character may be summed up in the words of Lord Byron:

He had kept the whiteness of his soul, and thus men over him wept.

From a personal standpoint, the death of Phil Handmaker has meant the loss of a cherished friend of many years. His passing recalls to mind the words of the poet—

A friend has passed across the bay,
So wide and vast and put away,
The mortal form that held his breath;
But through the storm that men call death
Erect and straight, unstained by years
At heaven's gate a man appears.

Sharing the sorrow voiced by countless friends and acquaintances, I joined them in tendering sincere expressions of deepest sympathy to his devoted wife, Mollie, their four daughters, and other members of the immediate family.

In conclusion, Phil Handmaker's life was a virtual mirror in which were reflected the many fine qualities of his richly gifted soul. These outstanding personal characteristics enshrine him in the minds and hearts of those privileged to have crossed paths with him in the daily stream of life. His manner of daily living portrayed his adherence to the deathless tradition of the ancient faith of a people who were "keepers of the word" and "the bearers of the commandments."

Thus, it is fitting to say that in the best traditions of the Judaic-Christian precept of living by the word of God, the late Phil Handmaker by his short, yet

fruitful life fulfilled the beautiful prayer of St. Francis of Assisi:

Lord, make me an instrument of Thy peace;
Where there is hatred, let me sow love;
Where there is injury, pardon;
Where there is doubt, faith;
Where there is despair, hope;
Where there is darkness, light;
Where there is sadness, joy.

[From the Altoona (Pa.) Mirror, Aug. 10, 1959]

CITY AUTO PARTS SUPPLY COMPANY PRESIDENT DIES

Philip H. Handmaker, 57, of 3004 Second Avenue, president of the Automotive Supply Co., and chairman of the Altoona Bus Authority, died in the Altoona Hospital at 9:45 a.m. yesterday after a heart attack.

Mr. Handmaker, whose Automotive Supply firm had many branches throughout Pennsylvania, had large holdings throughout the United States, including a traction firm in Minneapolis, Minn.

Relatives reported he awakened Saturday morning complaining of indigestion. He was admitted to the hospital during the morning.

Born August 7, 1903, in Russia, he was the son of Harry and Sophie (Romick) Handmaker. His career began in Altoona as manager of the Firestone Service Store at 12th Avenue and 15th Street.

He left Firestone to form the Automotive Supply Co. The firm moved in 1937 to its present building at 1917 Margaret Avenue.

Surviving are his wife, Mollie and following daughters: Mrs. Harriet Bregman of Altoona, Mrs. Reitz Kaplan of Pittsburgh, Mrs. Audrey Goldstein of Johnstown and Mrs. Barbara Kaminsky of Ann Arbor, Mich., and nine grandchildren.

Also surviving are two brothers and four sisters: Isaac H. of Tucson, Ariz.: Meyer of Pittsburgh, Mrs. Jean Sparks of Altoona, Mrs. Mary Supowitz of Tucson, Mrs. Saua Auxwerwitz of Harrisburg and Mrs. Josephine Feldman of Pittsburgh.

Mr. Handmaker was a member of Agudath Achim Synagogue and Temple Beth Israel, the Elks and the Altoona Kiwanis Club.

Interment was made in Pittsburgh today.

[From the Altoona (Pa.) Mirror, Aug. 24, 1959]

MAN OF WIDE INTERESTS

EDITOR OF THE ALTOONA MIRROR:

Few men attain the success in the business world as that achieved by Philip Henry Handmaker whose sudden death on August 9, 1959, came as a distinct blow to his countless friends and business associates.

As a small boy, Phil came to this country with his parents from his native Russia, the family locating in Pittsburgh. With meager book learning, he became a giant of business, a true example of a self-made man.

Mr. Handmaker's business career in Altoona began in 1925 at Beale Avenue and 24th Street. At that time, there were three employees—himself and two others. Today, his vast network of holdings in his Automotive Supply Co. and its divisions employs more than 350 persons.

Those who were close to this successful business leader realize that he shunned publicity for himself. Nevertheless, we feel that any individual who made such wonderful strides in his own endeavors and who had done so much good (with no fanfare), merits a written tribute at his passing.

Just as Phil Handmaker never hesitated to make a decision while he lived, it seemed that he died that way.

We would recount his many fine traits of character:

Devoted to family, extremely proud of grandchildren.

Keen insight, always knew what to do and the right time to do it.

Never forgot humble beginning, always anxious to help the less fortunate or anyone who needed a boost.

Strict attention to business—not one for a lot of frivolity.

Office door always open—constantly being approached by those who needed advice or those who wanted his opinion on business and other matters.

In spite of his growth, he never changed. Those who knew him in 1925 (the oldtimers) marveled that he was the same Phil Handmaker they knew way back when.

Accepted appointment to the bus authority even though he was in an entirely unassociated business. He realized that transportation was a must for the community—nothing selfish in his accepting the appointment as his business was not dependent upon public transportation.

Never blessed with a son—seemed to express his interest in young men by offering summertime employment to a great number of college age young men. One such young man, now a law student, when told of Mr. Handmaker's passing, remarked that he learned more from his association with Phil Handmaker and working for Automotive Supply Co. than he did in his 4 years at college.

The Automotive Supply Co., of which he was president, comprises 16 branch firms in Pennsylvania. The main corporation also includes these divisions: University Supply Co., with branch locations at Morgantown and Kingwood, W. Va.; Complete Auto & Home Supply Co., 11 locations in Arizona; Complete Industrial Supply Co., 2 branch locations in Arizona. He was a director of the Twin City Rapid Transit Co., Minneapolis, Minn. He also served as chairman of the Transportation and Motor Buses for Public Use Authority in Altoona.

The life and work of Philip H. Handmaker will ever stand as a monument to his success. His passing is mourned by all who knew him.

HIS ASSOCIATES.

[From the Altoona (Pa.) Mirror, Aug. 19, 1959]

FLAG OF DEATH FOR EVERYONE

EDITOR OF THE ALTOONA MIRROR:

When the morning of August 9, 1959, began, the news was circulated in Altoona that Phil H. Handmaker was no longer among the living. It is very hard to express sympathy when the wound is new, but every one of us must go through it.

The flag of death is for everyone. The life of a person going through this world is like a person arriving in a city, staying overnight at a hotel and leaving in the morning. Life is divided into three parts.

First, a child is born, and as soon as he opens his eyes to look at the world, he closes his eyes and falls back into eternal sleep. Second, when a person is young, in middle age, he strives for happy ending and golden dreams. Suddenly death enters and ends his dreams. Third, when a person reaches old age, his strength leaves.

Naturally your sorrow is very great, but you must remember that death, the funeral, the grave, the cemetery is not the final end of a person. Because the other world brings a new life. I hope his soul is at rest and peace.

Rabbi J. H. HENDERSON.

Resurgence of Krupp Empire

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. ROOSEVELT. Mr. Speaker, certain correspondence regarding the reconcentration of German heavy industry—with special reference to the resurgence of the Krupp empire—has come to my attention. I am sure my colleagues will find the subject matter of extreme interest as well as cause for concern.

Therefore, Mr. Speaker, I insert at this point in the RECORD a copy of a Department of State letter of February 3, 1959, directed to the Society for the Prevention of World War III, Inc., and the latter's response to it. Also included is an Associated Press dispatch from London, dated June 9, 1957, which is referred to in the society's letter of February 13 of this year.

The correspondence follows:

DEPARTMENT OF STATE,
Washington, February 3, 1959.

SOCIETY FOR THE PREVENTION OF WORLD WAR III, INC.,
New York, N.Y.

SIRS: The Department has received your letter of January 14, 1959, in which you have raised certain questions concerning the implementation of the deconcentration program affecting heavy industry in the Federal Republic of Germany and have referred in particular to the recent approval; given by the high authority of the European Coal and Steel Community, for the purchase of the Bochumer Verein by the Krupp controlled Rheinhausen A.G.

As the New York Times article of January 7, 1959, to which you have referred, indicated, the high authority of the European Coal and Steel Community announced that it has approved an application made by the Krupp controlled Rheinhausen A.G. for permission to purchase the majority interest in the Bochumer Verein. The high authority decision was based on article 66 of the ECSC treaty under which approval of new concentrations is authorized when the high authority finds the transaction will not give the interested parties the power to determine prices, control production, prevent effective competition, or result in establishing an artificially privileged position. The high authority found that the two enterprises involved would, after merger, account for the following percentages of production within the six-nation community: coal 3 percent; coke 4.4 percent; pig iron 5.7 percent; crude steel 5.5 percent; and rolled products 3.7 percent. The high authority also announced that future investment in the steel sector of these enterprises will be subject to special control to insure compliance with the abovementioned requirements of article 66 of the treaty. The high authority emphasized its decision does not affect any obligations of persons, enterprises, or governments pursuant to law 27 regarding reorganization of the German iron and steel industry.

The responsibility for completing certain obligations under Allied Control Council Law 27 was assumed by the Federal Republic of Germany under the terms of the Conven-

tion on the Settlement of Matters Arising Out of the War and the Occupation. Chapter I, article 9, paragraph 3 thereof states that insofar as the convention relates to deconcentration it "shall be without prejudice to such expansion or affiliation of enterprises of the German coal mining and iron and steel industries as shall be permitted under the Treaty on the Establishment of the European Community for Coal and Steel." This provision of the Settlement Convention clearly eliminates any obstacle to a purchase such as the one in question upon approval by the high authority and there is thus no basis in the Settlement Convention for our entering an objection to this transaction.

With regard to certain outstanding obligations which the Federal Republic has under the deconcentration program, the Federal Republic has indicated that the completion of certain aspects of the program presents very considerable difficulty. These difficulties are presently the subject of discussions which are being held with the Federal Republic by the Governments of the United States, the United Kingdom, and France. The deconcentration program was an allied undertaking, and whatever action is taken on the German request for release from the remaining obligations must be arrived at on a tripartite basis. While this may result in further delays before a decision is reached, it would be incorrect to say the views of any party have been overruled. It is impossible at this time to predict just what will be the outcome of these discussions, but the Department wishes to assure you that all the aspects of the problem are receiving our careful attention.

Very truly yours,

JOHN DEVINE,
German Economic Affairs,
Bureau of European Affairs,
(For the Secretary of State).

SOCIETY FOR THE PREVENTION OF WORLD WAR III, INC.,
New York, N.Y., February 13, 1959.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Department of State, Washington, D.C.
(Attention: Mr. John Devine, German Economic Affairs, Bureau of European Affairs.)

DEAR MR. DEVINE: This will acknowledge your letter of February 3, in reply to our letter of January 14, 1959, wherein the society protested against the reconcentration of German heavy industry with special reference to the resurgence of the Krupp empire.

In defending the State Department's refusal to object to Krupp's purchase of the Bochumer Verein, you cite chapter I, article 9, paragraph 3 of the Settlement Convention with Germany which recognizes that reconcentration in the German coal and steel industries may be permitted under the Treaty on the Establishment of the European Community for Coal and Steel (Schuman plan) upon the approval of the high authority. Yet, in the paragraphs 1 and 2 of the very same article (9) it was stipulated that the German Government would carry out the Allied program for the deconcentration and decartelization of the coal and steel industries "through to completion." This pledge was also reaffirmed by Chancellor Adenauer in a letter to Dr. James B. Conant, then U.S. High Commissioner for Germany (October 23, 1954). In that letter which attached to the "Protocol on the Termination of the Occupation Regime in the Federal Republic of Germany," Chancellor Adenauer assured the U.S. High Commissioner that the West German Government "was determined to maintain the anticartel policy hitherto pursued by it and to work toward effective and comprehensive protection of freedom of competition by a German law. In this effort, the Federal Government will also oppose all efforts to repeal or modify the Allied legislation which now prohibits restraints of competition and monopolies."

In our opinion, the pledge of Chancellor Adenauer on behalf of the West German Government and the relevant provisions in the Settlement Convention are in contradiction to paragraph 3 of article 9. It is clear that paragraph 3 enables the Germans to renege on their obligations by resorting to the powers of the Schuman plan high authority as a figleaf for these evasions.

It is astounding to us that U.S. and Allied negotiators should have permitted this obvious contradiction that was embodied in the Settlement Convention when, at the same time, the public received the impression that the Allied deconcentration and decartelization programs would be carried out both in letter and in spirit. In retrospect we now wonder whether the Senate which was called upon to approve the Settlement Convention, was specifically apprised of this contradiction. If U.S. and Allied negotiators were determined to carry out the deconcentration of German heavy industry, then how does the State Department explain the fact that it agreed to chapter I, article 9, paragraph 3, which, in effect, has the potentiality of nullifying much of the allied program for the deconcentration of German heavy industry?

Your letter would appear to imply that the reconcentrations in German heavy industry now taking place, stem from the fact that under article 66 of the ECSC Treaty, the high authority has the power to approve such concentrations. Persons conversant with the history of the U.S. program for the deconcentration and decartelization of German heavy industry know that reconcentration had been taking place well before the Schuman plan high authority was established. This is noted in the Bulletin for the European Community for Coal and Steel, April 1955, which reveals that the Allies had already permitted certain reconcentrations in German heavy industry and were therefore regarded by the high authority as a fait accompli.

In our letter of May 22, 1958, we submitted evidence supporting the contention that reconcentration had taken place for some time. In our magazine Prevent World War III, the society published articles disclosing that key American officials who were supposed to carry out the program of deconcentration, were unsympathetic toward it and by their attitude and actions helped to render it meaningless. We are enclosing herewith the Nos. 36, 37, and 38 issues of Prevent World War III which carry a serial study of the problem under the title "Was the Decartelization Program Sabotaged?" (See No. 36, pp. 31–35; No. 37, pp. 23–29; No. 38, pp. 25–31.) The above-mentioned study referred to the fact that the Ferguson committee, appointed by the U.S. Government to investigate the status of the deconcentration program, reported that "the U.S. occupation officials have failed to smash a single one of Germany's giant monopolies under a crackdown now 2 years old" (New York Times, Apr. 30, 1949).

In this connection, former U.S. High Commissioner for Germany, Gen. Lucius D. Clay, expressed his views on the deconcentration of the German steel industry to U.S. members of the Decartelization Branch: "A great many people believe in small business but it doesn't happen to be that that is a policy of our Government. * * * I would never go along with the idea of breaking up the steel companies into lots of companies." The former Chief of the U.S. Decartelization Branch in Germany, Mr. James Stewart Martin, wrote in his book "All Honorable Men," published in 1950, that General Clay had declared that the steel industries in Germany must be big enough to "live" in competition with the steel industries of other countries.

Also indicative of the fact that the power of the Schuman Plan High Authority cannot explain the reason why reconcentration is growing, is the reemergence of the "big three" banks of Germany (the Deutsche, Dresdner, and Commerz Banks). These banks were never under the jurisdiction of the Schuman Plan High Authority. They were supposed to be broken up because of their predatory record and monopolistic powers. Today they have regained their former status.

Insofar as the Krupp case is concerned, we should like to make the following observations:

1. The Krupp agreement specifically stated that Krupp would dispose of his ill-gotten iron and steel properties within a fixed period of time. If he is now permitted to purchase the Bochumer Verein, how can it be said that he has not violated the spirit of this agreement despite the technicality of article 66 of the Schuman Plan? It seems to us that it was the general public impression when Krupp agreed to dispose of his iron and steel properties that he would be prohibited from ever owning such properties again—otherwise, what was the purpose of the Krupp agreement in the first place?

2. As regards the purchase of the Bochumer Verein, we have provided the pertinent details in our previous letter showing how Krupp cloaked his activities so as to remain within the letter of the agreement. The facts show that the purchase of the Bochumer Verein was part and parcel of Krupp's plan to build up his iron and steel empire to even greater proportions than before the war.

We are aware of the legalism behind which German heavy industry, led by the Krupp interests, is evading its obligations. However, German heavy industry, with the sanction of the West German Government, has brazenly violated the spirit of the Allied deconcentration program. In the last analysis it is this aspect which should carry the most weight for it plainly reveals the simple fact that the Germans cannot be trusted.

This is not the only instance in the postwar period where the Germans have gone back on their word. We can cite a number of important examples including their original pledge not to enter into diplomatic relations with the Russians, and their pledge contained in the settlement convention to abide by the Allied program for the disposal of former enemy assets. This tendency to violate obligations and commitments has progressively sharpened. However, candor compels us to state that United States and Allied officials must share in the responsibility of this grave development. As noted in our previous letter, "If Krupp is permitted to regain his former power, then what becomes of the principles for which so much blood, sweat, and tears were shed during World War II?" As you know, these principles embraced the concept that Germany must become law-abiding both in spirit as well as in letter; that they must learn to carry out obligations assumed and that the sinews of her warmaking power including the huge concentrations of heavy industry must be curbed and whittled down. We believe that it is this concept that concerns all security minded Americans and that should not be sacrificed by resort to ambiguous legalisms.

Therefore, we must reaffirm our protest "against the continued reconcentration of

Germany's industrial war potential which will inevitably bring great harm to the American peoples and their Allies."

Very sincerely yours,

SOCIETY FOR THE PREVENTION OF WORLD WAR III, INC.,
ALBERT SIMARD, *Secretary.*
ISIDORE LIPSCHUTZ, *Treasurer.*

P.S.—Attached herewith is an Associated Press dispatch from London (June 9, 1957) which sheds some light on the dubious maneuverings of the West German Government in support of the Krupp interests.

[From the Cleveland (Ohio) Plain Dealer, June 10, 1957]

KRUPP HOLDS EDGE IN FIGHT OVER EMPIRE

LONDON, June 9.—A new international storm is blowing up around a coal and steel king who walked out of a German jail 6 years ago still one of Europe's richest men.

He is Alfried Krupp von Bohlen-Halbach, whose family name for generations has symbolized guns and war.

American troops arrested him in World War II. The Nuernberg war crimes court convicted him on charges of exploiting slave labor and plundering. He got a 12-year sentence, but left Laandsberg Prison in 1951 under a sweeping revision of war crimes sentences.

Today Alfried Krupp, 49, soft-spoken and courteous, is sole owner of Krupps. The company has book assets of $238 million, a yearly turnover of $700 million, a payroll for 90,000 workers and publicly unmeasured investments outside Germany.

TALKS COMING UP

The United States, Britain, and France are trying to force Krupp to sell his coal, steel, and iron empire.

All the tangled issues soon are going to be discussed—first among the Americans, British, and French and then between the three Allies and West Germany.

In the immediate postwar years, the Western Big Three set out to smash the power of Krupp and other big industrial combines which had helped to feed the German armed forces in two World Wars. They made Krupp promise never to return to the coal, steel, and iron industries in Germany.

As occupying powers, the Allies passed a law in 1953 providing for the breakup of all such groups. They set a 1958 deadline.

ADENAUER SMARTEST

Western officials say there is little doubt the Allies—left to themselves—would insist on keeping Krupp to his word. But the Western Powers had reckoned without Konrad Adenauer.

West Germany's shrewd old chancellor 4 months ago proposed that the law be scrapped. He argued that Krupp and other steel barons were finding it hard to get buyers in Germany.

Adenauer played his cards well. He refused to acknowledge the Allied law, leaving the Americans, British, and French to deal directly with Krupp.

As a result, some international lawyers doubt whether the agreement given by Krupp (an individual) to the Allies (three foreign powers) could be enforced in German courts.

The Aptuxcet Story

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. MARTIN. Mr. Speaker, a unique observance is taking place on September 5 and 6 in the town of Bourne, Mass., where I have my summer home and which is represented in the House by our colleague, Hon. HASTINGS KEITH.

The townspeople on these days will commemorate the establishment, in the year 1627, of the Aptuxcet Trading Post in the town of Bourne, on the banks of the Manamet River. It was here that the colonists of the Plimoth Plantation wrote and signed the first business contract in America, thus becoming the birthplace of American capitalism and free enterprise.

A replica of the trading post stands on the original foundations of the post. In 1627, an agreement was written setting up the trading post, by the colonists of the Plimoth Plantation. The written instrument gave certain of their number control of the trade, the purpose of which was to pay off the huge debt still owed to the London promoters of the *Mayflower* expedition, to transport more of their countrymen to Plimoth.

The observance on September 5 and 6 will be marked by a pageant at the post, depicting the historical events connected with it.

The significance of the event is that it was here that the system of free enterprise contracts had their beginning. The colonists built on a firm foundation. From this humble start the way of life established by these rugged settlers became the vehicle for the development of the economic strength which has made our country the greatest power in world history.

Cordell Hull Award

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release by the Committee for National Trade Policy announcing their sponsorship of the Cordell Hull Award. This award was inaugurated in 1955 in honor of outstanding contributions to U.S. foreign economic policy and in recognition of Cordell Hull's national leadership which was established in a career of more than half a century as Secretary of State and as a Member of both the U.S. Senate and House of Representatives and his historic sponsorship of the recriprocal trade agreements program. The decision to transfer the responsibility for this award from its original sponsor, the Committee on Foreign Trade Education, Inc., was made because of the vigor which the committee for a national trade policy had exhibited in presenting the facts on trade policy.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

NEW SPONSORS FOR CORDELL HULL AWARD

The Cordell Hull Award, established in 1955 in honor of outstanding contributions to U.S. foreign economic policy, is now to be sponsored by the Committee for a National Trade Policy, it was disclosed here today. The transfer of the award is being made, it was indicated, because the originating organization, the Committee on Foreign Trade Education, Inc., is discontinuing its activities.

The Hull Award was inaugurated with the permission of the Secretary's family shortly before his death in 1955. In presenting the award the Committee on Foreign Trade Education, Inc., sought to recognize the Secretary's "national leadership * * * great tradition of public service * * * established in a career of more than half a century as Secretary of State and as a Member of both the U.S. Senate and House of Representatives, and * * * his historic sponsorship of the reciprocal trade agreements program."

The first award honoring Secretary Hull was made in 1955 to the late Secretary of State's political protege, Senator ALBERT GORE, Democrat, of Tennessee. The next award winner was Paul G. Hoffman, former Marshall plan Administrator, and the 1957-58 award recipient, Clare Boothe Luce.

In accepting sponsoring of the award a spokesman for the Committee for a National Trade Policy expressed the committee's satisfaction that the continuity of the award will now be preserved and added the hope that the Committee for a National Trade Policy would be strengthened by the support of all the members of the Committee on Foreign Trade Education.

B. A. Rittersporn, Jr., long-time chairman of the Committee on Foreign Trade Education, Inc., said the officers of the organization had decided to transfer the award to the Committee for a National Trade Policy because of its "vigor in presenting the facts on trade policy to the public. The Committee for a National Trade Policy," he said, "has spoken out forcibly for a liberal trade policy in order to stimulate national prosperity and strengthen U.S. foreign policy." Mr. Rittersporn added: "The Committee on Foreign Trade Education has always been pleased to work with the Committee for a National Trade Policy; we are delighted now, as we conclude our work, that they are assuming the responsibility for the Cordell Hull Award and for continuing the tribute to Secretary Hull's great tradition of public service."

Sidney A. Swensrud, former chairman of the Gulf Oil Corp., is now the chairman of the Committee for a National Trade Policy, Charles P. Taft, general counsel, John W. Hight, executive director, and Mrs. Rachel S. Bell, legislative director.

Mr. Rittersporn headed the Committee on Foreign Trade Education from its inception late in 1953 to early in 1958, when he resigned to join the Washington, D.C., office of the European Community for Coal and Steel, and, later, to become a member of Governor Rockefeller's campaign organization. He is now a public relations counsel in New York and Washington.

In his statement Mr. Rittersporn hailed the 1958 officers of the trade education organization, Warren W. Dwyer, chairman, Norman W. Davis, secretary and treasurer, and Robert Baldwin and Gerard Palmer, vice chairmen. The extension last year of the reciprocal trade agreements legislation until June 1962, Mr. Rittersporn said, has been a major factor in the decision of the officers to conclude the committee's operation.

He charged, however, that "the 1958 extension contains so many loopholes and under-the-counter giveaways to the high tariff interests that it would be dead wrong to believe that the world's leading Nation is yet equipped to lead in developing world trade." For that reason, he said "the commitee's officer anticipated that members throughout the Nation will pitch in to help the Committee for a National Trade Policy win a trade policy that builds up—instead of tears down—our international security and our domestic prosperity."

The Committee on Foreign Trade Education, Inc., was formed in late 1953 by leaders of both the New York Young Republican and Young Democratic Clubs. It aimed to stir public interest in trade policy and to win popular support for a liberal trade program. In addition to Mr. Rittersporn, cofounders included Maureen Black, Ford Foundation staff member, Thomas L. Hughes, attorney, Maurice Rashbaum, Jr., advertising executive, Daniel F. Ruge, newly appointed director of the New York State Department of Commerce in Washington, D.C. and Robert W. Sweet, onetime assistant U.S. attorney in New York.

Mr. Rittersporn thanked all those who had joined the committee's bipartisan, volunteer drive and gave special praise to the directors of three of the committee's national chapters and affiliates, Mrs. Naomi D. Marshall, of New Orleans; Mr. Jerome Jacobson, of Washington, D.C.; and Mr. Edward S. Flynn, of Los Angeles, Calif. He also singled out some of the organization's New York leaders, Cora Lou Buffum, Peggy Fischer, Edward S. Early, Stephanie Edgel, David C. Hamilton, John Howatt, W. Byron Kantack, Marie Ryan Kearney, David C. Lane, Gwelda McPhee, Winthrop R. Munyan, and John F. Petty.

Public figures identified with the trade education committee as advisors and honorary members included: Senator Jacob K. Javits, Republican, of New York, Senator Harrison A. Williams, Jr., Democrat, of New Jersey, former Gov. Theodore R. McKeldin, Republican, of Maryland, Representative Frank E. Smith, Democrat, of Mississippi, the late Herman P. Eberharter, Democratic Congressman from Pennsylvania, and former Republican Congressmen, Robert W. Kean, of New Jersey, and Albert P. Morano, of Connecticut.

Others included Mr. Whitelaw Reid, former editor and publisher of the New York Herald Tribune; Col. Redington Fiske, editor of Export Trade; Dr. Isador Lubin, former industrial commissioner in New York State; Harry S. Radcliffe, executive vice president of the National Council of American Importers; Louis Harris, public opinion analyst; and Dr. Raymond Vernon, former director of the New York Metropolitan Region Study.

Now Who'll Buy Savings Bonds?

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. BETTS. Mr. Speaker, for several weeks the press has given prominent attention to the President's request to remove interest rates on E and H bonds as well as long-term issues. Most of the comment has criticized Congress severely for its failure to act. One of the most telling arguments in favor of the President's proposal was a letter from Prof. Cyril A. Zebot of Georgetown University printed in the New York Times of August 25, 1959. The last paragraph of Professor Zebot's letter reads as follows:

Congress must find a way to correct the dangerous monetary situation before it adjourns. The political leadership that permitted the hasty House committee decision must be made aware of the fact that general economic literacy is not so low that people will fail to detect the source of the grave consequences that will follow if the interest rate ceiling on long-term Government bonds is not removed now.

Another sound appraisal of the situation appeared in an editorial in the Christian Science Monitor of August 20, 1959, as follows:

NOW WHO'LL BUY SAVINGS BONDS?

The bonds of a country's government ought to form one of the most attractive media for the savings of its citizens. For 12 months Americans have been cashing in more than they have been buying of the series E and series H savings bonds which trace their lineage back through two World Wars. In July the excess of cash-ins over purchases surpassed a quarter of a billion dollars.

If a commercial corporation found its securities losing popularity at that rate it wold consider what it could do to make them more attractive, either by increasing the rate of return or improving its credit or both. It is time Congress should consider these possibilities with reference to securities of the United States.

Yet, what has happened? The House Ways and Means Committee by vote of 14 of its 15 Democratic members has tabled the bill carrying the authority requested by President Eisenhower and the Treasury to pay higher interest rates on Government bonds of 5-year or longer terms, including savings bonds. This action is fiscal irresponsibility of a blatant sort. One of its worst features is that, unless reversed, it postpones for a year or more the possibility of making Government savings bonds attractive to citizens who should be taking a financial as well as a civic interest in the affairs of their Nation.

Even with an increase from 3¼ to 3¾ percent in interest rates such as the administration proposes, it would take some time to curb the recent movement away from Government bonds on the part of individual savers and of institutions such as banks and insurance companies.

For that movement has been engendered not only by concern over rate of yield on an investment but still more by concern for safety of the principal—not in terms of dollars but in terms of buying power. Myriad investors, large and small, have been looking for a hedge against inflation, and many of them turning to the stock market.

One irony of the situation is that this enlightenment as to the inroads of inflation may have come at the end of the inflationary spiral and at a point where for once in a generation bonds might hold their value besides paying a reasonable yield. A large number of economists now believe that consumer prices for the next year or two may remain stable—in other words, that inflation may be checked. If the boon of a decade of peace can be added to rising world productivity, this could be a very good period for citizens to own bonds—and for governments to encourage their ownership.

Hosting Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. SPARKMAN. Mr. President, recently the Dothan Eagle, of Dothan, Ala., published a very interesting editorial entitled "Hosting Mr. Khrushchev." Some very good ideas are expressed in the editorial, which I commend to the reading of all Senators. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOSTING MR. KHRUSHCHEV

If Americans heed the requests of President Eisenhower and Vice President NIXON they can put on their best bib and tucker for the forthcoming visit of Nikita Khrushchev. Both have spoken forthrightly in a plea that courtesy be shown the Soviet leader and if the forthcoming exchange of visits between him and Mr. Eisenhower is to have any weight as a warming influence in the cold war, it would be well that he be politely received.

Without fawning or kow-towing, due courtesy can be shown Mr. Khrushchev, particularly in view of the Russian receptions given Mr. NIXON. He can be given a polite listening and he can speak his piece, as did Mr. NIXON on several occasions, while having a look-see at America that may do him good.

Memory is not too short to recall the anger expressed widely in the United States by individuals and press when Mr. NIXON was spat upon and pushed around by South American hoodlums on his tour of good will.

Neither is the recollection gone of some slightly shabby treatment accorded Mr. Khrushchev's deputy, Mikoyan, who visited here last January and was the target for some perhaps understandable jeering from some Hungarian refugees. But Mikoyan also was the recipient of some eggs in Chicago and San Francisco and this is hardly understandable conduct from democratic and sporting Americans who are supposed to be the epitome of tolerance.

Even more recently the mayor of Detroit snubbed Soviet Deputy Premier Kozlov and refused to welcome him there.

These events were sharply in contrast to the conduct of the Russians during the tour of eight American Governors as they called on the heads of Soviet Republic States and at much variance with Mr. NIXON'S reception. It might be pointed out here that while Detroit's mayor ignored Kozlov, Khrushchev unexpectedly invited our Vice President to his home for an unscheduled overnight visit.

Concerning the Khrushchev visit here, there already is a policy change by high Government officials over harsh statements about the Russian boss. This was evidenced last week in the notable change in text of a speech by no less a distinguished official than Army Secretary Brucker, and later by the change in text of a speech of Gen. Arthur Trudeau, Chief of Army's Research and Development.

Secretary Brucker's prepared speech had belabored Khrushchev for "blatant Soviet threats of nuclear devastation" and for recent "tough talk" to American visitors (the Governors) to Moscow. Instead, the Secretary substituted remarks about the friendly reception for Mr. NIXON which he said "promises a better era of understanding."

General Trudeau's address was changed to eliminate some harsh quotations from Khrushchev himself.

All of this, of course, including the Eisenhower-Nixon courtesy pleas, is no attempt to be buddy-buddy with the Soviet's biggest figure or to play footsie-footsie to the extent of overdoing politeness.

It is, more to the point, to show the Russians that all of our talk of peace and an end to the cold war is not empty nothingness or sweetness wasted on the desert air.

Let Mr. Khrushchev come, see and talk, as all do under our vaunted freedom of speech.

We can be as polite as a little dog in a meat house, yet be as frank and free as Voltaire when he said:

"I disapprove of what you say but I will defend to the death your right to say it."

Clara Barton: Beloved Daughter of the Third Massachusetts District

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks I include therein an outstanding and most interesting article entitled "Clara Barton: Angel of the Battlefield" which outlines the remarkable career and contributions of the illustrious founder of the Red Cross who was born in Oxford, Mass., in my district on Christmas Day, 1821.

This article was very ably and appropriately written for the centennial edition of the Webster Times, a celebrated and splendid newspaper in my district. It is the almost incredible story of a gifted woman inspired to help the poor, the lowly, and the afflicted.

The great, humane organization she founded is an imperishable monument to Clara Barton. In the hearts of the people, and in the history of the Nation and the world, the name of this saintly lady will be remembered forever.

CLARA BARTON: "ANGEL OF THE BATTLEFIELD"—AMERICAN RED CROSS FOUNDER BORN IN OXFORD DECEMBER 25, 1821

(America's foremost woman—the "Angel of the Battlefield"—was born in Oxford, Worcester County, Mass., on Christmas Day, 1821. For half a century she was the world's leading figure in relieving the suffering of the thousands who fought on the fields of battle. She became the friend and counselor of Abraham Lincoln, of Ulysses S. Grant, of James A. Garfield, of Hayes, Harrison, Cleveland, and McKinley.)

From the crowned heads of Europe she received homage that royalty might envy. When, according to the custom, she bent to kiss the hand of the CZAR of Russia, he quickly raised his hand and said, "Nay, Miss Barton, not that from you."

Clara Barton was perhaps the most perfect incarnation of mercy that the modern world has known, and the founder of the greatest humanitarian movement in the history of nations. Preceded by the scarlet cross, Clara Barton went to Washington during the Civil War and there—the first woman to render aid to the Union soldiers—visited the hospitals and brought relief to the wounded. Day after day she went down to the wharves, where, with the mud and gore of Chickahominy still clinging to them, were brought the boys in blue and in gray.

Then came the eventful Sunday in September 1862, when she loaded an army wagon with supplies and started out alone in the wake of General McClellan's army. She caught up with McClellan at Antietam and took her place in the swift train of artillery. At a large barn near a cornfield close to the battleline she made her headquarters, where the Confederate shells fell thick and fast, and the cornfield was filled with wounded. The army surgeons ran out of dressings, and endeavored to make cornhusks do. It was then that Miss Barton opened her supply case and brought out what was needed. "I have everything," was her quiet remark.

She rounded up 25 men who had come to the rear with the wounded and set them to work administering restoratives. When her bread and broth were spent, she used a liquor supply that she carried. Darkness fell over the bloody field of battle, and still men remained who had not been relieved. "Five hundred men," cried the surgeon general, "will die before daybreak unless they have attention, and I have no lights."

"Get up, Doctor," said Miss Barton, "I have brought plenty of lanterns this time. The men will be here in a few minutes to light the house. You will have abundance of light and all the help you want." And she led him to the door and showed him how she had arranged lanterns for the work that lay before them. So the candles of her love and pity lighted the blood-stained fields of Antietam and Fredericksburg. It has been said that she bore a charmed life, for though her clothing was often grazed, she was never wounded. At the close of the Civil War she organized the bureau to locate missing men or find their burial place.

At the outbreak of the Franco-Prussian War, Miss Barton went abroad where she aided in caring for the wounded, and where afterwards she received many decorations and recognition for her service. The Grand Duke and Duchess of Baden, the Queens of Serbia, Italy and England, the Empress of Germany, and the Prince of Jerusalem all joined in their thanks for her devotion.

During the summer of 1877, Miss Barton endeavored to get the Red Cross convention signed by the Government, but it was not until 1881 that she succeeded. In May of that year the American Association of the Red Cross was formed, and President Garfield made her president for life. She continued in this office until 1904, when President Roosevelt conceived the idea of making the Red Cross a military branch of the Government. It was then that Miss Barton resigned.

In 1892 she sent representatives to Russia, where, following her experiences in alleviating suffering during the Johnstown flood, she helped to relieve the famine. In 1896 she aided Armenia after Turkish ravages. After the battle of Santiago was fought in 1898 the entire American Navy made way for her relief ship. In command of the first ship to enter the harbor after the capture of Santiago, Miss Barton entered the town with food and other necessities. Her last work of national importance was in connection with the Galveston flood of 1900.

Miss Barton lived to be 90 years old. From her home overlooking the fair Potomac she passed her last years a shadowy figure that moved through the gardens of Glen Echo, a pitying sweetness in her eyes, and a frequent word of forgiveness to the Nation that had taken from her the staff that had borne aloft, for more than a half century, the banner of the Red Cross.

A slight stoop was evident in the shoulders that had bent over so many sickbeds, but the fine dark hair, save for silver lights above the ears, remained dark to the end.

Miss Barton died at Glen Echo, April 12, 1912. There was in that year considerable dissatisfaction that her remains were not interred in the National Cemetery, but the town in which she was born, received the body.

Today, in the cemetery at Oxford, stands a monument of "red" in the form of a cross that marks the grave of the town's most distinguished citizen. A diabetic camp, named for her deeds of mercy, is a tribute to this great humanitarian.

Her birthplace is a national shrine, visited by many thousands.

The town's greatest citizen, Oxford may well be proud of being the birthplace of Clara Barton, founder of the American Red Cross.

Response to Cosponsorship of Senate Joint Resolution 127

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILEY. Mr. President, a short time ago it was my pleasure to join with some of my colleagues in sponsoring legislation which is intended to help relieve the serious shortage, now existing in this country, of specially trained teachers of the deaf and speech pathologists and audiologists.

From correspondence received from educational institutions and individuals in my State, as well as from all over the Nation, it had become increasingly evident that there is a vital need for legislation which will help to subsidize teachers in training for this noteworthy profession. For example, the chairman of the Department of Exceptional Education of the University of Wisconsin at Milwaukee, Miss Alice Streng, informed me that that institution has been training teachers of the deaf since 1913, with an average class size of eight students, but—although an active recruiting campaign had been conducted among the student body and high schools in the area—the prospects for the senior class this next year consist of only two students. Miss Streng had attributed this alarming state of affairs to several factors—the primary one being that teachers of deaf children are not usually compensated beyond what an ordinary teacher earns, even though working with deaf children is an extremely difficult and exacting job. In addition, the shortage of teachers in general has drawn students away from the specialties; and, because of limited contacts with deaf children in the population, most students are not aware of this professional field.

Statistics prove that Wisconsin is not alone in its shortage of teachers of the deaf and speech pathologists and audiologists. It has been reliably estimated that there are some 8 million Americans of all ages who suffer from speech or hearing impairments of such a nature so as to seriously handicap them in their efforts to become self-supporting, self-sufficient taxpaying members of their communities. Included in this figure are some 30,000 deaf children of school age in the United States—an increase in 1959 of more than 1,200—who require the training of some 500 teachers of the deaf annually. Despite this requirement, there were fewer than 150 such teachers

in training over the past academic year. In addition, although it is estimated that some 20,000 speech pathologists and audiologists are needed to properly diagnose, train, and rehabilitate these 8 million handicapped people, there are at present only some 2,000 certified specialists in this field.

It is expected, therefore, that—if enacted—Senate Joint Resolution 127 will assist in alleviating this need by establishing and conducting a program of grants-in-aid to public and nonprofit institutions which are engaged in this type of training.

Recently, I have been pleased to receive many letters from all over the country expressing appreciation for my cosponsorship of Senate Joint Resolution 127; among them the American Speech and Hearing Association, the Alexander Graham Bell Association for the Deaf, Inc., and the Clarke School for the Deaf. I ask unanimous consent to have some of these letters printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AMERICAN SPEECH & HEARING ASSOCIATION,
Washington, D.C., August 31, 1959.

The Honorable ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: The American Speech & Hearing Association wishes to take this opportunity to express its appreciation to you for cosponsoring Senate Joint Resolution 127 with Senator HILL.

Your understanding of the tremendous need for speech pathologists, audiologists, and classroom teachers of the deaf is most encouraging to all of us actively engaged in work with children and adults severely handicapped by speech or hearing disabilities. If you feel we may provide you with information about the speech and hearing field and the needs in this area, please let me know. The American Speech & Hearing Association, the national professional association for speech, pathologists and audiologists, would like to be as helpful as possible in the effort to secure passage of this extremely desirable legislation.

Yours very truly,
KENNETH O. JOHNSON, Ph. D.,
Executive Secretary.

ALEXANDER GRAHAM BELL ASSOCIATION FOR THE DEAF, INC.,
Washington, D.C., August 24, 1959.

The Honorable ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR WILEY: On behalf of the 1,200 members of the parents' section of the Alexander Graham Bell Association for the Deaf, I would like to thank you for the work you have done on the preparation and introduction of Senate Joint Resolution 127.

As parents of deaf children we are grateful for the effort you have made to insure their education and help them grow up to be productive citizens.

Sincerely yours,
ROBERT H. COLE,
President, Parents' Section.

THE CLARKE SCHOOL FOR THE DEAF,
Northampton, Mass., August 14, 1959.

The Honorable ALEXANDER WILEY,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: All of us associated with Clarke School wish to add our expression of appreciation to those of the national organizations concerned with the education of deaf children, as well as the schools for the deaf and the parents of deaf children, to you for your active interest in our work. Senate Joint Resolution 127, which you cosponsored, is a significant step in the history of the education of deaf children in this country.

We appreciate the time and effort which you have devoted to this cause, and all of the courtesies which you have extended to Mr. Evan V. Johnston, our director of development.

Undoubtedly you will hear from a good many others who are interested in deaf children across the country. The need for trained classroom teachers of deaf children is urgent, and we in the profession will bend every effort to assist you in urging the passage of the resolution.

Sincerely yours,
GEORGE T. PRATT, *Principal.*

THE CLARKE SCHOOL FOR THE DEAF,
Northampton, Mass., August 14, 1959.

The Honorable ALEXANDER WILEY,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you very much for your thoughtful letter and a copy of Senate Joint Resolution 127, along with the introductory statement taken from the CONGRESSIONAL RECORD relative to Senator HILL's comments on this legislation.

Please accept the sincere thanks of the many people in the profession of education for the deaf, and especially those groups that helped promote this proposal. The main organizations that have been working together to obtain this legislation are the Conference of Executives of American Schools for the Deaf, the Convention of American Instructors of the Deaf, the Alexander Graham Bell Association for the Deaf; and for title II, the American Speech and Hearing Association.

Passage of this resolution will give a tremendous boost to education for the deaf throughout the world. Your interest has been deeply appreciated, and you may rest assured that we will lend our full facilities to the Congress in order to obtain a clear picture of the critical needs, and in order to aid in passage of Senate Joint Resolution 127.

Sincerely yours,
EVAN V. JOHNSTON,
Director of Development.

We Are Being Sheared

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HENDERSON. Mr. Speaker in recent days on the floor of the House, reference has been made to the plight of several industries that are being adversely affected by this Nation's trade policies. The victims of this program are increasing daily. Those of us who have proclaimed effects of calculated destruction to the pottery, ceramic tile, handmade glass, and similar industries during the past 5 years, have been greeted with courtesy, but also with indifference, shrugged shoulders and knowing looks, by members who felt their industries were secure, or even being benefitted by our suicidal trade program. One of these days, more of my colleagues will be awakened to the realization that they have been feasting on a poisonous fare, a delight to the palate, but death to the diner.

The trade balance has tipped. Dollars and gold are pouring out for foreign goods while the products of the American workman are staying home, unwanted by other nations of the world, whose only interest is in selling to Uncle Sam.

The Zanesville (Ohio) Times Recorder in an editorial of August 28, 1959, quoted the apt description of Senator SCHOEPPEL who said:

> We are making the United States the worst place in the world to buy and the best place in the world to sell in. If we continue we will have full employment in Milan and Manila and increasing unemployment in Topeka and Detroit.

It seems impossible that a deliberative, representative legislative body could have embarked upon such a program to weaken our Nation, but the record speaks for itself. Markets for our goods are dwindling, while we destroy our domestic market by opening the flood gates of trade to foreign nations where a workman receives a pittance to compete with the wage earners of southeastern Ohio.

It is time for us to wake up to the facts of economic life and national survival. We are deliberately trading our dollars for cheap junk and trash that breaks, fades, ravels, cracks, and crumbles.

The Times Recorder editorial which contained the quotation of the distinguished Senator is in its entirety a well-reasoned, frank appraisal of our situation. I include it at the conclusion of my remarks:

WE ARE BEING SHEARED

In the face of the rising tide of imports that, encouraged by our do-gooding reciprocal trade programs, have already brought U.S. imports dangerously above exports, some public figures in Washington are beginning to realize that the survival of one American industry after another is at stake.

Senator ANDREW SCHOEPPEL, Kansas Republican, now fears for our much bragged about standard of living and says: "We are making the United States the worst place in the world to buy and the best place in the world to sell in. If we continue we will have full employment in Milan and Manila and increasing unemployment in Topeka and Detroit."

With similar rumbles from solons in north, south, east, and west, Congress may be sufficiently alarmed by next January to consider the bleak prospect we have created through the export of our industrial know-how, our giveaway programs and GATT. But American wool people, notably the American Sheep Producers Council, backed by the processors and weavers, decided some time ago to pull the industry up by its own boot-straps rather than waiting on our lawmakers. Organized as Woolens and Worsteds of America, Inc., wool people—from the grass country to the mills—are awakening the public not only to the unique and inherent virtues of American-made woolen fabrics but to the importance of this far-reaching industry to our national economy and national defense.

In September, which is American Woolen Month, we shall be increasingly reminded that these natural fibers are still unequaled in withstanding both summer's heat and winter's blast, in providing warmth without weight, elasticity that insures long wear and

good appearance; qualities that are enhanced by its resistance to wrinkles and its nonflammability—and the recent developments of mothproofing, crease-retention, and washability. And we will realize, too, that American-made woolens are today the finest in the world.

In considering the wool robes of the Bedouins which protect these rovers from the desert's blazing sun and its shivering nights, we should also consider the plight of an army in the field, in fair weather and foul, without woolen uniforms. And without woolgrowers and woolen mills of our own, we would be at the mercy of nations that might, or might not, share with us—even if we were able to bring these essential fabrics to our shores.

When we see the sheep-shearing displays that are to be a feature of American Woolen Month, let us consider well that, in the international senses, we are the sheep. Foreign mills with wage scales of one-third to one-tenth of our own are doing their very best to denude us. Those of us who care about employment, prosperity, and safety for this country will ask questions before we buy wool products. Where does the wool come from? Where was it loomed? Until Congress gets around to protecting this essential industry, Americans must protect it—by buying American woolens.

Let Khrushchev Call Off the Soviet Union's Propaganda Campaign Against Iran

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. SPARKMAN. Mr. President, all of us have noted, in connection with the prospective visit of the Soviet Premier, that Mr. Khrushchev states that he desires a lessening of world tensions. In addition, he and other Soviet leaders have often asserted that the U.S.S.R. does not interfere in the internal affairs of other countries. If Mr. Khrushchev really means what he says, he might call off the Soviet Union's abusive and unwarranted propaganda campaign against Iran, its small neighbor. Apparently, Iran's only sin in Soviet eyes is her friendship with the United States.

Mr. Roscoe Drummond of the New York Herald Tribune has pointed up this situation in his articles of August 24 and August 19.

Therefore, Mr. President, I ask unanimous consent that the articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Aug. 19, 1959]

REPORTS ARE ENCOURAGING FROM COLD WAR'S FRONTS

(By Roscoe Drummond)

It is a good idea to take a clear-eyed look occasionally at the big question: How fares the cold war?

To answer this question you have to ask others. Are the Communists continuing to make friends and influence people? Are they even continuing to make enemies and influence people? Is their power and is their prestige growing—or lessening? Is resistance to communism strengthening itself? Is U.S. policy beginning to show some significant dividends?

We need to avoid being wishful, and sometimes today's gain turns out to be tomorrow's loss. But the other extreme also needs to be avoided—a kind of whipped-up pessimism that everything is falling apart under Communist pressure and that nothing the United States does ever works.

The fact is that on the broad fronts of the cold war the evidence justifies two encouraging reports:

1. In Europe the Soviet Union has suffered several stebacks in recent weeks.

2. In non-Communist Asia the tide is visibly turning against communism and the capacity and will to resist Communist subversion is increasing.

What has Moscow most been trying to accomplish in Europe this year? Primarily to keep any NATO country from accepting American nuclear weapons. It blandly argued that Western Europe can better protect itself if only Russia has nuclear weapons. Then the Kremlin rattled its rockets at Italy, Greece, and Turkey and fired off notes and threats that they must not receive nuclear weapons from the United States. These countries refused to be intimidated and their answer was that "we'll decide what's best for our defense."

For months now the Kremlin has been directing a massive and abusive propaganda campaign against Iran, seeking to force its Government to break its ties with the West—or else. The sturdy Iranians refuse to yield.

Premier Khrushchev found the Scandinavians so unresponsive to his bill of goods that he had to call off his scheduled month-long trip to Norway, Sweden, and Denmark. And the 100,000 Poles who cheered and beflowered the Nixons weren't cheering their own unwanted Communist leaders nor the Kremlin's.

In Asia from Indonesia to India the neutralist nations are becoming less neutral to communism all the time. President Sukarno has ejected the Communists in his Cabinet, as has the new government in Ceylon. Nearly all the free regimes in Asia are achieving new levels of stability and economic growth.

Washington officials are much encouraged by these developments, and the validity of their appraisal has new confirmation in the reports which Ernest K. Lindley of Newsweek has brought back from his 3-month survey from Lebanon to Korea. He is not one given to overstatement or lightheaded optimism. He writes:

"In Asia the tide has turned in our favor. The appeal, influence, and prestige of communism are waning."

There are, of course, some very considerable reasons; such as Red China's bald aggression against Tibet, the brutal regimentation of the communes which has alienated many of the overseas Chinese, the firm and successful stand against the Communist effort to take the offshore islands near Formosa last year, the gross violation of democratic institutions by the Communists in Kerala.

But there are other reasons which have contributed to turning the tide. American economic aid has helped. More Asians are coming to see that the SEATO military alliance is a deterrent and shield against aggression. Our refusal to withdraw from the offshore islands in the face of Communist fire heartened all the free Asian governments.

Obviously this is no time to weaken or alter U.S. policies, including economic aid and nonadmission of Red China to the U.N., who helped to bring about these results.

[From the Washington Post, Aug. 24, 1959]

ADVICE FOR MR. K.

(By Roscoe Drummond)

HE COULD IMPROVE THE CLIMATE HERE

There is no doubt that Premier Khrushchev wants his visit to the United States to be harmonious. To that end, from the very day the exchange of visits was announced, the Kremlin called off its more abusive propaganda attacks directed against America and Americans.

There is criticism on Radio Moscow, but the rough language of the past is now muted and sometimes the Soviet press actually speaks a good word about the American exhibition.

This is all very nice, but it doesn't mean much. A temporary interruption in the flow of anti-American propaganda is not going to improve the climate for Mr. Khushchev's trip a very great deal—if at all. I wonder if Mr. Khrushchev would like to know how really to improve the climate? What counts is what is done, not what is said or left unsaid, and I can think of three things the Soviet Premier could do to guarantee a courteous, responsive, and hopeful reception in the United States.

They are these:

The matter of Iran—Here is an innocent, harmless, brave country bordering on the Soviet Union which is certainly no military threat to anybody. In 1946 and 1947 Moscow sought to take part of Iran by setting up a separate Communist state in the province of Azerbaijan supported by Soviet troops which then refused to leave after World War II.

Because of the continuing Soviet threat, Iran joined the defensive Baghdad Pact and strengthened its ties with the United States and the West.

Since the war Soviet policy toward Iran has alternated between honeyed words and bristling threats. For a year now it has been using the bristling-threat tactic. Moscow wants to force Iran out of the Baghdad Pact and to make it sever its ties with the United States. It wants Iran neutral, isolated, and under its protective arm.

Since January of 1959 Radio Moscow in its Persian language broadcasts has been sharply critical of Iran, vilifying personally the Shah and inviting the violent overthrow of the Iranian Government. It has done more. It has set up a clandestine radio in Soviet territory claiming to be the national voice of Iran and attempting openly to incite to revolt. On May 23, it pleaded: "Patriotic Iranians, crusade against the plunderers of Iran." On July 2, it urged: "Dear compatriots, crusade against the detested regime of the Shah."

If Mr. Khrushchev wants to improve the climate for his American visit, he could call off Moscow's abusive campaign against Iran.

The matter of the American fliers—on June 27, 1958, Soviet pilots shot down an unarmed American transport which had lost its way a few miles off its course over the Soviet-Armenian frontier. We have in our possession and we have given to the Soviet Government the complete earwitness of what happened. It is a continuous tape recording of the conversation of the Soviet pilots which literally reveals their words and Russian voices telling each other that they had spotted the lost U.S. plane, that they recognized it as an unarmed transport, that they agreed which should attack first and which should finish it off. There were 17 Americans in the plane. The Soviets have turned over six of the bodies. They claimed the plane crashed by accident, that they know nothing of the other 11.

If Mr. Khrushchev wants to improve the climate for his U.S. visit, he could provide an informative and frank report on the missing 11 U.S. fliers.

The matter of Laos—We believe that the Soviet Union is aiding and abetting the Chinese and Vietnamese Communist aggression against the independent and non-Communist state of Laos.

If Mr. Khrushchev wants to improve the climate for his American visit, he could use his influence with his Communist colleagues to call off the attack and if he is unable to succeed and wants to prove that he tried, he can announce that he will not veto U.N. Security Council action to restore peace.

Aptuxcet: Birthplace of American Capitalism and Free Enterprise

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. KEITH. Mr. Speaker, in the year 1627 the Aptuxcet Trading Post was established in what is now the town of Bourne, Mass., on the banks of the Manamet River, later to become part of the Cape Cod Canal. The post, a replica of which stands on the original foundations, was the birthplace of American capitalism and free enterprise.

On September 5 and 6 the town of Bourne will celebrate its 75th anniversary. I regard as timely the inclusion in that celebration of a pageant depicting historical events connected with the Aptuxcet Trading Post, and welcome it as an opportunity of acquainting my colleagues in the Congress with the significant role played by the post in the establishment of the American capitalistic system and free enterprise.

Mr. Speaker, with leave to extend my remarks in the RECORD, I include the following pertinent information, provided by sponsors of the Aptuxcet Pageant, 1959: Bourne Historical Society, Old Colony Union Women's Club of Bourne, and Buzzards Bay Chamber of Commerce, as written by Mrs. Elinor D. Kemp, chairman of the Aptuxcet Pageant Committee:

The agreement setting up the Aptuxcet Trading Post and giving certain of their number control of the trade there, was written and signed by the colonists of Plimoth Plantation at the plantation, 20 miles distant. Its purpose was to pay off the huge debt still owed to the London backers of the Mayflower expedition, to transport more of their brethren to Plimoth, and to bring profit to the colony.

This agreement was the first business contract drawn up and signed in America and establishes Aptuxcet's claim as the birthplace of American capitalism.

In Aptuxcet's organization and in the reasons that brought it into being lie the basic concepts of that which is typical of our present-day American capitalistic system. The venture was undertaken, through free and democratic process, by people with faith in God and an unswerving devotion to obligations at home and abroad.

Thus, the Aptuxcet Trading Post, as a symbol of American capitalism, can be a powerful anti-Communist weapon. The methods and motives of its founders are the antithesis of everything inherent in Soviet communism. Where American capitalism was founded on faith, freedom, and honor, Soviet communism is dedicated to atheism, enslavement, international deceit, and Communist world domination by whatever means will serve.

Communism seeks the destruction of our capitalistic system by use of the "big lie." In the Aptuxcet story we have the "big truth." American capitalism, which has brought abundance and enrichment to our society, and which we have shared freely with the world, was from its earliest beginnings firmly rooted in moral principles.

Mr. Speaker, I would like also to include in the RECORD a special message from Richard Cardinal Cushing, archbishop of Boston, sent to the town of Bourne in honor of this event:

I am very pleased to hear that the town of Bourne is this year celebrating the diamond jubilee of its foundation. The little towns of Massachusetts have always been model communities of family living where the finest qualities of religion and patriotism have blended to give us the ablest of men and most loyal of citizens.

Bourne has a special distinction in having within its borders the old Pilgrim Trading Post in Aptuxcet where we can say that the world of business began in America. When Governor Bradford had drawn up an agreement with a group of colonists to regulate the trading in furs, lumber, and the rest, he could not have foreseen the great economic empire which would one day be America. At the same time, in those modest beginnings, he underscored the lasting principles which should mark every business enterprise—honesty, fair dealing with labor and mutual confidence.

Many years have passed since 1627 and there have been many changes in human life and living but what was begun at Aptuxcet was well founded, and as long as America continues to honor the old virtues, we will have a Nation, not just economically strong, but what is more important, morally strong as well.

My blessings and good wishes to the citizens of Bourne on their happy anniversary. May God watch over them always.

Mr. Speaker, from the correspondence of Governor Bradford, and from his history "Of Plimouth Plantation," it has been found that this trading post not only played a most vital part in the financial struggles of the early settlers, but appears to have been what truthfully may be called the cradle of American commerce.

The Bourne Historical Society, which owns the ancient site, believing that every opportunity should be embraced to preserve landmarks of our earliest history as an aid to inspiring future Americans with gratitude to the founders of the Nation, has, with the support of the General Society of Mayflower Descendants and many friendly citizens, erected on the original foundations a permanent replica of the old buildings as a memorial to the early traders who, by their tenacity of high purpose, here blazed a definite and successful beginning of the trail of the Nation's commerce.

I feel privileged, Mr. Speaker, to be the Representative in Congress of this most important town, with its rich heritage, and of the people there perpetuating the characteristics of the early 17th century pioneers to whom at this time we pay honor.

Rabbi Robert I. Kahn, of Houston, Tex., Chosen as National Chaplain of American Legion

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. JOHNSON of Texas. Mr. President, on August 27, I had the pleasure and privilege of addressing the 41st National Convention of the American Legion, at Minneapolis, Minn. On the previous day, the Legion chose as its new national chaplain, Rabbi Robert I. Kahn, of Houston, Tex.

Mr. President, the Lone Star State is proud of this honor that has been bestowed upon Rabbi Kahn, for he is indeed a distinguished man of faith. Rabbi Kahn is known in Texas for his intelligence, his character and capacity for leadership, and his warm sensitivity. I am delighted that the American Legion has made this choice.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Legion Chooses Texas Rabbi To Be Chaplain," written by Willmar Thorkelson, and published in the Minneapolis Star of August 27, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEGION CHOOSES TEXAS RABBI TO BE CHAPLAIN

(By Willmar Thorkelson)

A tall Texas rabbi whose parents and brother live in Minneapolis was elected today as new national chaplain of the American Legion.

Dr. Robert I. Kahn, 48, for 15 years rabbi of Congregation Emanu-El in Houston, Tex., is the third Jewish clergyman in the 40-year history of the Legion to serve as its chaplain.

He succeeds Msgr. John J. Twiss, pastor of St. Peter's Catholic Church in Lowell, Mass., who has served during the past year.

Rabbi Kahn is son of Mr. and Mrs. Morris L. Kahn, 3908 South Sheridan Avenue, and a brother of Howard S. Kahn, 5133 South Oliver Avenue, former Minneapolis Housing and Redevelopment Commissioner and unsuccessful candidate for the Minneapolis School Board in the June election.

On the basis of his Army experience, Rabbi Kahn said that he didn't expect his being a non-Christian would be a handicap in serving as Legion chaplain.

"When I was in the Army," he explained, "I was rabbi to the Jewish soldiers but chaplain to all men of the outfit. That's what I think I'll be in the Legion."

He noted that in many of its public functions, the Legion has developed a trio approach and has clergy representing the three major faiths—Protestant, Roman Catholic, and Jewish.

Asked if he had seen any results of the Legion's "Back to God" movement, Rabbi Kahn observed that they had been more in quality than in quantity.

He said he referred to the quality of the services at Legion conventions, the response to Legion telecasts and the feeling among legionnaires that the "Back to God" effort was not empty piety, but honest recognition that religion plays an important role in all of life.

The rabbi was endorsed for national chaplain by the Legion's Texas department which said he had brought it "the very best in spiritual guidance" during his term as department chaplain.

A rabbi of the reformed or liberal wing of American Judaism, Dr. Kahn was born in Des Moines, Iowa, in 1910.

He received his A.B. degree from the University of Cincinnati, Ohio, in 1932, and his rabbinical degree from Hebrew Union College, Cincinnati, in 1935.

He earned a doctor of Hebrew letters degree from the latter college in 1950. His thesis was on "Anglo-Jewish Preaching in the 19th Century."

Rabbi Kahn began his career as a clergyman at Congregation Beth Israel, Houston, in 1935.

He served in the Army chaplains' corps from 1940 to 1945, spending 2 years overseas with combat troops of the Sixth Army.

During this time, he conducted services in New Guinea and the Philippines at more than a dozen different island installations. He was a captain when separated from service. He joined the Legion a month after leaving the Army.

He was elected rabbi of Congregation Emanu-El, then a new congregation, while still overseas. During his rabbinate, the congregation has grown from 200 to more than 1,100 families and has built a new temple.

Dr. Kahn is married to the former Rozelle Rosenthal of Dallas, Tex. They have three children.

The Visiting Fireman Problem

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal on the forthcoming visit of Premier Khrushchev:

THE UNSPOKEN RISK

In his speech to the American Legion convention, Vice President NIXON gave the clearest official explanation so far of a matter that puzzles and disturbs many Americans—why the administration decided to invite Soviet Premier Khrushchev to this country.

What Mr. NIXON said, it seems to us, adds up to a responsible and dignified answer to that question. And if the U.S. can only stick to the approach defined by Mr. NIXON once the Big Two talks get going, then there need be little fear of the outcome.

Here is how Mr. NIXON summed up the present administration attitude:

"It would be naive and wishful thinking to assume that the visit * * * will result in any basic change in the Communist objective of world domination or their adherence to policies designed to achieve that goal. * * * Everything (Khrushchev) sees in the United States will be seen through Communist eyes and the picture will be distorted or magnified. * * *

"What useful purpose, then, will this visit serve? Putting it in its simplest terms, while understanding alone will not bring peace, misunderstanding could provoke war." Mr. NIXON then discussed some of Khrushchev's dangerous misconceptions about the United States, misconceptions which just might be tempered by his visit despite his Communist bias. On such, containing obvious dangers of a miscalculation on the Kremlin's part: Khrushchev is convinced that millions of Americans do not support the President in his firm stand against communism.

"In a nutshell," the Vice President went on, "if we are to have a Soviet leader with such power in his hands, it is better to have one who knows the world than who is isolated in the Kremlin."

In addition, Mr. NIXON discounted the fear that the American people and their leaders will be lulled by Khrushchev into a false sense of security and trust. We agree with the Vice President there, too; not many Americans ever were taken in by communism, despite the wartime attitude of their Government, and certainly President Eisenhower isn't going to be fooled at this late date.

Still, it will take all Mr. Eisenhower's skill and firmness to avoid a somewhat subtler risk, unspoken by Mr. NIXON in his admirable presentation. In large part this risk stems from the very nature of this kind of get-together. Here are by all odds the two most powerful men in the world, conferring together for several days during Khrushchev's stay. The President will need all his present determination to keep this from being in fact a summit meeting—the summit of summits, to pursue that abused metaphor.

For in these circumstances, with such unprecedented power in the hands of two men, the temptation is inherent, and will doubtless grow as the days go on, to use that power; in our case, for what we deem to be the good of the world. If the stalemate of the oppressive cold war, with its constant risk of nuclear war, could seemingly be broken with a word, even a tacit understanding, many men would find the temptation irresistible.

This would not be the same as being "lulled" by a false-faced enemy. The risk, if any, is of being lulled into a slip by one's own longing for real peace after all these years of bitter frustrations, heavy burdens, and incessant dangers. Lulled by the feeling Mr. Eisenhower himself eloquently expressed the other day in defense of the forthcoming meetings: "What we are talking about is the human race and what's going to happen to it." Lulled in short, not by the vice of megalomania but by the virtue of compassion for humanity.

That is why we think Mr. NIXON's speech is more important than an explanation, useful though that is. It should also be a policy guide. So long as the Government adheres, throughout the trying talks ahead, to the coldly courteous, cautiously exploratory attitude he has outlined, the subtle risk need never become threatening.

Remarks on Diversion of Water Issue

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my remarks on the diversion of water issue.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR ALEXANDER WILEY BEFORE SENATE OF THE UNITED STATES ON DIVERSION OF WATER ISSUE

Let us first get a little of the history involved in this water diversion. Since 1922, bills have been introduced in Congress to authorize the diversion. They were introduced mostly by Congressmen from the city of Chicago. The bills based their right for the diversion of water from Lake Michigan on the following grounds:

(1) Sanitation—for sewage disposal purposes.

(2) Public health—caused by contamination of waters of the Chicago River, the Chicago Sanitary District Canal, and the Illinois Waterway.

(3) Diversion would permit the generation of additional waterpower at the Chicago District Lockport plant.

(4) Fish life would be restored.

(5) It would eliminate damage by extremely high waters of Lake Michigan.

(6) Navigation requirements of the Illinois Waterway demanded additional diversion.

(7) Then there was the position that diversion should be authorized to take care of a variety of demands in the Mississippi River watershed.

Harry Truman once quoted Justice Holmes as follows: "A page of history is worth a volume of logic," so let us get at some of the historical facts.

The controversy originated between the years 1892 and 1900 when the Chicago metropolitan area cut a canal across the Continental Divide. Previously the Illinois-Michigan Canal was completed in 1848. This canal soon became polluted with sewage; and, finally, in 1887, the Commission studied three methods of sewage disposal and recommended as the most economical the discharge of the sewage into the Des Plaines River through a canal across the Continental Divide. The legislature took action and the sanitary district was created with power to handle the situation. At that time, the sanitary district embraced an area of 185 square miles—it now embraces 600 square miles.

Since the opening of the canal, the Chicago River has been reversed. Then, it flowed into Lake Michigan—now it flows away from Lake Michigan. The purpose of the canal was the disposal of sewage and the production of electricity, so the Court found.

In 1907, an application was made to do certain work on the Calumet-Sag Channel to increase the flow from Lake Michigan through said channel. But this was refused by the Secretary of War. In spite of this, the sanitary district went right ahead; so the United States brought suit in 1908. Then, another application of the district in 1913 was denied by the Secretary of War.

In 1908, pursuant to the amendment of the constitution of Illinois, development was begun of a project that would contruct powerplants, locks, bridges, and dams, starting at the water powerplant near Lockport to a point on the Illinois River near Utica; the justification therefore was that it would provide about $3 million a year from the use of water diverted from Lake Michigan for waterpower purposes.

Well, the diversion was made without the consent of the States bordering on the Great Lakes, and in defiance of the Federal Government. Temporary permits were granted from time to time by reluctant Secretaries of War on the plea that the district and Illinois had neglected or refused to install modern sewage disposal plants and that the health of the people would be impaired.

The sewage pollution continued to be offensive up through the years. In 1925, the U.S. position for injunctive relief was affirmed by the Supreme Court, although the Secretary granted a permit for diversion of 8,500 cubic feet—looking to a progressive reduction. Meanwhile, in 1920, the Board of Engineers for Rivers and Harbors of the United States, made a report stating, in substance, that Chicago was debarred from any claim for indulgence; that it had defiantly opposed the Government and was in open disregard of the law; and that they had expended money of their constituents in prosecution of unwise and illegal plans.

In 1927, the Court, having referred the action of Wisconsin, Minnesota, and Michigan to Special Master Charles Evans Hughes, who said that the district, in relying on the arguments with reference to the health of its people, had long delayed the subject of suitable sewage plants as a means of avoiding future diversion. Therefore, the district could not complain if an immediately heavy burden was placed upon the district because of its attitude and its course of action. The Court further required that the rights of the complainants be restored gradually; giving the district time to provide adequate means

for disposing of the sewage. In other words, the U.S. Supreme Court ruled that the Chicago Sanitary District, and the State of Illinois, must stop the illegal diversion (281 U.S. 179) and the Court observed that "the diversion of water for sewage disposal was held illegal."

In 1932, on the application of the States, including Ohio, the Court appointed a Special Master, Edward F. McClellan. He found that the causes of delay in obtaining approval of the contruction of controlling works in the Chicago River "are total and inexcusable failures of the defendants to make an application to the Secretary of War for such approval." The Court entered its decree and provided for "gradual reduction of the diversion of waters of the Great Lakes, St. Lawrence system through the Chicago drainage canal; the reduction should be down to 1,500 cubic feet per second by December 31, 1938."

Again, the district delayed and, in 1932, application was made by the complainants again for a special officer to see that the decree of April 21, 1930 (281 U.S. 696) was carried out.

In 1933, the Court enlarged its decree to provide that "the State of Illinois is required to take the necessary steps to complete adequate sewage disposal plants and sewers to the end that the reduction of diversion may be made at the times fixed in the decree." The sanitary district then demanded that the Federal Government purchase the canals, paying $90 million therefor. The engineer department reported against it and this started the flood of bills; beginning in 1937, in the 75th Congress, seeking authorization for increased diversion of water.

In the Supreme Court Decree of April 21, 1930, there was a requirement in paragraph 5 that the defendant's sanitary district file with the clerk of the court semiannually, on July 1 and January 1 of each year—beginning July 1, 1930—a report to the Court adequately setting forth the progress made in the construction of the sewage treatment plants and appurtenances outlined in the program. Also, it was to set forth the extent and effect of the operation thereof and the average diversion of water from Lake Michigan.

Again, the sanitary district failed to comply with this order. The last semiannual report was filed on January 2, 1939, which said that "the complete treatment of all sewage will not be possible until July 1939,"—although the district was required to complete construction of the facilities on or before December 31, 1938. In January 1940, an application was made again for more diversion. The Court said, in relation to the same, "Illinois has failed to show that it has provided all possible means at its command for the completion of the sewage treatment system as required by the decree and no adequate excuse has been presented for the delay." The Court appointed a special master again and he recommended that the petition of Illinois be dismissed. The Supreme Court upheld the master's report.

Again, in 1956, Illinois petitioned the Court for a temporary modification of the decree and the Solicitor General filed a memorandum on behalf of the Government, as amicus curiae; pointing out the interests of the United States with regard to the paramount power of Congress in relation to navigation and treaties between the United States and Canada which affect the total problem of diversion. The Court, on the application of the district, granted a petition for temporary increase of diversion to, and including, January 31, 1957, and extended it again to February 28, 1957 (352 U.S. 983).

HISTORY OF THE FIGHT IN CONGRESS

Since 1920, bills have been entered to increase the diversion. Twice President Eisenhower has vetoed bills; stating, in substance, that he was unable to approve the bill because:

(1) Existing diversions are adequate for navigation on the Illinois Waterway and Mississippi River.

(2) All methods of control of lake levels, and protection of property on the Great Lakes, should be considered before arbitrarily proceeding with the proposed increased diversion.

(3) Diversions should be authorized with reference to negotiations with Canada.

(4) The legitimate interests of other States affected by the diversions may be adversely affected.

In the 85th Congress, a bill providing for an additional diversion for 3 years was passed in the House, but failed in the Senate.

The Chicago district pressure has not been limited to bills in Congress. Applications were made to Presidents Roosevelt and Truman, with Secretaries of War and with various boards and commissions.

Now, it is evident that Chicago has no health problem. Back in 1940 it was claimed that diversion was necessary because the pollution in the Chicago drainage canal constituted a menace to health. The special master, after extensive hearings, held that there was no menace to health. We know very well that an additional diversion of 1,000 cubic feet will not clean up the objectionable conditions in the Illinois Waterway as long as untreated, and partially treated, sewage and sludge is permitted to enter the waterway. The permanent solution is to keep pollution out of the Chicago area's waterways by enforcing State and district laws prohibiting the dumping of raw, or partially treated, sewage, chemicals, and other materials in the streams and waterways of the State of Illinois. Eminent sanitary engineers are agreed that the effluent (liquid residual which remains after complete treatment of the well of an operated sewage disposal plant of an activated-sludge of modern type) is a clear, odorless liquid—nonputrescible which requires no chlorination and in which fish can live. The sanitary district affirms that the effluent of its northside treating plant "is almost as clear as drinking water, and quite as harmless as it finally leaves the plant through an outlet and into and through an artificial channel which discharges into the Chicago River" (278 U.S. 367).

There is no claim that additional diversion is needed for navigation on the Illinois Waterway, or for navigation on the Mississippi River. In a recent report by the division engineer, he states that "commerce on the Illinois Waterway has increased from 1,600,000 tons, in 1935, to 21 million tons in 1955." Recent studies of present and prospective water requirement for navigation on the Illinois Waterway show that the authorized diversion of 1,500 cubic feet per second from Lake Michigan is adequate to meet those requirements.

The Alton lock, which was provided by Public Law 500, will take care of any trouble during low water.

Now, the Supreme Court has made it pretty clear that it will not permit any additional diversion at Chicago until the district utilizes all practical means, other than diversion, to alleviate conditions complained of. The U.S. Public Health Service has indicated that there are measures which the sanitary district can take which would handle the situation: Sewage treatment through aeration or chlorination, or the combination of the two. (See Senate Subcommittee on Public Works hearings, 1958, p. 92.) Based on aeration, the first cost would be $2 million; annual cost $250,000. Based on chlorination, the first cost is not given; annual cost $550,000.

It is very evident that the reason the sanitary district urges additional diversion is to avoid the normal and usual sanitation costs which would be required in expanding its facilities. Away back in 1913, when application was made to Henry Stimson, Secretary of War, he stated:

"The demands for diversion at Chicago are based solely upon the needs for sanitation of that city. Every drop of water taken out of the lake necessarily tends to nullify costly improvements made under direct authority of Congress throughout the Great Lakes; and, it is manifestly said that, as long as the city is permitted to increase the amount of water which it may take from the lakes, there will be very strong temptation placed upon it not to take a more scientific—and possibly a more expensive—method to dispose of the sewage."

The Supreme Court on April 21, 1930, limited the amount of water that could be diverted from the Great-Lakes-St. Lawrence system to 1,500 cubic feet in addition to domestic pumpage (281 U.S. 696).

There are the House bill, the Senate bill, and the amended bill, all considered by the committee. A study of the bills indicates quite clearly that some fertile minds which drew the two amendments were trying to meet some of the arguments that were made. The Power Authority of the State of New York, when it accepted the licenses granted to it by the Federal Power Commission for the construction of the Niagara power projects, did so, relying on the decree mentioned above.

The Canadian Government and the State of New York will in the course of the next 3 or 4 years have completed the power projects at an expense of over half a billion dollars. By that time, the power projects will be in full operation and a diversion of 1 year will be felt, causing a loss yearly of over a million dollars in income. So there is no question that the power authority would be deprived of substantial legal rights.

As we have already stated, such a diversion in violation of the Court's decree and the legal treaties would justify the claims of Canada to divert all the water from the Columbia River.

Now the next question arises, Is there any need for a diversion of 1,000 cubic feet per second for such a study? Senate Document No. 128 of the 85th Congress, 1st session, states: "Recent studies of present and prospective water requirements for navigation on the Illinois Waterway show that the authorized diversion of 1,500 cubic feet per second from Lake Michigan is adequate to meet those requirements" (p. 48) and shows that losses would result from increased diversion to navigation, power development, and shore property interest. Further, that if the water were diverted, such study could not possibly demonstrate that the levels of the Great Lakes and the flow at Niagara and the St. Lawrence River would not be affected detrimentally—with adverse effects on navigation and power development. It would also show, if such diversion were made, increased power production at the sanitary district's plant at Lockport, Ill., saving the district money.

The U.S. Department of Health in its report of April 29, 1957, suggests the answer by means of chlorination and aeration.

Added diversion will not benefit navigation on the Illinois Waterway; it will affect adversely navigation on the Great Lakes. It will not solve the problem of sewage in the sanitary district. It will affect adversely the power authority and benefit the district power generation.

All these facts raise a Constitution issue of the power of Congress to authorize additional diversion. But if it should be constitutional—and only the Court can decide that—it certainly is unfair to injure the property rights of people in Michigan and Wisconsin and deprive navigation and downstream power interests of their rights

solely for the economic benefit of the sanitary district.

Now that the Court has appointed a master, he should handle the matter. Perhaps it should be referred to the Commission under the authority of article IV of the Boundary Waters Treaty of 1909.

Certainly diversion is unnecessary. It involves the rights, obligations and interests of the United States and Canada, as well as the litigating States and the inhabitants thereof.

REASONS FOR DENYING DIVERSION

1. The legislation will jeopardize our friendly relations with Canada. Canada is the best friend we have got in the world. Besides that she's our best neighbor, our best customer.

The two notes which follow, which I ask to be printed at the end of my remarks, clearly demonstrate how inappropriate it would be for Congress to take action.

2. The Great Lakes watershed: Canada and the United States are trustees thereof. If the door is opened now a flood of requests will come to the Congress from other communities along the St. Lawrence and in other States. Already the Ohio communities have discussed taking from Lake Erie water to the Ohio River watershed, and recently a group of Texans has suggested that a pipeline be built to the Great Lakes to tap the water thereof.

3. The increase in diversion comes at a time when the Great Lakes are headed for a record low lake level. At a time when every inch of diversion accentuates great losses in shipping, hydroelectric power plants on the Niagara and St. Lawrence River and also the harbors of port cities.

4. We and Canada have put into the St. Lawrence development between us a billion dollars. The utilization of the Seaway requires high water levels. Chicago diversion will nullify, to some extent, the benefits derived from the St. Lawrence Seaway.

U.S. ARMY ENGINEERS REPORT

1. The engineers have stated that a temporary 3-year diverison of 1,000 cubic feet per second would lower Lakes Michigan-Huron by five-eighths of an inch and Lakes Erie and Ontario would be lowered by three-eighths of an inch.

They also stated that an increased diversion of 1,000 cubic feet per second at Chicago would affect the flow and production of power in the Niagara River, the St. Lawrence River and in the Illinois hydroelectric plants—having an adverse effect on hydroelectric energy evaluated at $408,000 to $918,000.

2. The permanent diversion of 1,000 cubic feet per second would have the effect of lowering the levels in Lake Michigan-Huron, and the estimated annual average economic loss to the U.S. Great Lakes fleet would be $240,000.

3. The evidence of the chairman of the Power Authority of New York estimated by 1 year additional diversion at Chicago of 1,000 cubic feet per second the total loss to Canada and the power authority would be $1,142,000, and as was suggested, it is plain that H.R. 1 is designed to open the door to a permanent additional diversion of 1,000 cubic feet per second.

4. There has been plenty of evidence to show that the port cities of the Great Lakes would sustain very substantial damages to their harbors and port cities if H.R. 1 were to become law. Every fraction of an inch of loss in lake levels to artificially lower the Great Lakes due to a diversion at Chicago, would cost the lake port cities thousands of dollars annually.

5. The lake carriers testified that an additional diversion of 1,000 cubic feet per second at Chicago with the resultant lowering of the lake would result in a loss of approximately $2,500,000.

CONCLUSION

1. The waters of Lake Michigan are interstate in character.

2. Five States: Illinois, Michigan, Minnesota, Indiana, and Wisconsin in 1955 approved the so-called Great Lakes Basin Compact, but Illinois Congressmen, following in the steps of their predecessors, kept on pressing Congress, even though the Supreme Court has returned and recently taken action and again appointed a master.

3. There are some real nice questions of law involved:

(a) Does Congress have the power to authorize the transfer of huge quantities of water from the Great Lakes-St. Lawrence watershed to the Mississippi watershed with substantial damage to the Great Lakes States, the municipalities located on the Great Lakes and their people?

(b) We believe—

(1) The Court in *Wisconsin* v. *Illinois*, 278 U.S. 367, has answered that question definitely. That it is beyond the power of Congress and the Federal Government, particularly when made to create an artificial waterway to divert water from one watershed to another.

(2) That the power in Congress goes to the constitutional provision to regulate commerce or navigation, and that sewage disposal or sanitation is not a legitimate object of legislation.

(3) Neither is the development of power at Lockport, Ill., a valid object under the Court's decision.

(4) Now that the Supreme Court has again appointed a master, it is the proper machinery to dispose of this matter.

(5) That the notes from Canada, with whom we have been at peace for 140 years, indicate a really substantial reason for Congress not to take action on this bill.

(6) That it is unconstitutional for Congress by additional diversion to prefer Chicago over the ports of the other States.

(7) That an additional diversion would work injury to the other States by depriving them and their citizens and property owners and property without the due process of law (278 U.S. 367).

(8) That, in accordance with the testimony of Colonel Nauman, of the Corps of Engineers, additional diversion is not needed on the 9-foot channel of the Illinois Waterway.

(9) That taking water from Lake Michigan and transferring it to another watershed to the detriment of the first watershed is neither just, legal, nor equitable.

(10) That the only permanent and effective way of cleaning up the drainage canal and the Illinois River is by keeping out of them any untreated, or partially treated, and other material that pollutes the water.

4. The International Joint Commission has definitely stated that if any increased diversion will have the effect of partially lowering the levels of the boundary waters, that it is not within the Congress to attempt to change the amount of the present authorized diversion. Under the Boundary Waters Treaty of 1909, our two nations divested themselves of all authority over the boundary waters as far as raising, lowering, or diverting them were concerned.

Let me recapitulate. Aside from the question of jurisdiction and power of Congress in the premises, no necessity or justifiable excuse exists for increasing the diversion of water from the Great Lakes-St. Lawrence system through the Chicago drainage canal.

1. The Great Lakes are international waters and no additional diversion should be permitted without the agreement of Canada and the States bordering on the Great Lakes;

2. The Illinois Waterway has more than enough water to handle all of the traffic and freight available and last year handled about 22 million tons of cargo;

3. Additional water diverted from Lake Michigan would not stop any erosion to riparian property on the Great Lakes due to high waters and winds; other means to minimize such damages are effective;

4. The Great Lakes are now in the downward movement of the cycle, with Lake Michigan 5 feet lower today than in August of 1952, and the Great Lakes will have now levels for the next years;

5. Additional diversion will not clean up any objectionable conditions in the Illinois Waterway as long as the Sanitary District of Chicago and industries, municipalities, and individuals continue to dump raw or partially treated sewage, chemicals and other materials in the waterway;

6. Any additional diversion will result in large and continuing damages to the Great Lakes and municipalities on the Great Lakes and their peoples, as witnesses and the United States Supreme Court pointed out;

7. Chicago today has no health problem related to the diversion issue;

8. President Eisenhower in his veto message of September 3, 1954, and in his veto in 1956, set forth succinctly the reasons why additional water from Lake Michigan through the Chicago drainage canal should not be authorized by Congress. (CONGRESSIONAL RECORD, July 27, 1956, vol. 102, No. 1030, p. 13768.)

9. The State of Illinois has, as a matter of official State policy as evidenced in its adoption of the Great Lakes Basin compact, recognized the justice and desirability of settling the Chicago water diversion controversy by agreement among all of the affected States and Canadian provinces, and not by Federal legislation. President Eisenhower, in his September 1954 veto of the diversion bill, indicated that he approved of an agreement between the interested Great Lakes States before authorizing additional diversion.

The Significance of Laos—Two Articles

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. COHELAN. Mr. Speaker, two different articles by Columnists Marquis Childs and Joseph Alsop—both appearing in the Washington Post—point up the significance of recent outbreaks in Laos. Columnist Childs suggests some differences between United States and British policy on Laos which can, as he says, "in a different atmosphere loom large indeed" although they are now being avoided. On the other hand, Mr. Alsop relates the problem of Laos to the question of coexistence. While these two observers appear to have some conflicting ideas about what is happening in Laos, their thoughts are helpful to those who seek to understand the significance of this development and, for that reason, I include both articles in the RECORD under permission to extend my remarks:

LONDON DIVISION MASKED BY SMILES
(By Marquis Childs)

LONDON.—This exercise in good will has ben so carefully stage managed that it has all but obscured the sharp differences dividing American and British policy in important areas of the earth. They have been swept under the royal red carpet of welcome ex-

tended for every step of President Eisenhower's visit.

In the glow of harmony that has been generated here they seem trivial enough. But if it comes to the testing point these differences may be serious.

The trouble in Laos is a case in point. Because Britain accepted responsibility for the Indochina truce when the United States in 1954 simply walked away and would have none of the compromise that carved out separate Communist and non-Communist countries, the British today have a special role in the area. As cochairman with the Russians in presiding over the terms of the truce, they are distinctly uncomfortable in the present situation.

They would like to have the United Nations intervene, through Secretary General Dag Hammarskjold, to prevent a nasty little war from becoming a nasty big war. But the Russians will have none of this. Instead, they are insisting that the Neutral Truce Commission be reactivated to play policeman.

But, as seen from the American view, this would be an affront to Laos. It would imply that Laos is not a sovereign power capable, with the help of its allies, of managing its own affairs.

While no British official would admit it publicly, and certainly not at this moment when the theme is hands across the sea, there is a feeling that American zeal for a military buildup in southeast Asia has made Laos vulnerable. In supplying arms and military advisers to Laos, the United States has stayed within the terms of the truce which permits armed forces to be raised to a certain level of capability with outside assistance.

But the effect, as the British see it, has been to draw Laos into the orbit of the Southeast Asia Treaty Organization and, therefore, to violate the spirit at least of the truce. The British have always taken a rather dim view of SEATO.

Separating truth from fiction in the snatches of information reported from the conflict in what is a new and highly unstable country is all but impossible. This reporter has talked with high officials of both the British and French governments during the past week. They agree that there is no evidence at this time of Communist intervention from outside Laos.

Communication between the capital, Vietiane, and the remote jungle areas where the conflict is going on is virtually nonexistent. Rebel bands with a strong Communist orientation have long operated in the border regions that are for the most part trackless wilderness.

Undoubtedly the Communist objective is to subvert the Government of Laos and bring it down. But whether this subversion can be stopped with the new American arms being flown in to be put in the hands of an additional force of 5,000 Laotians is a very large question. And it is here that British policy and American policy tend to diverge.

Mr. Macmillan's smile is that of a shrewd and confident politician who scents victory in the air in the election that is just ahead. The polls show something like a landslide for the Conservatives, who lead Labor by five to seven points.

Who would want to spoil this by raising unpleasant and controversial issues? Important sectors of British public opinion, and not just alone in the Labor Party, were offended by the President's acting in inviting the Spanish Foreign Minister, Fernando Maria de Castiella, to come to London to see him. Despite the official denials, this was done without prior consultation with the government here. De Castiella's record as a close ally of the Nazis and the Fascists and an enemy of the democracies was so well known that the British refused after the war to accept him as an ambassdar.

But if the Americans want to bring Spain into the NATO alliance the Prime Minister will not make an issue of it at this moment. As with Laos, it is being swept under the rug.

In the solemn splendor of St. Paul's Cathedral and the emotion evoked by the American Memorial Chapel symbolizing the war fought in a common cause the differences are petty and inconsequential. But differences that now seem small can in a different atmosphere loom large indeed.

WHAT IS COEXISTENCE?

(By Joseph Alsop)

TOKYO.—What is coexistence? This will be the true, central theme of the talks between President Eisenhower and Nikita S. Khrushchev. Berlin and Laos are only episodes, though very important episodes, which raise questions about the meaning and possibility of coexistence.

If President Truman were in President Eisenhower's place, it is hard to believe that there would be any opportunity to discuss this vital topic. For if Truman had asked Khrushchev to the White House, and the acceptance of his invitation had then been followed by a naked Communist attack on a position of American interest, even in remote Laos, Truman would have disinvited Khrushchev at once.

But Eisenhower is not Truman, and the power position of the United States in 1959 is altogether unlike the power position that Eisenhower inherited in 1953. So there is little likelihood of disinvitation, although the Communist aggression in Laos amounts to a public expression of Khrushchev's contempt for the President and the country he leads. The vital topic will still be discussed, in a little more than a fortnight, by the two chieftains of the East and West.

The meaning of "peaceful coexistence" to Khrushchev and his subordinates and satellites can be easily summarized. They mean by "peaceful coexistence" playing the game of the world power struggle according to the strange prevailing rules, and thus avoiding any serious risk of major war. The rules they play by, although we have largely accepted them, are rules made in the Kremlin.

These rules permit Khrushchev to tear up the most solemn Soviet commitments, given only a few years ago, because these commitments do not any longer correspond to the facts—meaning the facts of the greatly changed world power balance. They further permit Khrushchev to indulge in the crudest military threats to Berlin, after repudiating the agreement of Berlin reached by the Soviets and the Western Powers in 1949. The result of these actions, moreover, is not American mobilization, but an invitation to Khrushchev to drop in at the White House.

Again, these Kremlin rules also permit Khrushchev, even when newly invited to the White House, to sponsor a naked Communist military aggression. The aggression is duly fuzzed up and disguised a little, of course, as a popular guerrilla movement. But under the rules, any position can be attacked in this manner, where the attack seems safe and the aggression seems likely to pay off. This is what is happening in Laos.

In other words, Khrushchev looks at the current state of the power balance, and especially at the deterioration of the American deterrent. He looks at the mood of the President and the rise of peace-at-any-price feeling in London and elsewhere. After calculating these factors, he then looks for a vital position which he can grab for, without undue risk of a general conflagration. And he promptly grabs for that position, in full accord with the rules of the game as he understands them.

It is bitterly ironical to recall that an attempt to change those rules was once made by President Eisenhower, who came to power with a pledge to liberate the free peoples enchained by Soviet imperialism. In his confirmation hearings, former Secretary of State John Foster Dulles even suggested that it was downright immoral not to believe in the liberation policy.

In the last 7 years, one must remember, the opportunities for a serious liberation policy have been very great indeed. The situation in Eastern Europe reached the potential explosion point in this period, because of the death of Stalin and the post-Stalin disillusionment. Twice, in fact, great explosions have actually occurred in Eastern Europe, in East Germany in 1953, and in Hungary in 1956. If we had such an explosive situation on our side of the line that divides the world, it is easy to imagine what the Kremlin would do about it.

What we did about it was to eat the phoney words about liberation as soon as they were taken seriously. All the resources of the CIA were used to help the Soviets damp down the East German rising of 1953. Our reaction to the Hungarian tragedy, by the same token, was too unpleasantly impotent to bear thinking about.

In this manner, the West has tacitly accepted the Kremlin's rules for coexistence. These are: (a) That we cannot even support a legitimate government struggling to be free, as in Hungary, on their side of the line that divides the world; and (b) that the Kremlin can freely attack any conveniently vulnerable position on our side of the line.

If these rules for coexistence are now approved by President Eisenhower in his talks with Khrushchev, and if they are then confirmed by the President's successor, the predictable outcome is the West's final and total defeat in the cold war. That is the fact now glaring us in the face.

Booming South Texas Economy

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, September 2, 1959

Mr. JOHNSON of Texas. Mr. President, the story of Texas is the story of a land of progress and expansion, of the growth and development of ideas as well as the utilization of ideas.

Recently, a magazine called the South Texan published an article entitled "Booming Population Growth Spurs South Texas Economy."

Because of the interest which other Members of Congress from areas of expansion would have in what is happening now in south Texas, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the South Texan, August 1959]

BOOMING POPULATION GROWTH SPURS SOUTH TEXAS ECONOMY—ESTIMATES INDICATE 1 MILLION INCREASE IN PAST 9 YEARS

(By R. L. Skrabanek, Department of Agricultural Economics and Sociology, Texas A. & M. College)

All sorts of data can be collected and displayed to show that the south Texas area is booming. High on any such list is its very rapid population growth. Population estimates for the last 9-year period (1950–59) indicate that the area has added approxi-

mately 1 million people in this short span of years (see table). This is a tremendous rate of growth considering that there were under 2 million people in the region in 1950.

Current estimates place the total number of people in south Texas at a figure fast approaching 3 million, with the area increasing its population at a considerably faster rate than the remainder of the State.

Where is all of this population increase coming from? One place is through a natural increase brought about by an excess of births over deaths. The area has regularly had a birth rate substantially above that of the Nation as a whole. In more recent years rapid strides have also been made in a falling death rate.

In addition to its increase from births over deaths, south Texas has likewise continued to attract a sizeable migration, a condition testifying to the opportunities offered to migrants into the region.

All of the necessary ingredients for a healthy growth lie in the region—chemurgy, industry, oil transportation, agriculture and manufacturing. Not to be overlooked in this list, however, are the people who, in the final analysis, organize these resources into productive use. Vast areas of the world today have the same resources as those found in south Texas but they remain relatively untapped because of the lack of initiative and know-how on the part of the people who occupy these lands.

Still another factor in the rapid population growth of south Texas is what some might refer to as a fringe benefit—a favorable climate. The climatic factor has been an influencial one in the migration of people from the Northern States to the Rio Grande Valley region particularly, as well as in south Texas in general.

Of course, not all of the areas in south Texas are sharing equally in the rapid population growth characteristic of the region as a whole (see maps) [Not printed in RECORD.] The two maps indicate that some areas have been gaining population at a much faster rate than others.

Regardless of possible explanations for this phenomenon, it all boils down simply to the fact that areas which are largely dependent upon farming and ranching for the most part are barely maintaining their populations or are losing people.

Modern farming and ranching technology has developed rapidly and makes it virtually impossible to operate a small farm or ranch for a profit if one is dependent solely upon it for his livelihood. Consequently, many either must give it up altogether or take on other jobs to supplement their incomes in nonfarm occupations.

The shift of population from rural areas to the larger cities has had the effect of worsening the relative position of many small town merchants who tend to lose business not only through population losses but to also increasingly lose business to retail trade centers. On the other hand, where oil and gas developments are taking place, irrigation is expanding and new industries are moving in, these areas are growing at fairly rapid rates.

The presence of already large population centers and the job opportunities in them has an attraction for many people. A closer look at what has happened in three city-dominated counties in the south Texas area serves to illustrate the drawing power of larger cities. Bexar County is estimated to have added some 370,000 people during the last 9-year period; Travis County increased by well over 100,000 and Nueces County another 130,000. Thus, these three counties alone account for about one-half of the total population increase of the entire area. This is not an unusual situation, however, for the same thing is happening in other sections of Texas. At the present time States' people are concentrated in 15 standard metropolitan areas.

Although their population increases are not as spectacular in total numbers, some of the lesser populated counties have had sizable population increases, too. For example, Victoria County has increased from around 24,000 in 1940 to 65,000 in 1959. Likewise, Comal County increased from 12,000 in 1940 to 23,000 in 1959.

These constitute some of the basic facts about south Texas' population increases. But how will this tremendous population growth affect the area in general? Obviously, they create new problems which require foresight, planning, organization, and cooperation far beyond our imagined possibilities of a few decades ago. Such growth places pressure on school expansion programs, water resources as well as other resources. At the other extreme, however, are the many benefits to be derived—for a growing population means a growing volume of trade and other business activity for the purpose of serving large numbers of customers.

In addition to an increased total volume of business, population increases mean more volume per business enterprise, because population and income tend to rise faster than the number of business units. Thus, in the long run, population increases mean expanding markets which in turn attract new industries and new business establishments.

All of these factors put together add up to a bright outlook for the south Texas area in the future.

1940–50 populations and 1959 estimated populations of south Texas, including lower Rio Grande Valley

STCC district	1940	1950	1959	Percent change	
				1940–50	1950–59
1	105,830	120,861	158,367	+14.2	+31.0

Pomierski on Freedom for Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. PHILBIN. Mr. Speaker, upon the request of some of my friends and constituents, under unanimous consent to revise and extend my remarks, I include therein an outstanding letter recently released to the press, commemorating the anniversary of Hitler's attack upon Poland, written by that most distinguished Polish-American leader and great American, Hon. Stefan Pomierski.

This ably written, eloquent communication touches very profoundly upon the great sacrifice of the Polish nation when it was bestially assailed, first by Hitler, and then by Russian hordes during World War II.

There is little anyone could add to Mr. Pomierski's brief but complete statement of these outrages against human decency and against human liberty.

Let us ever be true to the cause of Poland and other heroic peoples behind the Iron Curtain who have suffered unspeakable torture and persecution in the name of freedom.

Let us never betray this great cause.

Let us make every effort that we humanly can to speed the day when these loyal, fearless, courageous sons and daughters of liberty shall be restored to their full rights as citizens of free governments.

Mr. Pomierski, with great clarity of vision, apt powers of expression and unflinching courage has admirably summed up the case for the free world.

Let it be known to Mr. Khrushchev and his colleagues in the Kremlin that the American Nation stands for freedom and justice for all peoples and that we will never abandon our struggle to seek freedom and peace for all peoples who yearn to be free.

The letter follows:

AUGUST 22, 1959.

DEAR EDITOR: September 1st will mark the 20th anniversary of Hitler's unprovoked attack upon Poland and of the beginning of World War II.

On that day the Polish nation stood up to the last man, woman, and child against the mightiest power of that time, and after 19 days of brave resistance against the Nazi hordes—without receiving any outside help as promised by England and France—Poland was cowardly stabbed in the back by Soviet Russia, an ally of Germany.

It took a total of 36 days of fierce fighting, before Hitler and Stalin were able to divide their spoils. A few months after Poland fell, a Polish Army, Navy and Air Force fought side by side with her Western Allies, while those remaining in Poland organized a most effective underground army. Eight million Poles—one fourth of Poland's prewar population—gave their lives for and in the defense of Freedom. Poland lost hers.

The heart-warming and spontaneous welcome given to Vice President RICHARD NIXON on his recent visit to Poland was touching evidence that the people of Poland have a very deep affection for the people of the United States and our ways of life.

The warm applause with which our Vice President was greeted in Poland, is further proof that the Polish nation never has and never will change her devotion and loyalty to God, her love of Freedom, and her long lasting friendship for the United States of America.

Let the betrayal of Poland and let the horrors inflicted upon her by Nazi Germany and Red Russia—both having signed a solemn nonaggression pact with Poland—serve as a stern warning to us and other free nations that neither the spoken nor written word of the evil forces of the Red

Kremlin or any other dictator can be trusted.

Therefore, we must be continuously and diligently alert, fully armed and prepared against any possible sneak attack upon this great country of ours.

We must be grateful that God has blessed us with men in our Government such as the distinguished Congressman from Massachusetts, the Honorable PHILIP J. PHILBIN, is. He is an experienced, a just, a learned and illustrious statesman, who stands for the finer and nobler things of life.

Congressman PHILBIN, whose patriotism, sense of justice and wisdom is well known all over this country as well as abroad, has won the affection and esteem of all freedom-loving people.

Mackinac: Arsenal of Freedom

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. TOLLEFSON. Mr. Speaker, a most timely radio broadcast was given in Los Angeles over NBC by Mr. Sid Fuller on July 23. He reported on his visit to Mackinac Island where a summit strategy conference by moral rearmament people is in progress. Men and women from 48 nations have been in attendance. The work they have been doing to remake the world is most encouraging. I am certain that Members of Congress will want to read the text of the broadcast:

MACKINAC: ARSENAL OF FREEDOM

As I have reported to you since my return from a Michigan weekend, Mackinac Island is a pleasant quiet place, a green and lovely oasis of refreshing calm in a desert of world-wide turmoil. And it is a historic spot, a point at which the currents of national destinies have met and crossed and swirled in desperate conflict. But today because of an idea, Mackinac Island may well be the arsenal of freedom. Because of Mackinac all men may yet be brothers, may look ahead to a world in which their children will walks the earth in dignity and peace.

Like many of you, I, too, have sensed the disturbing feeling that world war III has already begun. Not that bombs are falling, that great cities are being demolished, that civilization is being destroyed by fire and blast and radiation. No. That apocalyptic doomsday has not come. Rather the enemy has outsmarted us, outwitted us, by not using the weapons we had expected him to use. He is using an even deadlier tool of war. He is waging an ideological war against us. His objective is not the material wealth we have accumulated. He does not want that destroyed. He wants that for himself and in good time he means to have it.

Instead of the material, his immediate objective is spiritual. It is the spirit of god-fearing men that he would first weaken, and then destroy. Men without the will, the moral fiber, the deep spiritual fortitude to stand firmly in defense of what is right are doomed to see their freedom lost, their God-given rights denied, their hope of love and life and laughter unfulfilled. The enemy knows this. He knows that without the spirit there is no will. The man corrupted is the man defenseless.

And mark you this. The enemy knows how to corrupt, how to poison, how to defile. He has done it by force and violence to the 900 million helpless humans already his captives. In attacking the Western World, however, he is reluctant to resort to force and violence. He is counting on our determination to avoid atomic war to blind us to the fact that he is already undermining our ramparts of the spirit. With his evil ideology he is achieving results he could not produce with a nuclear warhead on a guided missile. He knows that free men will resist violence with violence, but he also knows that free men who are spiritually sick need not be attacked with violence. They have already surrendered. So he declares ideological war.

And what is his ideology? It is communism, a stream of social and political and moral and spiritual subversion and corruption that is poisoning the societies of every nation. Including our own. The only weapon that can be used against an ideology is an ideology. An ideology is not a thing of material substance. It is a conviction, a code of faith which no material force can resist. The ideology of communism stems from a conviction that wrong is right, that hate is stronger than love. It is a code that condones treachery and terror and immorality and cruelty and untruth as legitimate means to an illegitimate end. It is a faith that holds evil paramount to good, might paramount to right.

How deal with such a corrosive thing?

There is only one way. With an ideology diametrically opposed. One rooted in a conviction that absolute honesty, morality, unselfishness, and love are the eternal verities, the wellspring of peace, honor, and justice. One with a code which rejects all compromise with evil. One with a faith that God's pattern for the perfect life cannot be distorted or destroyed if man will be guided by God's will.

This is the ideology of Moral Re-Armament.

It is being stockpiled on Mackinac Island right now—at the summit strategy conference. Last weekend I saw it being implanted in the hearts of men and women from 48 nations, people of many races, religions and cultures, but all of them kin because all were learning how to use this weapon against a common enemy. I talked to men already changed, men with fresh hope, new spirit, new courage. Here in MRA is a catalyst that first unites and then releases the enormous moral potential of all men of good will, whatever their racial or spiritual background.

It is impossible to visit Mackinac and come away without a firm, fresh faith that free men with God's guidance and only with God's guidance will yet remake the world and achieve lasting justice and an honorable peace for all men.

Negroes Oppose Mixed Schooling

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. JOHNSTON of South Carolina. Mr. President, there appeared in the Baltimore Sun this morning, September 2, 1959, an article entitled "Negroes Oppose Mixed Schooling."

In this article a Negro leader of Birmingham, Ala., wired President Eisenhower a 350-word telegram stating that Negroes of the South do not want forced integration.

Part of his telegram urged the President "not to use force to integrate the schools and deny our race a major symbol of our progress—all-Negro schools."

He further told the President, "I assure you that both races in the South are unalterably opposed to the integration of races in public schools," and suggested to the President that he have the Federal Government conduct a poll of the majority of the southern Negroes to determine what they want in the way of segregation. He further suggested that the results of this poll would be overwhelmingly in favor of preserving segregation.

Mr. President, I feel this article should be read by every Member of the Senate, especially those who wish to attempt to ram civil-rights legislation through this body in an attempt to help foster forced integration upon people who do not want it.

For this reason, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of Sept. 2, 1959]

NEGROES OPPOSE MIXED SCHOOLING

BIRMINGHAM, ALA., September 1.—A Negro group today wired President Eisenhower that most southern Negroes do not want forced integration. And the group asked for a Government-sponsored poll of southern Negroes to prove the point.

The statement and the request were included in a 350-word telegram sent to President Eisenhower by the Southern Negro Improvement Association of Alabama.

Samuel H. Moore, of Birmingham, president of the group, said it has more than 5,000 members in Alabama.

Moore told the President:

"I assure you that both races in the South are unalterably opposed to the integration of races in public schools.

"Racial hate and racial prejudice that was dead is now reconstructed. Threat of forceful integration has created fear and hate in many of our former white friends."

Moore said he put these questions to the President:

"Since this is free America, why not put your racial policy upon voluntary action of the citizens, not forceful compulsion? Why not have the Government take a poll of the majority of the southern Negroes?"

Moore said that such a poll should be confined to southern Negroes because "our northern Negro brothers * * * do not live in the South and therefore do not understand our southern bicultural society."

He urged the President "not to use force to integrate the schools and deny our race a major symbol of our progress—all-Negro schools."

Moore said, "For lasting and enduring advancement of our race our progress must be achieved with good will from the white people among which we must live."

The Right to Travel

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following statement which I made before Senator ERNEST GRUENING'S Subcommittee on Passport Legislation on September 1:

STATEMENT BY REPRESENTATIVE CHARLES O. PORTER, DEMOCRAT, OF OREGON, BEFORE THE U.S. SENATE GOVERNMENT OPERATIONS SUBCOMMITTEE ON PASSPORT LEGISLATION, SEPTEMBER 1, 1959

It is my opinion that the Secretary of State does not have and should not be given powers to prevent an American citizen, Member of Congress or not, from visiting any country in the world. Unless we are actually at war, American citizens should be freely allowed U.S. permission to visit all countries. A passport should be only an identification. Its issuance should be an almost entirely clerical act, not a question of executive discretion to be decided in terms of foreign policy considerations.

Some of the legislation under consideration by this committee was requested of the Congress by the President of the United States July 7, 1958, to authorize the Secretary of State to refuse passports for travel in designated countries or areas. From the Executive's point of view there may seem to be advantages to this but, in my opinion and as in the case of many other restrictions on freedom, the disadvantages are far greater.

Four alleged advantages are set forth in a letter dated July 2, 1959, which I received from Assistant Secretary of State William B. Macomber, Jr.

The first advantage listed had to do with the emergency declared in 1950 and which is still in effect. This means there is a state of unresolved conflict between Communist China and the United States. I fail to see how restricting travel by U.S. citizens assists us in resolving this cold-war type of conflict in our favor. On the other hand I can conceive of improved relations resulting from such visits. However, the Department of State itself has granted permission to 41 U.S. journalists to travel in China. This seems to recognize the fact that the cold war is best fought through an increase of information and understanding. Our motives are good. We plan no aggressions. We truly want peace, freedom, and improved living conditions for the people of the world. To ban travel is to cut off effective personal communication. This lessens the opportunities for the understanding which must be the basis for any real peace.

Second, it is alleged that the United States can't provide the customary protection in these areas, the governments of which we don't recognize. There are many risks a U.S. citizen still takes without the aid of the protective arm of his Government. A citizen going to the Dominican Republic takes the usual risks in a police state of becoming a casualty, something which our diplomatic representatives there can neither prevent nor mend nor readily punish. All that the State Department should do in such circumstances is make certain that the citizen contemplating a trip to a police state understands the risks he faces.

Third, in the case of China, such restrictions are supposed to punish, or at least indicate our disapproval of, the Chinese Communist Government for maltreating and holding as hostages our citizens. This is on the erroneous assumption that our refusing permission to our citizens to visit China hurts or at least demeans them more than it handicaps us in seeking both peace and facts. I feel that we would secure the release of the five remaining U.S. prisoners far sooner if we permitted wider interpersonal communications between our country and Communist China.

Fourth, the State Department refers to what it terms an "important factor," the effort of the Communist Chinese to utilize trade and cultural contacts to promote political objectives hostile to our interests. We can hardly hope to win the cold war if we refuse to join battle on the trade, cultural and other fronts. Indeed, with respect to the Soviet Union, by far our major opponent, we carry on, amid almost universal applause, an extensive program of visitor exchanges. The President's recent decision to trade visits with Khrushchev is a dramatic affirmation of the President's belief that such contacts can aid the cause of peace.

We cannot rely on increased communication alone to guarantee peace. It is even more clear that the willful ignorance or any variety of iron curtains makes war more probable.

Every American citizen who travels abroad is an ambassador. Most are good ones. Some are not. All learn things which they bring back to be evaluated. Enemy stereotypes are blurred by facts and obliterated by understanding.

The peoples of the world don't want war. If informed, they can be powerful drags on imperialistic ambitions of their rulers. Ordinary person-to-person contacts are the best way for human beings to form tolerant and friendly opinions of each other. Curtains between countries, whether of iron, bamboo, visas or passports, become black shrouds for the cause of world peace.

These are some of the reasons why American citizens should be permitted by their Government to travel anywhere. I also believe that this is part of the freedoms guaranteed to every American citizen. This question is for the judiciary to settle.

On August 27, 1959, I filed suit against the Secretary of State because he had refused to give me permission to travel in China. With the chairman's permission I shall file the text of this complaint at the conclusion of these remarks. A Member of Congress is in a somewhat different position from one who is not a Member. Secretary Macomber, in the letter cited above, wrote to me, "as a Member of Congress your visit would be interpreted throughout Asia as well as by the Communist Chinese as a basic change in policy at the very time when the Communists are engaged in liquidating the Tibetan revolt, threatening war in the Taiwan Straits, and showing increasing arrogance and contempt for international law and decency."

I see no necessity for an interpretation that the suggested change of policy would mean any softening of our attitude. Certainly no softening is justifiable. Red Chinese aggression in Tibet, Laos, and India should be dealt with firmly. No one is suggesting that we forgive or forget Korea.

My visit to China, or the visits of other Members, should be characterized to the world as fact-finding missions with no such overtones, just as the Eisenhower visit to the Soviet Union cannot be accurately interpreted as meaning that we have forgotten or forgiven the slaughter in Hungary.

It seems to me there is a more pertinent difference in the case of the Member of Congress who seeks permission to go to China or any other country. This has to do with our keystone governmental doctrine, the separation of powers. The executive cannot, it seems to me, forbid a member of the legislative branch to visit any country with which we are not actually engaged in war. My lawsuit against the Secretary of State seeks a judicial decision on this question.

Moreover, since the State Department has seen fit to give permission to travel in Communist China to 41 journalists, its refusal to permit a Member of Congress seems arbitrary and discriminatory.

Let me make it clear that I do not believe that my going to China is in itself of much importance. This is a test case and I am seeking to help open the way for a policy change which will permit others, far better qualified than I, to go. The harm done by the present policy is more apparent when we consider that the State Department's position also blocks travel by Senator MAGNUSON, the chairman of the Senate's Interstate and Foreign Commerce Committee, Senator COOPER, Senator HUMPHREY, Senator ENGLE, and other Members in both branches. Every Member of Congress has a duty to inform himself on legislative matters and to work for national security, but of course the special constitutional role of the Senate with respect to foreign policy makes the State Department's obstructionism with respect to Senators all the more intolerable and unconstitutional.

My plans for a trip to China and the Far East always have included being accompanied by other Members of Congress, experts in the area and in trade matters, businessmen, and journalists. That I am the sole plaintiff against the Secretary of State does not mean I intended to go to China as a lone, self-appointed investigating committee. Specifically I want to learn what I can, firsthand, about the conditions and potentialities of trade, especially with Oregon.

Workers' Progress

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. WAINWRIGHT. Mr. Speaker, one of the more intelligent editorials on the controversial measures now pending was found in the Washington Daily News of several weeks ago. I was surprised that no one put it in the RECORD. It was good then, it is good today, and it will, I hope, be clairvoyant for the future.

WORKERS' PROGRESS

James B. Carey's letter to Congressmen who voted for the Landrum-Griffin labor bill is intemperate and insulting.

Mr. Carey, president of the electrical workers, has a constructive record in organized labor, particularly in his successful fight against the Communists. He's entitled to his opinion as to the effects of this bill but when he impugns the motives of those who voted for it he seems to deny that they, also, are entitled to their opinions.

We think that Mr. Carey, once he cools off, may be sorry he ever wrote his letter.

The organized labor movement isn't much more than half a century old in America. Within the memory of men and women still living, mine and factory wages have been $15 a week and less. Women and children have worked 60 to 70 hours a week for a dime an hour. The 12-hour day was standard in the steel industry.

Conditions like these caused the workers to organize. Union pressure has sped the transformation of a city, slum-dwelling proletariat into a home-owning, auto-driving middle class.

But sometimes labor leaders, forgetting how far they've come, relapse into the idiom of the old days when a man could lose his job for mentioning a union or asking for a living wage. Mr. Carey's charge of a "vindictive assault on the labor movement" is a good example. George Meany's talk of the unions trying to "survive" is another.

Rapid progress of organized labor came because of national persuasion that the union cause is righteous. That conviction hasn't changed but in the present case the union

chiefs simply have lost touch with public opinion. While condemning the racketeers they have seemed to oppose any effective steps to get rid of them.

Passage of a tough labor bill doesn't mean that the country or the Congress has turned against them or the working people they represent. It merely signifies widespread opinion that, in this case, labor leadership is wrong—that this bill is no more a union "killer" than Taft-Hartley was "slave labor."

Gangsters have fattened on the labor movement from the start, defying the best efforts of sincere men to dislodge them and using everything including murder to maintain their power.

If Congress can provide the means for law enforcement officials to root out these criminals, the unions will be the gainers—even if they must, for the common good, put up with some mild inconveniences in the process.

Off the Record

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of August 31, 1959:

OFF THE RECORD

STATISTICS

According to the 1958 Year Book of the South Carolina Department of Agriculture, Lancaster County averages 44.8 inches of rain a year, of which 31 percent, or 13.6 inches, falls in the three summer months. We have no doubt that August 1959 will go down in the statistical averages as a normal month.

What statistics will not show, however, is that all our rain for August fell this weekend in one big bucketful. Wow.

FIVE MINUTES MORE

"All South Carolinians," says the State, should go on 'life-saving time,' beginning this week."

"By setting their alarm clocks 5 minutes earlier," the newspaper continues, "the thousands of men and women who head out for work in their high-powered autos at the same time thousands of children start to school, would not have to race to get to the office.

"A 5-minute head start, which would encourage careful driving, might save 80 years of some child's life.

"Give the school-bound youngster a chance. Someone gave you yours."

We don't know what we can add to that simple appeal unless it is to remind our readers that there are at least 10 schools in this area having no sidewalks children can use in reaching them. The kinds must walk in the streets. Drivers must be extra careful.

Also, from 7 to 8:20 a.m. and again for nearly 2 hours in the afternoon Lancaster County has 90 school buses on the highways making frequent, unexpected stops to let children on and off. These buses haul about 5,000 children a day. That's 10,000 feet and legs all running in different directions when the bus doors open.

Mr. Driver, you can't outfigure a youngster every time. When the bus stops, you stop, too. That's the law but it is also the only way you can play it safe.

LYNCHING IN THE NORTH

There is not much profit in arraigning a large city, such as New York, for the prevalence of sensational crimes occurring within its borders. Where population is concentrated violence is also concentrated. That we have learned to accept as one of the more unpleasant facts of life.

What we have never learned to accept is the holier-than-thou attitude of big city newspapers and editorial writers in distinguishing between violence in the cities and violence in the hinterlands. In New York City, for instance, eight young people in their teens or early twenties, have been murdered by racially organized gangs since the beginning of the year.

Any one of those killings in the South would have been called a race riot or a lynching, depending on who got killed. In the North these things are called outbreaks of juvenile delinquency, as if victims were less dead or more righteously dead because of the tender years of the members of these wide-ranging gangs.

A lynch mob in the South is a terrible thing. It brings shame to all of us. The record over the past 50 years shows conclusively that the Southern States have worked hard to eradicate lynching. It has become so rare that it is no longer a real problem. What large city in the North can point to a similar achievement?

Lynch mobs in the South have generally had some poor excuse for their violence. These senseless killings by mobs in the North have nothing behind them but racial or class hatred. By any definition, however, they are lynchings and if they were called lynchings we feel the newspapers and law enforcement agencies of the North would have a clearer idea of what to do about them.

They have always been so positive about them when these acts of violence took place just over the horizon.

Appointment of Moton H. Crockett, Jr., of Austin, Tex., to Junior Chamber of Commerce International Commission

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. JOHNSON of Texas. Mr. President, for the first time, a Texan has been honored by receiving an appointment to the Junior Chamber of Commerce International Commission. He is Moton H. Crockett, Jr., of Austin, Tex.

Mr. Crockett's position will be one of far-reaching responsibilities, both on a national and on an international scale. I know that he will do well in his new job.

Mr. President, I ask unanimous consent that an article entitled "Crockett Given World Junior Chamber of Commerce Job," published in the Austin, Tex., American of August 27, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CROCKETT GIVEN WORLD JUNIOR CHAMBER OF COMMERCE JOB

A young Austin businessman, Moton H. Crockett, Jr., was named Wednesday to the worldwide Junior Chamber of Commerce International Commission—the first Texan ever to be so honored.

Crockett's appointment was made by the U.S. Junior Chamber of Commerce president, Bob Clark of Iowa.

Crockett, a former president of the Austin Jaycees, will be one of 10 U.S. representatives on the international commission. His field of work, the appointment announcement said, will be international relations.

Austin Jaycee President Joe Hannan hailed the choice of Crockett as an event putting Austin in the spotlight of international relations between young men the world over.

Speaking of Crockett's international relations portfolio, Hannan said, "This is one of the more important commission in the Jaycee international movement because of the pressing need for understanding and cooperation between young men of all nations."

Crockett will begin his new job by attending the annual convention of Mexico Jaycees in the resort city of Acalpulco in October.

The following month he will attend the Jaycee International World Congress at Rio de Janeiro.

Jaycee clubs exist in 89 countries, in 59 of which there are national organizations.

Economic Assistance to Poland

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. MACHROWICZ. Mr. Speaker, the Polish American Congress, Inc., with headquarters in Chicago, Ill., and State chapters throughout the United States, represents over 7 million Americans of Polish descent.

The president of this organization is Mr. Charles Rozmarek, who also is the president of the Polish National Alliance, largest Polish-American fraternal organization.

The board of directors of the Polish American Congress held a 2-day meeting at the Statler-Hilton Hotel in Washington, D.C., on March 16 and 17, 1959. At that time they adopted a memorandum and a motion on the subject of further economic assistance to Poland.

I would like, at this time, to present the memorandum and motion as adopted. They are as follows:

MEMORANDUM ON FURTHER ECONOMIC ASSISTANCE TO POLAND, PRESENTED BY THE POLISH AMERICAN CONGRESS, WASHINGTON, D.C., MARCH 16, 1959

Notwithstanding the anti-American pronouncements made by Wladyslaw Gomulka and other members of the Communist regime in Warsaw, we strongly believe that further economic assistance to Poland in the form of new credits for the purchase of agricultural surpluses and industrial machinery is still in the best interests of the United States.

American economic aid to Poland in her present industrial and commercial difficulties will undoubtedly strengthen psychological resistance of the Polish people to communism and against Soviet domination. It will be a step toward Poland's liberation from economic pressures and dependence on the Soviet Union. It will alleviate the distress caused by the shortages of foodstuffs, animal feeds, and consumer goods. As Poland grows economically stronger through American help, she will be in better position to resist Russian pressures and thus gradually create a widening market for American goods in her expanding economy.

The Polish people are not Communists. They did not elect—they were forced under

a system that denies them the freedom that they have championed and fought for throughout history at home and abroad, even to aiding us in our struggle for independence. It will help her to keep alive the hope of returning to the family of Western nations, a place which she earned as a bulwark of Christendom for the past thousand years.

The fact that the Warsaw regime occasionally denounces American policy is of no paramount importance. These pronouncements actually echo the dictates of the Kremlin rather than the real sentiments of the Polish people.

The will of the Polish Nation remains undaunted. It has ever been the will to defend the rich heritage of Western civilization, culture, and tradition. As then, so now more strongly than ever it is to return to the free world as a nation, whose devotion to the ideals of freedom and democracy has been for centuries.

In conclusion, we respectfully submit that Poland's current request for credits be granted within the framework of the mutual security program.

MOTION PASSED AT MEETING OF THE POLISH AMERICAN CONGRESS, MARCH 17, 1959, ON FURTHER ECONOMIC ASSISTANCE TO POLAND

We firmly support continued economic assistance by the United States to the people of Poland, even though regrettably, Poland's present government continues to be controlled by sources subservient to Soviet rule. We support this continued economic assistance to the people of Poland because we firmly believe that the present government of that nation is transitory while the firm dedication of the Polish people to the principles of freedom and democracy are unending and time enduring.

It is our firm conviction that the two previous extensions of credits by the United States to the people of Poland, namely, the first loan of $95 million and the second for $98 million, have bolstered the Polish people's spirit to continue their resistance toward suppression of liberty in their native land.

Continued economic assistance to the Polish people would help this gallant ally of the West maintain this spirit of resistance.

It should be made clear that while we support the concept of continued economic assistance to Poland, we strongly urge our State Department to take whatever steps are necessary to make sure that this assistance will go exclusively for the aid of the Polish people and will in no way be used directly or indirectly to help the Soviet Union.

We further authorize the executive board of the Polish American Congress to take whatever steps it deems necessary to help obtain continued economic assistance to the people of Poland.

Diamond Jubilee

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, this is a significant year for a veterans' organization which has achieved much since it was organized 60 years ago today. The Veterans of Foreign Wars, which dedicated its War Memorial Building in the Nation's Capital this year, is an organization of importance not only to its members but to the Nation as a whole.

An editorial in the August 20 edition of the National Tribune, the Stars and Stripes, gives a good account of the VFW in its diamond jubilee year.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIAMOND JUBILEE

A proud veterans organization will be celebrating its 60th anniversary this month at Los Angeles. We speak of the Veterans of Foreign Wars which may well be proud of its service in time of war, as in time of peace—proud of its beginnings and proud of its continued zeal in the welfare of the Nation, the State, and the community.

The Veterans of Foreign Wars of the United States is just what its name implies—an organization of men who, like the crusaders of old, have followed the Stars and Stripes into foreign climes, and brought the faith of Washington and Lincoln to foreign tyrants and despots—men who have proven their patriotism by the offering of their bodies and souls in sacrifice that liberty should not perish from the earth, and that American ideals and institutions might be preserved for posterity.

The Veterans of Foreign Wars is a permanent organization. It will continue as long as it is necessary for American citizens to defend the faith of their fathers against foreign aggression, and uphold these principles and ideals for which the heroes of 1776 risked their lives, their fortunes and their sacred honor in establishing the Nation.

The Veterans of Foreign Wars of the United States resulted from the amalgamation of several societies formed immediately following the Spanish-American War in 1899, little groups of veterans returned from campaigning in Cuba and the Philippine Islands, founded local societies upon that spirit of comradeship, known only to those who have faced the dangers of war side by side. Similar experiences and a common language drew them together. The American Veterans of Foreign Service was chartered by the State of Ohio on October 10, 1899.

The Colorado Society, Army of the Philippines, was organized in Denver, Colo., December 12, 1899. Shortly thereafter, a society known as Foreign Service Veterans was born in Pennsylvania.

These organizations grew up side by side, increasing in scope and membership until 1913, when at a convention held at Denver, they merged their interests and identities in a national organization known as the Veterans of Foreign Wars of the United States.

The VFW is an organization unique in its eligibility requirements. To join its ranks, a man must be able to produce an honorable discharge from the Army, Navy, Marine Corps, or Air Force, showing "service honest and faithful" in time of war in the theater of operation.

So much for the history of the organization. The record of its accomplishments may be found in the record of its activities throughout the land—on the local, State, and National level.

Its legislative group is ever alert to legislation which may arise in Congress affecting veterans and their dependents and presents the views of its membership to Congress. Its rehabilitation service devotes itself to the presentation of claims through the regional offices and through the appeals machinery of the Veterans' Administration—ever seeking to secure more adequate medical care for that veteran group.

One of the highlights of the past year in the history of the VFW was the erection of the War Memorial Building in Washington, D.C., a beautiful structure, worthy to take its place among the outstanding landmarks of the Capitol area. The auxiliary contributed substantially to this project and may well be proud of their efforts in this direction.

Perhaps the most outstanding project of the organization is the national home at Eaton Rapids, Mich., which has been maintained as a refuge for children whose fathers were totally disabled or deceased. One visit to the national home will convince the most skeptical critics of organized veterandom that any group which provides such a home for its members' children is more than worthy of the respect of our citizens.

The Veterans of Foreign Wars has grown in membership and achievement under the able leadership of its young commander in chief, John W. Mahan, of Helena, Mont., and its auxiliary with Mrs. Myers as president has progressed equally well in its field of endeavor and membership gains.

We hope that all who attend the diamond jubilee meeting of the VFW in Los Angeles this year will have the good time they deserve but also that out of the serious work of the convention will come useful and beneficial resolutions and the type of leadership which the veterans and the auxiliary have enjoyed in the past.

Walter Lee's Retirement Means Loss of Fine Public Servant

SPEECH
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. WEAVER. Mr. Speaker, time has been set aside by the House to honor one of its finest servants and a man who has done long and excellent service for the people of the United States over many years. I refer to Walter Lee, who is retiring from active duty with the House Committee on the Judiciary.

Almost every Member of the House has, at one time or another, had a problem to deal with that came to the attention of this fine committee. And, unless one is an attorney or has had long experience with these problems in the House, one is at a loss as to where to turn and what course of action to follow.

That is, one would be if it were not for the fact that the committee has had on its staff Walter Lee. I know from personal experience that on many occasions I have had to prepare legislation or to follow up legislation and have not known from past experience exactly where and how to proceed. On these occasions I have always been able to turn to Walter Lee for advice and help. He has always been there to give that kind of advice and has always been eager to help.

Walter Lee is leaving the Judiciary Committee staff. He will be sorely missed, particularly by the new Members of the House, who will not—as I have had—have the opportunity to turn to Walter Lee for his sound advice and counsel.

In closing, might I add that Mr. Lee's help was never a matter of partisanship.

Whether a member of the Republican or Democratic Party, Mr. Lee was equally helpful when asked by a Member of Congress for assistance.

In his retirement, the public is losing a good and faithful servant. My one wish is that Mr. Lee will, in the remaining years, enjoy the life of retirement he has so well earned. I know that if to look back on a life of service brings happiness, Mr. Lee will be one of the happiest men on earth.

Atlanta, Ga., Citizens Protest Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. DAVIS of Georgia. Mr. Speaker, there are many good citizens throughout the length and breadth of America who are convinced that the impending visit of Communist Premier Khrushchev bodes no good for freedom-loving people in this country and elsewhere in the world.

The inclination of the average person is to accept it and to make the best of it, inasmuch as the invitation has been extended and accepted. Yet, those who have throughout the years fought the aims and purposes of communism are aware that this visit is going to result in considerable advantage to Communist leaders from a propaganda standpoint, and considerable disadvantage to us and particularly to the unfortunate and miserable people behind the Iron Curtain whose governments and lands have been taken over by the Communists.

In Atlanta, Ga., in my own district, there is a strong spirit of protest against the exchange of visits between Khrushchev and President Eisenhower. There has been forwarded to me a protest signed by a number of outstanding Atlanta citizens on behalf of an organization known as Atlanta Citizens Protesting the Khrushchev Visit. They have, in a few words, graphically expressed their feelings of protest.

I have asked unanimous consent to insert this protest in the RECORD, and pursuant to this unanimous consent I insert it herewith:

We hereby protest the invitation to Mr. N. S. Khrushchev, head of the Communist Russian dictatorship, to visit our country and our city. We are convinced that only harm can come from such a visit, for it reflects a spirit of gradual compromise, which can lead to the eventual downfall of America.

The association with this man, with his known character, representing the government which is sworn to defeat our country and destroy our way of life, can only give the impression of friendship and indicate appeasement, amounting to support of his aims.

We do not agree with the aims of communism, and we feel that such a visit can bring only misunderstanding and despair to those people who are fighting this godless tyranny, both here and in all the countries of the world.

Joseph G. Maddox; Charles A. Wofford; Joe Maloof; Joseph M. Salome; Alfred Hardman; Paul E. Beard, Sr.; Frank H. Benning; Lester Maddox; J. L. de Give; T. J. Wesley, Jr.; James C. Meaders, for Atlanta Citizens Protesting the Khrushchev Visit.

Withholding, for Purposes of Income Tax Imposed by Certain Cities, on the Compensation of Federal Employees

SPEECH
OF
HON. WILLIAM H. MILLIKEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. MILLIKEN. Mr. Speaker, I rise in opposition to H.R. 3151. This tax is a very unfair tax. It is imposed by the city of Philadelphia on the nonresidents who work in Philadelphia, who work in the Philadelphia Navy Yard and in other installations in the city of Philadelphia. This tax has been fought many times through the Pennsylvania legislature, and now the city of Philadelphia is down here asking the Federal Government to be their tax collector. If the Federal Government is going to be a tax collector for the city of Philadelphia and other large municipalities, they should also collect the taxes for every municipality in this country. There are 197 local municipalities in Pennsylvania that have wage taxes, and I am sure that every one of these municipalities has Federal employees. I was very disappointed when this bill came out under suspension of the rules. I talked this matter over with former Congressman Wolverton from New Jersey last fall, and he told me the place to object to this bill was before the Committee on Rules. Now, I woke up one morning and found out that this bill was on the floor of the House under suspension.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield for a correction?

Mr. MILLIKEN. I yield.

Mr. CURTIS of Missouri. I kept the gentleman informed completely at all times of when we would bring it up, did I not?

Mr. MILLIKEN. You informed me you were going to bring it up, but you did not inform me that it was coming up, because I had an amendment that I wanted to offer to include all municipalities who have a wage tax.

Mr. GARY. Mr. Speaker, will the gentleman yield?

Mr. MILLIKEN. I yield to the gentleman from Virginia.

Mr. GARY. I understand the gentleman says that this will make the Federal Government a tax collector for the city of Philadelphia.

Mr. MILLIKEN. And other cities.

Mr. GARY. Is not the city of Philadelphia now a tax collector for the Federal Government on income tax?

Mr. MILLIKEN. Yes.

Mr. GARY. Then, what injustice is it to require the Federal Government to do the same thing for the city that the city is now doing for the Federal Government? I have no interest in this matter, but I just cannot see any injustice in it.

Mr. MILLIKEN. Is the Federal Government eventually going to go into and collect local taxes for every municipality in this country?

Mr. PRICE. Mr. Speaker, will the gentleman yield?

Mr. MILLIKEN. I yield to the gentleman from Illinois.

Mr. PRICE. The city of Philadelphia merely collects for the Federal Government from its own employees as any employer would do.

Mr. MILLIKEN. That is correct.

Mr. CAHILL. Mr. Speaker, will the gentleman yield?

Mr. MILLIKEN. I yield to the gentleman from New Jersey.

Mr. CAHILL. But every city in the United States, whether it has a wage tax or not, does that for the Federal Government.

Mr. MILLIKEN. Every municipality in the United States does that for the Federal Government.

The SPEAKER pro tempore. The time of the gentleman from Pennsylvania has expired.

Free Elections?—Where?

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a timely editorial appearing in the Tacoma News Tribune on August 8, 1959.

FREE ELECTIONS?—WHERE?

When we Americans say it is shameful that people cannot have free elections, we usually are thinking of Hungary or some other state ruled with an iron hand by a despotic regime.

We certainly do not refer to the United States of America, the land of freedom and free elections.

And yet the capital city of these United States, a metropolis of some million persons who are entitled to every human right and right of citizenship we in Tacoma enjoy, have no elections at all, free or otherwise.

It is not only that the residents of Washington, D.C., have no right to vote for the man who will be their neighbor in the White House. They cannot even elect a local city or district government. They are run by a commission appointed by the man in the White House, subject to the rules laid down by a congressional committee.

For 80 years the residents of Washington, D.C., have been trying to get voting rights restored, rights that were taken from them at an unfortunate time when the Federal Government thought Washington city government was trying to pressure it. Such a charge would be laughable today, but there is another stumbling block. The majority of persons in the District of Columbia are Negroes and you can't get southern Democrats who run the District of Columbia to

agree to home rule, so much do they want to deprive the Negro of a vote. This also is an untenable position and, thankfully, the Senate has passed a home rule bill now languishing in the House District of Columbia body. There is a move on in the House to get the 219 signatures needed to take the bill away from this hidebound committee and get it on the floor for passage.

The people of our National Capital say, "We believe in democracy; we want to vote." Let's show them we also believe in democracy and ask our Congressmen to sign on this motion to take up the bill.

The Late Kenneth Mills Regan

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. PATMAN. Mr. Speaker, there are many Members of this House who will remember with feelings of friendship and respect the late former Congressman from my State, Kenneth Mills Regan, who died Saturday, August 15, in Santa Fe, N. Mex. He served here in the House during the 80th Congress as the Representative from the 16th Congressional District, demonstrating great loyalty for the people whose battles he fought in committee and on the floor, and great devotion to Texas and to his country. He was reelected to the 81st Congress. I rise to speak in behalf of his memory not only because I have been for years his friend as he was mine and regarded him with affection but because he was during his incumbency as a national legislator one with whom I took frequent counsel and one who had the good grace to acknowledge and respect the value of my advice, experience, and cooperation. He regarded me not merely as a fellow Texan and a friend, but as a fellow American. It was a source of no little pride for me to note that Ken Regan was quite as capable of seeing the Nation as a whole when he was confronted by a decision, as he was eminently astute in recognizing the needs of the area he represented and its people.

Regan's career—broadly speaking—was not unlike that of many of us here in this Chamber. He attended public school and studied at Vincennes University in Vincennes, Ind. He engaged in the real-estate business and since 1920 was an oil operator. He began his political career as an alderman for the city of Pecos and was that city's mayor from 1929 through 1932. Then from 1933 through 1937 he was a member of the State senate. He participated in both World Wars—I and II—serving with the rank of captain. Many of us knew him here in the House when he was elected to fill the vacancy caused by the resignation of the Honorable Robert Ewing Thomason. Among his legislative interests here were a deep concern for the ending of the Korean war, proposals for improving the water situation in our State, problems on reclamation and mining, the protection of trademarks, immigration problems, questions involving oil and gas leases—a field in which he was expert—and other issues that confronted our State, his district, and our Nation. He did much for El Paso and for rehabilitation projects along the Rio Grande.

Ken Regan was in his 66th year and while his passing is a source of regret to his family, his friends, the thousands whom he befriended, and the country, it is satisfying to know he had a full and highly satisfying life. He made good, many times over, his obligations as a leader, and accomplished much for the public interest. I want from the Chamber of the House of Representatives to offer my condolences to his widow, Mrs. Regan, the former Roberta Katherine McGary of El Paso, and to express as formally and respectfully as possible, the regrets of the House of Representatives on the death of this distinguished and able former associate.

Interstate Commerce in Ignorance

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the August 25 edition of the Paterson (N.J.) Morning Call carried an editorial which comments on recent remarks made by the president of the National Education Association. At a time when there is much discussion of Federal aid to education, the comments and the editorial have great significance.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial of August 25, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERSTATE COMMERCE IN IGNORANCE

A most intriguing phrase occurred in a remark made the other day by Dr. W. W. Eshelman, president of the National Education Association. The newly elected head of this organization of educators was commenting on the NEA's support of Federal aid for school construction and teacher salary boosts. "There is as much interstate commerce in ignorance," he said, "as in anything else."

Dr. Eshelman made the point that, because there is such a great interchange of Americans from one section of the country to another, the Nation can no longer afford regional inequalities in education. It is a point of great importance to the long-range national welfare.

Most Americans uphold the principle of local autonomy in education, and dislike the idea of a nationalized system. Within the framework of that principle, however, much can be done to improve educational standards. Endless debate on this subject is a luxury the Nation can ill afford. It is clearly in the public interest that American children everywhere should be well educated. Steps should be taken to make that a reality instead of a dream.

Professor Goddard Father of the Rocket

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very ably written and particularly pertinent article by Mr. Evan Kenkins, staff reporter for the Worcester Telegram and Gazette which recently appeared in that celebrated publication which serves my district, relating to the illustrious career and historic work of the late Prof. Robert H. Goddard.

This article is a very interesting and timely résumé of Professor Goddard's historic achievements. It comes at a time when, thanks to the interest and good judgment of the outstanding chairman of our House Banking and Currency Committee and its very able membership, my bill to strike off a medal in his honor has been reported from the committee and passed by the House.

The bill has also been reported from the very able Senate Committee on Banking and Currency and is presently awaiting action by the Senate and I am very hopeful of early favorable action in the other body.

Too much cannot be said about Professor Goddard's experiments, inventions and accomplishments which have revolutionized science and ushered in the space age. Much is being written and said now about the epochal achievements of Dr Goddard but little has been noted of his long, difficult struggles and bitter sacrifices to reach his goal of initiating workable practicable space vehicles.

This great man was not only handicapped by lack of funds, but he most unselfishly gave of himself and his own modest income to carry forward his momentous experimentation. Few and meager indeed were the contributions made to the conduct of his early work, and perhaps more regrettable even than lack of funds was the barrage of scorn and ridicule to which he was subjected. Through all these obstacles, disappointments and discouragements, Professor Goddard with greatest courage, ability and genius was not deterred from his objectives and he stubbornly persisted with his experimentation until he had, not only made great contributions to the national defense with regard to the bazooka and jet propulsion, but also had laid a firm, sound basis for the modern rocket which is now propelling payload, scientific missiles through the reaches of outer space.

Where Professor Goddard's dedicated work will lead not even the most fantastic imagination could predict. Indeed, not even Jules Verne could conceive of man's future conquest of outer space.

With the continued projection of Professor Goddard's original ideas, man is, in truth, released from his previous captivity on this terrestrial sphere called

earth and is destined in the future to soar almost effortlessly through the distant heavens and perhaps into the planetary world. A trip to the moon which when mentioned during the days of Professor Goddard's experiments would be scoffed at and ridiculed is now regarded by scientists as being probable, indeed in the not too distant future.

In any event, this Nation and the world owes an incalculable and everlasting debt to the great Robert H. Goddard who achieved so mightily, and it is most appropriate that Congress and the American people should honor and express the most profound appreciation to this great immortal son of central Massachusetts.

The article follows:

[From the Worcester (Mass.) Sunday Telegram, Aug. 30, 1959]

LATE PROFESSOR GODDARD'S DREAM IS SEEN FAST APPROACHING REALITY

(By Evan Jenkins)

America's foremost rocket authority, in a newspaper interview, predicted that trips to the moon may occur long before the lay person dreams that anything of the kind may be possible."

According to the laws of physics, he said, there is not a single reason why such voyages may not become a reality in the near future. And in time, round trips to Mars and Venus may be made.

A visionary? To be sure. Especially so—in 1934.

It was just 25 years ago this week that the late Robert Hutchins Goddard, then head of the physics department at Clark University, spoke with such confidence about trips into space. His remarks were recorded in the Sunday Telegram for September 2, 1934.

FATHER OF ROCKETRY

Today, 14 years after his death, Goddard is revered as the "father of American rocketry."

In 1934, the reporter noted, the Worcester-born physicist was widely known as the "Moon Man."

The writer took care to include in his story the distances Goddard was so sure could be conquered:

To the Moon, 236,000 miles.

To Mars "at its minimum apposition," 35 million miles.

To Venus, 65 million miles.

Skepticism was natural enough. The highest that man had gone at that time was 67,000 feet, or about 12½ miles. (The record was claimed by the Russians, but the aviators were killed when their balloon crashed.)

A FAR CRY

It was a far cry from 67,000 feet to 236,000 miles. But Goddard, for at least 14 years, had predicted that the lunar flight would eventually be made.

By 1934, he had succeeded in propelling a rocket at 500 miles an hour—an unheard-of-speed—in tests at Roswell, N. Mex.

He had developed the all-important liquid-fuel rocket motor, 15 years before the Germans had one.

He had worked out—in 1918—complete plans for the bazooka, an adaption of his rocket work unused until World War II.

He had proved, by actual tests, that a rocket does not need a "cushion of air to push against," as many scientists still believed. In fact, he had shown that a rocket is 22 percent more effective in a vacuum.

GIVEN SUPPORT

Goddard's work in the early years was not without support. The Smithsonian Institution helped finance it, starting just after World War I. Clark, which paid him to teach physics, also provided a laboratory and some funds for the pet project.

Major assistance came from millionaire Daniel Guggenheim. His backing was originally obtained largely through the efforts of another pioneer, Charles A. Lindbergh.

But others, perhaps a majority of the Americans acquainted with the "Moon Man's" investigations, were not so kind.

His work in the 1920's and 1930's was being carefully watched elsewhere, however—notably in Germany.

UNWITTING AID

The V-2 rocket almost changed the course of World War II. Scientists who worked on the 20-year project in Germany said the effort might never have succeeded without the unwitting assistance furnished by Goddard.

An ominous accompaniment to the 1934 Telegram article is a picture of a German rocket launching—an unsuccessful one, that time.

At home, things might have been better financially. Billions are spent today on rocket and missile work stemming from Goddard's trail-blazing studies.

NO DATE SET—THEN

"Ask him when we take off for Mars," wrote the reporter in 1934, "and he is reluctant to set a date."

But not because he lacked faith in the ultimate realization of his dreams.

"He will tell you," the article continues, "that scarcity of financial support is today the deterrent to a human development that would outrival those conceived by the wildest dreams of a Jules Verne or an H. G. Wells."

Warsaw in Chains

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. MACHROWICZ. Mr. Speaker, my attention has been called to many recent favorable reviews, here and in England, of a book recently published by Stefan Korbonski, entitled "Warsaw in Chains."

There has been of late much interest in recent political developments in Poland. Many Americans are having considerable difficulty in fairly assessing that situation. Vice President NIXON's recent visit to Poland and the unusually warm welcome given to him by the people of that Communist-controlled nation, serve to stress again the warm feeling of friendship to the United States by the Polish people.

The author, Stefan Korbonski, a lawyer by profession, was the political head of the huge Polish underground that fought gallantly under the exiled Polish leadership in London throughout the Nazi occupation. His experiences of personal arrests and escapes make fantastic reading.

I most warmly recommend "Warsaw in Chains" to those of my colleagues who would like to understand better the present situation in Poland and the developments of the last 20 years. It makes excellent and most educational reading.

Amending the Bankruptcy Act With Respect to Discrimination Against Salesmen

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 872, to amend the Bankruptcy Act with respect to the priority of debts owed by a bankrupt to workmen, servants, clerks, and salesmen.

On February 18, 1959, I introduced H.R. 4729 on the same subject.

On August 20, 1959, it was my privilege to appear before Sucommittee No. 4 of the House Judiciary Committee in support of these measures.

My testimony was as follows:

STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK, AUGUST 20, 1959

Mr. MULTER. It is the identical subject, but slightly different language.

I am ABRAHAM J. MULTER, Representative of the 13th District of New York.

I have a prepared statement, Mr. Chairman, which I can leave with you.

Mr. FORRESTER. On both bills?

Mr. MULTER. It covers both bills.

Mr. FORRESTER. Let it be made a part of the record.

Mr. MULTER. I have been introducing a bill covering this subject for many years, having in mind that the limitation now in the statute, in the bankruptcy statute, of $600 for each claimant, in the nature of a wage earner or salaried employee, has long since been outmoded.

Originally I put in a bill some years ago with a change, increasing the amount of $600 to a much larger sum. I followed that same procedure when I introduced H.R. 872, on January 7, 1959. And in that bill, I changed the $600 limitation to $1,500.

On February 18, 1959, I introduced H.R. 4729, which has no limitation of amount, but sets up a criterion for determining the maximum that can be paid, averaging it as against the last year's earnings.

Now, the original limitation—may I say first that I do not change the period of time of 3 months prior to the bankruptcy. In other words, any earnings that have not been collected prior to 3 months before the bankruptcy are treated the same as claims of general creditors. That is the law today, and I don't seek to change that. I continue the 3-month limitation, so that the priority granted to earnings applies only if earned within 3 months prior to the filing of the bankruptcy petition.

Now, it was in 1898 that Congress first put the $300 limitation into the statute. Then that was changed.

In 1926 the Congress doubled it and made it $600. Even when they increased it at that time to $600 they hardly went far enough, because even on that basis, taking the comparative figures, if they considered the increase in cost of living, and the increase in wages, percentagewise, as against the figure that had been on the statute books from 1898 to 1926, if they had increased it realistically at that time they would have increased it instead of to $600 to $2,200.

Now, I am suggesting now that in the wisdom of the committee either you change

that amount to $1,500, which is much more realistic than the $600, but still not as far as it should go, or so as to avoid the necessity of coming in each year, or every 2 or 3 years, asking for another change in the statute, set up a formula something like the one that I have set forth in H.R. 4729. Then you don't have to change the limitation from year to year, but as the standard of living goes up, as wages and salaries and commissions go up, you can then take a base period of 1 year prior to bankruptcy, average that out, and whatever the average earnings have been in that prior year limit the priority claim accordingly to 3 months' earnings, but not to exceed what he actually earned during that 3 months prior to bankruptcy. Thus you have a limitation by formula instead of by dollars and cents.

I think that would be the more realistic way of doing it.

At the same time, I can understand how there may be some reaction, "Why should we allow a priority wage earner so much money, $1,500, it is a lot of money." Or possibly if the formula is adopted it may run to $2,000 or $3,000. Well, the fact of the matter is that we ought to determine the amount a man can receive on the basis of his earning capacity.

If I can only earn $100 a week, and the company that is employing me goes into bankruptcy, then I will file a claim, priority claim, for that $100 a week, multiplied by the 12 or 13 weeks in the 3-month period prior to bankruptcy. But, on the other hand, if I happen to be a better employee, or a commissioned salesman, who is doing an awfully good job for my employer, and I am earning $150 or $200 a week, I don't think I ought to be penalized and put on the same plateau of the fellow not doing as good a job as me and not earning as much. The 3-month period is a fair period. If you let each man get what he has earned during that 3-month period we are being just and fair. I can understand if you don't have some kind of a formula, or some kind of a limitation, it would lend itself to fraud. The bankrupt could make a fraudulent arrangement with some friends, whom he put on his payroll, but actually are not earning anything. He could put them on the payroll for $300 or $400 a week, just prior to the bankruptcy, so that they get priority claims that might eat up all of the assets.

My bill does not permit that, because if it is going to be based on my particular formula, then the man must actually have been earning during that year. We take his average of what he has earned and use that as the basis of the limittion of the priority. I think that is a much fairer standard than now in the law.

But, again. I realize the opposition that might develop to having a statute of this kind which does not fix a maximum dollar limitation.

That is, in the main, my presentation, Mr. Chairman, and members of the committee. I appreciate very much the opportunity you have given me to come in and present the case for this bill. I do hope you will favorably consider one or the other of these two bills.

Mr. FORRESTER. The gentleman from Texas [Mr. DOWDY], any questions?

Mr. DOWDY. Not at this moment.

Mr. FORRESTER. The gentleman from North Carolina [Mr. WHITENER]?

Mr. WHITENER. Well, you preserve the 3 months' period for priority?

Mr. MULTER. Yes, sir.

Mr. WHITENER. What about this independent contractor provision? Would that include corporate independent contractors?

Mr. MULTER. No; it was not intended to include the corporate contractor. This was intended to include that salesman who is working for four or five companes, because, as you know, the salesman, many times, will take on three or four different lines. Some companies cannot afford to employ a salesman full time. Therefore, the salesman will carry three or four lines. He may carry items that sell that may be divided pricewise, or they may be divided qualitywise. He may carry three or four different lines for small houses.

Mr. WHITENER. Manufacturers' agents?

Mr. MULTER. Yes; when they get into the higher brackets, they call themselves manufacturers' agents. In the lower brackets——

Mr. WHITENER. Or sales engineers?

Mr. MULTER. Yes—and independent contractors. But where the man is not working for a single company, unless we have some language like this, he is not covered by the statute. You just suggest by asking will this include corporations, that it may be necessary to amplify that language so as to apply to individuals.

Mr. DOWDY. I understand these words are in the present law, is that right?

Mr. DRABKIN. "Salesmen, whether or not they are independent contractors", I think is in the act now. As I read these bills, it doesn't change the scope of the persons covered. It just changes the measure.

Mr. MULTER. That was the intent, to change the measure of the priority claim.

Mr. DRABKIN. I think in 1956 the amendment was made which broadened the scope of the people included. But this bill, as I understand it, would not do that.

Mr. MULTER. Yes, you are quite right on that. I had been introducing bills along this line since back in 1948 or 1949, and I overlooked, until this moment, that in 1956 you broadened the language of the statute as to the definition of wage earner.

Mr. FORRESTER. Mr. MULTER, did you furnish counsel with a list of your witnesses?

Mr. MULTER. No, I did not do that. But I think that he has some requests from interested persons.

(Statement referred to is as follows:)

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT OF NEW YORK, BEFORE HOUSE COMMITTEE ON THE JUDICIARY IN SUPPORT OF H.R. 4729, AUGUST 20, 1959

Mr. MULTER. Mr. Chairman and members of the committee, I appreciate the opportunity afforded to me to submit to you my views in support of my bill, H.R. 4729, which I introduced on February 18, 1959.

This bill would remove an archaic discrimination against employees and salesmen when settling the debts of a bankrupt. At the present time, several types of debts have priority and must be paid in full out of bankrupt estates before dividends can be paid to the creditors of the bankrupt. A dollar limitation is placed on only one of these debts, the claims for wages of workmen, servants, clerks, and salesmen. The dollar limitation now effective is the result of a 1926 amendment of a limitation derived from the 1898 act.

The present dollar limit on wages having priority as debts of a bankrupt estate is $600 for each claimant; the amount must have been earned within 3 months before the date of the commencement of bankruptcy proceedings. Prior to 1926, the limit was $300. When the increase was discussed on the floor of the House, on April 17, 1926, Congressman Michener said:

"Under the present bankruptcy law there is an amount of $300 for wages earned within 3 months immediately preceding the bankruptcy proceedings allowed as a priority claim. In the amendment suggested the amount is raised to $600. I might say * * * the American Federation of Labor appeared before the committee and asked that the limit on the amount be removed entirely and that the time limit be removed * * * if $300 in 1898 was the proper amount of wages earned within 3 months then in 1926, with changed conditions, that $600 was a fair and equitable amount." (CONGRESSIONAL RECORD, Apr. 17, 1926, p. 7675.)

The bill which I have introduced and which now is before you does not disturb the time limit of 3 months on earnings which are given priority. It removes the $600 limitation; and provides safeguards to employees and salesmen, and as well to the other claimants against the estate, in determining the amount of wages and earnings. The safeguards are provided in the method of determining the amount earned or receivable in 3 months prior to bankruptcy. The amount is determined on the basis of the average rate of pay during a period of not more than a year before the bankruptcy occurred. Reasonable rates of compensation should be ascertainable from the experience of a year.

When the $600 limitation was inserted in place of the $300 limit in 1926, it was a respectable sum. It was equal, for example, to more than 5½ months average pay of a manufacturing employee. If the limitation were to bear the same relation to manufacturing wages today, it should be at least $2,200.

It seems to me more appropriate to remove the dollar limitation on wages than to try to find one reasonable figure to fit conditions of today, when we know that the course of wages is upward, and any limitation that is appropriate today will be out of date within a year or two.

Removal of the dollar limitation as proposed in my bill probably would increase the wage claims given priority in settling bankrupt estates. In 1958, in 8,449 asset cases concluded in the courts, wages paid to priority creditors were only 2.3 percent of the proceeds realized from the estate. They were only one-sixth as much as taxes, and less than one-tenth as much as administrative fees and expenses. Removal of the $600 limitation would eliminate the distinction made in treating wages and other priority creditors, and make subsequent amendment unnecessary.

If the Congress will not go along with my bill to the extent of eliminating the dollar limitation then the least it should do is increase the amount to a sum that is fair by today's standards.

Thank you.

FURTHER STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. May I respond very briefly, Mr. Chairman,—I don't want to hold you too long. But I was intrigued by the opposition presented by Mr. Krause on behalf of the boys practicing in the bankruptcy courts. And I think you would be interested to know that originally, one of these bills I introduced some sessions ago, called for $3,500 as the maximum. Then I found that the bankruptcy lawyers were complaining about it. I discussed it with many of them—members of but none of them talking for the association that my friend Mr. Krause said he represented here today. But I discussed it with them, and they said, "Your $3,500 is just too high. Why don't you work out a formula—instead of having an amount?" And so you got H.R. 4729.

First, before I put in H.R. 4729, which is the formula bill, without an amount, they said, "Why don't you put in a bill for a more realistic amount? So I discussed it with them, back and forth.

Mr. FORRESTER. Who are you talking about?

Mr. MULTER. Lawyers practicing in the bankruptcy courts, most of them from New York, some from Washington, some from Baltimore, some from Philadelphia—friends of mine I met at various bar association meetings and during the course of my activities.

So I then put in what I thought was a more realistic amount which is the $1,500. Then came the suggestion, "Why don't you instead of an amount come up with a formula." So H.R. 4729 came up with a formula.

That is why I said to you, Mr. Chairman, that one is not a substitute for the other—because of the divergence of opinion, I want the committee now to decide which is the better way of doing it, because I think—I hope you will agree with me that the amount of $600 needs some change.

Now, instead of taking this man who is earning $2,500 a week, or $2,500 a month, as a salesman, let's take the average. And the last witness gave you the average in his club of $8,000. I think if you take the statistics from the Department of Commerce, you will find that that is approximately the same average throughout the country of salemen's commissions. They earn about $8,000 a year.

Eight thousand dollars a year is approximately $154 a week; $154 a week for a 12-week, 3-month period is $1,848. Look how close I came to that.

Mr. DOWDY. If it is $8,000 a year, 3 months is a quarter of that, which would be $2,000.

Mr. MULTER. You can figure it that way, too. If you take 13 weeks, it would be approximately $2,000. And the one bill only calls for $1,500.

Now, if you do it the other way, on the formula basis, you will, of course, take in some of the fellows in the higher brackets. But let's have this in mind. I thought possible our friend who is himself a salesman would have made the point, and it would not have been necessary for me to make it. But this is the situation. If you look at what actually happens in these industries, and how the salesman works—many of these salesmen will take this representation, whether they are representing one company or several companies—they go out on the road. They will stay on the road for as much as a month. They will be sending in their orders all the time, the factory or employer is accepting the orders, filling them, shipping them, getting the money. He doesn't get back to his home office anywhere from 4 to 6 weeks after he has left. Sometimes they go out and stay out for as many as 3 months, covering the entire country.

They leave New York City or Baltimore and cover the whole country, before they finally return. And he doesn't know what is going on at home. And when his checks stop coming in to him, he is not getting his weekly or monthly remittance, he will start writing back. If he is covering the country for three or four people instead of one, he can't come rushing back home, "Why haven't you give me my check?" He will be writing and telegraphing for money. When he gets back, he finds his company is in bankruptcy.

Isn't it most unjust to that fellow not to give him fair priority on the wages that he has earned?

Now, originally the statute, I think, said only wages, having in mind just wage earners. A long time ago they broadened the language to cover salaries and commissions.

I think it is fair to say that many of these places cannot stay in business, they cannot earn the money to pay the salaries or the wages to those who are producing the goods, if they didn't have salesmen out on the road, sending in the orders and bringing in the orders. And those fellows are as much entitled to protection of priority claims as the man who is working with his hands, because if the man simply produces, and the goods stay in the warehouse, and are not sold, then there is no money with which to pay his wages.

Mr. FORRESTER. He does get the same thing as a man working with his hands, doesn't he?

Mr. MULTER. Today he does, yes, sir.

Mr. WHITENER. Well, may I interject this thought? In the whole presentation here today, haven't you gentlemen overlooked the fact that if this is liberalized as to salesmen, it would also be liberalized as to the man who does work with his hands?

Mr. MULTER. Yes, of course. We are not trying to put them in a better position. We are trying to equalize the position for all of them.

Mr. FORRESTER. You are just trying to get it raised?

Mr. MULTER. Yes—but raise it for all of them.

Now, one other thing as to the technical language that Mr. Krause referred to, and the possibility of a need for an amendment.

I excuse my friend the salesman, who is not a lawyer, for saying probably it needs amendment. But you lawyers, like myself, I think, should say to Mr. Krause, "Now, Mr. Krause, don't take words out of context. You must read the entire section, and the entire clause." It is true you don't get down to the word "bankrupt" until line 6 on page 2. But if you read the whole thing, it is obvious.

We are not going to let the man working for four people average his earnings and come in and file his claim against the bankrupt for $1,000, because that is his average earning, when he only earned $200 for the bankrupt. It is obviously intended to apply only to his average earnings from the particular bankrupt against whom he is filing a priority claim.

If there is any doubt about it at all, just insert on line 6, after the words "payment" "by the bankrupt". And there can be no doubt about it. I don't think it is necessary to put it in.

I think on the question of independent contractors, while it is not tendered by the bill, now that the matter has come to your attention, if you think that needs some further definition, nobody would object to your clarifying it.

Mr. WHITENER. As I understand, this is the present law insofar as it refers to independent contractors, and as the language appears in the present law, and in your proposed amendment, it would relieve the court of even being concerned as to whether the individual is an independent contractor or an employee. And so you get away from this never never land of legal problems.

Mr. FORRESTER. Thank you, Congressman. We are glad to have you.

The President's Veto of the Public Works Appropriation Bill

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. JENSEN. Mr. Speaker, relative to the vote on the President's veto of the public works appropriation bill today, I could not find it in my heart to vote to sustain this veto, and I frankly admit that it afforded me no pleasure.

The bill which the President vetoed provides for less than one-sixtieth of the total budget request for fiscal year 1960, all for urgent flood control projects in almost every State of the Union, irrigation, reclamation, hydroelectric projects and related facilities, deepening of harbors, and so forth.

It is noteworthy that the bill which the President vetoed provided for funds less than 1½ percent above the amount which the President requested, and that when the conference bill was before the House on August 14, only one voice was heard against the bill.

Furthermore, every penny in the bill will be spent right here within the shores of the United States of America.

I Vote To Sustain the Veto

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. ROBISON. Mr. Speaker, last week, President Eisenhower vetoed the $1.2 billion public works appropriation bill. He gave, as his chief reason for the veto, the fact that funds were included in the bill for 67 new starts which would ultimately cost $800 million.

Thus, it seems clear that the President's objections are centered on the long-range effect the bill would have, financially speaking, rather than on its immediate unbudgeted impact which has been estimated at only $50 million.

I think it important for all of us to be aware of the nature of the problems we will face, as a Nation, as our population explodes from 171 million today to 195 million in 1965, 248 million in 1980, and a projected 370 million by the year 2010. Foremost among those problems is certain to be that of providing an adequate supply of water for both domestic and industrial purposes.

Interrelated to the certain expanding demand for water, will also be the need for flood control, power, navigation, outdoor recreational facilities, and other such projects as are included in the vetoed bill. Any failure in meeting those demands and needs on schedule would surely result in serious disruptions in our economic growth.

We must not, however, in responding to the urgency of this problem at the Federal level, ignore the necessity for what the President, in his veto message, has called the "orderly development of America's water resources within the Nation's fiscal ability." The key phrase is: "within the Nation's fiscal ability."

Now, of course, as our population grows so will the receipts by the Federal Treasury, and so will such other generally accepted yardsticks of national capabilities as, for instance, the gross national product. Obviously, we can hope to do more in another decade than we could in the next several years.

Who, then, is going to judge the size of the effort America can make now in this field—the President, or the Congress? Some news sources are referring

to the vetoed bill as a "pork barrel" bill. This is inaccurate. Traditionally, perhaps, public works bills—authorizations and appropriations—have been "pork barrel" measures, in the sense that there would be included therein projects which were either economically unjustified or engineeringly unsound. I do not understand that to be the case here.

Nevertheless, it can be assumed that, as in any congressional measure of this sort, political considerations, personal influence, geographical "logrolling" and the like, all played a part in the fashioning of the vetoed omnibus bill. Particularly, this assumption would seem to apply to the so-called new starts. I do not say this critically, and I hope it can be regarded as an objective statement of what we should all be willing to recognize as a legislative failing.

We in Congress are normally apt to look at this sort of subject through glasses that are tinted and somewhat distorted, without our even realizing it, by our awareness of the needs of our particular districts. On the other hand, the President who, with the Vice President, is the only Federal official elected by all the people, can and must make his determinations here on the basis of what he sees through the national glasses. President Eisenhower above all others, since he is not eligible for reelection, can safely be considered free of all political bias in deciding, as he has done, that the budget-approved projects included in the vetoed bill—which total an all-time high of $1.1 billion, which is three-quarters again as much as the Federal expenditure level along these lines in 1955—is all that America can work on now without going beyond her fiscal ability. He warns, in addition, that just to carry on the projects now underway will ultimately cost $6 billion, and that to attempt now to commence work on other projects may weaken our financial structure and add to the tremendous debt burden our children already carry.

I recognize that the President may be wrong. This is an economic decision. Not even all economists are in agreement as to our national future and capabilities, but, rather than to add to the $1,564 share of the national debt which each of my two small sons now bear, in this instance I cast my lot on the side of the President.

I do so with full awareness of the fact that, if the veto is sustained, I may be helping to cause a delay in the funding of the $1.7 million needed to complete the Endicott-Vestal, N.Y., floodwall project now going on in my district, and the funding of the $40,000 floodwall planning work for Nichols, N.Y., also in my district. But I believe the people of my district will approve the acceptance of such a risk in the national interest.

Finally, if the veto is sustained, as I hope it will be, I am confident that the Congress can and will immediately pass another appropriation bill so that work in progress on the budgeted items around the country can proceed without jeopardy. The Congress should not adjourn until it has so acted.

It should also be pointed out that this situation dramatizes to the fullest extent the need for a constitutional amendment giving the President the power of "item veto" as has been recommended by Presidents of both political parties since Ulysses S. Grant. Early this year I introduced House Joint Resolution 282 which would have that effect, and I deplore the fact that the majority party has not seen fit to permit consideration of this measure.

Justice for the Songwriters

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very remarkable article by Walter Winchell entitled "For All Songwriters, With Love," which appeared in the New York Mirror sometime ago.

Many people will heartily applaud Mr. Winchell for his eloquent, heartfelt tribute to the Nation's songwriters and I desire to express to him my warm gratitude for taking so much of his valuable time to laud and ask justice for this deserving group, who have made such great contributions to the Nation and the world.

Congress has the great responsibility of promptly correcting the unfair, inequitable laws which are depriving songwriters of the just rewards of their work. To further deny to them just compensation under our copyright laws for the gifted offerings which mean so much to people everywhere is a bitter irony and a fantastic miscarriage of justice in this great democracy.

The article follows:

[From the New York Mirror, June 18, 1959]

FOR ALL SONGWRITERS, WITH LOVE

(By Walter Winchell)

"Start Dust" inspires lovers from the Thames to Tanganyika. The Bolshoi dancers go wild over George Gershwin. Every second of every day somebody somewhere is being delighted by the musical witchcraft of Irving Berlin, Richard Rodgers, or Cole Porter. Yes, in these trying days, when the United States of America is meeting stiff opposition, even hostility abroad, one of the most potent ambassadors of goodwill we have is American music. Our songs have probably won us more admirers and prestige around the globe than all the striped pants and attaché cases in the State Department. Yet we treat our American songwriters shabbily. Europeans respect their musicmakers. We don't. And what's worse, American composers, authors, and their heirs have their songs, plays and novels taken away from them after a certain period—under the provisions of a horse-and-buggy, half-century-old law.

Today's words and musicmakers are still hard at work producing Broadway shows, the better popular songs, cool jazz. Yet they are inadequately protected on the legal front. Their valuable copyrights are taken away after 56 years. And there is no appeal. The law that sanctions this devastating giveaway was passed in the pre-radio, pre-TV, pre-recording Gibson Girl days of 1909. Yet it is still all powerful in the color TV, stereophonic sound era. If you own a peanut stand or an oil well, you own it forever until you or your heirs sell it. But if you create such song classics as Hammerstein-Kern's "Ol' Man River" or Gershwin's "Summertime," you lose these valuable creative gems when the copyright runs out. The creators and their heirs lose property rights, even though the melodies linger on and on and on.

As time passes, more and more musical gems, literary favorites, and dramatic classics go into the land of lost literary properties known as public domain. Once a work goes into public domain, it means that the creation can be used for profit by anybody. Broadcasters, record companies, TV producers. And the composer or author is left out in the cold. For instance: Sousa's brass band blockbuster, "Stars and Stripes Forever," is "PD." So are "In the Good Old Summertime" and "There'll Be a Hot Time in the Old Town Tonight." Also, the "National Anthem," for weddings Roger de Koven's "Oh, Promise Me," which he dug out of a trunk to please a soprano who claimed she didn't have enough to sing. Having a work go into PD neither helps the listening public, the composer, or the dramatist. Says ace lyricist Mitchell ("Star Dust") Parish: "If a work is copyright protected, it is watched over, good editions are made available, and the work is kept from being vulgarized."

In years to come, more and more popular songs will sink into PD. This will hurt hundreds of veteran songwriters in modest circumstances who have a few musical properties at most. When that unhappy day comes, they won't receive a penny in sheet music sales, record royalties or performance fees from radio-TV through ASCAP. Here's a sample of this legal cruelty. Songwriter Ernie Burnett, who has been at Saranac for many years, has been practically living off his one big song, "My Melancholy Baby." His meat-and-potatoes melody will be taken away from him in a few years.

PD recognizes no names, no reputations, no previous contributions to musical Americana. It cuts down the rich, the mighty and the average guys and dolls who have labored a lifetime in the 32-bar factories. Even Irving Berlin isn't exempt. His jubilant "Alexander's Ragtime Band" will be PD soon. So will the late W. C. Handy classic, "St. Louis Blues." And to bring the story closer to home, this year (1959) "Ida, Sweet as Apple Cider" hits the dust. So does Victor Herbert's beautiful kiddie cantata, "Toyland."

Yesterday's songs often become tomorrow's hits. This is another reason why the tunemakers of Tin Pan Alley need longer copyright protection. For a good song is a living memory congealed, and can be sung and played for the public's pleasure for decades to come. Recently, for example, many best-sellers (a welcome relief from rot'n'roll) were old-time ditties wrapped up in new arrangements. They leaped to the top of the toreador-and-jeans set. For instance: Connie Francis' disk click, "Who's Sorry Now," and Pat Boone's million-seller, "Love Letters in the Sand". In the very near future, unless the Government changes its tune, many best-selling "singles" and lp's will feature old-time "standards" that have gone into PD. And the poor creators (or their heirs) won't be able to realize a penny from all that vinylite riches.

Incidentally, an "oldie" often has saved a family from want and fire-eating creditors. A recent chart-buster, "My Happiness," proved to be a literal lifesaver for widow Betty Blasco, writer of the lyrics. At the time of the song's popularity two of her children had serious illnesses and Mrs. Blasco herself was hospitalized many weeks. And as Variety noted: "Just as hospital and medical bills were about to overwhelm her royalties began sifting in."

Of course, there have been some improvements in the copyright situation. You may

not know it, for example, but you can copyright photographs, blueprints, even Sunday sermons. Yet, when with these improvements, if you're a songwriter you can't collect royalties from the multimillion dollar jukebox industry. That's because the robot diskjockeys were exempted by the 1909 copyright law. This joker means that 600,000 jukeboxes (many owned by tone-deaf racketeers) take in money made from music but give none to the "pop" songwriters in terms of performance fees. There's a law coming up in Congress that would make jukeboxes pay for the right to use copyrighted material.

Today's copyrighted material is the bread and butter of America's writing fraternity. Without copyrights and economic protection, there would be no incentive to create toetapping tunes and plays that give millions enjoyment. They are the basis of our mammoth entertainment industries. Broadway, Hollywood, TV, phonograph records. So it is high time that America's melody makers, literary merchants of mood, who have given so much pleasure (by their creative efforts), get more recognition. Their brain children have prodded American show business into what it is today. They have brought us friends the world over. Yet, in the legislative corridors of Congress their pleas for copyright protection (at least equal to European musicmakers) fall on deaf ears.

And here's the final irony: On July 3 a statue will be dedicated on Broadway to the memory of George M. Cohan, playwright-actor-songwriter, who brought golden gleams of entertainment to this land for many decades. Ironically, most of the money was raised by songwriters themselves—not any government or city. The whipped cream on the irony is this: Next year two of George M. Cohan's greatest songs, "Give My Regards to Broadway" and "Yankee Doodle Dandy," go into PD—and his family and heirs won't be able to collect a penny from their use on radio, TV or records.

Poison in Your Water—No. 163

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Cleveland (Ohio) Press of July 2, 1958, entitled "A Terrible Price To Pay."

A TERRIBLE PRICE TO PAY

A health menace almost beyond description exists on the county's east side, along the lake.

It stems from the city of Euclid's sewage outlets, which are pouring thousands of gallons of completely untreated sewage into the already polluted lake hour after hour, day after day, week after week.

A sickening stench pervades the entire area, constant reminder of the terrible price in health risk the suburb is paying for all the years of delay in meeting the need for a new sewage plant.

A need that was recognized almost 20 years ago.

This is not to blame Euclid officials entirely. Many factors, including the prolonged Hilltop sewer line controversy, played a part.

But the point is that the years slipped by, each year the problem growing worse and worse.

Now, to Euclid's credit, it is doing something to eliminate the problem. A $5 million plant is underway. But at what a terrible price beyond dollars.

While the work is going on, while pipes are being installed, the old sewage plant has to be shut down 60 percent of the time, at a very lenient estimate.

The result is that raw waste from Euclid, Wickliffe, and Willowick homes—thousands upon thousands of homes—is pouring directly into the lake, is carried up and down the easterly lake front.

And this situation will go on until late next year. Almost 18 months.

Swimming? Out of the question. Boating? Who can stand to sail or dock boats in a mess like that?

The Euclid lakefront is so polluted, some residents say, that if a man took a bucket of that polluted water and set it down in Public Square he'd be arrested for creating a health menace.

Euclid's Mayor Sims knows of the menace and pledges to see what can be done to minimize this health hazard.

If there is any single thing that can be done to alleviate this mess, to safeguard the health of many people—it is worth every effort.

Oregon: Beauty of the Land

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, "Beauty of the Land," which appeared in the August 28, 1959, edition of the Medford Mail Tribune. Editor Eric Allen knows and loves his home State. His knowledge and love are found in the following paragraphs:

BEAUTY OF THE LAND

We are ever and always amazed and gratified at the beauty of this land.

The other day, standing at the summit of Mount Ashland, we found ourselves, once again, bemused and enthralled by the ranges, the valleys, the hills and crags of southern Oregon and northern California.

While the temperature was in the high eighties on the valley floor, the wind which whipped across the summit on which we stood was brisk—perhaps in the low sixties or high fifties. And the altitude, more than 7,000 feet, caused us to breathe rapidly from the slightest exertion.

Far to the northeast, almost obscured by drifting smoke from the Medford area's mills, was the sharp point of Mount Thielsen. Slightly to the right were the irregularities of the rim of Crater Lake. Still further south, Mount McLoughlin loomed, smooth, black, and snowless. And to its right were the tumbled hills of the Mountain Lakes wild area, just this side of Klamath Lake.

To the east were the peaks of the Green Springs area, and further south the dry, brown and green valleys near the Klamath River.

Just to the east of south was the monumental Mount Shasta, still bearing some of its everlasting snow, but far, far less than during a usual August. Just to its right, Black Butte could be discerned.

South and slightly to the west were the Trinity Alps, and, closer, the long Haystack Ridge, barren and stark in its blackness caused by the disastrous fire of 1955.

Further to the west were the rolling peaks and ridges of the coastal ranges. (Legend has it that, on a clear day, one can see the ocean from Mount Ashland. This we have always doubted, and we have also heard it refuted by competent authority. Haze and clouds on the horizon prevented eyewitness proof the day we were there.)

Directly west loomed the ridges of the Wagner Butte and the Dutchman. And in the distance more hills and valleys.

To the north, spreading out in its beauty, lay the Rogue Valley—a brown expanse of hills dotted with green trees (almost blue at a distance), stretching down to green and brown fields, intermingled with the colors of buildings and cities and roads and highways.

Roxy Ann is the most familiar landmark in the area, standing guard just to the east of Medford.

Medford itself could only dimly be seen through the haze. But directly below part of Ashland, and the brown scars of the recent fire, showed up clearly.

It is a vista of peace and loveliness, and we could have spent hours just staring at it.

Summerfield Parades Progress

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. CHAMBERLAIN. Mr. Speaker, many of my colleagues have taken advantage of the opportunity within recent days to see the parade of progress at the Post Office Department. I am sure they, like myself, were deeply impressed with this exhibit of the ingenious equipment which has been developed for faster handling of the mail, and which soon will be in actual operation

I only wish mail patrons the country over could be privileged to see for themselves this preview of the gigantic and dramatic strides which are being made in delivering their mail. Fortunately, however, our informative press has given the exhibit good coverage, and under leave to extend my remarks in the RECORD, I include Bill Pyper's account which appeared in Postmaster General Arthur E. Summerfield's hometown newspaper, the Flint Journal, on August 30, 1959. The article follows:

WOLVERINES IN WASHINGTON—SUMMERFIELD PARADES PROGRESS

(By William F. Pyper)

WASHINGTON.—It was a proud postmaster general who paraded his mechanized equipment for Members of Congress and news reporters.

Michigan's Arthur E. Summerfield called it the Parade of Postal Progress, as he literally lifted the veil off the model of a planned new fully-automated post office in Oakland, Calif., and took the occasion to demonstrate some of the newest equipment which his department will put into service all over the country.

Even to the cynics, who wanted to needle him about better mail service, some of the gadgets designed to speed up and make more efficient the handling of the mails were unbelieveable. They represent 6½ years of research and development—years which have gone a long way toward ironing out the rut

of procedural lassitude in which the gigantic agency has been running.

Perhaps Summerfield's brightest moment of the day came when Paul L. Davies, chief executive of the Food Machinery and Chemical Co. which is equipping the Oakland facility, told of surveys his people had made in European countries seeking ideas which might be incorporated into his project.

"In nearly every case, however, we found that the United States was substantially ahead," he remarked.

Such a comment was music to the ears of Postmaster General Summerfield and his staff—his deputy and assistants, all of whom share with him the title of "general."

For there can be no doubt that in 1953, when they took over the biggest civilian department of the Government, numerous states in Europe had modernized, leaving the United States at the post. Since the U.S. Post Office is also the biggest in the world, it was more than a little embarrassing to be asking the Scandinavian and Western European countries how things might be done better.

Today representatives of foreign postal agencies are a common sight around the U.S. Department. Through their international organization they learn that America is ahead in numerous developments which they need. They come here to look it over and return prepared to follow suit wherever it may be practical.

Even the Union of Soviet Socialist Republics has entered into a technical exchange program with the U.S. Post Office Department. A year ago, Summerfield's deputy, Edson O. Sessions, studied the Russian system in detail. His survey was followed by a 12-day visit from the Vice Minister of U.S.S.R. communications and three other postal officials to the United States. Just this weekend, four American postal executives, led by Chief Inspector David H. Stephens, are en route to Moscow for a return visit.

Anyone who has been dependent upon Russian mails will agree that the Soviets have more to gain from this exchange than have the Americans. However, Summerfield and Sessions firmly believe that such relationships help to melt the ice of the cold war, just as other exchanges. Thus, the Post Office Department has been doing quietly for some time what other parts of the administration only now are taking up in a more spectacular manner.

Nearly all Americans today are aware of the vast changes which have been made in the postal system since Summerfield took over. Everywhere one sees the red-white-and-blue vehicles and corner drop boxes. A good many persons have seen films or models of the mechanical equipment which was installed to speed up service rather than to meet the demand for restoration of two daily deliveries. The day is near when electronics devices will read addresses on letters and dispatch them virtually without a human thought or action being involved.

Somewhat closer to the public are the completely self-service post office and the automatic substation, where citizens can buy stationery, stamps, and envelopes around the clock.

Also nearly ready for operation is a parcel post acceptance machine which weighs a package, calculates postage and insurance in response to dialed information, stamps the amounts on the wrapper, receives the coins, and sends the parcel on its way.

There had been no new post office buildings in the United States from 1938 until Summerfield began his administration. In the years since then, under the lease program, 3,000 communities have received new facilities. Today, they're being dedicated at the rate of three a day, and the department hopes soon to double the rate. Private contractors construct the buildings and rent them to the Government.

"This is free enterprise at its best," the Postmaster General told newsmen.

Even with all his economies and improvements, plus the increase in rates of last year, Summerfield's department will run up a $600 million deficit this year. The reason lies in the fact that the increase in the volume of mail exceeds the increase in population—a worldwide trend.

"If we hadn't made the economies and improvements, and if we hadn't increased the rates, our costs would be running $1 billion above our revenues by now," he said.

More than that, without the modernization and mechanization, it would have been physically impossible to keep up with the increased volume.

Trade Adjustment Legislation Needed

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. BOWLES. Mr. Speaker, the reciprocal trade agreements legislation has always had my enthusiastic support. For at least a generation it has been evident to most Americans that the lowering of tariff barriers must be systematically pursued if the United States is to measure up to the demands of world leadership economically as well as politically.

At the same time it has long seemed unfair to me to expect a certain few industries in this country to bear the major burden of our national trade policy. It cannot be denied that the economic reversals suffered by many communities have resulted from tariff reductions.

I believe it is the responsibility of this Congress to ease the adverse effects of our national trade policy on previously healthy sectors of our economy. I am deeply convinced that we should provide temporary assistance to those stricken industries, communities, and individuals that find aid necessary as they attempt to diversify or expand their economic base.

Today I have introduced a trade adjustment bill which I hope may help serve as a focus for discussion in advance of the reconvening of Congress in January.

The objective of the bill is not to subsidize the adversely affected communities and firms or to compensate them for injury. Instead its aim is to help them adjust to new conditions within the framework of our trade policy—either by assisting them to make more effective use of their present facilities or by aiding the development of new lines of production.

The area redevelopment bill passed by the Senate earlier in this session contained an amendment which would have been a first step toward such a program of trade adjustment. This amendment would have authorized governmental assistance for industries and communities as they adjust their productive activities to the new economic conditions created by the lowering of trade barriers. The amendment would have encouraged the President to use every governmental procedure presently available to facilitate the adjustment process.

Unfortunately this amendment is not contained in the area redevelopment bill reported out by the House Committee on Banking and Currency. As a result there is little constructive legislation before this house designed to alleviate the conditions of depressed areas suffering specifically because of our overall national trade policy.

Mr. Speaker, the bill which I have introduced today is a comprehensive measure to provide governmental assistance to those communities, industries, enterprises, and individuals adversely affected by our reciprocal trade program.

Briefly, this bill would provide help from the Federal Government to retrain individuals for news jobs, to render technical and financial assistance for conversion of plants to new items of production, and to assist communities in their efforts to attract new types of industry.

In the past when imports have reached the so-called peril-point threatening a domestic industry, great pressure has been brought to bear upon the Tariff Commission for restoration of tariffs or imposition of quotas. It is my belief that the executive branch should be provided with another alternative in such situations. It should be able to assist these businesses, industries, and communities as they attempt to adjust to newly created economic conditions.

What I propose in this bill is the establishment of an interdepartmental committee, the Trade Adjustment Board. As an alternative to the acceptance of peril-point and escape-clause recommendations, the President could turn the matter over to this Trade Adjustment Board.

Upon application by a community, an industrial development corporation, a business enterprise, an employee, or a union, the Board could determine whether the applicant had been adversely affected by the lowering of trade barriers. If the Board decided that the applicant had been so injured, many different forms of assistance could be made available.

By shifting the point of adjustment from the tariff itself to the particular community, firm, or individual claiming injury, an equitable trade policy would both encourage the expansion of foreign trade and at the same time minimize the extent of possible injury to the domestic economy.

My bill would provide an orderly and direct means of supplying technical advice and information to seriously afflicted communities.

Another type of aid would be granted in the form of loans. These loans could be made available through the regular procedures of the Small Business Administration.

Firms and communities would also be allowed accelerated amortization in order that they might readily develop new or different lines of production.

Finally, this bill would also provide several types of aid to individual workers who lose their jobs because of our trade policy.

The first assistance granted to these individuals would take the form of additional unemployment compensation. The bill would authorize the supplementing of State benefits from Federal funds. A worker, under this bill, could receive two-thirds of his weekly pay for 52 weeks. This unemployment compensation would, of course, be a stopgap measure, providing benefits only until other employment was available.

If a worker is over 60 years of age when he loses his job through the operation of international trade, and if he cannot get another job because of his age, this bill would allow him to retire under the Social Security Act.

Other workers, however, with many productive years ahead would be provided with an opportunity to receive retraining in skills that are in demand by the national economy.

This trade adjustment program is not a subsidy. It is not permanent assistance enabling industries or communities to hobble along. It is temporary assistance designed to help them over a period of adjustment.

If we believe that world trade is crucial to the future economic health of our Nation, as everyone by now should be convinced it is, then anyone seriously injured in the pursuit of this policy should be eligible to receive aid in order that he might change operations and again become productive.

In the field of veterans' legislation, we refer to a "service-connected disability." That is the way I regard the sacrifices which some of our industries have had to make as we pursue the legitimate objectives of our national trade policy.

It is the responsibility of Congress, I believe, to provide temporary assistance to those trade-affected communities, industries and individuals that need and can use aid as they attempt to diversify or expand their economic base. This bill would not subsidize obsolete plants. It would assist them to make more effective use of their present facilities or aid them in switching to new lines of production.

Mr. Speaker, trade adjustment is not an untried idea. It has been tried and found workable.

I refer to the experience of the European coal and steel community. It was recognized by the farsighted men who set up this first major venture in international administration of economic resources that hardship would fall to certain areas because of greater productivity through technical development and shifts in the centers of production.

So the conception of readaption was evolved and put into operation in 1952. Readaption in the European coal and steel community offers aid to disadvantaged firms and workers similar to those proposed in my trade adjustment bill. This European program by and large has met with success. The recent treaty establishing the European economic community has continued the concept of adjustment assistance in areas affected by the reduction of trade barriers.

This concept of readjustment assistance recognizes that our American economy is able to adapt its productive capacities in order to meet changing conditions. We see this adaptability in action every day as American industry modifies itself so that it may assimilate new products or technological improvements.

Here is a partial but constructive solution for an ancient dilemma which has often plagued Members of Congress. Those who wish to lower tariffs should support trade adjustment for they do not want any domestic interest to be injured. At the same time those who are legitimately concerned about some particular industry or community should find in this trade-adjustment bill a way to assist these individual enterprises while at the same time furthering the overall national interest by increasing world trade.

Everyone should now be aware of our true national interest. The easy argument against foreign imports has prevailed too long. If it results in a further weakening of our trade policy we may all suffer gravely in the future. Totalitarian nations will continue to make inroads into the free world as their trade offensive succeeds beyond their greatest hopes. Our alliances will falter over trade antagonisms. Our domestic economy will decline and American laborers will be out of work as other nations are no longer able to buy our products.

None of these things need happen, of course. A policy of trade adjustment provides the means whereby the Reciprocal Trade Agreements Act can be strengthened, not weakened. Under it our trade with the world can continue to increase. Only a vigorous trade program of this sort will keep together a strong free world and promote a continually rising living standard for us all.

Maj. Gen. W. P. Fisher

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HÉBERT. Mr. Speaker, I share with my colleagues a sense of loss at the reassignment of Maj. Gen. W. P. Fisher, Air Force Director of Legislative Liaison. I congratulate him, however, upon his forthcoming assignment, that of commander of the Eastern Air Force of the renowned Military Air Transport Service.

General Fisher is a man of unusual experience and capacity as a commander, beginning with his leadership of the 28th Bomb Squadron, 19th Bomb Group which experienced the Japanese attack on the Philippines in December 1941 and survived.

His great capacity as a leader was notable during his service in the extremely challenging duties which he has had here in Washington. General Fisher is a man respected and admired for his calm, straightforward manner of doing business. His integrity is unquestioned. He has promoted with distinction the cooperative relationship which exists between the Congress and the U.S. Air Force.

I take this opportunity to welcome his successor as Director of Legislative Liaison, Maj. Gen. Thomas C. Musgrave, Jr., who is also an officer of the highest ability.

Just One Vote

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. BURDICK. Mr. Speaker, it seems incredible that just one vote put a roadblock in front of water resource development today.

The public works bill embraced programs to improve and increase domestic and municipal water supply, provide for pollution abatement, insure water for industrial uses and provide for irrigation and reclamation.

As a result of sustaining the veto of that bill, new starts in areas where development has been long overdue will not be undertaken and some existing projects may be endangered.

The citizens of North Dakota are vitally interested in water development. All segments of the State are united solidly behind a plan to divert water from the Missouri River, insure the water supply for many of the towns and cities in the area, and provide for irrigation in areas where rainfall is not dependable. This plan is known as the Garrison diversion unit—a brochure of this proposed project has been mailed to every Member of Congress.

While the people of my State support the Garrison diversion unit, they also are interested in water development throughout the country. Many groups in North Dakota have been formed to advance and encourage water resource development. These people cooperate with groups in other States to discuss their problems and share ideas in this important field.

The North Dakota American Legion, the North Dakota Bankers Association, the North Dakota Farmers Union, the North Dakota Farm Bureau, the North Dakota Water Users Association, the Garrison Diversion Conservancy District, and many others have taken a genuine interest in water resource development.

Prior to the vote on the public works veto today, I received requests that I vote to override the veto from public-spirited citizens in all walks of life. Telegrams were received from the following: L. C. Mueller, Oakes, N. Dak., president of the North Dakota Water Users Association; Oscar N. Berg, Minot, N. Dak., executive secretary of the North Dakota Water Users Association; H. W. Lyons, Jamestown, N. Dak., businessman; W. M. Harrington, Minot,

N. Dak., mayor; A. R. Weinhandl, Minot, N. Dak., banker; Henry J. Steinberger, Donnybrook, N. Dak., farmer; and A. J. Christopher, Pembina, N. Dak., director of North Dakota Water Users Association.

I was also advised by Mr. Herschel Lashkowitz, mayor of the city of Fargo, N. Dak., that the Fargo city commission had adopted a resolution requesting the Congress to override the veto.

Additional requests to override came from the following Rural Electric Cooperative Associations: Nodak Rural Electric Cooperative, Inc.; Burke-Divide Electric Cooperative; Williams Electric Cooperative, Inc.; Mor Gran Sou Electric Cooperative, Inc.; Sheyenne Valley Electric Cooperative; Mountrail Electric Cooperative, Inc.

Mr. Speaker, despite the stunning defeat administered today to water development throughout the Nation, I believe the people of North Dakota stand squarely behind these programs both in their State and in other States.

Let's Make Sure Boxcar Shortages Halt

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. PORTER. Mr. Speaker, year in and year out the Western States are plagued with the threat of boxcar shortages along the rail lines. It seems that some carriers fail to see the wisdom in planning ahead. One common complaint is that eastern carriers have a penchant for keeping boxcars until they are needed—a real handicap to western lines who may need them to haul lumber. The practice has severely injured the economy in the Fourth Congressional District, for example, on many occasions. Now I understand that rail cars are again becoming scarce in Oregon. Public Utility Commissioner Jonel C. Hill has publicly announced the probability of a future insufficient boxcar supply.

Both the House and the other body have examined bills introduced to correct this sort of problem. They would fine carriers who keep boxcars by charging a higher rental per diem per car, for example.

The Senate Interstate and Foreign Commerce Committee has reported S. 1789 which deals with the problems of keeping the boxcars rolling. This bill incorporates several features, among them giving to the Interstate and Foreign Commerce Commission authority to determine rental rates and old car replacements.

Hearings on this important legislation have been held in the House and the bills are now pending before the committee. I hope the House Interstate and Foreign Commerce will report to the House for action this legislation which means so much to the economy of the West and my district in particular. It is best to lock the door while the horse is still inside.

The newspaper article in which the Oregon PUC Commissioner Hill discusses the problem follows:

[From the Coos Bay World, Aug. 28, 1959]

RAIL CARS TO BE SHORT IN OREGON

SALEM.—Shippers in Oregon may expect a tight rail car situation for the next 2 months, Public Utility Commissioner Jonel C. Hill said today.

Some shortages are now being encountered along Southern Pacific Co. lines in Oregon.

"At this time, various crops are being moved to market throughout the United States," Hill stated. "This means the probability of a future insufficient boxcar supply."

He said Paul Miller, manager of the closed car section of the Association of American Railroads, has assured Gov. Mark Hatfield's emergency transportation committee that cars are on the way to the Southern Pacific to serve Oregon shippers.

"If we get enough of a backlog of boxcars," Hill said, "the shortage may be only temporary."

R. J. Hogue, Medford lumberman, is chairman of the Governor's committee.

Housing Bill—Or Issue?

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Evening Star of September 1, 1959, on the so-called compromise housing bill. The editorial, which needs no illuminating remarks whatsoever, follows, and I urge my colleagues to read it carefully:

HOUSING BILL—OR ISSUE?

One of the most frequently repeated criticisms directed at this 1st session of the 86th Congress is that it has sometimes seemed more preoccupied with creating political issues than with enacting legislation. Rightly or wrongly, the charge has been repeated, and most recently by an influential spokesman of the majority party—Chairman Smith of the House Rules Committee—with reference to the housing bill now before President Eisenhower for approval or veto.

In this case, the background for such criticism is substantially as follows: In early July the President vetoed an omnibus $1,375 million housing bill on the grounds it was extravagant and inflationary. He urged the Congress to try again and to hold more closely to recommendations which he had made in January. The result was a second version, a so-called compromise $1,050 million measure on which congressional action was completed last week. While the dollar figure has been reduced, the bill still contains several provisions to which the President has expressed specific objection, which raise the distinct possibility of a second veto, and which prompt the bill-or-issue query.

These are the major points of difference: (1) A 1-year $650-million extension of the urban renewal-slum clearance program instead of $300 million for each of the next 2 years; (2) new loan programs of $50 million each for construction of college classrooms and of housing for the elderly, both opposed at this time by the administration; (3) authorization for 37,000 new units of federally subsidized low-rental public housing, although the administration recommended none at this time because there is outstanding authorization for 100,000 units not yet built; (4) an increase of $8 billion in the loan insurance authority of the Federal Housing Administration, which the President has explicity asked be provided in separate legislation.

Along with this array of differences, congressional spokesmen have said that this will be the final effort at housing legislation in this session. Party lines were crossed in passing the bill in each branch, but it is difficult to tell how the votes might go on a Presidential veto—if there is one. At the moment, therefore, the question is still unanswered as to whether there will be legislation or a political issue on housing. But if the President vetoes the bill, and there is no legislation, we think he will have the best of the political issue, or what there is of it.

United States-Israel Ties Stronger

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD a guest editorial appearing in the Detroit (Mich.) Free Press on Monday, August 10, 1959, by Mr. Philip Slomovitz, the distinguished editor and publisher of the Detroit Jewish News, entitled "United States-Israel Ties Stronger."

This article well chronicles the fine, friendly relationship traditional between Israel and the United States and now growing stronger. The article follows:

UNITED STATES-ISRAEL TIES STRONGER

(By Philip Slomovitz)

TEL AVIV.—A new era of American-Israel friendship is in evidence in this country. Ambassadors from the United States have been instrumental, in the 11 years of Israel's existence, in furthering good will, in encouraging trade between the two countries and especially in advancing cultural interchanges.

The new U.S. ambassador in Israel, Ogden R. Reid, former editor of the New York Herald Tribune, is finding particular favor here.

For several months before his departure for Israel, he and Mrs. Reid studied Hebrew. When Reid presented his credentials to President Itzhak Ben-Zvi, they exchanged greetings in Hebrew.

Only the French ambassador is believed to have a better mastery of Hebrew among the foreign envoys in Israel.

Reid's position here is believed to be assuming an especially noteworthy significance by virtue of the latest developments in Arab-Israeli relations. The tension between the two peoples seems to have lessened considerably.

This is believed to be due to Israel's triumphs in the Sinai fighting of 1956 and the quickening of negotiations for the solution of the Arab refugee problems.

The United States is believed here to be playing an important role, behind the scenes of United Nations negotiations, in encouraging efforts for the solution of the refugee problem.

The acceptance in U.N. quarters of the view that it would be impractical for the Arab refugees who left Palestine when Israel was established, May 14, 1948, to return to Israel, is becoming the basis for solution of the problem.

The U.S. State Department has indicated on several occasions—first under the late Secretary of State John Foster Dulles 4 years ago—a readiness to provide large sums of money for resettlement of the Arab refugees.

Now there are reports here that the extension of such U.S. aid will be predicated upon acceptance by the Arabs of the viewpoint that the refugees cannot be expected to return to Israel.

The reasons given for such insistence are (1) that a return of Arabs in large numbers would constitute a fifth column in Israel; (2) that only a handful of Arab refugees desire to enter a new environment which would be totally strange to them; (3) that there are no opportunities for economic security for large numbers of untrained Arabs.

A counterproposal calls for the integration of the Arabs into the various Arab lands where there is a shortage of labor; the establishment of large-scale industrial enterprises into which the refugees would fit, and provisions for training the refugees in their new environment and their integration in a society that is akin to them.

Reid favors the friendliest relations between the United States and the Arab States as well as Israel, and he is expected to play a historic role in effecting a solution to the Arab refugee problem.

Congressman Dollinger's Annual Report

EXTENSION OF REMARKS
OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. DOLLINGER. Mr. Speaker, this is my 11th annual report to my constituents; I have sent them an annual report every year since coming to Congress. This report will be a résumé of my aims and efforts in behalf of the people I represent, as well as a summing up of the work of the 1st session of the 86th Congress. I have enjoyed representing the fine people of my district, and have considered it a privilege to strive for legislation beneficial to them as well as for the best interests of our country.

This Congress has accomplished a great amount of work, when we consider the overwhelming volume of business before it, the defense of our Nation being of primary concern. Vital domestic issues had to be considered as well as the Mutual Security Act, which fortifies our position with friendly nations and enables them to gain economic strength and protect themselves against aggressors.

In addition, we have had to grapple with the many crises engendered by the Soviet menace and the continuing cold war, as well as the explosive situations prevalent in many corners of the earth. Israel's position remains untenable and insecure regardless of the tremendous sacrifices of her people, their ability and industry, for her enemies still threaten to destroy her. I have lost no opportunity to urge that she be given all possible aid, for Israel is our bastion of democracy in the Middle East; she is our friend and ally; she deserves all that we can do to help her.

LABOR

This country's millions of workers await with great anxiety the final provisions of the highly controversial labor bill. At this writing, we do not know what the law will provide, as the Senate and House bills are in conference. We do know that as usual, Republicans favored management, and they, together with the southren bloc, succeeded in passing the Landrum-Griffin bill in the House. This has been labeled a bill which would "kill" the union movement; it has been charged that it was "probably authored by representatives of the National Association of Manufacturers." It has also been charged that a deal was made between Republicans and certain southern Democrats—that the Republicans would stymie action on civil-rights legislation in return for southern votes in favor of the Republican-sponsored Landrum-Griffin bill. I voted against this bill, the effect of which would throw the weight of the Federal Government on the side of management and would inflict punishment on the millions of honest, law-abiding men and women who belong to unions.

I favored a strong and constructive labor reform bill, which would protect union members and end abuses; I shall continue to fight against any labor bill which is punitive, which penalizes innocent workers, and which would deprive labor of any of its hard-won battles and advances. I hope that we shall have the opportunity to consider a final bill which will provide union members with all necessary safeguards and which will not tip the Taft-Hartley scales still more in favor of employers and against workers.

For many years, I have introduced bills to increase the minimum hourly wage from $1 to $1.25. I urged action on my bill, pointing out that millions of our people are merely existing; they live in substandard conditions because they are underpaid and because high living costs and high taxes make it impossible to provide their families and themselves with barest necessities.

CIVIL RIGHTS

Hope for passage of an effective civil rights bill at the present session of Congress grows dimmer; this is a severe blow to all who recognize the great need for such legislation. The 1957 civil rights right-to-vote bill is virtually ineffective; it needs teeth. Unless the Civil Rights Commission is given some real power, Negroes will go into the 1960 elections as voteless as ever. The President wants the Commission extended for 2 more years. This amounts to only a token gesture on his part, when we consider that he has yet to make an earnest plea for strong civil rights legislation. The Republicans are responsible for failure to vote a civil rights bill out of committee; if the Republicans were sincere in their campaign promises regarding civil rights, Members of Congress would have had the opportunity to vote on a good bill long before this, but so far, the Republican members of the committee in charge have withheld their support. The Attorney General must have authority to seek Federal court injunctions to enforce school desegregation and civil rights generally, and legislation to give him such authority should be given priority.

I have introduced strong civil rights bills to end the unconscionable discrimination, harassment, intimidation, and other human indecencies which are being inflicted upon a vast segment of our population. We cannot claim to have true democracy in our country, equality of men, equality of opportunity, freedom as guaranteed by our Constitution, until every vestige of discrimination because of race, color, or religion is abolished.

HOUSING

The President's veto of the first housing bill passed during the present session of Congress came as a great shock to me. In my opinion, his action was not only ill-advised but was unconscionable, when we consider that countless Americans now merely exist in substandard dwellings, and that they must rely on the help of the Federal Government for public housing.

We have now passed a second housing bill and it is to be hoped that it will become law. The bill provides for urban renewal grants; 37,000 additional public housing units, loan programs for construction of college classrooms and dormitories, and housing for elderly persons. This represents a constructive and vitally needed program, but it only begins to meet the minimum standards we should set for American living.

IMMIGRATION

I, with other members of the New York Democratic delegation, introduced an Immigration and Citizenship Act to supersede the present Immigration and Nationality Act, known as the McCarran-Walter Act. It has long been recognized that the present law is discriminatory, unfair, and undemocratic. Under our proposal there will be no discrimination based on national origin or race, no classification of U.S. citizens into two categories, native-born and naturalized. There will be no additional grounds for loss of U.S. citizenship by naturalized citizens except those that apply to native-born citizens. Many other necessary provisions are also included.

I hoped that, in view of the fact that the United States joined with other free countries in the United Nations in sponsoring a proposal for a World Refugee Year, and inasmuch as our attention was directed toward those unfortunates so desperately in need of a homeland, Congress would pass legislation liberalizing our immigration laws. However, that hope has been dashed also, and we continue to shirk our duty toward mankind while other nations, less able to sacrifice than ours, are opening their hearts and doors to the unfortunate, the homeless, the innocent victims of wars and oppression.

FEDERAL AID TO EDUCATION

Democrats are rightfully proud of their sincere efforts and great accomplishments. Their aim has always been to afford the help which the people need. By contrast, we find the Republicans still indulging in their deceitful promises and then sabotaging or ignoring the legislation which would provide for the very benefits they advocate by word only. As witness the deplorable plight of our public school system. The administration has, as usual, called attention to the desperate conditions, but has made no effectual moves to correct those conditions. There is a shortage now of about 140,000 classrooms throughout the United States. There is a great shortage of teachers. The administration is primarily to blame that this grave problem has once again been swept under the rug and that about 10 million American children are doomed to overcrowded and obsolescent classrooms in the richest Nation on earth.

SOCIAL SECURITY, PROBLEMS OF THE AGED, AND OTHER IMPORTANT LEGISLATION

I have been happy to support legislation liberalizing benefits under the Social Security Act, and have introduced bills to provide further benefits. Among the latter are bills to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits under the act; to provide that full benefits thereunder, when based upon the attainment of retirement age, will be payable to men at age 60 and to women at age 55; and to eliminate the requirement that an individual must have attained the age of 50 in order to become entitled to disability insurance benefits.

I also introduced a bill to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits. The protection offered by this bill is vitally needed by those many thousands of our older people who now cannot afford necessary medical, nursing, or hospital care; they cannot obtain or afford private insurance and they cannot meet the expense of illness. Costs of such care continue to rise, and the Federal Government must act to protect all those who are in dire need of such assistance.

Older workers and their problems have continued to receive my attention, and I reintroduced my resolution which would end existing bias against the hiring of older workers, and which would assist them in maintaining their rightful and dignified place as useful members of society.

I have introduced bills to lighten the taxload; to repeal excise taxes; to grant additional income tax exemptions to those supporting a dependent who is permanently handicapped; to those receiving retirement annuities or pensions; to those who are physically handicapped; to increase the personal income tax exemption of taxpayers.

Veterans deserve all possible assistance, and I have been happy to support legislation in their behalf at every opportunity, as well as to introduce bills beneficial to them. I am gratified that the liberalized veterans' pension bill recently passed, has been signed into law.

I voted for the Federal employee health program bill, and am pleased that it passed. I trust it will be signed into law. This will enable Federal employees to purchase protection at a cost which is within their means, from the unanticipated and oppressive costs of medical care, as well as the often crushing expense of so-called catastrophic illness or serious injury. The bill is designed to close the gap which now exists and bring the Government abreast of most private employers who have for many years been establishing and operating contributory health benefit programs for their employees.

I was happy to procure passage of my bill in the House to provide for the honorary designation of Saint Ann's churchyard in the city of New York as a national historic site. This culminated 11 years of unrelenting work on my part regarding the designation of Saint Ann's churchyard. Last year, I thought my work was finished when the House passed the bill, but it was defeated in the Senate committee. I renewed my efforts again this year; it again passed the House, and at this moment the bill is once more bottled up in the Senate committee. I can only hope that the Senate will take favorable action.

CONCLUSION

Space limitation prevents my discussing all the subjects important to my constituents. I hope the foregoing will show, to some extent, what I have endeavored to accomplish and what the 86th Congress has done so far.

My congressional office at 938 Simpson Street is open daily, and my constituents are welcome to call there and discuss matters of interest to them. I am always pleased to see them, to receive their letters, and to do all I can to be helpful.

Exercises Commemorating and Honoring the Memory of Father Junipero Serra, O.F.M., 175th Anniversary

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. SHELLEY. Mr. Speaker, there stands in Statuary Hall here in the Nation's Capitol a statue of Father Junipero Serra as one of California's distinguished sons. On Friday, August 28, at 10 a.m., ceremonies commemorating the 175th anniversary of Father Serra's death were held in front of the statue. Present were all of the California Members of the House, California's two distinguished Senators, the Serra Club of Fort Belvoir, Va., members of the clergy, and others.

Under leave to extend my remarks in the RECORD, I present herewith the remarks made by the several speakers:

EXERCISES COMMEMORATING AND HONORING THE MEMORY OF FATHER JUNIPERO SERRA, O.F.M., 175TH ANNIVERSARY, STATUARY HALL, AUGUST 28, 1959

The commemoration and the laying of wreaths at the statue of Padre Junipero Serra was held at Statuary Hall, U.S. Capitol, Washington, D.C., on Friday, August 28, 1959, at 10 o'clock a.m.

Dr. William T. Doran, Jr., president of the Serra Club of Fort Belvoir, Va., presided.

The PRESIDING OFFICER. Ladies and gentlemen, the ceremonies commemorating and honoring the memory of Father Junipero Serra, O.F.M., on the occasion of the 175th anniversary of his death will begin with the invocation. This will be given by Father Noel F. Moholy, O.F.M., of Santa Barbara, Calif., the vice postulator for the cause of Father Serra. Father Moholy.

INVOCATION

O God in heaven above, Supreme Master and Sovereign Lord, we praise Thee, we bless Thee, we adore Thee for Thy great glory. We beg Thee, Provident Father of us all, to turn Thy benign countenance upon this assemblage honoring one of America's pioneers. We beg of Thee the signs and prodigies which will show indisputably, to the glory of Thy name, that he is a saint in heaven.

The PRESIDING OFFICER. Your Excellency, distinguished participants in the ceremony, Members of Congress from the Senate and House of Representatives, it is with great pride that I, as chairman, welcome you here this morning on behalf of the cosponsors of this ceremony: the Members of Congress from California and the Serra Club of Fort Belvoir, Va. It is fitting to the memory of Father Serra that we acknowledge the presence here of our distinguished guests. Would that time permitted to mention everyone here because all present represent prominent and cultural groups and include: Knights of Saint Gregory, Knights of Malta, Knights of the Holy Sepulchre. It is with sincere pride and grateful acknowledgment that I mention those whose presence emphasizes the national and international recognition of California's first citizen and man of God's choosing. Representing the executive branch of our Government is Serran James O'Connell, Montclair, N.J., the Under Secretary of Labor. Among the Congressmen is Serran DONALD IRWIN, U.S. Representative from Connecticut. Representing Spain we are honored to have (Spain being the place of Father Serra's birth), the Honorable Enrique Suarez de Puga, Secretary for Cultural Affairs of the Embassy. Representing Mexico, our sister country to the south, and the place of Father Serra's early missionary work, is the Honorable Juan Gallardo, Chargé d'Affaires, and Mr. Luis G. Aveleyra, also of the Embassy. Representing the Pan American Union, is Dr. Juan Marin, Director of the Department of Cultural Affairs, Dr. Javier Malagon, and others. Dr. Manuel Martinez of the Department of Latin-American History of Georgetown University is representing the Spanish-American Historical Societies. Monsignor Magner is representing Catholic University. Father Durkin is representing Georgetown University. Mr. Homer Hammond represents the National Council of Catholic Men; former Congressman John Costello, the Holy Name Society; Mr. Gerald Mooney, Ancient Order of Hibernians; Mr. Justin McCarthy and Mr. Valentine Matellis, the Knights of Columbus. Father Frank Hurley represents the National Catholic Welfare Council. There are representatives of the various Catholic religious orders. Serra clubs of Serra International, are represented here this morning, from California to New Jersey, Massachusetts to Texas. Past President Thomas Reilly of Serra International, is here with us. Father (brigadier general) Walsh, U.S. Army (retired), represents the diocese of Richmond, Va., recogniz-

ing California's saintly pioneer. There are greetings; two of these I will read.

AUGUST 26, 1959.

Hon. JOHN SHELLEY,
House of Representatives,
Washington, D.C.:

I am with you in spirit on the occasion of of the commemoration in the National Capitol of the 175th anniversary of the death of Padre Junipero Serra. May God grant our Nation may soon be honored by the inscription of the name of California's founder and apostle in the Cannon of the Saints.

A. J. WILLINGER,
Bishop of Monterey.

FRESNO, CALIF.

AUGUST 26, 1959.

Hon. JOHN SHELLEY,
House of Representatives,
Washington, D.C.:

Franciscan Fathers of California express sincere appreciation for commemorative observance for Padre Junipero Serra on this 175th year and rejoice at the honor accorded their founder who also laid first stones of culture and initiated progress which has come to such a peak of achievement in the Golden State.

Father DAVID TEMPLE,
Franciscan Province of Santa Barbara.
OAKLAND, CALIF.

The PRESIDING OFFICER. Ladies and gentlemen, at this time I would like to introduce our first speaker, the Honorable JOHN SHELLEY, Congressman from San Francisco.

Congressman SHELLEY. Mr. Chairman, Your Excellency Most Reverend Bishop Hannan, Right Reverend and Very Reverend Monsignori, Reverend Fathers, representatives of the Governments of Spain and Mexico, my colleagues in the Congress of the United States and ladies and gentleman. It is first my privilege to read a couple of messages that were addressed to my office which arrived this morning:

AUGUST 26, 1959.

Hon. JOHN F. SHELLEY,
Old House Building,
Washington, D.C.:

It is a privilege to join with the Serra Society on the occasion of the observance of the 175th anniversary of the passing of Father Junipero Serra. The people of San Francisco are continually aware of the tremendous contribution made to this area by Father Serra. Were it not for his saintly efforts, San Francisco and California would be lacking in many of our greatest spiritual assets. However, our indebtedness to Father Serra exceeds even the sphere of the church as evidenced by the many temporal accomplishments justly accredited to his untiring efforts. San Francisco's debt to Father Serra and his coworkers of nearly two centuries ago can never be fully repaid.

GEORGE CHRISTOPHER,
Mayor, San Francisco, Calif.

AUGUST 26, 1959.

The Honorable JOHN SHELLEY,
House of Representatives,
Washington D.C.:

It is distinct pleasure to extend my warmest felicitations to the California legislators and the Serra Club of Fort Belvoir as you gather to commemorate the 175th anniversary of the death of Father Junipero Serra. In keeping his cherished memory alive you do a great service to the church and to the country. May the high ideals of this zealous apostle continue to inspire you and may God abundantly bless your devoted work.

Archbishop VAGNOZZI,
Apostolic Delegate to the United States.

AUGUST 27, 1959.

Hon. JOHN F. SHELLEY,
Member of Congress,
House Office Building,
Washington, D.C.:

Understand you will be present at ceremonies before statue of Junipero Serra. Would appreciate your acting as my representative and reading the following message:

It is fitting that in this year marking the 175th anniversary of Serra's death there be a program in his honor in the Statuary Hall of the Nation's Capitol. Father Junipero Serra is truly the first of the pioneers who inaugurated the history of civilized California. He personally established 9 of the 21 missions and made a host of other great contributions to the future of this State. The people of California owe him great and lasting honor and we appreciate the effort made by those of you present today.

Sincerely,

EDMUND G. BROWN,
Governor of California.

AUGUST 28, 1959.

Hon. JOHN SHELLEY,
House of Representatives,
Washington, D.C.:

The Native Daughters of the Golden West extend congratulations to Fort Belvoir Serra Club for this observance honoring Junipero Serra whom we revere and honor as the founder of our missions and father of California. Our order recognizes the great contribution Father Serra made to our State and we are happy to participate in this commemoration. I am proud to announce that we are beginning a project for the placement of a statue of Father Serra on the capitol grounds at Sacramento. The Native Sons of the Golden West will cosponsor this project with us. We will be happy to have assistance from other organizations or friends. I wish it were possible to be present for your program, but as it is not, I am delighted to have my daughter represent me and the Native Daughters of the Golden West.

MAXINE PORTER,
Grand President, NDGW.

A MESSAGE FROM JOHN B. SCHMOLLE, GRAND PRESIDENT, NATIVE SONS OF THE GOLDEN WEST, TO THE CALIFORNIA DELEGATION HONORING THE 175TH ANNIVERSARY OF THE DEATH OF FATHER JUNIPERO SERRA AT STATUE OF FATHER SERRA IN STATUARY HALL, WASHINGTON, D.C.

Father Junipero Serra—apostle of California—left an impact on the culture of the State which will live eternal. The simple kindliness which emanated from this man of God still permeates the atmosphere of California. His development and plan of the chain of missions was done in a time and an era devoid of the materials and mechanical knowledge ordinarily attendant and available to structurers even at that period.

Using the elements of nature and the products of the earth, coupled with the resourcefulness of a master builder, this man of God and his aids, drew on their storehouse of knowledge to erect in the primitive wilderness of California the buildings recognized by the civilized world as suitable habitations for the purpose they were to serve. All of the buildings still stand in one form or another—some in semirepair—some still in use. All are shrines, not only to the lover of history and the romantic period known as the Splendid Idle Forties, but also to the devout. Over 1 million tourists annually visit the missions of California.

The results of these buildings have been reflected over the entire history of California. In the architectural field the copyists refer to the buildings as mission style and replicas are still being built today, both for commercial and residential use, by people who have been enamored of this gracious form of building.

This diminutive man in body had the heart, mind, and spirit of a giant and symbolically represents the heart of California. As grand president of the Native Sons of the Golden West, it is my great privilege to write these few words honoring him, for he was a beacon and established a light that has never failed; the forerunner and possibly the reason for the greatest mass migration the world has ever known.

JOHN B. SCHMOLLE,
Grand President, Native Sons of the Golden West.

AUGUST 28, 1959.

Congressman JOHN F. SHELLEY,
Capitol, Washington, D.C.:

San Francisco Serra Club joins with you on the commemorative 175th anniversary of the death of our beloved patron Father Junipero Serra.

ALBERT E. MAGGIO,
President.

ADDRESS BY CONGRESSMAN SHELLEY

Ladies and gentlemen, there is a television series called "I Led Three Lives." This same title is particularly applicable to the State's founder, Padre Junipero Serra, and is especially significant this year. The year 1959 marks the 175th anniversary of Father Serra's death, the 190th anniversary of his arrival in upper California, and the 210th anniversary of his departure from his homeland in Spain. The first 36 years of his life Padre Junipero Serra spent on his native island of Mallorca. There he entered the Franciscan Order in 1730. After obtaining the doctorate in sacred theology, he devoted some 10 years to a distinguished career of teaching, even occupying a chair in the Lullian University of St. Raymond. His ability as a professor was rivaled only by his popularity as a preacher. In 1749 Father Serra sailed to the New World to become a missionary. His first assignment was in the mountains, Sierra Gorda, where in some 9 years he could report that not a single unconverted Indian remained in the region. Eight more years he passed crisscrossing central Mexico preaching missions to the faithful. In 1768 he was appointed padre presidente of the chain of missions in lower California. The following year brought the fulfillment of his heart's desire when he was designated the pioneer priest to handle the Christianizing of upper California. Father Serra helped blaze the trail that is still known as El Camino Real and founded the first 9 of the missions that eventually became a chain of 21. In 1784 he concluded his threefold career which had been lived in three countries and in three realms of activity. Today the servant of God is known and revered throughout the world for his zeal and for his holiness, and tomorrow we hope that the church in her wisdom and her prudence will reward this reputation with her highest honor—the canonization of Father Serra as a saint.

It is now my privilege to present my colleague from California, the senior Senator from California, the Honorable THOMAS KUCHEL.

ADDRESS BY SENATOR KUCHEL

Representative SHELLEY. Your Excellency, reverend clergy, members of the diplomatic corps, my colleagues in the Congress, ladies and gentleman, these services commemorate the life and labors of a Franciscan friar whose intrepid Christian ministrations

were spread through a great primitive area before the United States came into being. Junipero Serra, Franciscan missionary from Mallorca, journeyed to the North American Continent in the 1750's, came to the city of Mexico and in the late 1760's went northward to upper California. In that northward trek, both he and his courageous, faithful and devoted companions, sowed in the hearts and in the minds of men, the seeds of a new civilization under the Divine Spirit. Father Serra brought with him the mission which meant the spread of religion in these unknown lands, the presidio which meant the expansion of the political and military control of Spain, and the pueblo (a town) which meant the establishment of orderly civil government. Here was a tripartite development both secular and spiritual. The hard trails which his weary feet traversed, from mission to mission, along the El Camino Real today continues to be the wayroad along which our strong great municipalities, great universities, great industry, great agriculture, and the great missions of his day—human progress in its every latest attainment. One hundred and seventy-five years ago, Father Serra departed this life. From a primitive unsettled land on the Pacific shore to which he came, has developed now a majestic center of cultural and economic life rich in all the bounty of God's nature, our magnificent State of California. While we honor Junipero Serra for the blessings of civilization which he left in California, we shall not forget that his was a spiritual labor. The missions he built, the agriculture he founded supported by irrigation systems which, incidentally, still excite the admiration of modern hydraulic engineers, were all means to an end. The sword was there to support the cross, and so was the civil authority—but it was the cross which came first. Imbued with Divine Spirit, charged with an exalted mission and sustained by an unfaltering faith—Father Serra brought to the Indians the civilizing message of Christian teachings. Here was the solid, sound foundation upon which all other building rested. It is well to recall this simple fact in our day, for we too have an exalted mission—to hold high the banner of man's freedom to protect it from all assaults from the ungodly and to advance it with God's grace by an unfaltering faith in the righteousness of our purposes.

Congressman SHELLEY. Senator ENGLE, the junior Senator from California, was to have been here but was detained by a debate on the floor—that's his job—he has to be there. He has very graciously sent a very charming young lady from his office who will deliver the message of Senator ENGLE, of California.

SENATOR ENGLE'S ADDRESS

Your Excellency, reverend monsignori, reverend fathers, Mr. SHELLEY, Senator KUCHEL, Members of Congress, distinguished guests, ladies and gentlemen, I bring the greetings and regrets of Senator ENGLE, who is now engaged in a major speech on the Senate floor which he was obliged to make at this hour, and he was especially sorry to miss this beautiful ceremony this morning. In his name, I would like to read a few remarks in tribute to Father Serra.

The highest honor any State can confer on a native son is to place his statue here in Statuary Hall in the Nation's Capitol. Each State has been most careful in the selection of the individuals it has placed here. If you visit the respective States, you will find the statute of their favorite son in numerous places there. The statue of Padre Junipero Serra, accordingly, is found throughout California, in public plazas and in private patios, before courthouses and in lush parks. Streets are named in his honor and buildings are dedicated in his memory. Schools, theaters, and a retreat house bear the name of Serra. Such honor you would more or less expect to find in the Golden State but you find a statue of the venerated Franciscan in the vestibule of St. Peter's Church in Chicago's Loop. You see his image on the facade of Holy Name College here in Washington as well as in mosaic at the new Shrine of the Immaculate Conception. You cannot miss his identity in the ceramic of the new church of St. Francis Xavier in Phoenix, Ariz., and he holds aloft the cross from the roof of Casa de Paz Ybien in the same Valley of the Sun. His statute stands on the tables as he presides at every meeting of Serra clubs throughout these United States, and as Serra International grows, his statute moves into foreign lands. If you travel to Mexico you will find him in the vestibule of the church of San Fernando College, the cradle from which California was born. His name and reputation are held in veneration throughout the land to our south. In Mallorca you will find his statute in the principal plaza of his native town. Throughout Spain his name is revered. And now in the eternal city of Rome itself, the new American Franciscan college currently under construction is to be known as Collegeo Franchiscano de Americano de Junipero Serra. Here is a true American success story. The annals of our history feature those who have risen from poverty to riches, from obscurity to influential positions in public life. Not a few immigrants to this country have landed on our shore penniless, uneducated, and uncultured. Lifting themselves by their own bootstraps in this land of equal opportunity to all, they have attained prominence and importance to truly amaze historian and biographer alike. Padre Junipero Serra born in the small village of Petra Mallorca, in the poorest section of that little town, his humble origin might have suggested that he follow in the family simple tradition of farming. His illiterate background portended no brilliant future, yet under Franciscan tutelage first at San Bernadino in Petra, and later at San Francisco in Palma, he manifested such superior native talent and such proficiency in scientific work that he was awarded the doctorate in sacred theology and held the chair of theology in the renowned Lullian University of St. Raymond. All that he sacrificed when he sailed for the New World. While I would not here repeat the story of his life, I would underline his sharing of the American tradition. Although of poor and humble background, he rose to international preeminence. Today three countries claim him either as native son or adopted father. We Californians are justifiably proud to join with our Mallorcan friends in acclaiming him El Foundador de California—the founder of California.

The PRESIDING OFFICER. Ladies and gentlemen, it is my honor now to present Father Noel F. Moholoy, O.F.M., S.T.D., vice postulator for the cause of Padre Serra, from Santa Barbara, Calif.

ADDRESS BY REVEREND MOHOLOY, O.F.M., S.T.D.

Your Excellency Bishop Hannon, right reverend Monsignori, reverend fathers, Members of Congress, honored guests of the diplomatic corps, ladies and gentlemen, unable to stand or even to sit, the father now 55 years old lay restless on his bed of pain. Word spread throughout the camp quickly that Father Junipero Serra was ill. Don Gasparde Portala, the military commander of the expedition, immediately went to the friar's tent, appraised the situation realistically, and told the little padre that he would make arrangements immeditaely to have him transferred to San Fernando de Bellacepa, the mission Serra had founded 4 days previously. The pain disappeared instantaneously as the little Mallorcan reacted aghast: "No. If I die on the road, I'm still going to go." And he called the muleteer and asked him to apply the same tallow and herbs that he used on the pack animals. The next morning Junipero Serra celebrated mass and continued on to San Diego in the land of heart's desire. Frequently in the years that followed Serra was to manifest the same type of determination. When the entire colony in the spring of 1770 was preparing to leave, to abandon California, he was on Presidio Hill, in characteristic prayer begging that the relief ship *San Antonio* would arrive on time. But already a month previously he had served his ultimatum—"Though they all go back, I will remain here with Father Fray Juan (Crespi) to the bitter end." In answer to his prayer, the ship arrived, and he was revealing the watchword he had manifested in the farewell letter to his parents years before: "Always to go forward and never to turn back." He was an enthusiast and a zealot. To him the magnificent bay named in honor of St. Francis was a watery barrier hindering his progress for he envisioned missions as far north as Alaska in his own lifetime and commissioned expeditions to go there. For 15 years he labored in the area in the modern State of California working zealously planting nine of the crosses along El Camino Real, where weary Spaniard and wary Indian alike would find hospitality, nourished for the body and heavenly food for the soul. And it was only when the Angel of Death hovered over his simple pallet that to his beloved son Carlos de Bormelo de Carmello he finally said: "I must take some rest." The West has always boasted that it is a land where men are men. Father Serra can well be said to have set the precedent. He rolled up his sleeves and went to work. California has accorded him her highest honor by placing his statue here in Statuary Hall of the Nation's Capitol. The Franciscan Fathers of California have been laboring for 18 years and longer to place around that head the halo of a saint.

Congressman SHELLEY. It is my privilege at this time, ladies and gentlemen, to present for remarks the Honorable EUGENE J. MCCARTHY, U.S. Senator from Minnesota, Senator MCCARTHY.

ADDRESS BY SENATOR M'CARTHY

Mr. SHELLEY, Your Excellency, Right Reverend and Very Reverend Monsignori, Reverend Fathers, representatives of the diplomatic corps, of the administration, my colleagues of the Senate, Senator KUCHEL and Members of the House, ladies and gentlemen, friends of the cause of Father Junipero Serra. It is truly a privilege for me, from Minnesota, and the U.S. Senate outside of the Californians to be here to participate in this program. I think that you of California and of the Serra Club and the Franciscans who have had Father Serra to themselves for so many years, must now come to accept that throughout this country and throughout the world, his great work has been known and his cause has many supporters as he has many followers. It may be significant that now that California is no longer the western frontier of the United States, that it is now in effect the geographical center of the country, that Father Serra will be accepted too, as standing in the center of this United States, and the things for which he stood become more widely known and more widely accepted. It is significant I think that he labored in California in the same years during which men of politics labored on this eastern coast to establish the institutions and the traditions which have been the strength of democratic society here in the United States. His approach, as has been said by others here before me, was somewhat different. His emphasis was on the cross and on the things of the spirit but his labors were not restricted to that field, because he knew, as well or better than any man, along with the things of the spirit, it was needed to have political order and economic and social order. So, dedicated to the cross and things of the spirit, he built these other institutions as men of politics establishing this United States sought to build political

institutions and economic and social institutions which would establish the means and conditions out of which spiritual perfection might be achieved. So let me congratulate you, the friends of Father Serra, Californians, members of the Serra Club, and particularly the Franciscan Order and to express my hope that his particular cause, the cause of his canonization, may prosper, but along with that, and more important, the cause which he so well advanced in his own time will prosper even more.

The PRESIDING OFFICER. We of Serra and California, thank you Mr. MCCARTHY for your remarks. Mr. Hubert Kelly, chairman of the special events committee, Serra Club of Fort Belvoir, will present the wreath laying ceremonies.

Mr. HUBERT KELLY. Thank you Dr. Doran. I shall first call upon Father Clebus Wheeler, Minister-Provincial of the Franciscan Order of Friars Minor to bless the floral offerings that we are about to present. Father Wheeler.

BLESSING

We ask of our Heavenly Father that He speed the cause of Father Serra, that He bless these wreaths we are about to put on the foot of his statue and that He bless us in the name of the Father, of the Son and of the Holy Spirit. Amen.

Mr. HUBERT KELLY. The first wreath will be presented for Serra International by Mr. Peter A. Mills, Knight of St. Gregory, Pittsburgh, Pa., the permanent chairman of the Father Serra Spiritual Observance Day, and past trustee of Serra International, and by Mr. Ralph Hauenstein of Grand Rapids, Mich., first vice president of Serra International.

Mr. Mills and Mr. Hauenstein thereupon placed a wreath at the foot of the Serra statue.

The second wreath will be presented for the Serra Club of Fort Belvoir by Mr. Joseph S. Hoffmann, Alexandria, Va., past president of the Serra Club of Fort Belvoir, and deputy district governor of district 19 of the Serra International, and Mr. Fiori J. Tamanini, also a past president of Serra Club at Fort Belvoir.

The second wreath was placed before the Serra statue by Mr. Hoffmann and Mr. Tamanini.

We will now call upon Father (Lieutenant Colonel) Pawlowicz, post chaplain of Fort Belvoir and acting chaplain of the Serra Club of Fort Belvoir to make one final introduction before closing the ceremony with the Serran prayer. Father Pawlowicz.

Father PAWLOWICZ. I would like at this time to ask all the distinguished guests to remain seated until after the ceremoney is over and also to call upon His Excellency, the Most Reverend Philip M. Hannan, auxiliary bishop of Washington, D.C., to present benediction after the prayer of the Serrans.

PRAYER FOR VOCATIONS

O God who wills not the death of a sinner, but rather that he be converted and live, grant, we beseech Thee, through the intercession of the Blessed Mary, ever virgin, and all the saints, an increase of laborers for Thy church, fellow laborers with Christ, to spend and consume themselves for souls, through the same Jesus Christ, Thy Son, who liveth and reigneth with Thee, in the unity of the Holy Spirit, world without end. Amen.

Bishop HANNAN. I think it is fitting on an occasion like this to recite the prayer of St. Francis, a prayer which certainly epitomizes the life of Father Serra. In the name of the Father, and of the Son and of the Holy Ghost. Amen.

PRAYER

Lord make me an instrument of Thy peace; where there is hatred, let me sow love; where there is injury, pardon; where there is doubt, faith; where there is despair, hope; where there is darkness, light; and where there is sadness, joy.

O Divine Master, grant that I may not so much seek to be consoled as to console; to be understood, as to understand; to be loved, as to love; for it is in giving that we receive, it is in pardoning that we are pardoned, and it is in dying that we are born to eternal life.

The PRESIDING OFFICER. Will the distinguished and honored guests please remain for the press and the photographers. The ceremony is ended.

Tribute by Bishop Wilbur E. Hammaker Upon the Life of Miss Elizabeth A. Smart

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted by the House, I am including herewith an address by Bishop Wilbur E. Hammaker, of Washington, D.C., delivered at the funeral service of Miss Elizabeth A. Smart on August 15, 1959. Bishop Hammaker is known throughout the length and breadth of America. Miss Smart was his personal friend, as she was a friend to thousands of people in America.

The address follows:

MISS ELIZABETH A. SMART

(An address by Bishop Wilbur E. Hammaker of Washington, D.C., at the largely attended funeral service in Washington on August 19, 1959.)

Our friend, Miss Elizabeth A. Smart, is now numbered among those for whom the bell has tolled. She has moved out of that physical house that was no longer a fitting habitation for her tireless and ambitious spirit. It had served her well across the indefatigable years. But despite her will to live and continue to serve, it became so uninhabitable that she had to give up the processes of repair. She is gone, we have lost her. That is, we have lost her out of the midst of our reforming endeavors. We have not lost her beyond finding. We shall find her some day, in God's good time, and we shall tie together the broken threads.

She has entered on that great and glorious other-life adventure in store for all who fight a good fight and keep the faith. She has been transferred by the Captain of our Salvation from the ranks of the church militant to those of the Church triumphant. She won the promotion. She was a gallant soldier of the cross. She has set out for that bourne whence no traveller ever returns.

CONTINUING PERSONALITY

Over and over, we repeat those four short words: "We have lost her." It is always thus when one loved and respected hears the summons—sharp and sudden, or slow and stumbling—and moves out into the vast unknown. She is gone. We have lost her. In such moments and in some such mood of finality, we now and then temporarily forget that life is ever Lord of death and love can never lose its own. For the nonce, vironed round by shadows of the valley, we fall short of our faith.

Betimes, we almost lose sight of Him, who conquered death on a lonely hill outside a city wall and made immortality man's surest possession. "Yet, ever near us, tho unseen the dear immortal spirits tread." Those whom we cherished, and lost awhile, are not sunk in a sea of oblivion; they are not even asleep; they are alive forevermore. You recall that Jesus said to the repentant man hanging on a cross alongside His own: "This day shalt thou be with me in Paradise." All that I have been saying and more, belonged to Miss Smart. In the last days she was marvelously steadied by her sure confidence in such eternal realities.

A VALIANT SOLDIER

She belonged to the undaunted, the undismayed, the undefeated. She lived far from the group whom little things could discourage, or could satisfy. She took defeats in her stride. She expected to lose battles, but to win the war. Her eyes were strong enough to see the far horizons. She looked beyond the trivial and the transient to the ultimate. She could see no final answer except the destruction of the organized and legalized traffic in alcoholic beverages. She had responded in the soul of her to the mightly appeal with which the author of the letter to the Hebrews sums up his tremendous treatise on the Christian hope, emerging in the midst of a forlorn world.

He says: "Let us therefore go forth unto Him without the camp, bearing His reproach. By Him therefore, let us offer the sacrifice of praise to God continually, that is, the fruit of our lips giving thanks to His name." What the writer of the Hebrew letter is saying is: "Let us live as in God's care and presence and say to ourselves and to others and to Him, that it is blessed to live and move and have our being in the Eternal One." That's sharing in the riches of grace. But our guide and mentor on the Hebrews highway added: "That may become only an individualistic ecstacy." To quote him exactly he says: "But to do good and to communicate forget not; for with such sacrifices God is well pleased."

Add to your experiences on the spiritual mountain tops, testimony and the proclamation of healing truth as you walk up and down the pathways of the plains. Be not tempted as were the chosen three on the transfiguring mount to say: "It is good for us to be here, Master. Let us build three tabernacles one for thee and one for Moses and one for Elias and stay here." To revel in high moments of spiritual ecstasy is tonic for the soul. It is what we need for doing the hard, rough work of the world. Without such refreshment we would weary in well-doing and faint by the wayside. How well Elizabeth Smart knew that.

HER TESTIMONY

She also knew that a correlative reality is to do good and communicate. To tell God's truth is a divine compulsion from which alterted and sensitive souls cannot escape. "Woe is me," moans the aroused soul, "if I speak not the words that lead to the true facts of life." Miss Smart found all that out. She discovered that sometimes such a course is far from popular. She was willing to pay the price. She took the gaff involved in sticking to an unfavored presentation of reality. She shunned not the shame. She knowingly and willingly went forth unto Him without the camp, bearing His reproach. She was not deterred by the fear of being called fanatic. Nor was she downhearted, because of the skepticism of friends or the sarcasm of foes.

She had what our preeimnent psychologist-philosopher William James used to call "the will to believe." She believed that the resources on which she could draw were adequate to the demands life imposed on her. James used to amplify his great statement by adding: "By the grace of God, 'I can' is one of character's priceless ingredients." It reveals the possibilities in us and dares us to try our strength and reach beyond our grasp. She was constantly doing just that. She knew that God is not dead and that His arm is not shortened. In His strength and for His sake, and for the sake

of His children of earth she kept on, going on. She was never alone in the conflict. He was with her. The Lord God—the Almighty one had concern like unto her concern. In fact because of His concern, she had her concern. My soul, how she yearned to warn and to win those tempted by Old King Alcohol. Great was her concern.

HER LEADERSHIP

We shall miss her infectious and inspiring leadership. Her courage in the midst of defeats was heartening and contagious. We, her comrades, found it so. A moment since, I said: "She was never alone in the conflict, He was with her. The Lord God—the Almighty One had concern like unto her concern." Let me now add that she was never alone because the cohorts of her division of the army of the Lord, were always backing her. She had their support to an amazing degree. They believed in her. They had confidence in her counsels. Her words carried weight with the women of the WCTU. Throughout the length and the breadth of the land they had respect for her wisdom.

And how richly she deserved it! She was their voice. She spoke not for herself. Her strength was not in rampant individualism. She was not on her own, she was on their own, she was a representative. She was the National Woman's Christian Temperance Union's agent and ambassador in the Nation's Capital. She was evermore identifying herself with her organization. I have never known a more complete submerging of self in a noble organization, than hers in the Woman's Christian Temperance Union.

NOT HER OWN

Her total attitude of selfless service to a cause and to an organization greater than herself, reminds me somehow of the repeated identifications of Jesus with His Father in numerous assertions of this type: "Believest thou not that I am in the Father, and the Father in Me? The words that I speak unto you, I speak not of myself; but the Father that dwelleth in Me, He doeth the works." "Believe Me that I am in the Father and He in Me; or else believe Me for the very works sake". I am mindful of this attitude of the Master when I review Miss Smart's reiterated and consistent declarations of the source of her plans and purposes. She was not her own. She belonged to a group greater—far greater than herself. She and the Woman's Christian Temperance Union were one. They were indivisible.

She had no other will than that of the organization she served. She had no other purpose than the purpose of those godly women. Their mind supplied the norms for her conduct at the battle's front. She was fond of saying to legislators and others in authority: "My organization wants this done". Or "my women believe that the only right course to follow is the one I have just outlined. I plead with you" she would add, "not on my own, but on their behalf. I am only their representative. I bring you their judgment and their desire." How modestly, how persuasively, how eloquently, she pled the case in the name of, and for the sake of the womanhood of the land!

HER SUMMONS TO OUR SOULS

But that moving voice is stilled, she shall, henceforth, no more be heard here in the nerve center of our national life. But we shall follow in her train. To us she has flung the torch; as a tribute and memorial to her heroic contribution to the cause of temperance reform we shall carry on. She would not yield to defeatism nor shall we. Failures did not wear her down, rather she thrived on them. Without coming within a mile af pollyannaism she clung to optimism. She would not give up the dream of a brave new world despite all the slowness of its coming.

Nor shall we. Neither suffering nor shame, neither defeat nor disaster could dampen the ardor of her soul as she held aloft the banner of helpful righteousness. She was sustained by her unbreakable belief in the ultimate decency of things in a world which, after all, is her Father's. She had discounted all the contingencies when she went forth unto Him without the camp, to bear with Him His reproach. This day we salute her; and pledge here in the sight of God to go and do likewise.

Eisenhower Administration's High Interest Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following press release issued by the Democratic National Committee on August 29, 1959:

The Eisenhower administration was criticized today by Paul M. Butler, chairman of the Democratic National Committee, for trying to press its high interest policy on a reluctant Congress. Mr. Butler's statement:

"The Republican administration is irrevocably committed to a policy of high interest rates and tight money. Democrats quite properly oppose this policy, under which all of the people are increasingly exposed to what is really a new tax, a tax not voted by the Congress, and a tax which is payable not to the Government but to the moneylenders.

"The citizen who borrows to finance a new home, a new car, a new household appliance, is directly affected by the general rise in interest rates fostered by the Government's high-interest policy. Every taxpayer is affected by the forced increase in the interest payable on the debt of Federal, State, and local governments. Every businessman who routinely borrows money from a bank must pay a higher rate of interest—and pass it on to his customers.

"It might have been supposed that the Republicans would acquire, from brutal experience, some insight into the economic facts of life. We have had two Republican recessions in the past 7 years. We have seen in the last year the greatest peacetime deficit in history. We have had the spectacle of the President of the United States coming hat in hand to Congress only last June with the admission that he would need $500 million more to pay for a dead horse—to pay the interest on the public debt—than he had thought 5 months earlier would be needed for this purpose.

"This is fiscal irresponsibility with a vengeance.

"The Democratic platform of 1956 attacked the Republican high-interest policy as a boon to only a few bankers and a hardship for the general public. This policy has been vastly intensified since then. The subsidies provided by this administration for the money lenders in additional interest now exceed $25 billion.

"The administration is so confused about its fiscal objectives that the Secretary of the Treasury put his foot in his mouth this week by acknowledging that 'nothing shoots up interest rates as fast as the fear of inflation.' The fact is that nothing adds speed to the inflationary spiral like increased interest rates.

"The Republicans still resist high wages for labor and insist upon excessively high wages or interest for money. We are proud of the way the Democratic 86th Congress has stood its ground against the arrogance of the administration in this field."

A Tribute to His Country by a New Citizen, Erik Brings

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 2, 1959

Mr. SCOTT. Mr. President, a few weeks ago I had the pleasure of welcoming as new citizens, Mr. and Mrs. Erik Brings. Mr. Brings, in desiring to express his feelings and belief in America, has written a poem in tribute to his country. I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Brings' first literary product in the English language, "The Mission of America."

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE MISSION OF AMERICA
(By Mr. Erik Brings)

When God divided land and sea
Among His many Nations,
He set aside one country, free,
A land of joy and liberty
For future generations.

As nations grew their skills progressed
And lifted them to splendor,
Till some, with greed and hate possessed,
Compelled the peaceful, happy rest
Of mankind to surrender.

A few ruled many merciless,
The earth was tears and sorrow,
Till some with courage and with stress
Shook off the chains of their distress
And cried for a tomorrow.

Their cries were heard by God, and He
Showed man and woman fighter
His land of joy and liberty,
America, the strong and free,
To make their burden lighter.

God made them promise, thus defined,
To carry on the fighting
Within themselves and for mankind
For freedom of their work and mind,
Until the earth was brightening.

United now for evermore,
Courageous and with vision,
America, keep fighting for
The things you promised once before
The things which are your mission.

Walter Lee

SPEECH
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. LINDSAY. Mr. Speaker, it was with a real sense of shock that I learned of the illness of Walter Lee, for many years the efficient "chief of staff" of Subcommittee No. 2 of the Judiciary Committee on which I am honored to serve. Mr. Lee has shepherded the work of the Claims Subcommittee through many difficult and crowded legislative sessions, and I am sure we all hope to see him soon restored to full health.

Appendix

Labor Corruption, Business Corruption, and Class Legislation

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DENT. Mr. Speaker, in the interest of proper coverage of the many facets in this labor reform and labor control legislative fight in which we are still engaged, I am taking this opportunity to present to the House a statement sent me by the International Association of Machinists' president, A. J. Hayes.

I do this because he may well have touched on a subject that must be probed by this Congress in the near future, namely, business corruption and the drives behind class legislation.

Insofar as the situation we find ourselves in concurring the ill-fated, politically spawned original Kennedy reform bill, we can thank the President of the United States and his coterie of richly endowed funds such as Humphreys, Black, Payson, Ryerson, Jones & Laughlin, Bethlehem Steel, Armco Steel, who together, handed over $245,000 to Ike's campaign in 1956.

Wonder how they felt and what they wanted in labor reform.

Those of us in Congress know what they wanted and incidentally, got.

It is therefore proper and just to put before Congress the official position of this segment of labor as represented by the following statement.

The history of restrictive covenants disguised as so-called reforms is that instead of reform, they usher in injustice and personal restrictions and in the end, open up Pandora's box from which come the misunderstandings, misrepresentations, and eventually chaos, deceit, and unrestrained evils.

The statement follows:

LABOR CORRUPTION, BUSINESS CORRUPTION, AND CLASS LEGISLATION

The Landrum-Griffin bill is a fraud on the American people. It is a particularly vicious fraud on the workers and wage earners of this Nation—both the organized and the unorganized—for it gives them no new rights—and, in fact, strips them of many old and honorable trade union rights, including the right to picket nonunion employers, the right to boycott unfair employers and the right to govern their own unions by the democratic principle of majority determination.

That this is a drive to hurt the American wage earner and not to help him is evidenced by the indisputable fact that the individuals and groups who have sponsored and supported so-called labor reform legislation are the same individuals and groups who have invariably opposed any measure which would even remotely improve the wages, hours, job safety, housing, health, education and social security programs of the American people.

During the past year these forces have coalesced in a massive effort to cripple the labor movement. They have been actively assisted by politicians from both major political parties. They have had the support of the Nation's business-owned newspapers, magazines, radio and television outlets.

This onslaught has been brought on by 5 years of repetitious congressional exposures of certain shameful—though actually quite isolated—incidents of wrongdoing in a very small segment of the American labor movement.

These incidents, though shocking, are in no way typical of the overwhelming majority of honest and conscientious trade union officials and members. In fact, the integrity of the labor movement is proven by the prompt action which the AFL–CIO took in adopting far-reaching codes of ethical practices, along with an effective enforcement procedure which materially reduces the possibility of corruption and wrongdoing in the future.

It should be noted, moreover, that though some corruption has certainly been shown to exist in the American labor movement, this corruption did not—and could not—exist in a vacuum. It is, in fact, a part of a pattern of corruption that is deeply rooted in the ethical deterioration of business and industry in America today. This deeper corruption of our business society is, of course, well known to the lawmakers—and to the administration now in power. It is, therefore, fitting that since they have used corruption as an excuse to legislate away the rights of trade union members and officers, that they should now undertake to investigate and correct the greater corruption that exists in so many other areas of our society.

As a start, we would invite their attention—and the attention of the American people—to the following evidences of business and professional corruption in this Nation:

1. The reported $5 billion which, according to Life magazine, normally changes hands among businessmen and industrialists in the form of kickbacks, payoffs, and bribes every year.

2. The documented disclosures of the many and widespread business uses of prostitutes by some of the largest and supposedly most respectable corporations in America.

3. The $250 million which, as a matter of public record, has been deducted by employers as withholding taxes from wages of employees, but which has never been turned over to the U.S. Treasury.

4. The reported $750 million which is fraudulently extracted from the American people every year by heartless racketeers operating in the field of charity collections.

5. The many proven reports of ghost surgery, fee splitting, bill padding, and other unethical practices by which the medical profession is cynically undermining union-negotiated health plans.

6. The well-known examples of tax evasion by corporate boards of directors who vote themselves stock options worth millions at the expense of rank-and-file stockholders and, ultimately, at the expense of all other taxpayers.

7. The many reported instances of denials of civil rights in many States particularly in the South, where a well-entrenched coalition of employers and local governments prevents workers from exercising their constitutional rights in both political and economic fields.

These are only a few of the kind of public reports and information that illustrate how deeply the sickness of corruption permeates the fabric of American life. It seems, in view of the billions of dollars that business, industry, and the professions extract unfairly from the American people every year, that the indignation of the McClellan committee over the fact that $10 million in union funds has been stolen, embezzled, or otherwise misused over a period of 15 years, is somewhat exaggerated and misplaced.

If the embezzlement of $10 million over 15 years in the labor movement warranted a 5-year investigation of organized labor—and the enactment of "killer" legislation, there would appear to be justification for a similar investigation in depth of the reports of this much greater corruption in these other segments of our society.

The American people should know that with the exception of a few requirements in the body of the Landrum-Griffin bill, this bill does not do what it purports to do—nor does it do what its sponsors say it will do. It will not prevent corruption and wrongdoing. Instead, it penalizes the very people it is alleged to protect—the rank and file members of labor unions.

Despite assertions to the contrary, the so-called McClellan bill of rights provisions of this bill grant no new rights to American trade unionists. For, in addition to encouraging dissident minorities to obstruct and disrupt unions at every level, and permitting them to thwart the will of the majority, it paves the way for the infiltration of unions by employer spies, racketeers, gangsters, and even Communists. It does this by protecting these disruptive and divisive minorities against any internal discipline on the part of the majority. In fact, the antilabor forces who so often accuse organized labor of "a lack of responsibility" have now taken away the tools by which it can be responsible. The forces who have accused organized labor of being undemocratic have now taken away the prime prerequisite of democracy, the principle of majority rule.

The American people should also know that this so-called labor reform legislation seeks to reform the labor movement by denying workers their constitutional rights, including the right of free speech, the right of free assembly, and the historic trade union right to picket and advertise unfair sweatshop exploitation.

Upon due consideration of these facts, we, the executive council of the International Association of Machinists, firmly believe that it is our duty and our responsibility to inform and warn our members that the Landrum-Griffin—or any similar bill—can have but one result: The substantial and material weakening of the economic effectiveness of our union and the American labor movement as a whole. We feel it incumbent upon us to warn them that this type of legislation will strip them of rights enjoyed by other citizens of our country, that it will divert a substantial part of our finances, time, and effort from our proper bargaining ob-

jectives, that it will open our union to legal harassment, and that it will create a climate of even greater opposition from employers, arbitrators, courts, and administrative tribunals.

We warn our members, and every other worker in America, that the real effect of this legislation will be to hurt every man, woman, and child who is dependent upon wages for their daily bread.
